The argument for facing the pitcher is that you can watch him easily from that position; that if you are "foot shy," you will have no inclination to pull farther away, but will rather desire to step into the ball; and that it gives you a better reach for outside and curve balls. The fault of it is that it carries a strong temptation to offer at close balls, and that you cannot hit inside curve balls with nearly so much drive as you can from the other stand. The argument for standing with your side toward the pitcher is that, if you do not fall away and if you watch the ball all the way up, you have a freer swing and a better drive than when facing the pitcher. Close balls do not tempt you so much, and you can meet inside balls better, because it is easy to pull back a little from the plate.

Some coaches lay rather too much stress on the fault of stepping away. The attention should be given to balance. If your balance is forward, you can hit a near ball better by stepping away than you can by stepping straight forward. The trouble is that it is easy to form the habit of always stepping away, of getting on the heels and off the balance. If you seem to be hopelessly "foot shy," try facing the pitcher for a time. If you are not, then the most efficient form for you is an easy, natural side-on stand slightly facing the pitcher.

A short step forward generally accompanies the swing or even anticipates it. Some batters do not step at all, but, beginning with the feet

A VIGOROUS SWING PARALLEL TO THE GROUND

somewhat apart, they merely shift their weight to the foot that is in front. Whichever method you adopt, you should make the aggressive forward motion on every ball pitched,—unless you have to dodge it,—so that you are constantly ready to hit. If, on stepping forward, you decide that the ball is too close, retreat by withdrawing the foot that is behind, and leaving in place the foot that is in front. That brings the body quite away from the pitch, and is a much quicker and less dangerous way of getting back than by pulling away with the front foot. The form with practice becomes quite simple and easy.

STEPPING FORWARD

One of the commonest faults is stepping too far forward. That brings the body so low that it becomes virtually impossible to hit a shoulder ball. A moderately short step is best: straight forward if the ball is coming over the plate; a little back if it is inside; somewhat across if it is on the outside of the plate. Remember to be on the offensive all the time.

Standing forward or opposite or behind the plate in the batter's box is a matter of personal liking. If a batter is a confirmed right-field hitter, he should try standing farther back toward the catcher. Some batters watch curves better from the back of the box; others like to hit a curve before it has more than begun to break. The best plan is to experiment until you discover the position that suits you best.

Good form alone does not make a batting average. To get hits you must acquire the faculty of "picking out the good ones." Of course that part of batting is largely a matter of an accurate eye, but there are other matters

worth considering. The intentions of the pitcher are important. You should try to discover what is in his mind. In the first place a pitcher is trying to give you more strikes than balls, "to keep out of the hole." With that in mind he tries generally to get the first ball somewhere over the plate. He wants a strike. It is a good thing to be fully prepared for the first ball pitched. You must remember, however, that when there is a man on base, a pitcher is likely to "waste" the first one if he suspects a steal or the "hit-and-run" play. But once he is "in the hole,"—with more balls called than strikes,—he has to make every effort to get even again. The great rule of all hitting is: *Get the pitcher into the hole and then hit the ball.* When

THE POSITION OF YOUR BAT WHEN IT HITS THE BALL DETERMINES THE LINE OF FLIGHT

two balls and no strikes have been called, you can be pretty sure that the pitcher will try to put the next one over the plate. There are very few pitchers with control enough to "waste" three balls.

OUTGUESSING THE PITCHER

Then there is the game of outguessing the pitcher—of making up your mind just what kind of ball he is going to throw. In some ways that is a dangerous game, but it is often worth while to guess once. If some time before a batter has shown a weakness, it is a fair presumption that the pitcher remembers it. If you have made a clean strike on a shoulder ball, you have reason to expect that ball will be thrown to you again. If you can hit that sort of ball when you know it is coming, it is a good plan, for once at least, to expect it and prepare to meet it. It is even a trick with some batters to swing wildly at the first ball pitched, then to get set and hit the second one of the same sort. That is outguessing the pitcher.

Putting the ball dead to the ground in the infield for the purpose of "sacrificing" a runner forward a base, or even for the purpose of making a hit, has come to be one of the most useful forms of batting. There are three standard bunts: getting the ball thirty feet down either the first- or the third-base line, and making the "long bunt" between the first baseman and the pitcher, which both may attempt to field, and thereby leave first base to be covered, if at all, by the second baseman. Probably the "short bunt" down the third-base line is best for the purpose of making a hit. The first-base bunt is generally best for "sacrificing" and always best on the "squeeze play."

The right way to make the bunt is to run the forward hand out on the bat, holding the handle loosely with the thumb and forefinger of the other hand, and giving way slightly with the forward hand as you meet the ball. That deadens the rebound so that the ball rolls only a short distance. The trick is, of course, to get the ball on the ground within base lines a desired distance from the plate. One help to that end is getting

STARTING THE SWING

at the start and arms extended; then you will not find bunting the hardest part of baseball to master.

When it is essential to hit a ball to the ground, as in the case of the "squeeze play," there is one trick in bunting that is worth a great deal. It is called "putting a hand on it." You compress the forward hand as much as possible behind the bat, and then make believe that you are trying to put that hand on the pitch. Of course any ball player can put his hand on any ball thrown near him, and he can certainly put the bat on it if he employs this method. The danger is that a glancing blow from the bat may hit the hand, but it is much less than might be supposed. Try it in practice on slow pitching for a starter. It requires nerve to execute the play against speed pitching, but it is a sure method if you will conscientiously carry out your part.

HITTING A SWIFT BALL

Hitting very swift balls is one of the hardest problems that a batter has to solve. Some coaches advise taking a light bat that you can swing more quickly, but many others believe that it is better to take a heavy bat, hold it short and tap the ball. It is surprising how much of a rebound a swiftly pitched ball takes from a good, solid bat. It is generally quite enough to carry over the infield even if the ball is no more than blocked. The trouble with trying to hit very fast pitching is that the general tendency is toward hitting harder the more swiftly the ball comes. *That is a mistake.* Swift pitching ought to be met, not hit at.

"Working" a base on balls is one of the best things that a batter can do. With no one on bases it is as good as a hit, and at any time nothing is

more disconcerting to a pitcher than the knowledge that he is pitching to a man who will offer at no balls that are not strikes. No player becomes a great batter until he has learned how to wait as well as how to hit, for of course the pitcher is constantly trying to entice him to strike at bad balls. The way to learn to be a good waiter is to watch every ball coolly; make a mental note of what any ball looked like that was called by the umpire *different from what you supposed it to be*. It is not merely by waiting that you learn to be a good waiter; it is by educating your judgment and by reducing to a minimum the number of balls that you cannot judge.

Place hitting is a step beyond the ordinary ball player, but it is interesting and enlightening to know the theory of how a ball travels when hit. The law is that a ball will leave the bat according to the angle at which it hit the bat. If you have been studying physics recently, you will remember that the angle of incidence is equal to the angle of reflection. If the bat meets the ball at right angles to the line of pitch, a straight ball goes to centre field, an outcurve to left field, and an inshoot to right field. It does not always happen, of course, that ball and bat meet at a right angle. On a fast, outside corner ball, for example, the head of the bat is not usually swung round quickly enough to form a right angle with the line of the pitch. The angle of incidence is a little less than a right angle, and the ball goes toward right field. The opposite is often the case with an inside ball; it goes to left field instead of to centre; it is said to be "pulled" round. The chances on the curves are about what we might expect. An outcurve that is well met is likely to go to left field and an inshoot to right. An outside straight ball can be hit to right field; a close, straight ball to left field. Beyond that it is a matter of whether the hands are farther forward than the head of the bat, or the head of the bat farther forward than the hands. No one can really "pull" a ball round. It is all a matter of the angle at which the ball meets the bat. Batting is the heroics of baseball. It is what the

THE BUNT

grand stand cheers and the players talk about, for it is the important part of the offense. Games cannot be won consistently unless the team can bat.

CUTTING SECTIONS

[This is the third of a group of articles on the microscope. The first, *A Boy's Microscope*, appeared in the Boys' Page for January; the second, *The Care of a Microscope*, appeared in the Boys' Page for February.]

IN order to examine the internal structure of plants and animals by far the best way in most cases is to cut very thin slices from the material and study them. By cutting first a section across the stem of a plant and then one lengthwise and looking at them under the microscope, a much clearer idea of the cell forms and relations can be obtained than by simply poking the tissues apart. Most animal tissue requires much preparation before it can be properly sectioned, but it will pay to try a few things, such as meat, the thick cuticle in the palm of the hand, and so forth. From many parts of plants it is possible without previous preparation to make sections that when stained are both beautiful and instructive.

Something can be done merely by holding the specimen in one hand and cutting off a slice with a very sharp knife or an old razor. An idea of the structure can be gained in that way, but a little

THE QUICK START OF THE LEFT-HANDED BUNTER

time spent in making a holder and a proper knife will be repaid a hundredfold by the much thinner and cleaner sections that will result.

What is needed is to have some of the material held firmly, yet not distorted; to be able to raise it evenly a very small distance between each two cuts, and to have it protrude from a smooth, hard surface along which the knife will slide smoothly.

First, get a piece of one-inch iron pipe, clean inside, and six inches long. It will cost only a few cents. If you cannot get it, lead pipe or a piece of bamboo fish pole cut from between the joints will do. Next, get a three-inch square piece of hard wood, such as oak, an inch or an inch and a half thick. In the exact centre bore a hole just large enough to allow one end of the pipe to be crowded into it under considerable force. The pipe should be pushed through until the end of it is just flush with the other side; if the hole is bored carefully, the pipe should be very firm and tight and the end of it exactly square with the surface of the wood. If the hole is wet with good glue, the firmness will be greater.

Two pieces of glass, one inch by three inches,—the regular glass slips used with the microscope are just right,—should be countersunk in the wood on the side opposite to that from which the pipe protrudes, one on each side of the hole, parallel to each other and the edges of the block. They should lie flat, and the surface of one should be just even with that of the other. They should be countersunk enough to allow a knife passed along both together just to miss the end of the pipe in the hole.

By adding a large bolt and a nut the instrument can now be made almost as serviceable as those instruments that sell for six dollars. The nut should be fastened by solder or other means to the free end of the pipe. The threads of both nut and bolt should be cleaned and greased.

A round piece of wood two to four inches long is fitted snugly into the pipe above the nut, so that when the bolt is screwed into the nut everything in the cavity above the sliding piece of wood is lifted a little higher with every turn of the bolt.

Material can be held in a split stick placed in the pipe, or between pieces of elder pith or even carrot, if the combination fills the pipe snugly; the arrangement will depend on the nature of the material. But both object and knife should be thoroughly wet when the attempt is made to cut them. Pieces of large succulent stems or of vegetables can be sectioned from pieces that fill the end of the pipe.

The knife is important. It should be flat on the under side, and should slide along the glass runways with the back raised a little. The old-fashioned heavy razor works well, but the modern hollow-ground razor is useless. The finest sections can be cut with a blade from a safety razor—one of the kind that is thin and flat and has no back. The blade should be mounted at a slight angle between two strips of wood, so as to leave the upper surface mostly uncovered. The edge of the knife should be straight, not curved. A handy boy can make good sections with a pocketknife if he flattens one side of the blade clear to the edge and grinds the edge straight and thin.

The finer the material the thinner must be the section; but experience is the best teacher as to that.

Sections of the stems of different plants show up well, and in most herbaceous specimens the wonderfully diverse hairs can be seen. Twigs need a strong support and a stiff knife. Fine sections of ordinary woods—pine, cedar, chestnut, and so forth—can be cut if the wood is taken from boiling water and cut immediately. Buds, roots,

Don't Monkey With the Buzz-Saw

and don't experiment with an unreliable brake. It is dangerous business. Experienced cyclists for the past sixteen years have given consideration to only one brake—the

DUPLEX COASTER BRAKE

Its reliability is known. It has proved itself dependable thousands and thousands of times under all riding conditions. Cyclists know they can trust it, because it has never failed. Through actual service it has earned its reputation as the standard brake equipment—100% efficient.

"Corbin Control Means Safety Assured"
Powerful, durable and sure; smooth in action, easy of operation, gradual or instant of grip. There is no doubt about it, the Corbin Duplex is the only brake you can afford to equip to your bicycle—old or new. It doubles the fun and safety of riding. Insist on the Corbin Duplex. It is the only brake for you to use. At all bicycle dealers'. Ask for it.

leaves (squeezed between two pieces of pith), vegetables, seeds, the ovaries, anthers and pistils of flowers, and seaweed offer an endless variety of material. Staining helps wonderfully in getting a vivid picture.

NESTING BOXES FOR WOOD-PECKERS

HOW to entice woodpeckers into artificial nesting boxes and thus to bring them within the range of daily observation has puzzled many a lover of birds. A naturalist has solved the problem by taking account of the fact that in building their nests woodpeckers, unlike most other birds, do not use extraneous material, such as straw, twigs or grass, but content themselves with the chips that they make in digging their way into a decayed tree or post.

Using only old and weather-beaten lumber, the naturalist made a box about six inches wide and two and one half feet long. Near the top he cut a small entrance hole, and in the bottom, as the nearest imitation of the tiny chips made by the birds, he put several inches of ground cork of the kind used for packing grapes. The first nest attracted a pair of red-headed woodpeckers, and later nests were occupied by other varieties of woodpeckers and by sparrow hawks and screech owls.

It is important to use old lumber and to leave no cracks in the box, so that the only light that enters shall come in at the round hole near the top. It is also important that the hole be neither too large nor too small. The study of natural nests is the best guide to the proper size.

The Venizelos Stamps.—When the former premier of Greece, M. Venizelos, dissatisfied with the policy of his country in regard to the European war, withdrew with his sympathizers to the island of Crete and there set up a revolutionary government, philatelists confidently expected that new postage stamps would not be long in appearing. Their expectations have now been fulfilled. The stamps of the provisional movement are of twelve values—the lowest, one lepton, and the highest, twenty-five drachmas. Iris, the mythological Greek divinity who personifies the rainbow, appears as the chief figure of the design, and the inscription contains the word, "Hellas," meaning Greece, together with Greek characters that spell the words, "provisional government." The stamps are extremely interesting to collectors, and it is not improbable that future events will greatly increase their philatelic value.

A KITE PARACHUTE

ANY boy who can make and fly a kite can send up all the parachutes he has the patience to make.

In order to soar steady and far, the parachute must be well-balanced and made to exact proportions. Take a piece of newspaper about two feet

FIG. 1

FIG. 2

square, fold and crease it one way diagonally, then unfold it and crease it the other way, as in Fig. 1. Next take two white-twine strings of equal length, each about six inches longer than twice the diagonal A D in Fig. 1, and tie them together at their middle with another piece of twine about eight inches long, as in Fig. 2 at F. At each of the four ends tie a slipknot, as at H, and make sure that the ends of the string left over are the same on each knot. Pinch the corners of the paper and pull a knot tight over each corner, as in Fig. 3. Tie a small weight—such as a nail or a stone—to the single string just below F, then spread the parachute out in your hands and let it fall. If the weight is too heavy, the parachute will drop too fast; if too light, the paper will tip over and

FIG. 3

not stay open. The weight should be just heavy enough to keep the parachute steady. Bend a pin and stick it through the middle of a half-inch square of cardboard. Then stick the pin through the centre of the parachute, E, Fig. 1, with the cardboard on the under side of the paper and the hook of the pin above.

Now you are ready to fly your kite. To have sufficient lifting power it should be at least thirty inches tall. Be sure that there are no knots in the string to keep the parachute from climbing. Choose a day with a moderate breeze, and get your kite up as high as you can. Have some one else take the folded parachute, put his arm over the kite string, and slowly bear it down for about fifty feet. Then let him hook the pin over the string and, still keeping his arm over the string, walk carefully back to you. At that height the wind will soon catch the parachute and carry it up the string.

When it nears the kite, with the end of the string in your hand run very fast about thirty feet toward the kite, which, in consequence, will drop a little. The parachute will spread and lift itself off the string. Do not jerk the string, or the parachute may swing and tangle. Be sure that the pin is not bent too much; if it is, the parachute cannot get away, and will slide into the kite and wreck it. A few trials will show how to set it free.

IMPORTANT NOTICE to LUMBER USERS:

THE SOUTHERN CYPRESS MANUFACTURERS' ASSOCIATION HEREBY INFORMS YOU THAT ALL CYPRESS NOW AND HERE-AFTER SHIPPED BY MILLS WHICH ARE MEMBERS OF THE ASSOCIATION WILL BE

IDENTIFIED BY THIS MARK

TRADE MARK REG. U.S. PAT. OFFICE

This registered trade-mark will be, henceforth,

Your Insurance Policy of Quality

It will appear stamped (mechanically and ineradicably) on one end, or both ends, of EVERY board and timber of

CYPRESS "THE WOOD ETERNAL"

CYPRESS FLOORING, SIDING, MOULDING AND SHINGLES, which come in bundles, will bear the same mark on EVERY BUNDLE.

The legal right to apply this epoch-making symbol of strict RESPONSIBILITY IN LUMBER MAKING AND SELLING

is, of course, restricted to those Cypress mills which, by their membership in the Southern Cypress Manufacturers' Association, attest their devotion to its Principles of SERVICE to the CONSUMER and their foresighted appreciation of its open and progressive educational methods.

Only mills cutting "Tide-Water" Cypress are eligible for membership. (Cypress which grows too far inland is not equally noted for the "Eternal," or decay-resisting, quality.)

Only mills which subscribe to the Association's standard of scrupulous care in methods of MANUFACTURE, INTEGRITY OF GRADING AND ACCURACY OF COUNT can belong to the Association. These responsible "A-1" mills the Association now licenses to

CERTIFY THEIR CYPRESS by applying the registered trade-mark with their identifying number inserted

WILD GARDENS

MANY lovers of flowers have beautiful gardens in which they grow rare plants, often at an extravagant price in time and money, without knowing that they could have just as much beauty without continuous labor and at a very small cost. There are bits of land both in small dooryards and in extensive gardens that careful cultivation cannot easily reach—fence corners, half-shaded spots that tempt indigenous blackberry vines to spring and choke the grass, rough places where some stubborn old geological fact insists upon showing its scars and will not disappear. All that they need to transform them into beauty spots is a patch of vegetable court-plaster in the shape of some hardy perennial or tuberous-rooted flower or branching wild rose vine.

If liberally planted and then let alone, such places will fringe themselves out into the surroundings in softened lines; and once and probably twice in the summer, when they flower or put on interesting autumn tints, they will exhibit themselves in colors that will put a carefully tended garden to shame.

It is liberality of planting that makes such places beautiful. A flush of pink lying like a sunset cloud on the contrasting green of the lawn, or breadths of blue or purple threading the grass like sky-reflecting streams are always exciting and interesting; yet those effects can be produced by clustering masses of moss pink or hardy phlox, thickly planted and left to their own devices, and by thickly growing stalks of the single half-wild blue larkspur.

Many plants will thrive in that sort of vagabondage, for the hoe is to the garden what the rod is in the hand of the schoolmaster. Some plants do best where they can shoulder one another and grow tumultuously without ever being called to order or restrained.

The first necessity of "wilderness" planting is to select only such roots as will not resent the encroachment of other plants, and the only way to know which they are is to watch their conduct for several years. All the wild asters and the free-flowering roadside plants are exempt from trial. We know that they will live under hard conditions; they are virtually beyond the reach of competition. So also are the fence growers; you need only plant them in sufficient quantities in any wild or neglected land, and refrain from curtailing their borders with plough and hoe, and they will grow in wild masses that will make you hold your breath with wonder at their beauty.

Many beautiful indigenous tribes that have been scared away from native haunts by energetic farming can be won back to the haunts of men. Some of them are already so scarce that you will not be able to plant them in large quantities, but it is always a joy to get even one or two and place them where you can behold the possible increase. You can move most of them safely even when they

BLOODROOT IS READY TO RESPOND TO ENCOURAGEMENT

are in flower if you take the precaution to dig up enough earth with them so that you do not disturb their roots.

Among the precious plants that respond readily to encouragement are the moccasin flower, both the yellow and the pink; the fringed orchid, white, buff and lavender; the scarlet wood lily and the fringed gentian. Flower lovers know all of them and seek them in unfrequented places, yet they will grow under your very eyes if you will only plant them.

But do not seek always for the rare flowers. Who does not know the butterfly weed and the gay and bold Black-eyed Susan and the fragrant bouncing Bet? All of these roadside plants will rejoice greatly at being transplanted to dustless grounds.

Others that are waiting for a chance to beautify your grounds are the scarlet lobelia, the Indian balm, the meadow lily, the meadow rue, the hepatica, the bloodroot, the wild phlox, the cardinal flower, the columbine, the wild aster, the liliatris, the jack-in-the-pulpit, the violet; and among shrubs, the white elder, the dogwood, the shadbush, the wild azalea, the pink and the white, the laurel and the already domesticated rhododendron. Some of those plants may not grow in your neighborhood, but if you live in a fertile region you will find their places taken by other flowers and shrubs that are no less ready to make friends with man.

The reverse of persuading the wild flowers to grow on lawns and in gardens is to return some of the lost tribes to their native haunts—to set free domestic plants and garden favorites and give them leave to increase, which is a privilege that the ordinary garden denies. The list of such plants is almost endless. All the bulbs, except a few that belong to the lily tribe, will do well in grass or wild land. Narcissuses, including the daffodil varieties, hyacinths—although they will probably revert to their primitive single state—and virtually all of the smaller bulbs can be so restored to nature. The four varieties of tuberous-rooted lilies also grow in wild land as persistently as in the garden. The most fragrant lemon, or golden, day lily never grows better than in "wilderness" corners, and the less-esteemed orange, or red, day lily makes haste to overgrow its borders. The blue day lily threads its roots through the sandiest and most gravelly soil; and even the white day lily, with its imposing, tropical-looking green leaves, takes kindly to the "wilderness." Many of the perennial phloxes are perfectly able to take care of themselves; so, too, are the blue, white and pink single larkspurs.

WILD PHLOX IS UNRIVALED FOR SHADY SPOTS IN THE HOME GARDEN

That is only a beginning of the list, which you can increase almost unerringly by choosing the hardiest and most persistent of perennials.

The interest of the thing, the excitement and triumph, is in discovering "wilderness" traits in some hitherto untended flower, in finding that some queen of the garden is pleased to reign as a gypsy queen. The bulbs and the lilies are of the spring and early summer, but the beautiful purple and lavender and white asters come into bloom in August and September; so all through the season you can be sure of one or another effect of color and growth. Ferns of all sorts, from the lady fern to the tall ostrich fern, are in place in the wild garden, but they must have the shadiest and most secluded places.

The important thing is to look upon the outlying corners, not as gardens for the care of which you are responsible, but as thickets, or as playgrounds of nature, where all sorts of experiments may be made and failures do not count, where the plant and not the gardener is the lawgiver, where seed may be sown broadcast and without limit, where neglect is the rule and success the unearned reward.

THE BEDTIME BUGBEAR

SITTING in front of the open fire, Mr. and Mrs. Creswell were chatting with their neighbor, Mr. Warthin. At the other end of the room a boy and a girl were playing dominoes. Mrs. Creswell looked toward them frequently as if she were watching the progress of the game.

"It's ten minutes to eight, children," she finally announced.

"All right, mother," answered the girl to the sound of shuffling dominoes.

"You'll have time for one more game, but only one more to-night," Mrs. Creswell added quietly.

It was two or three minutes after eight when the boy exclaimed, "I won the rubber, mother!"

Without further discussion the children put away the dominoes, said good night, and started upstairs amicably discussing the game.

"Do your children always go to bed as pleasantly as that?" asked Mr. Warthin.

"Usually, if I am wise enough to do my part," answered Mrs. Creswell.

"Your part? What did you have to do with it?"

"Didn't you hear me tell them when it was ten minutes to eight?"

"Yes, but —"

"That was my ounce of prevention to save a pound of cure."

"I don't see yet," said the mystified neighbor.

"Haven't you noticed," suggested Mr. Creswell, who was proud of his wife's methods, "that it is human nature to be an Oliver Twist? If we like a thing, we always 'want more,' and make a fuss if we can't have a second helping."

"Children are pretty sure to make the fuss," said Mrs. Creswell, "unless they are prepared for the worst. I have learned to watch the clock and to warn the children of any approaching unpleasantness like bedtime. I haven't forgotten how I hated to be dragged off in the midst of an entertaining story or game when I wasn't at all sleepy. I try to tell my children when the 'once more' will be the last. That prepares them, and usually—although of course not always—they go pleasantly, as they did to-night."

"That sounds like good sense," said Mr. Warthin to himself. "I wonder if there's really anything in it."

The next night a small sample of bedlam let loose in his own home compelled him to think of the matter again.

"I told you children at eight o'clock to put your playthings right away and go straight to bed, and it's nearly half past now," Mrs. Warthin's voice was nervous and full of irritation.

"Just let me finish this one dress, mother!" pleaded Lucy. "It won't take but a minute." She hastily spread with paste the pink-tissue ruffle for a paper doll's dress.

"No, you ought to be in bed and asleep this minute," As Mrs. Warthin spoke, she put out her hand and disarranged the irregular blocks in front of Belle.

"There, you've muddled my picture puzzle all up!" cried Belle. "I had it almost done, too!"

The mother paid no attention to the protest, but tumbled the blocks into the box. Reaching forcibly hands toward Lucy's pink treasure, she insisted upon taking immediate possession of it.

Lucy sullenly handed over the unfinished garment, and slipped slowly out of her chair, banging boxes and scissors noisily.

Mrs. Warthin hurried

the little girls upstairs. Lucy whimpered all the way and brought her foot down on each step with a stamp. Belle cried at the top of her voice, wailing between sobs, "I didn't want my picture puzzle spoiled! I didn't want my picture puzzle spoiled!"

"The hardest thing I do all day is to get those children to bed!" exclaimed Mrs. Warthin, as she returned to the sitting room and dropped wearily into a chair. "They are never ready when the time comes, and I always have to drag them off by main strength. If I didn't say a word about going to bed until ten o'clock, they would always want to sit up just a little longer."

Then Mr. Warthin told her about the method of dealing with the problem that he had seen their neighbors employ.

"That sounds as if it might be a sensible plan," said the perplexed mother. "I'm going to try it to-morrow."

DOES IT PAY TO MEND?

THREE years ago a woman who was addicted to overcareful and continual darnings and patchings of her clothes began to realize that instead of being thrifty she was probably wasting time. Like many other women, once she began to mend she never knew when to stop, for a misguided conscience nagged her into going on and on as long as there was a hole or a thin place in sight. The idea came to her of trying to copy the methods of the efficiency experts. She decided, therefore, to "standardize" her mending.

First, she made a list of the garments in common use that needed most frequent repairing; then she estimated the length of time each article could be worn without need of repair, and the average yearly cost. Following is a copy of the list, revised after three years' experience; but as no two women's experiences would furnish statistics that would be exactly alike, the list is given merely for illustration:

Garments in Common Use	Original Cost	Length of Wear	Average Yearly Cost
Apron, kitchen overall	\$.60	18 mos.	\$.40
Apron, "tea"	.50	24 "	.25
Combination garment, muslin	.50	8 "	.75
Corsets	3.50	12 "	3.50
House dress, wash	5.00	12 "	5.00
Kimono	2.50	24 "	1.25
Nightgown, muslin	1.00	8 "	1.50
Nightgown, flannelette	1.50	8 "	2.25
Petticoat, muslin	1.00	12 "	1.00
Stockings, lisle or balbriggan	.35	1 "	4.20
Stockings, cashmere	.50	1 "	6.00
Union suit, summer	.50	6 "	1.00
Union suit, winter	2.00	6 "	4.00
Waist, lingerie	1.50	6 "	3.00

As a guide to mending, such a list will serve in the following way: You will see that the "life expectancy," so to speak, of a kitchen apron is eighteen months, and its average yearly cost is forty cents. If by one hour of mending you can lengthen the life of the apron six months, you have spent the hour well, provided that you could not earn more during the time by doing something else. But if by an hour of mending you can lengthen the life of the apron only one month, even if you estimate your time as worth only six cents an hour, you are paying more for the apron than it cost in the first place.

It may sometimes be necessary to take that course, just as it is sometimes necessary to borrow money at a high rate of interest, but it is false economy to do it unless there is no other way.

MARTYNIAS FOR PICKLES

SOME catalogues class the martynia among the flowers, others put it among the vegetables. It is quite at home in either place, for its gloxinia-like blossoms are very delicate and pretty, and the fruit into which they turn is unsurpassed for pickles. Comparatively few people know the martynia at all, and most of those who are familiar with it grow it for its floral beauty alone; they are not aware of what good pickles it makes. Yet it is easier to grow than the cucumber, and will thrive anywhere.

Of late years it has been almost impossible to grow cucumbers in some regions because of the blight; but with the martynia to fall back upon no one need be without pickles, for no diseases or pests seem to bother the plant—an immunity that is perhaps owing to the fact that it gives off rather an unpleasant odor when touched. The fruit has an odd-shaped hook at one end; in South America, where the plant grows wild, the hook catches into the hair of passing animals, which thus help to distribute the seeds.

The martynia fruit cannot be eaten raw, as cucumbers are, but can be preserved for pickles in exactly the same way. Choose specimens from one half to three quarters grown and wash them thoroughly before you use them. The seeds, which cost only five cents a package,

may be sown in the open ground in April. When the seedlings are well started, transplant them so that the plants stand two feet apart. Half a dozen martynias set in the flower garden will add to the beauty of your floral display, and after the flowers are gone you can pull the plants up. Two dozen martynias in the vegetable garden should bear sufficient fruit to supply the average family with all the pickles it can use.

BROWNIES

BROWNIES make pleasing favors for children's parties, because at the feast the children can eat them with enjoyment and with no ill effects. For each brownie you will need two large and two small almonds, two figs, eight raisins and one marshmallow, with four pieces of fine, stiff wire, and two pieces of stiff cardboard two and one half inches square, covered with brown crepe paper.

To make the base, put two of the wires through one piece of cardboard and turn back the ends; glue the other cardboard to the back of the first.

Push each of the wires through the large end of an almond, and string two raisins on each wire; that makes the legs and feet. Cut a fig in two so that the piece nearest the stem shall be one third the size of the other. Push the two wires through the larger piece with the cut edge uppermost; then pull on a whole fig.

Make the arms by fastening a small almond to the end of each of the other two wires, and then running each wire through two raisins. Join the two arms to the shoulders with the wires, and run them up through the fig so that the free ends shall come well toward the centre. If you remember that this process is merely to place the brownie's arms properly, you will find it much easier than it sounds.

A marshmallow forms the head, and the remaining third of the fig, with the stem end up, makes the hat. With melted chocolate you can paint eyes, nose, mouth and hair on the white marshmallow.

If the brownies are to be seated, make the legs according to the directions here given for making the arms; run the wires into the cardboard, and up into the fig to fasten the body to the base. Do the rest of the work in the same way as for standing brownies. You can adjust the arms to suit your fancy, and hang a place card upon them.

A HOMEMADE BABY TENDER

A USEFUL baby tender for a child over eight months old is a strong dry-goods box four feet long, two feet deep and two feet wide. Pad the edges and the bottom, and cover the whole box with bright cretonne. Put casters under each corner, so that the box can be moved to the veranda in warm weather. For winter use nail legs a foot high to the corners. The elevation will lessen the danger from drafts, and will enable the child to look out of the window.

THE COMPANION RECEIPTS

These receipts are gathered from original sources in America and Europe, and are fully tested.

BAKED SWEET POTATOES (a Florida receipt).—Boil five good-sized sweet potatoes until they are tender. Peel and slice them lengthwise. Put into a baking dish a layer of potatoes sprinkled freely with brown sugar and a little cinnamon and dotted with butter, then another layer of potatoes, and so on until the dish is filled. Pour over all a gill of hot water. Bake the potatoes in the oven, basting them frequently until they are thoroughly cooked; then let them brown slightly.

ULJAT ISKANDARANEYYAT (Alexandrian Omelet).—Mash well in a mortar one half pound of onions and a small bundle of parsley. Squeeze out the juice. Mince fine one pound of lean mutton, season it with salt and pepper, and fry it a little with a finely cut onion. Beat twelve eggs, add the half-fried meat and the squeezed onion and parsley, and beat all the ingredients together. Put a little butter in a large frying pan, add the mixture, and bake it well on the upper shelf of the oven. The best results are obtained when the omelet covers the bottom of the frying pan to a depth of about half an inch.

BAKESTONE CAKES.—Sift together three cupsful of oatmeal and one cupful of white flour with a teaspoonful of salt and two teaspoonfuls of baking powder. Add three cupsful of scalding milk, two heaping tablespoonfuls of butter and one of sugar. Mix all the ingredients with a spoon until they form a soft dough; roll the dough into a thin sheet without touching it with your hands, cut it into cakes with a biscuit cutter, and bake them for about fifteen minutes on heated bricks over the fire. Butter and serve them very hot. They should be brown underneath, but not darker than a pale yellow on top.

BAKED ONIONS WITH LEMON JUICE.—For this novelty, the large Spanish or Bermuda onions give the best results. Peel the onions under cold water, and there will be no trouble about the eyes smarting and very little odor left on the hands. Butter a baking dish, and put four onions allow two tablespoonfuls each of lemon juice and melted butter. Add a pinch of salt and a dash of pepper to each onion and bake the whole in a hot oven, being careful not to let the onions scorch. Baste them frequently with the lemon juice and butter, and add a little more if necessary until the onions are done, which can be determined by trying them with a cooking fork.

SCOTCH COCKALEEKIE.—Cut the white part of six leeks, one stalk of celery and one onion into thin strips about an inch long. Put them into a saucepan with a tablespoonful of butter. Cook them slowly and stir them occasionally. When they have cooked about ten minutes, pour two quarts of chicken stock over them, and when the mixture reaches the boiling point skim it well. Then add a pint of potatoes cut to the size and shape of a dime, and one quarter cupful of rice. Let the whole boil until the solids are tender. Add half the breast of a fowl cut into strips. Season the soup with salt and pepper, and add prunes previously cooked, pitted and cut into small bits.

HEPATICAS THRIVE IN THE "WILDERNESS" GARDEN

Watch Over Those Little Feet!

MOTHERS: If you are ever tempted to let your children wear pointed, "fancy" shoes—never, never yield to the temptation.

For such shoes are the cause of all the foot troubles that afflict grown-ups—corns, bunions, flat feet, bent bones, callouses, ingrown nails.

Give your children roomy, healthful Educators, because they are built to "let the feet grow as they should."

Made for MEN, WOMEN, CHILDREN

Start the whole family wearing them. But note this: Not every broad toed shoe is an Educator. The EDUCATOR mark on the sole is your guarantee of the correct orthopaedic Educator shape.

Send for "Bent Bones Make Frantic Feet," a free book of foot facts by orthopaedic experts.

MUSHROOMS

WE sometimes hear the complaint that by neglecting to use the mushrooms that grow wild in the woods and the fields Americans are wasting an important food. The would-be economists tell us that it is easy to distinguish the edible from the poisonous varieties, and urge us not to despise this food supply, which, like the manna of old, comes overnight and asks only to be plucked and eaten. They sometimes attempt to show that in nutritive value a pound of mushrooms is equal to a pound of beefsteak. That is an exaggeration that the chemist easily disproves.

As a matter of fact mushrooms contain no more nourishment than any other of the green vegetables, and do contain as much or more indigestible material. Protein, which is the muscle-building and waste-repairing element of food, contains nitrogen; and so food analysts formerly assumed that they could estimate the protein content of any food by the amount of nitrogen it contained. That is how the mistake came about. Mushrooms contain, it is true, a considerable proportion of nitrogen, but so do crab shells.

Some of the nitrogenous constituents of mushrooms, furthermore, are substances related to protein, but readily converted through putrefactive changes within or without the body into active poisons. The amount of actual utilizable protein is perhaps as much as is contained in cabbage or in other greens, but scarcely more.

A good mushroom, properly cooked, is a very luscious morsel and as such is a welcome addition to the dietary. If you are absolutely sure that the variety that grows on your lawn or in the neighboring fields is of the edible kind, by all means cook it and eat it; it will do you good and start the secretion of the gastric juice by reason of its palatability. But if you have the least doubt of the innocuousness of the growth—and many poisonous kinds look attractively innocent—you had better leave it alone; the risk is too great and the possible gain in nutriment is too slight.

THINGS AS THEY ARE

"YOU know," Clotilda gave warning, "I say dreadful things sometimes."

"I think I can stand the shock," Miss Sheldon replied. "Are you wanting to say some dreadful things just now?"

"That's just it," Clotilda replied, lifting her brows perplexedly. "I never want to say dreadful things. They never sound dreadful at all to me—only to other people. I'm just trying to say things the way they are."

"That," Miss Sheldon responded, "is about the most difficult thing in life, Clotilda."

"It is?" Clotilda's voice was full of amazement. "Why, I think it's easy—if only people would let me."

"I'll let you. At least, I won't be shocked. What did you want to tell me, Clotilda?"

"Well," said Clotilda, settling into a confidential attitude, "there's Miss Raeburn. She looked so sweet, but she doesn't do anything except that everlasting crocheting—balls and dolls and such things—for church fairs, I suppose. Think of being in mountains like these and seeing nothing except work! She never goes on any trip anywhere."

Clotilda paused a second for Miss Sheldon to make some comment, but no comment came, and so she went on to the next thing:

"Then there's Beatrice Pemberton—I heard that she was so artistic, but the clothes she wears! Why, Miss Sheldon, they are awful. They don't match—the colors—and they don't suit her in the least. Some of them are fussy and frilly. No one could be really artistic and wear such clothes—you needn't tell me!"

"Clotilda," Miss Sheldon said, "did you ever think it would be fun to be a detective?"

"Didn't I—just!" Clotilda responded. "How did you guess, Miss Sheldon?"

"It wasn't guessing—it was suggesting. Why don't you do a little detective work for yourself—discover why Miss Raeburn sees nothing except wools and Beatrice Pemberton wears frilly clothes?"

"I wonder what's up?" Clotilda remarked reflectively to the landscape. "But I'll try—it will be fun."

Two days later Clotilda rushed in—Clotilda all penitence and humility.

"Miss Sheldon, wasn't I just horrid! Why do I jump at things so, never waiting to find out? Miss Raeburn, with that spinal trouble and never a word about it! And sending boxes and boxes of Christmas presents to poor little schools and places!"

"Did you find out why Beatrice Pemberton likes 'frilly' clothes when they don't suit her?"

"She doesn't—she hates them. She wears them because a cousin sends them to her, and she's putting a little sister through college. Miss Sheldon, I feel just about one inch high."

Miss Sheldon smiled—it was a smile that was full of understanding, and it comforted Clotilda.

SAXON "SIX"

A Car Whose Quality Lifts It Above The Level of Its Price

Though priced at \$865 Saxon "Six" has forced—actually compelled—people to think of it in the terms of costly cars.

Such a situation is unprecedented.

No other car we know of has ever accomplished this feat.

Can you think of any car in any other price class whose superiority is as distinct and pronounced as that of Saxon "Six" among cars costing less than \$1200?

The answer of course is in the motor—the famous Saxon "Six" high-speed motor.

Its performance today is probably as nearly perfect as has ever been attained.

In high-gear work, in pulling power, in smoothness, in flexibility, Saxon "Six" gives a performance that seems incredible in a car from the less-than-\$1200 class.

Saxon "Six" is \$865; "Six" Sedan, \$1250; "Four" Roadster, \$495; f. o. b. Detroit. Canadian prices: "Six" Touring Car, \$1175; "Six" Sedan, \$1675; "Four" Roadster, \$665. Price of special export models: "Six," \$915; "Four," \$495; f. o. b. Detroit.

(927)

SAXON MOTOR CAR CORPORATION, DETROIT

Did You Know There Are Many Kinds of Peanuts?

THERE are big fellows called Virginia Peanuts, which are very rich. The small peanuts, the ones that have such a "give-me-more" taste, are called Spanish Peanuts.

When we make Beech-Nut Peanut Butter, we mix both kinds together just right to bring out the taste that all boys and girls love.

Beech-Nut Peanut Butter is made differently from any other peanut butter. Most boys and girls like the Beech-Nut flavor better than any other. Lots of them like it better than candy.

HOW DO YOU EAT PEANUT BUTTER?

Most boys and girls love Beech-Nut Peanut Butter spread on bread, crackers or toast. Maybe you have found some new ways to eat it. If so, write us a letter about it. We would like to hear from you.

If you have never tasted Beech-Nut Peanut Butter, ask your mother to get you a jar today.

BEECH-NUT PACKING COMPANY, CANAJOHARIE, N. Y.

BIG FOUR \$850
LIGHT FOUR \$665
F.O.B. TOLEDO

Is this your family, having the time of their lives in one of those beautiful Overlands — something to look forward to every day of the year?

Or is this your family, limited to long rides in stuffy, hot trolley cars and listless conversation? How about getting an Overland?

This is the life—

There are two ways to live nowadays.

One way is the life that is daily chock full of healthy activity, wholesome fun and lots of fresh air.

This way is shown above.

This manner of living gives your family every modern opportunity to better health, better sport, a broader mentality and a more highly developed point of view.

To enjoy life on this basis—to get all there is to be had and all that you should have; to look forward to each day with a keener interest and anticipation; to miss nothing—get an Overland.

For there is a quality car in the Overland line for every class of buyer.

And each car is bigger value because it has shared proportionately in the greater economies of our larger production.

The tremendous factories and facilities of the great Overland industry permit us to offer cars of unusual efficiency, style, comfort and power at remarkably reasonable prices.

There is an Overland for you and yours. Pick it out today—and tomorrow introduce your family to the new order of things—the bigger life made possible by the economical Overland.

The smaller picture tells the other side of the story—the other way some live—the wrong way.

This pictures the more narrow and cramped life, with trolley car outings for the big event of the week.

It's wrong. It's not fair to your children—your wife—or yourself.

—this is not

enormous economies thus effected.

The new Overland models are beauties.

Easy to handle—anyone in your family can learn to drive in no time. They have abundant power; beautiful lines; lots of room, comfort and style and are backed by the greatest motor car institution in America.

See the nearest Overland dealer and take a look today.

Stop living the wrong way.

Get a car—an Overland—and over night all this is changed. It will add years to your life and rejuvenate your family.

The Overland is "everyone's" car today. Some one of the beautiful models you can easily afford. It's not an expense. It's a downright economy.

One executive organization—one factory management—one purchasing unit—one sales management—one dealer organization produce and sell the entire line. Each model shares the

of your car.
disastrously skidding
on the slippery turn ahead—

You have neglected to put on Weed Chains.
You anxiously view the slippery turn ahead
and have a *mental picture of your car skidding
into the school children.*

Stop nursing anxiety and coaxing calamity. For
Safety's sake—for your own peace of mind fully
equip your car today with

Weed Anti-Skid Chains

The Only Real Safeguard Against Skidding

Safety demands that all tires be
equipped with Weed Chains. It
doesn't require the gift of second
sight to see why this is true. **Rub-
ber slips—never grips.** Rubber
will agree to anything the road has
to offer. It is the weaker element.
It slides on wet pavements like a
cake of soap rubbed on the moist-
ened hands. Rubber lacks the
bite-and-hang-on ability to prevent
skidding.

Weed Chains are diamond hard—
many times harder than their op-
posing element—the pavement or
road. Wheels equipped with Weed
Chains automatically lay their own
traction surface. They grip without
grinding—hold without binding.
**No matter how muddy or icy the
road, they hold on** like a bull-dog, pre-
vent side-skid and
drive-slip.

There's a Gold Mine In Your Back Yard

Boys, do you know what vegetables will
bring? If you have room for a garden, you can
grow all your pocket money and a tidy sum
beside. A good garden is a little gold mine.
All you need is enough gumption to go at it
and pluck to stick to it. But, first of all, learn
this great lesson about living things. Fine,
vigorous plants are not accidental, they usually
spring from vigorous ancestors; seeds of un-
known pedigree are uncertain in result.

FERRY'S SEEDS

are pedigreed seeds, they come from true, vigorous
plants. Ferry's seed-corn, tomato seed, radish
seed, carrot seed, in fact Ferry's Seeds of all
kinds, are selected from chosen plants and
tested in Ferry's trial gardens and should
grow vegetables of the finest quality and
size. Doubtful seeds are dear at any price.

Ferry's Seeds are sold by dealers every-
where. Drop us a postal for our free
Seed Annual.

in repair. And compared with anything that he had ever known, the salary was munificent; it would make his family truly comfortable.

At Reuben's suggestion he moved into South Hollow, so that he could be near his work. He found a pleasant little house opposite the grammar school, and there he established his family before the opening of the schools in September.

A new life seemed to have dawned for them. Coming into another district was to them like moving into the village as strangers. Rusty insisted upon new clothes for her mother, and even induced her to go to church and to the store and, after much persuasion, to return the visits of neighbors.

But Rusty's own contentment was threatened. The question of her return

to Miss Penny's for the school year came up. Miss Penny declared that she needed her and could not do without her; and the girl herself was determined to go back. But her mother pleaded that her own home was now quite as near the academy as Miss Penny's; and her father declared he guessed he could support his daughter—the only one he had left. And then he sighed and a shadow clouded his wife's brow.

They had both believed when Anna had left home that her running away had been due to sheer wickedness. In the light of the new conditions they realized how barren the old life must have been to a girl of Anna's lively temperament, and they felt that she had not been so much to blame, after all.

But now that they were in their new home, they could not understand why Rusty should think of going to Miss Penny's. Rusty herself felt secretly that she had a right to choose. She had stayed at home summers and weekends and had put things into such good running order that her family could do without her perfectly well. Being so near, she could drop in every day, and if they insisted she could continue to come home to stay over Sunday. She could not help preferring to live at Miss Penny's; she told herself that during her last year at the academy she ought to have the quieter home, where she could study to better advantage. She certainly should never get that scholarship away from Mabel Graham if she stayed at home.

As it came about, the question was settled in a quite unforeseen manner. And although Rusty never knew it, it was she herself that set in motion the forces that brought about the decision.

Just before they moved into the new house she went over to Wenham one afternoon to do some shopping, with more money in her pocket-book than she had ever had there before. She bought a hat to go with her mother's new suit, shirts for her father, blouses and ties for the boys and curtains for the front room.

For herself she had only shoes to buy. The cousin in New York continued to supply her with other clothes. Rusty had lately written at her father's behest that in view of their improved circumstances she need not send anything more; but the cousin had answered that the sending of the box three times a year gave her so much pleasure that she begged to be allowed to continue as usual.

When she had made all her other purchases, Rusty sought the shoe department of the store,

large shop of Wenham. As she was passing through the section where drapery was sold, she noticed a piece of shimmering silk. It was soft and lustrous, and of a beautiful shade of creamy yellow, between opal and fawn color. Rusty stopped spellbound before it.

Taking an end of the silk, she held it surreptitiously against her face and glanced in the mirror opposite. It was truly becoming.

"Two dollars and a quarter a yard, madam, and a yard wide," said the clerk. "And you know nineteen or twenty inches is the usual width of silk."

Rusty fairly gasped at the price; but the address "madam" steadied her, and she remarked casually that it seemed to be a good firm piece.

"Can't I sell you a dress pattern?" urged the clerk.

"With low neck and short sleeves and such wide material it wouldn't take much to make a handsome evening dress for such a slim young lady as you."

"Oh, no, thank you, not to-day!" said Rusty hastily, and passed on.

Low neck and short sleeves! An evening gown! On a sudden Rusty's old longing to go to parties, to be vivacious, rushed over her overwhelmingly. She had never in her life had a really festive gown.

Thus preoccupied, she gave only perfunctory attention to purchasing the shoes, and at last decided on a pair of pumps, although she knew that she ought to buy boots; but she told herself that pumps were cheaper as well as prettier, and that she should buy boots later with her own money that she should earn at Miss Penny's. She was certainly going back to Miss Penny's; she did not care what anyone said! She had to go back, because of the scholarship. From the scholarship her mind darted back to the yellow silk.

If she should get the scholarship and go to college in another year, she should have to have an evening dress. She decided in that event to get just this kind of silk and exactly this shade. She had a vision of herself receiving the prize on graduation day and rushing over here the next morning to buy the silk. The clerk handed her the change, but she did not count it, for a terrible thought had flashed into her mind. She should reach the silk counter on that morning after graduation only to find the silk gone—"sold out long ago, madam." Of course beautiful stuff like that, a yard wide, would be sold within a fortnight. She went back to look at it again, half hoping that it might not look so attractive; but it seemed only the more enchanting.

"It seems just your color, doesn't it?" said the clerk.

"How much—do you suppose five yards would make a dress?" Rusty inquired.

"Well, now, let me see. No sleeves at all—waist draped so—you might just make out. But skirts are to be fuller this fall, and a dress like this you'd wear forever, almost. I should advise six yards myself."

"How do you do, Rusty?" said a voice behind her. Rusty turned to see Mabel Graham.

"Oh, hello, Mabel!" she said coldly.

"Coming back to school?"

"Pa wants me to," said Mabel, "and my aunt and uncle enjoy a young person about the house; so I suppose I shall. And then, being so far ahead on the scholarship, it wouldn't be

SHE SPOKE SO SHARPLY THAT A COMMERCIAL TRAVELER WHO WAS GOING THROUGH THE STORE STOPPED

hardly fair to back out now. I don't believe Mr. Phillips or Miss Gilbert would like it."

"I dare say," remarked Rusty loftily, and turned to the counter.

"Pretty silk," Mabel remarked. "But, my! isn't it dear? Two dollars and a quarter a yard! Maybe you're only looking for samples? I know a girl that's made one of those silk quilts with little puffed squares stuffed with cotton wool and sachet powder just out of samples."

"I don't go in for that sort of thing, thank you, Mabel," Rusty answered. Then, turning to the clerk, she said grandly, "Give me six yards, please."

Mabel's eyes seemed to start from her head. "Why, Rusty Miller!" she exclaimed.

She spoke so sharply that a commercial traveler who was going through the store stopped and looked at the two girls—the one slim, intense, with a sort of poised look about her; the other large and stolid.

"Is there any reason why I shouldn't have an evening dress, Mabel?" Rusty demanded.

"Oh, no, Rusty, of course not, if you can afford it," Mabel admitted, edging back, "though I shouldn't suppose your father could pay that much a yard for silk, working in a shop. But like as not you saved it yourself. Miss Penny must pay pretty good wages, for Reuben Cartwright dresses like a dude."

"I don't have to spend my earnings for clothes; I use them for pin money," responded Rusty with a superior air, although she did not know exactly what pin money meant. "My father is anxious for me to have what I want, and I shall need an evening dress for college."

The last words were scarcely out of her mouth when she regretted them; but she could not take them back.

"Why, Rusty Miller!" Mabel exclaimed, shocked almost beyond expression. "If you haven't got cheek, talking about college in that grand way! Is your pa going to send you?"

During the long walk home Rusty had the grace to be ashamed of this altercation with a schoolmate in a public place. She seemed to have a vague vision of a stout man with a hand satchel looking on with twinkling eyes. Mabel had begun it, indeed, but Rusty realized that she ought not to have allowed herself to be drawn into it, and of all things she should not have bragged about going to college.

But long before she had reached home she had forgotten that in the feeling of blank depression that had suddenly seized upon her. Something very heavy seemed to be dragging her down. It could not be about the silk. Her

heart should be light about that; for really she had got a bargain, and if she went to college she should be that much in; and then, having it, she would certainly try much harder for the scholarship. She even decided that she would try her level best every single day; and if she did that everyone said she could beat Mabel. Besides, in a sense it was not her father's money that she had spent. She had bought her own shoes and stockings and gloves with the money that she got from Miss Penny. She had been wholly within her rights when she was shopping for the family to spend thirteen dollars and a half for herself.

Thirteen dollars and fifty cents! It seemed to her an enormous sum. And, she asked herself, if she felt wholly justified about the purchase, why was she not ready to show it at home? She was carrying this package instead of having it sent with the others, and she had not once thought of showing it to her mother; indeed, she had already prepared a speech about spending thirteen dollars and a half for things she needed, and she hoped her father would misinterpret her words.

Should she show Reuben the dress? Reuben would like the color; he was very observant for a boy. Still, he would not understand. Being so old and sedate, he would not dream of a girl, a country girl,—when all was said, a red-haired country girl,—wanting a party dress for no good reason, and spending enough on it to get her father a winter overcoat or a stove for the sitting room of the new house.

No, Reuben should not see it until she wore it, and goodness only knew when that would be. She did not know how she should ever get the dress made, and after that it would take a

great deal of courage to "spring it" on people. As she kicked open the gate, Rusty wished that she had not bought the stuff at all. If it had not been for that hateful Mabel Graham, she believed she never should have done so.

Her mother met her at the door with smiling face. It was a new experience to see Mrs. Miller eager about anything. Rusty's heart sank.

"O Rusty, did you get my hat?" she cried. "And what's in your bundle?"

"Yes, mother, I found a beauty with just a touch of blue. It will come to-morrow, and—oh, this is a secret. You'll know sometime!" Rusty answered, trying to smile mysteriously, but failing dismally; for even as she spoke, she realized that she was trying to deceive her mother.

"Poor child, you're all tired out!" said her mother, as Rusty threw down her hat. "Didn't you get a lift?"

"Not coming back. But I rode all the way over from the bridge. I'll come down in just a few minutes and tell you about the things."

She went to her room and hid the box between some comfortables on the shelf of the clothespress. Then she sat down on the edge of the bed and stared before her in dumb misery, forgetful of all else until she was startled by the call to supper.

Two days followed, two days of wretchedness. On the third day Rusty made a secret journey to Wenham, carrying the silk; but she returned with it, for the people at the store would not take the purchase back. When Rusty went to bed that night, she almost felt that she should never rise from it again. It really seemed to her as if her heart were broken.

TO BE CONTINUED.

UNCLE NATE'S BEARS

By Charles A. Hoyt

In Two Parts

Part Two

WHEN the Batchums crawled under the fence and took a short cut across the field to the village road, Uncle Nate was several rods behind them. Leaning on the top rail, he sadly watched them pass out of sight; then he wearily shouldered his wet robe and trudged on toward his house.

His cows all stood at the bars, bawling, pawing the dirt and horn-ing the ground. When they saw the robe their eyes bulged and they trembled. Two tried to jump the bars, broke them down and ran to the stable. The rest pushed through the opening; some circled the barn-yard, and three dashed through the little gate and over Aunt Marilla's flower beds.

Uncle Nate was disgusted. Even the cows mistook him for a bear. He dropped the robe behind a big stone, and after much running got the excited beasts into the barn and started to milk them. Usually Uncle Nate had no trouble with them, but that night he received three or four kicks, and lost part of a pail of milk.

Aunt Marilla, who had just returned from the quilting bee, had supper ready when he came in.

"Well, of all the sights!" she exclaimed. "Go right up and change them clothes! Hurry now, because I've got a pandowdy for supper, and it'll get soggy if it sets."

As Uncle Nate changed his clothes there was a ray of hope in his heart. Perhaps the Batchums would keep their mouths shut about the affair; perhaps shame that the children had been caught stealing berries would seal the uncles' lips. The more he thought about the matter the brighter the outlook seemed to him. Indeed, at supper he was very cheerful, and ate fully half of the pandowdy, joked Aunt Marilla about the "hen party," and otherwise conducted himself in his usual manner. When he pushed away his empty plate and leaned back in his chair, Aunt Marilla, out of the fullness of her experience, knew that the time had come to find out things.

"I saw them Batchums when they come up this way, and I saw 'em when they come back," she said calmly. "They stopped in to Mis' Beman's—where the quiltin' was—and told the whole thing."

Uncle Nate's jaw dropped. The worst had happened! More people knew the bear story already than if it had been printed in the Gazette.

Aunt Marilla laughed. "I was mad," she said; "but I couldn't help laughin' after all. What if some one had been up there huntin' and had shot ye? There's most allus some one foolin' round those woods with a gun."

Nervously wiping his brow, Uncle Nate hurried to explain; but he unwisely neglected to mention the robe.

"Let's see," Aunt Marilla said, eying him

DRAWN BY F. STROTHMANN

CLOSING HIS LIPS IN A HARD LINE, HE LOOKED ROUND FOR THE VERDICT

narrowly. "They said something about a robe. What were ye doin' with a robe, I'd —"

"Yes," he said hastily, "I had it along, plannin' to scare the little tikes out of there."

"Well," she said, after a moment, "I ain't never caught ye lyin' to me yet, and I don't b'lieve you'll begin now. The Batchums told the whole thing to all them women down to the quiltin', and they don't think there's any bears up there at all. Of all the screechin' and laughin' you ever heard —"

Uncle Nate got up and went out to the barn. His heart was full. Aunt Marilla's surprising lack of interest when he told of his desperate encounter with the bear showed only too plainly that she accepted his story with some mental reservations.

The next day was Uncle Nate's day for going down to the creamery at the village. Although he admitted to Aunt Marilla that he dreaded the trip, he hitched old Bill up and set out bravely. As he passed the bank building the members of the Watch Traders' Exchange were all in their accustomed places. They hailed him loudly.

"Hi, there!"

"Wait a minute; your ticket gives you a stop-over, don't it?"

"It's against the law to drive a hoss more'n twelve hours without feed or water!"

Those and other remarks stopped him. George Kibbee cleared his throat with a

fearful growl. "My throat's all closed up this mornin'!" he said.

Uncle Nate flushed slightly. "Looks as if it would thaw before noon," he remarked, wiping his face with a red cotton handkerchief.

Grandad Marsh winked at Jed Chamberlain. "What kind of an animal ye goin' to be next time?" he inquired. "You can't fool 'em but once with the same critter."

"It would be less trouble if you was to git some of these big Teddy bears the kids have," Bert Howieson declared, "and stand 'em round up there in the berry patch."

Uncle Nate knew better than to lose his temper.

"Oh, there's bears enough up there," he said easily. "You don't need any stuffed ones. One of these days they'll stuff themselves on some of these kids round here."

"Come over and set in the shade, Nate, and tell us all about it," said John Bridgeman. "There's so many stories goin' round we don't know what to b'lieve."

Uncle Nate climbed heavily over the wheel and sat down on a bench. The drenching in the brook and his exertions of the day before had left him rather stiff.

"I see that whole passel of kids goin' into the berry patch," he began, "and I went up there, figgerin' on runnin' of 'em out for fear of their gettin' into trouble, when what should I do but blunder right onto the old bear and her two cubs that's been stayin' up there all summer. The bank caved off with me and I fell right down amongst 'em!"

"I vow, I never heard of bears runnin' a bank before!" drawled Bert. "You made a sort of a run on 'em then, did ye?"

Uncle Nate went on impatiently: "The old one grabbed at my back, but didn't get a good holt, and pulled —"

"The robe off yer back?" asked Grandad Marsh, while the others chuckled.

George Kibbee slapped his knee. "I got a plush robe you can have, Nate; it's got one of these yaller tigers with his mouth wide open wove in the linin'."

Uncle Nate turned a fiery red. "She pulled my co't off!" he said firmly. "And I clumb a

he got along very well until he arrived at the creamery. There, however, he received a hilarious greeting.

"Hello, Nate!" one of the men called, with a silly grin. "How's the bears?"

Jim Shepard dragged Uncle Nate's can inside and weighed it. "Barely sixty pounds!" he said, with a snicker.

They all guffawed.

Uncle Nate hopped into his wagon with his empty can without waiting for any buttermilk.

"Hee!" called Jim Shepard. "Don't you want any swill? Has the bears et up all your pigs?"

Uncle Nate did not stop and did not trust himself to speak; he merely waved his hand, with his face set straight ahead. No one else hailed him, but everyone smiled as he passed. Although he had several errands at various places, he went directly home. Aunt Marilla had to come down later and do her own errands.

"I declare for't," said she, when she got home again, "I never see such a place! The whole village is yellin' and laughin' over that fool business! Everywhere I went it was just the same. I shan't go near the place again for a month."

Aunt Marilla kept her word. Uncle Nate, however, had to go to the village frequently on various matters of business; and each time he had to run the gantlet of hilarious growls from boys on the street, tiresome bantering from his friends of the Watch Traders' Exchange and gibes in general from everyone in sight.

By the time winter set in, however, the joke had been partly forgotten and partly worn out, for Uncle Nate was always careful not to show temper, and tried to give his tormentors as good as they sent. By spring his trips to the village were usually peaceful.

When Uncle Nate saw the first crow, he thought of his maple orchard in the back pasture. It was time to get the sugar tools ready for the spring run of sap. The next morning he hitched his team of Morgan colts to the bobsled and by noon had broken out the road to the sugarhouse.

He drove round on the south side of the building, where it was warm in the sun, tied the horses to a sapling and gave them their dinner. The wooden ox sled, with the large tub that he used for gathering sap bolted to it, stood beside the house close to the horses, almost completely covered by a huge drift of snow. The tub was round, perhaps four feet across the top, and five feet high; it was strongly made, and the top was covered, except for a hole about eighteen inches square in the centre. The heavy cover that fitted over the hole and that kept the sap from spilling out as the rig was drawn along the rough roads through the woods was leaning against the wall inside the sugarhouse.

The colts were eating quietly enough, when suddenly they began to tremble and to snort. Uncle Nate ran out of the sugarhouse, where he was eating his own dinner, and caught their heads. They were looking toward the sap tub and sniffing at it. When he had tied them to another tree he went to the tub to investigate. From the opening in the top, half covered with snow, a faint curl of steam was rising; and as he leaned forward he caught a strong odor of animals.

The truth burst upon him! His troublesome bears had made their winter nest and had hibernated in his gathering tub! Peering cautiously into the tub, he could see a

mass of grass and weeds that the beasts had carried in, but nothing else. A grin of delight spread over his face, and running into the sugarhouse, he brought out the cover and quickly fastened it into place.

After boring some holes in it with a bit to give the captives air, he dug the snow away from the sled and hitched on the colts. They were very nervous, but he got home without accident, and backed the sled under the barn. Muffled growls came from inside the tub, but otherwise everything was quiet.

Uncle Nate did not say a word to anyone about his catch, not even to Aunt Marilla; but he smiled and chuckled so many times at the supper table that finally she asked:

"What you grinnin' like a Cheesy cat for, anyway?"

Uncle Nate, remembering her skeptical attitude when he had most needed her sympathy, had decided to tell her nothing at present; but every time he thought of the surprise he would spring on Grandad Marsh, George Kibbee, John Bridgeman and all the rest of the crew who had been making his life miserable, he chuckled aloud. He would hire a strong box stall in the livery stable—that was what he would do! He would dump his bears into it, and then call the whole outfit to come and look them over. They should see who laughed best then!

The next day was town-meeting day, and clear and warm. Uncle Nate did his chores

tree! All three of 'em took to the brush, and in a few minutes they tackled the kids; and that's all they be of it."

Closing his lips in a hard line, he looked round for the verdict.

"Long when I was twenty year old and upwards," said grandad, "I usta go up in the north woods in Maine every winter, loggin'. They usta be lots of them black bears up there, gritty little tarnals they was, too. You say this one took jest one bite at ye?"

"Yes," said Nate eagerly, hoping that here was some corroboration to his story. "Jest one grab in the middle of my back."

"An old she-bear with cubs," grandad went on meditatively. "Had ye down, took jest one bite at ye, didn't leave any marks on ye, and then let ye go!" He got up, walked away a few steps, and then came back. "All I got to say is—if any bear I ever see hed me in 'er mouth like you tell, I shouldn't be here tellin' of it."

Uncle Nate's breath grew short, and he had to blow his nose violently to keep tears of rage from running down his cheeks. "Well, I got to d'liver that cream before it sours out there in the hot sun," he said in an even voice, as he got up. Climbing into the wagon, he woke the old horse and pulled on the lines. As he moved off he sent one parting shot at the enemy: "All I got to say is—the tracks is up there in the mud for anyone to see that wants to go up there and look."

Only a few persons were on the street; so

A BEAUTIFUL CORNER OF THE ARBORETUM IN EARLY SPRING

A STRANGER MIGHT WELL BELIEVE THAT HE WAS IN A BIT OF NATIVE NEW ENGLAND

A GARDEN OF TREES

By Charles S. Sargent
Director of the Arnold Arboretum

IN order to increase the general knowledge about trees and thus to stimulate love for them, Harvard University about forty years ago established a garden. The gift of a substantial sum of money by the will of a New Bedford merchant, James Arnold, made the garden possible. The Arnold Arboretum, as it is called, is the only scientific garden in the world exclusively devoted to trees; it is a department of Harvard University and is situated in Jamaica Plain and West Roxbury, suburbs of Boston.

The university made an agreement with the City of Boston, whereby the city agreed to add certain parcels of land necessary for the proper development of the garden, to build and maintain the roads and paths needed to make it accessible to the public, to protect it by its police, and to assume all taxes that might be laid on the property during the life of the contract, which was made for a thousand years. In return the university agreed that the Arboretum should be open to the public from sunrise to sunset for a thousand years.

Here, then, is a garden controlled by a great university, with a life of at least ten centuries assured to it in its present location. Such a term of life offers unprecedented opportunities for making the garden complete and useful. What those centuries may bring to the garden no one can foretell, but it is safe to predict that under the direction of the university it will be wisely managed.

In the short period that has passed since the Arboretum was established, its directors have been engaged in gathering information about trees, in collecting, raising and planting trees and shrubs, in forming a library of books, in establishing a herbarium of dried specimens of woody plants, and in publishing the results of the investigations and explorations of its members.

From its earliest days the Arboretum has been active in exploration. In gathering material and information its officers and agents have traveled over much of the surface of the earth. North America was the first field for explorers from the Arboretum; then Japan, China and eastern Siberia, for in eastern Asia grow the greatest number of the exotic trees and shrubs that may be expected to prove useful in the parks, gardens and forests of our northeastern states. The explorations in some of the least-known parts of China, on the borders of Tibet, were especially successful, for they gave to the gardens of America and Europe many beautiful trees and other plants.

The Arboretum as now organized consists of a museum of living trees and shrubs and a laboratory of research. Under the terms of the will of James Arnold the university must grow a specimen of every tree and shrub that will thrive in the climate of Massachusetts. That condition made necessary the explorations that the Arboretum has undertaken; for at the time the garden was established comparatively little

was known about the trees even of the United States. Only a few plants had then reached the United States and Europe from Japan, northern China and Siberia, and no botanist had penetrated the mountain wilderness of western China, which we now know possesses a flora richer in the number and variety of its trees and its shrubs than any other region outside the tropics.

The museum of living plants occupies two hundred and twenty acres of meadow, hill and valley. The trees in this outdoor museum are arranged by groups of species,—genera,—and the genera, as far as it has been found practicable, have been planted according to their botanical relationships into larger groups called families. The student therefore finds all the different forms of oak trees in one group, the maples in another, the pines in another, and so on; so that it is easy to compare related species that are able to grow in the New England climate. To show the habits of important North American trees under different conditions a number of specimens are planted close together in a group, and, at a distance great enough to allow its branches to develop freely, a single representative of the species is planted. Moreover, a member of each species of the trees in the museum stands near a drive, so that visitors, in passing along the Arboretum roads, may obtain a general idea of the groups of trees hardy in Massachusetts and of their relations to one another. Grass-covered paths give access to all parts of the garden and make it easy for the visitor to examine the collections. In no other museum of living plants are the collections arranged more conveniently for study and

observation, and in few public gardens are the plants so systematically and clearly labeled.

In this museum there is the largest collection of trees and shrubs in the United States, and perhaps the largest collection in the world of the woody plants of the north temperate zone. By the Arboretum explorations and by the exchanges that are carried on with other public institutions and with lovers of plants in all parts of the world, the collections are constantly increasing.

Beauty is a powerful influence in a garden devoted to study, for beauty—the beauty of fitness and of natural arrangement—first attracts and then holds the attention of the visitor, who, once his interest is roused, instinctively becomes a student. Fortunately, the exceptional topography of the ground makes the Arboretum, with its broad meadows, its high hills separated by narrow valleys, its Bussey Brook rippling at the base of high cliffs of rock covered by a dense growth of native hemlock trees, one of the most beautiful public gardens in the world. From the tops of its three high hills you can see Boston Harbor, the whole range of the Blue Hills and the domes and spires of Boston and Cambridge.

In arranging the museum of living plants, every effort has been made to do the work in such a way that the natural appearance of the native woods and of the individual native trees shall be as little changed as possible. A stranger driving through the Arboretum for the first time might well believe that he was in a bit of native New England and not in one of the great botanical collections of the world. That fortunate union of beauty with science is one of the characteristics that make the Boston

garden of trees different from other botanical gardens, and the one that led a foreign visitor who had seen the gardens of many countries and who had come to the Arboretum to study its collections to say, "To one who enters the Arboretum for the first time the most striking impression received is its great beauty of landscape."

To the lover of birds the Arboretum offers exceptional opportunities. Its varied natural features, combined with favorable conditions of food supply and protection, have proved very attractive to native birds. Some fifty species have bred there during the last twenty years, and only a few of them have left the Arboretum. The persistent warfare on the gypsy moth, the elm-tree beetle and other insects by spraying has doubtless had its effect in diminishing the number of birds in the garden; yet during the course of a year you can see probably as many as one hundred species.

The list includes many of our most beautiful birds of song or plumage, such as the song thrush, veery, rose-breasted grosbeak, thrasher, oriole, bluebird, wood pewee, indigo bird, redstart and several warblers. You can occasionally see the ruffed grouse, and a flock of quails has maintained its numbers for many years. The ring-necked pheasant is increasing, and late in the summer the green heron, the night heron and sometimes even the great blue heron visit the ponds. Of the rarer birds of eastern Massachusetts the yellow-breasted chat and Brewster's warbler have nested there, and the solitary mockingbird that during the summer of 1915 delighted visitors to the Arboretum with its song is still living in the garden.

In the spring and sometimes in the fall the Arboretum gives instruction about trees. It publishes a guide that leads the visitor to all the points of interest and to all the principal collections. It also issues weekly in the spring and fall bulletins that contain much information about the flowering and the ripening of the fruit of rare and other interesting plants. Those are sent to all applicants for a nominal price, which pays for the cost of printing and postage.

For the man or woman who has a garden and wishes to improve it, for the professional landscape gardener, for the nurseryman anxious to keep up with the times, and for the working gardener a weekly visit to the Arboretum from April to December is not too much if he wishes to get the greatest good from the Arboretum. There are many seasons of the year that attract to the garden the general public—the people who can admire but who do not wish to learn. When, late in May, the cherry trees of Japan are covered with pink and white flowers, or when, a few days later, the great collections of crab apples and lilacs bloom, or when, in early October, the trees and shrubs of China and Japan compete with their American rivals in the variety and splendor of their fall dress, the Garden of Trees is truly a place of supreme beauty.

PHOTOGRAPHS BY T. E. MARR

THE GREAT LILAC BLOOM IN MAY

early, and then hitched the colts to the heavy sled. Aunt Marilla was astonished.

"What on earth you haulin' that great thing down to the village for?" she asked impatiently. "I was plannin' to ride down with ye. You don't s'pose I'll ride on that thing, do ye?"

Without a word of explanation he hitched the old horse to the sleigh for her. Then, with his wife following close behind, he started down the hill.

He stopped by the watering trough in the centre of the square. The street was full of men; farmers from all over town stood on the corners and along the curb; and because his colts were fine animals, several of the men came out to look them over. After a while George Kibbee, Grandad Marsh, John Bridgeman and Bert Howieson came out of the livery-stable office.

They had not teased Uncle Nate for a long while, but the sight of their natural prey with a crowd standing round was too much for them. They went eagerly out to the horse trough.

"Gosh!" said Bert, with a wink at the crowd. "I'm glad you come to-day, Uncle Nate, to vote for puttin' a bounty on bears. They're makin' all kinds of trouble round lately."

"All right," Uncle Nate said smilingly. "I've got two or three here to c'lect on, jest as soon as it's voted."

"Good boy!" said George Kibbee. "How many ye got—a tubful?" And before Nate realized what the other was going to do, George turned the cleat that held the cover in place, lifted the cover and looked in. A fierce growl greeted him, and the muzzle of a thoroughly angry black bear was thrust into his face. With

a frightened yell, George sprang back, lost his balance, and sprawled on the ground.

The brute climbed out of the tub, stood on the top a moment blinking in the bright sunlight, and then leaped down beside him. George rolled over two or three times and scrambled to his feet; trustworthy witnesses testify that he ran the hundred yards or so to the livery stable at the speed of a college sprinter.

Bert Howieson was fat and not very swift, but everyone he bumped into agreed that he was an exceedingly strong runner, and that nothing except a brick wall would have stopped him. Grandad Marsh carried a Minié ball in his leg as a souvenir of Gettysburg and could not run; John Bridgeman had been in the same regiment, and he bravely stood by his comrade. They had their canes in both hands,

and the light of battle was in their eyes; but the fearsome beast never looked at them, and they were not called into action.

The crowd scattered in panic. Never before was seen such excitement in Hartwick! Women—including Aunt Marilla—screamed, boys ran and hooted, dogs barked, and doors were almost torn off their hinges as the shrieking crowd rushed to safety.

As Uncle Nate frantically banged the cover down in order to keep in another bear that was trying to get out, his colts gave a frightened glance behind them, and promptly showed their best speed up the road. They ran into the mill yard, broke the tongue of the sled against a log pile, snarled themselves up in the harness and fell down.

Meanwhile the bewildered bear galloped up

the street, collecting dogs at every jump, until she met an ox team dragging a load of wood. The dogs were crowding her so hard that she jumped to the top of the load to escape them.

The cattle gave a frightened bellow, ran down a bank and tipped the load over. Thrown to the ground, the harassed bear took refuge under the gristmill, where, with her back to the corner, she did the village a good service by ridding it of half a dozen worthless curs. After that, she escaped to the woods.

The populace emerged from shelter. Willing

hands helped Uncle Nate take care of his colts; even the members of the Watch Traders' Exchange came forth to lend their aid.

"Say, Nate, you got one or two of them critters left in that tub, ain't you?" asked George Kibbee in a voice that was full of respect. "What you goin' to do with 'em?"

"Well," said Uncle Nate, looking at the assembled Watch Traders with a gleam of satisfaction in his eyes, "unless some menagerie should happen to want 'em, I cal'late I'll rig up a cage close by, so's to sort o' remind you fellers that bears is bears."

a week Elsie was called to the telephone to receive a long-distance message from Uncle Harry; and although it was ostensibly to learn how the young couple were getting along, it was in reality to hear his gift extolled.

Elsie's replies were marvels of pleasant truthfulness. For four weeks she said much the same thing, praising the carvings and the finish of the table, and quoting the exclamations it drew from her friends. The fifth week she added laughingly that a certain Mrs. Trim, who lived in a big suburban house, was a covetous admirer of the table. The sixth week she spoke of Mrs. Trim again. Mrs. Trim had said that if the time ever came when the Hal Streets wished to sell that table she stood ready to buy it.

"Think of that, Uncle Harry!" added the "bunch of fluff." "Think of our selling your wedding gift as a piece of secondhand furniture!"

Two days after that, Elsie wrote a note to Uncle Harry insisting that he fulfill his promise and visit them for a few days.

"The couch bed in the living room," she wrote, "is exceptionally easy and quite broad, and you can make a convenient dressing room of the bathroom. As for my cooking—Hal's additional five pounds in the last six weeks doesn't give it a black eye, does it? We shall expect you Tuesday without fail."

—if we didn't have that, we couldn't have you! So you see how necessary that is. And then the piano—I could never get along without a piano. And Hal couldn't pass an evening without his music box. And the chairs—here's three of us now, and we must allow for at least two callers. And there's no other furniture except your beautiful, great big table!"

Uncle Harry followed the argument carefully and found that he could not dispute it. Still — Elsie, being supple and slender, dodged and bent her cheerful way to the front windows. "Over here, uncle," she explained, "we have put the easiest chair for you, where you can watch the street."

Uncle Harry made a gallant effort to reach the easiest chair, but he was neither supple nor slender. He required margins of space for his movements, and there were no margins of space in the little room. He hit his knee a resounding whack on the first dragon's head and, smothering a groan, tried to wedge his bulk between the table and a chair; but neither piece of furniture yielded, and so, stifling another groan, he painfully lifted his knee, stepped over the chair, ran against the second dragon's head, and at last sank into the chair beside the window. It was so closely hemmed in that he had to be careful lest he put his elbow through a pane of glass on one side or hit a dragon's head on the other.

Then Hal came, breezy and hearty, and unaffectedly glad to see his favorite uncle. The two shook hands with arms stretched across two chairs and one corner of the table. After that ceremony, Hal thumped the table and exclaimed warmly:

"The only piece of solid mahogany I expect to own until I get to be the vice president of the First National!"

Uncle Harry looked pleased and then perplexed, writhed in his limited quarters, took in his elbows awkwardly and assented. Hal departed to the kitchen to help Elsie get dinner. As soon as Hal had gone, Uncle Harry peered cunningly under the table, over it and round it. He was seeking a safe way out of his corner.

"Huh!" he muttered at last in triumph. He had discovered a lane that by skillful manipulation could be made a little wider.

With puffings and blowings, he moved the heavy table over against the music box. In yielding to his struggles it ruffled up the edge of the rug, and when Hal came to call his guest to dinner the guest caught his toe on the ruffle and plunged into his nephew's arms.

"Drat that ta-carpet!" he growled, as he regained the perpendicular and followed Hal to the dining room.

The dinner was delicious, and under its influence his spirits rose slightly; but they were unable to attain the heights of his hilarious nephew.

"You leave the dishes for me to clear away, Elsie," Hal directed, as they rose from their chairs. "You go and put our new funny record on the phonograph. That'll make uncle hold his sides; it's a good digester."

There was a look of gloomy apprehension on Uncle Harry's face as he followed, watching his feet cautiously, and warning Elsie to look out for that "kicked-up carpet."

"That will be smoothed down as soon as we move the table," Elsie replied. "We shall have to get it away from the music box over against the chairs again,—you pull and I'll push,—that way. Isn't it solid and heavy, though,—a fine piece of wood,—I don't wonder that Lora Trim wants it. O dear! Leave yourself room to get out—that's it."

As soon as Hal came in he demanded a song by a visible singer; but in order to let Elsie reach the piano, the men had to pull and push the table against the couch. This effectively blocked the passage to the easy-chairs beside the windows, and Uncle Harry sat uncomfortably on a straight-backed chair in the doorway, while his nephew stood beside the piano and added a good bass to Elsie's soprano.

Bedtime came, and Elsie disappeared, leaving the two men to wrestle with further difficulties. The problem was to clear a space large enough to allow the couch bed to be unfolded. Harry the younger was gay and talkative, and Harry the older abnormally silent.

"The way to do," said the younger briskly, "is to put every chair out into the hall and push the table against the front windows. Those are Elsie's orders. She's the best Al manager you ever saw!"

The elder grunted an assent, while the younger dropped on his hands and knees and crawled under the table to the windows. There he turned the chairs over on their sides and pushed them under the table as far as he could reach. With difficulty Uncle Harry bent his corpulent figure, pulled the chairs out and carried them into the hall; in performing these duties he got very red in the face.

"Here you are!" cried Hal with great glee, as he blocked the windows with the table and unfolded the bed. "Now, all you'll have

MANAGEMENT A 1

By Alice Louise Lee

UNCLE Harry Street blew a great blast on a large handkerchief and advanced with ponderous ceremony to greet the bride. He gazed with a comical mixture of pleasure and disapproval on the shimmering white clouds out of which her face shone happily. This first glimpse of his nephew's bride gratified his aesthetic sense but offended his business sense; and in Uncle Harry the business sense predominated strongly. He shook her small hand up and down until it ached and informed her portentously that on Hal's present salary life would not be all honeymoon. Then he backed on the patent-leather toes of the best man and ploughed his way to the library, asking himself audibly how that "bunch of fluff" was going to manage on Hal's salary.

In the library his business sense was further outraged. With his large feet planted far apart, he glanced about him and frowned; then he spoke in his booming voice. Uncle Harry was large in body, action and sound.

"Just what I expected to find." He addressed the other relatives, who stood round admiring one another's gifts. "Now, why can't people use the same sound management in giving presents to a young couple that they use in their business? I knew you folks would give 'em such truck as this—things that will wear out or tarnish or break! I got 'em a wedding present in the city, and had it sent right up to their flat. The janitor is going to see to putting it in. I just went into a furniture store and picked out a clerk that looked as if he understood his business. I said to him, 'I've got a nephew that's going to be married next week, and I want to get him a piece of furniture that'll last a lifetime.' And he said that a library table would fill that bill—a handsome library table. That struck me as sound sense, and I told him to trot one out."

Here Uncle Harry blew another blast. His blasts were merely loud punctuation points for his words.

"He showed me one right away that suited. It cost me exactly one hundred and fifty dollars cash!" Uncle Harry was generous and not at all averse to having everyone know it. He cast a belittling glance on the array of silver, glass and linen, and waved his handkerchief over them as if it were a wand.

"Why, it's big enough to hold all these things and as many more. As I told the clerk, when your namesake is gettin' married you get 'em a present re-gardless of the cost, but you use sense in getting it."

Here Uncle Harry slapped his trousers pockets with a great bang and moved on to the dining room to inform the remaining relatives of his gift "re-gardless."

On the train that bore the bride and groom directly to the city, where the groom presided in the cage of the receiving teller of the First National Bank, the "bunch of fluff" sighed and shook her head.

"Think of it, Hal! One hundred and fifty dollars in a library table! That's almost as much as we've spent on the other furnishings! If only —" She paused.

"Might as well finish it, Elsie," said Hal, laughing. "If only he had given us the money and let us buy our own table, it would probably be more suitable for the apartment."

They had prepared the apartment for immediate occupancy. There was a tiny living room, a bedroom, a bath, a dining room and a kitchen. The living room Elsie remembered with joy. It had a pretty wall paper, with a modest rug to harmonize with it, a few comfortable chairs, a phonograph, which Hal had long had, a piano, which came from Elsie's home, and a soft, comfortable couch that might, in a twinkling, be transformed into a bed for a guest.

"Why, Hal," exclaimed the bride in perplexity, after that mental review, "there's no room for a library table, little or big!"

But whether there was room for it or not, there it was, and there they found it when they

unlocked the apartment. It filled the eye—likewise the living room. In order to get it in, the janitor had been obliged to take the phonograph and all the chairs out. The beautiful mahogany top stretched abroad like the wastes of Sahara. Hal and Elsie regarded it and each other with tears of laughter in their eyes.

DRAWN BY PETER NEWELL

THE ELDER GRUNTED AN ASSENT, WHILE THE YOUNGER . . CRAWLED UNDER THE TABLE TO THE WINDOWS

"Peary would find the Polar Sea easy navigating after this room," declared Hal ruefully. "Look at those legs!"

They curved outward beyond the top of the table, and the curves supported dragons' heads that grinned fiendishly in anticipation of the shins they would skillfully bark, the dresses they would be privileged to rip, and the chairs they would delight in scratching.

Before Elsie could respond, the telephone bell summoned Hal to the hall. From her place behind the white elephant of mahogany, she heard her husband say, "So it's you, Uncle Harry! Yes, the train was on time and we're here. Yes, we found it. Why-ee, like it? Well, I'll call Elsie. A woman knows —"

Elsie was already on her way. She crowded carefully between the table and the couch and took the receiver from Hal's limp hand. There was a peculiar light in her eyes, but her voice was pleasant as she greeted her new uncle.

"I have never seen such beautiful carving on a table," she began sweetly. That was all she had a chance to say. Uncle Harry found great pleasure and profit in the sound of his own big voice.

"I'll drop round one of these days," he ended, "and see it for myself in its new home. There's nothing like using a little business management in selecting wedding presents."

For six weeks life flowed on happily in the tiny flat and as smoothly as the library table would allow. Elsie managed to squeeze two chairs between it and the front windows. The others were left in the hall. The phonograph was crowded into the kitchen against the stationary tubs. Once a day regularly Hal asked in exasperation what they were going to do "with that confounded table!" Once a day regularly Elsie answered mysteriously that in the near future Uncle Harry would himself attend to disposing of his highly prized gift.

That is, the gift was prized highly by the donor. In fact, it grew in value. At least once

After she had signed the letter, she hesitated, smiled and added a postscript: "Another good reason for your coming—we wish you to see your beautiful library table in its new home."

After Uncle Harry had telephoned his intention to make the visit and had set its limit at a week, Elsie gave Hal a few instructions, which made him beat his knees in an outburst of hilarity.

Tuesday Elsie met Uncle Harry at the ferry and escorted him to the tiny flat. On the way she appeased him with an account of the finances of her housekeeping. She had not spent all of her allowance for household expenses. Uncle Harry actually listened and expanded in deep breaths of satisfaction.

"I didn't think it," he boomed, "but I believe you have some idea of good management! That's what I believe in—horse sense in spending money as well as in making it."

When they reached the flat, Uncle Harry hung up his hat and topcoat in the hall and then followed Elsie to the living room. The hall was cleared of chairs. They had been restored to the living room, where they hugged the wall in company with the piano, and with the phonograph, which had been brought in from the kitchen. In the doorway Elsie paused and pointed.

"There it is, Uncle Harry. The carving on that table impresses me more every day." She was glad that Hal was not present to hear the truthful, but ambiguous, statement. "Mrs. Trim thinks it's the most beautiful table she ever saw. She's the one, you know, who envies us its possession."

Uncle Harry looked about him blankly and cleared his throat. Then, pending speech, he blew a great introductory blast. "Huh!" he finally exclaimed. "What a lot of furniture you've got crowded in here!"

Elsie looked up in pained surprise. "Too much furniture, uncle? Please tell me how we could get along with less. There's the couch

to do is to stay put in bed until daylight. If you go to moving round —"

Uncle Harry wiped a gathering dampness from his forehead and fixed an apprehensive eye on a dragon's head alarmingly near the head of the couch. "I'm likely to thrash round considerably in a strange bed," he declared, "and throw out my arms."

Hal scratched his head. Then he said, "I'll ask Elsie; she'll know what to do." In a moment he was back, beaming. "She says to make the foot of the couch its head, and that will put a lot of space between your head and the dragon's."

Uncle Harry wiped his brow again. "But what about fresh air?" he asked in a strangled voice. "I always sleep with my windows open, and how can I get to the windows?"

"Oh, that's easy!" Hal exclaimed with exasperating cheerfulness. "You'll get used to navigating round this table before the week is up, but I'll open the windows for you tonight."

Casting himself on the table, he wriggled across it on his stomach, opened the windows and wriggled back again. His uncle was not yet ready to have them opened, but he did

not remonstrate, for he knew that the feat of reaching them was far beyond his ability.

At last, with chattering teeth, he crept under the covers of the couch. Changing his head to the foot of the couch brought it into the icy December draft between the windows and the hall doorway, but, knowing that the dragon's nose was reaching out cunningly to bump him at the other end of his bed, he piled the pillows over his head and suffered in silence.

Once only he groaned, "A week of this!" and then subsided.

Not being able to sleep, he thought.

The following morning, when he appeared at the breakfast table with a large handkerchief in one hand, his niece asked him solicitously how he had slept.

"Kerchew!" sneezed Uncle Harry, flourishing the handkerchief. "Kerchew! Where does that Mrs. Vrim live who wants that table? Can we get it to her this morning? That confounded clerk down at the furniture store didn't have an atom of sense when he sold that table to me! It shows mighty poor management in a firm to keep such an addle-brained clerk! Ker-chew! Where did you say that Mrs. Sim lives?"

It looked dark and forbidding. They felt certain that they had run the thief to his lair at last, but neither of them felt disposed to enter after him.

"Come out!" Tom cried, standing back from the hole. "We won't hurt you. All we want is our gun."

No answer came from the cave.

"Don't be skeered!" Tom continued, dropping into dialect, with the idea of making himself more intelligible. "We-uns is friends. We ain't lookin' for no trouble. Come on out."

Still no answer.

"Possibly he isn't there, after all," Tom suggested. "I believe I'll just —"

"You're not going in there?" Ellis expostulated. "Why, he'll get you, sure!"

But, gripping his hatchet, Tom started for the narrow entrance. To Ellis it looked like madness; but he would not let his cousin go alone, and followed him into the hole. For two or three feet they stumbled over split rocks; apparently they were going down a slight slope. Then the space widened round them. There was a faint, stale odor of smoke; the air was damp, as in a cellar.

"Who's in here?" cried Tom in rather a strained voice, and at the same moment he struck a match.

As the tiny flame flickered and grew they saw that they were in a roughly rounded cavern, about ten feet wide and fourteen feet long; it was eight feet or so high at the entrance, rose higher in the centre, and sank rapidly at the rear. The walls of cracked rock were blackened with smoke, and at two or three points the roots of trees penetrated the roof. The floor was irregular, but the occupant had cleared it of rubbish. The wild man was nowhere in sight.

"Missed him again!" said Ellis, as the match went out. "That's the most elusive fellow I ever saw; but this is his house, all right. Come outside and we'll get some wood for torches."

Near the mouth of the cave they found some fat pine, and presently they were back in the cavern again gazing round by the flaring, smoky light of their torches. In a niche at one side were the remains of a fire, with a large pile of broken wood on one side of it. On the other side Tom triumphantly picked up the

great, rough candles made of beeswax. Evidently the man had robbed a bee tree.

"It looks as if he'd been living here for a year," said Ellis, as they inspected the cave. "What kind of man do you suppose he is? An escaped lunatic?"

"A very clever lunatic, I should think," said Tom. "He may be slightly off his head, but I suspect that he has some good reason for wanting to keep away from people. I'd like to know where he is now."

"Outside, maybe, waiting for us to come out," Ellis suggested.

It was a disconcerting thought. The boys listened intently, but heard no sound. After a little while Ellis began to walk round the cave again.

"He's got some fine skins," he remarked. "Wonder how he killed these deer. That rifle hasn't been fired for a long time."

"I suppose his ammunition gave out. What puzzles me is how he has lived since."

"I suppose he went down to the settlements to steal. Camping parties aren't plentiful enough here for him to live on them. That was why he tried to make the most of us."

While Ellis talked he was examining a deer hide that hung on the wall at the rear of the place. As he pulled at it, it came down suddenly from its pegs, and both boys gave an exclamation of surprise. Behind it was an opening, a sort of burrow three feet in diameter, running back into the earth.

"Here's his back door!" Ellis cried. "This is how he got away!"

"Surely not," said Tom, peering cautiously into the dark hole. "This doesn't lead out. This seems to run straight back into the mountain. This must be his last hiding place, and very likely he's in there now."

"You wouldn't crawl in there after him?"

"You bet I wouldn't. There may be still another big cave farther back. These mountains are all honeycombed with caves. Some people say that you could travel all through Tennessee and Kentucky underground if you only knew the way."

When he thrust his torch into the hole, they saw a long, narrow, dark passage just large enough for a man to creep through on all fours.

"I reckon he's there," said Tom, and then shouted, "Come along out, now! You hear me? We're not going to hurt you."

No answer came from within.

"I reckon there's nothing to do," said Tom, "except to sit down here and wait till he comes out. He's bound to come out sooner or later, and I'm determined to have that gun back."

"He might not come out for days. He may have grub in there," said Ellis.

"Well, we can stick it out as long as he can," said Tom obstinately.

So the boys sat down in the gloom of the cave and prepared for a siege. The time passed slowly; at first they were tense with expectation, but they soon grew weary. Night would fall presently. One of them would have to go down to camp to care for Peter; and they would need food from camp, too, unless they contented themselves with the pork and nuts in the cave.

"Did you notice," Tom asked, after they had been on guard for what seemed a long time, "that the fellow had a bunch of ginseng in his hand when he came into camp? I've been wondering ever since what he brought it for. Do you think that he might have intended to pay us with it for what he stole?"

"Maybe he isn't so bad as he looks," said Ellis.

"No one could possibly be so bad as that fellow looks. Let's hope he's a good deal better. Listen! What on earth was that?"

"An earthquake!" cried Ellis wildly, jumping up.

A dull, heavy reverberation had suddenly filled the close air of the cavern. They could not tell from where the sound came or what had made it; but a moment later a second muffled explosion sounded, and this time they knew that it had come from the burrow at the rear of the cave.

"It's my gun!" cried Tom. "He's fired both barrels."

"What for? What could he shoot at?"

"Don't know. It may have been a signal. Listen!"

They listened with suppressed breath. After a few seconds, they heard a faint shout that seemed to come from the very bowels of the earth. Again came the long-drawn cry. Was it some one calling "Help!"

"Something's happened to him! He's fallen into a hole or something!" Tom exclaimed.

"We ought to go in and get him out."

"Crawl into that hole?" said Ellis. "Maybe he's only trying to trap us."

"I don't believe so. He's in some fix and wants help."

The boys stood irresolute. Another halloo came out of the burrow.

"I'm going to risk it," said Tom, lighting a fresh torch and gathering up several extra pieces of the fat pine that they had brought into the cave. "I'll go first. Keep close behind me, and be ready to light a match if the torch goes out or to grab my legs in case I tumble into anything."

With that, he got down on his hands and knees and crawled resolutely into the dark burrow.

TO BE CONTINUED.

THE CRYSTAL HUNTERS

By Frank Lillie Pollock

In Eight Chapters Chapter Four 2

THE figure that Tom and Ellis gazed at in astonishment was that of an elderly man, tall, gaunt and muscular, dressed in an indescribable assortment of rags. Black, grizzled hair hung down over his shoulders; a beard hid much of his face, which seemed as dark as an Indian's. His arms were bare to the shoulder; his legs were swathed in sacking, and his feet were bound in rude deer-hide moccasins; in his hand he carried the stolen shotgun. Casting keen, quick glances about him like a wild animal, he advanced with a springy step toward the camp fire.

As the man came nearer, Tom noticed that he carried in his left hand a large bunch of roots that were unmistakably ginseng; but he scarcely marveled at that, for the man's whole appearance had completely amazed him. In fact, the boys lay almost paralyzed until the stranger had nearly reached the fire. Then Tom, gathering his wits, leaped to his feet.

"Halt! Drop that gun!" he shouted boldly. He half expected to be answered by a shot. But with a strange, startled cry the wild man dropped the roots and sprang away, still carrying the gun.

"After him! Run him down!" Tom shouted.

The boys were for an instant almost at his heels; then he quickly left them behind. They were good runners, but the thief went with the speed of a frightened deer. They soon lost sight of him, but for some time they could follow him by the noise he made in crashing through the undergrowth.

"Keep it up! Don't let him get away, for goodness' sake!" Tom cried.

But in a few minutes he had passed even out of hearing. Trying to find some trace of him, the boys rushed this way and that.

"He was heading up the creek!" Tom said. "See if he crossed it!"

Back to the stream they ran and traced its course upward. Sure enough, within half a mile they found footprints of wet moccasins on the stones. They were not experienced enough in woodcraft to follow the trail far, but they dashed ahead in what they thought was the right direction. The man seemed to have been heading up the slope of the mountain. The thickets of small pine and oak grew sparser.

"There he goes!" Ellis shouted suddenly, and Tom was just in time to see a crouching figure slip across an open space and vanish behind a thicket of pines.

Up the hill they dashed, but when they reached the woods the man had gone; although they circled round and round the place for nearly an hour, they could find no trace of him.

"I'm afraid we've seen the last of your gun, Tom," said Ellis.

"It'll be another two weeks before I say that," Tom declared.

They wandered over the mountain side for two hours and climbed nearly to the top of the ridge. Down in the valley they could make out a white spot that they knew was their tent; a pale thread of smoke was rising from the low fire. In another faint spot of white that moved slowly they recognized Peter, the mule, peacefully grazing.

"Suppose he went down there and ran off with the mule!" suggested Ellis.

"I don't believe he's thinking of anything now except to keep out of sight," Tom replied.

They both had to admit that the thief was doing that most successfully. But a little later Tom made a discovery that gave them some hope. The bed of a spring that bubbled out of the mountain had been scooped out, evidently

by human hands. The earth round it was trodden hard, and a trail led away from it.

"Here's his watering place!" cried Tom exultantly. "He's got a camp probably or a cabin not far away, and it'll be queer if we can't find it."

For a hundred yards or so they followed the trail until they lost it in a space of gravel and cactus. The boys went on, however, in the direction that the trail had been leading, and within two or three hundred yards came round the corner of a rocky bluff. A jungle of small saplings grew against it, and creepers and

DRAWN BY H. C. EDWARDS

"HERE'S HIS BACK DOOR!" ELLIS CRIED. "THIS IS HOW HE GOT AWAY!"

laurel masked the face of the rock; but footprints and broken twigs showed that some one had frequently pushed his way through the branches.

"No place for a camp in there!" muttered Tom, as he cautiously reconnoitred.

The place was excellent for an ambush, and the boys held warily back for a little while; but at last Tom ventured to push aside the pine boughs and to force his way into the thicket. No man lay hidden there.

The boys were about to turn back, when Ellis uttered a cry of surprise. He had parted the creepers and uncovered a great, dark cleft in the face of the bluff, screened by the foliage.

"A cave!" cried Tom. "I ought to have thought of that before."

When they examined the creepers closely, they saw that the vines had been loosened so that a man could enter the cave without tearing them away. The dark opening was half as big as an ordinary door but much narrower, and

stolen coffeepot. A battered frying pan and a small kettle were the only other cooking utensils in sight; it was small wonder that the cave dweller had felt the need of more.

A wooden trough, hollowed out by fire, held several gallons of water. Another trough was half filled with walnuts and beechnuts. From the floor Ellis seized the lump of pork that they had lost, or rather the remains of it, for the thief had devoured more than half of it.

"Now if I could only find the gun, I'd go away and let him alone," Tom remarked.

The shotgun was not in the cave; the thief doubtless was still carrying it. But an old repeating rifle, battered and rusted as if it had not been used for years, stood against the rock. Opposite the fireplace was the man's bed—a pile of twigs covered with two deer hides and several raccoon skins.

Another deerskin or two hung upon the walls; three log troughs were filled with miscellaneous rubbish, and in one corner were several

FACT AND COMMENT

THE man who does no more than he is paid for will never get paid for any more than he does.

He won Success. They said his Luck prevailed.
Yet, oh, how often he had Tried and Failed!

IN the journey of life it is not always the magnificent distances that count. The most wonderful road ever traveled lay straight and steep between a manger and a near-by hill.

INTERNATIONAL trade is always disclosing something fresh and interesting. The American schooner Lyman M. Law, which was sunk by a submarine in the Mediterranean, was loaded with shooks, got out near Bangor, Maine, for lemon boxes to be put together and filled in Italy, and then, probably, to be shipped back again to this country.

THE Puget Sound halibut fishermen had such a prosperous season last year that seventy new vessels are fitting out at Seattle and other Sound ports to engage in the business when the warm weather comes. The crew of one vessel, working on shares, got \$460 apiece for a cruise of two weeks; but of course that was an exceptional case.

"OLD PROB" is extending his field of operations. The better to watch the storms that move northward from the Caribbean Sea, the Weather Bureau is to establish nine new stations on islands in that sea and on the coast of Central America. For some time it has had stations on the islands of Barbados, Trinidad and Curacao.

THAT equipping an army is not merely furnishing arms, ammunition and food may be inferred from the list of less-known articles on which the United States government recently called for bids. Among them are 27,500 "slickers," 800,000 pairs of shoe laces, 50,000 cravats, 50,000 brooms, 50,000 scrubbing brushes, 70,000 stovepipe joints, 100,000 pillows and 50,000 pillow cases, 20,000 shovels, 10,000 hatchets, 20,000 thimbles, 20,000 whistles with chains, 1500 music stands and 2000 pounds of beeswax.

AN interesting experiment was made a month or two ago with a squad of thirteen New York policemen to show that in these times of the high cost of living a very moderate sum will suffice to provide ample rations. The men were all strong and active. They were fed for three weeks at a cost of twenty-five cents each a day for raw material, and at the end of that time twelve of them had gained on the average more than two pounds in weight, and the thirteenth had neither gained nor lost. What food was supplied to them is not specified.

THE fifty thousand young Americans who are fighting on the side of the Allies are not the only contribution of the United States to the forces in the field. The American mule has demonstrated his military qualities to the British commanders and endeared himself to the transport officers. They find him more imperturbable than the horse, tougher of hide and capable of greater endurance. In the last quality he is reckoned as equal to six horses. He goes to sleep behind a roaring nine-inch gun, and if he chances to fall into a shell hole lies there, nonchalant and self-contained, until some one pulls him out. But we suspect that more than appears in the words themselves can be read in the remark of the British officer: "He has some ways with him that we didn't quite understand at first."

THE human mind cannot grasp the full meaning of such terms as eternity and infinity. Time and time again preachers and men of science have tried to hit upon some illustration that would give us some imaginative realization of what the words mean. Many of the efforts have been picturesque, but among all those that The Companion can remember at the moment none is more striking than this: Were one of the smallest known insects to take an atom of this earth, an atom

so small as to be invisible to the naked eye, and carry it to the most distant star, a journey that it would need a million years to make, and, returning, take another infinitesimal speck and make another million-year trip, and so on until this whole planet with all upon it and in it had been removed, eternity would then have only begun.

CUBA

NOT the least of our national troubles at the present time is the disorderliness of our neighbors. Mexico is the most troublesome of them, but Nicaragua, Costa Rica and Santo Domingo are all giving us some annoyance; and now the circle is completed by a threatening attempt at revolution in Cuba.

The presidential election in Cuba was close. The law provides that doubtful elections shall be made certain by supplementary elections in disputed districts, and thus leaves no excuse for violence, but nevertheless certain leaders of the party that was apparently defeated at the polls started an armed revolt before the law could be fully applied. Now, the United States, which freed Cuba from Spanish rule, is under a moral obligation to insure peace and orderly government in the island. When we turned it over to its own people we reserved, and the Cubans conceded, our right to intervene if intervention should be necessary to maintain constituted authority and to repress rebellion.

That is our right, but it is a right that we dislike to use; and we should dislike still more to have an occasion arise that would oblige us to use it. Nevertheless, to intervene is our duty, and in the emergency the Administration showed that it intended to discharge that duty—first, by appealing to the rebels in arms to accept loyally the result of the supplementary elections, whatever it might be, and thereby to spare us the necessity of using force against them; and second, by warning them that we should refuse to recognize any government that should forcibly overcome the existing authority and thus establish itself. Neither the appeal nor the warning had an immediate effect. Fortunately, however, the Cuban government seems to be strong enough to deal with the situation without help from us.

No one except the leaders of the revolt knows how the trouble began. Mysterious preparations for an armed outbreak seem to have been made months before the election. In the past many insurrections have been planned in this country by ambitious politicians; this one may be another of the same kind, but there are also suspicions that all the recent troubles among our neighbors have been stirred up by potential enemies of the United States on the other side of the water. As yet they are of course only suspicions, and by no means to be considered as facts or even as beliefs supported by convincing evidence; but whatever the origin of the troubles, the troubles are ours, and, although they hamper our action in other most important fields at a critical time, and impose heavy financial burdens upon us, we must bear them.

GARDENING

NOT everyone enjoys gardening, although nowadays it is the fashion to express enthusiasm for it. The young woman who declared her satisfaction on moving into the country because she could once more take up gardening, the delight of her childhood, and who two months later abandoned her efforts in disgust because her peony "bulbs" had died and her poppy seeds, although planted carefully two inches deep, had not come up, deserved really less respect than the man who said that he disliked gardening because it meant taking care of things.

Certainly people who are lazy about taking care of things had better not attempt gardening. It is more demoralizing to start a lot of plants and then to leave them to be choked by weeds or devoured by insects than never to start any plants at all. The man or woman who makes a garden must be prepared to sacrifice to it some measure of independence. A man does not part with independence cheerfully unless he really cares about the object for which he makes the sacrifice. If you have but little time for recreation and care more for golf or tennis or baseball or novel-reading than for working in the soil and creating something with your labor, you had better let the soil alone; you will get more satisfaction out of your sports or your reading. Gardening is an exacting recreation. It puts aches into muscles and weariness into bones; it requires you to wear old clothes and be unattractive in appearance; it exposes you to the assaults of flies and mosquitoes; it compels constant

warfare against cutworms, aphids and beetles, against grass and weeds, and it never requites you with any immediate and instant reward.

The young woman who discovered that some of her plants were afflicted with a mysterious blight for which the books at her disposal suggested no remedy and who spent a day washing every leaf with a household solution efficacious in removing mildew had the proper spirit. By her ingenuity and patient labor she saved her plants.

There is nearly always something winning and appealing in the character of the gardener. The care-taking quality does not mean fussiness. It is usually the attribute of a loving nature. Good gardeners are likely to be good husbands and fathers, good wives and mothers.

WOMEN AFTER THE WAR

IT is an interesting question whether by the time the war ends we shall have heard the last of the ancient and outworn aphorism that woman's place is in the home. We do not realize as we should that in a more literal sense than ever before whole nations are now at war. Often in the past huge armies have been raised, even to the point of draining the nation of its male population, but never before have great powers brought into the struggle and enlisted in their support all the human forces capable in any way of helping their cause.

For the first time in human history woman has been mobilized as an additional arm of the service. She does not shoulder a rifle or hurl grenades or aim field pieces. But neither is she content merely to fall into the places left vacant by the men who have marched to the front; she engages also in work directly connected with war.

The process has been gradual and piecemeal, not the working out of a complete and predetermined plan; but the result is a revolution. Women by the myriad—which is a definite number, and not a symbol of infinity—are working in munitions factories and other establishments that are making equipment and supplies for the men in the field; they are running street cars, they are tilling the fields, they have replaced men in a hundred occupations for which long-standing prejudice has regarded them as unfit. In every country that is now at war women are "doing their bit" as generally and as efficiently as the men. There are few "slackers" among them.

That is a revolution, and revolutions never go backward. When peace is restored, women will be holding millions of jobs that were left vacant by men who took their way to the trenches and who were swallowed up forever. They will continue to hold those jobs, partly because they have earned them by their faithfulness in times of stress, partly because there will be need of every hand and eye and brain to repair the awful waste.

THE EGYPTIAN FRONT

WE do not mean to appear flippant in saying that the war reminds us of a great three-ring circus where the spectator watching a feat of extraordinary brilliancy at one end of the tent misses seeing the hardly less remarkable act that is going on at the other end. Only in the case of the war there are more than three "rings"—not less, we should say, than half a dozen.

So, amid the succession of extraordinary events elsewhere, we have heard and thought little about the fighting of which Egypt and the Suez Canal are the centre. Early in the war the Turks, led by German officers, made a serious attempt to reach and cut the canal. They knew its strategic value to England, and still more the tremendous moral and political effect a British reverse in Egypt would have throughout the world. After the failure of the Allies at Gallipoli, there was a time when it seemed that this thrust might become one of the major campaigns of the war; the Turks got a strong force across the desert to El Arish, and their raiding parties reached the canal itself, while the English defense was complicated by uprisings among the wild Senussi Bedouins on the Libyan frontier.

But Turkey had its hands full in Armenia and on the Tigris, and Germany, staking its future at Verdun, could give no support in a region so far from its own main fronts. The British army, augmented, no doubt, by troops from Gallipoli and the colonies, has soundly beaten the Senussi Bedouins, and driven the Turks back out of the Sinai Peninsula into Palestine. If the war lasts long enough to make the effort worth while, it is not impossible that the British in turn will make an

attempt to invade Palestine and to seize the railway that runs south from Damascus into Arabia. That is still more probable now that the Anglo-Indian army on the Tigris has driven the Turks out of Kut el Amara and is advancing on Bagdad, and it would be quite certainly the move to make if the Russian army in Armenia were able to drive southward and cut the Bagdad railway. Such an offensive, converging from three directions on the heart of the Ottoman Empire, would be a strategic move of the greatest interest and promise; if it succeeded, it would put Turkey at the mercy of the Entente.

It is of course very doubtful whether Great Britain and Russia can spare the men and munitions necessary for so great a campaign from fronts that are still more important, and from offensives that are aimed at a more dangerous enemy than Turkey. At all events, Great Britain has successfully defended what the Germans have called the Achilles' heel of its world empire. Cairo is in no more danger from the enemy to-day than Marseilles is.

A CHURCH SURVEY

FOR the last three years a notable work has been carried on in Ohio. A group of able men interested in the problems of rural life had long wished to discover the actual facts concerning the condition and influence of the country church; because the church in the country has an almost unique opportunity to mould the life about it. Two of the men, Messrs. Gifford Pinchot and C. O. Gill, had already made a scientific survey of parts of Vermont and New York, and published the results in a widely read volume. Under the auspices of the Federal Council of Churches it was determined to attempt a similar survey of a whole state, and Ohio was chosen because it was populous, central, and likely to illustrate various phases of rural life. It was proposed to show (1) the situation and denomination of every rural church; (2) its present membership; (3) whether it was gaining or losing members; (4) whether it ordinarily had a resident pastor, and what part of a minister's service it received.

The complete results of this survey are not yet published, but the facts regarding 1100 of the 1352 rural townships in the state show pretty clearly what its general character will be. A township in Morgan County with 846 inhabitants was found to contain nine places of worship, one Presbyterian and eight Methodist. Another township in the same county with a population of 1048 also had nine churches. Not one of the eighteen churches had a resident minister. Those are extreme cases; but that they are significant of a general condition that sadly needs reform is shown by the fact that one fourth of the townships of the state are reported to be without resident ministers.

It is plain that, if the rural church is to be the influential centre of community life that it may be and that in many cases it has become, competition and narrow sectarianism must give place to coöperation. The Ohio Rural Life Association is taking intelligent steps toward that end. The survey already planned is nearly done and its results will be published; at the State University a Country Life Conference has recently been held during the annual Farmers' Week; arrangements have been made to give wide publicity to successful attempts at church coöperation and to the methods used by individual ministers to make their churches true community centres; and the Federal Council of Churches has published a significant report on training the rural ministry.

These are preliminary steps toward improving conditions that in many other states are no less unfortunate than in Ohio. Nevertheless, these activities are hopeful, first, because they seek to learn and to publish the facts; second, because they are the result of coöperation among denominational leaders; and third, because they seek to rouse the spirit of coöperation in the rural communities themselves—a spirit as necessary to rural social and religious life as it is to rural business.

CURRENT EVENTS

RELATIONS WITH GERMANY. — On February 26 the President went before Congress, and after describing the paralyzing effect that the German submarine warfare was having on American commerce asked the houses to grant him the authority to maintain an "armed neutrality" and the money to put such a policy into effect. The President's idea was to arm all American merchant vessels that

are sailing across the Atlantic and permit them to use their guns against any submarine that attacks them. He desired also to have money enough at his disposal to undertake adequate insurance against war risks. The House Committee on Foreign Affairs promptly reported a bill giving the President authority to put guns on merchant vessels and appropriating \$100,000,000 for his use. Six of the twenty-one members of the Foreign Affairs Committee opposed the bill.—On February 28 the State Department made public the proof that the German Foreign Minister Zimmermann had instructed the German minister to Mexico, in case the United States abandoned its neutrality, to propose to Mexico that it ally itself with Germany, and undertake, with German support, to reconquer Texas, New Mexico and Arizona. Mexico was also to mediate between Japan and Germany and try to attach Japan to the new alliance.—Word came from Berlin that the sailors from the Yarrowdale were released from confinement, but that on account of infectious disease among them they were not yet permitted to leave Germany.—Mr. Gerard, formerly United States Ambassador to Germany, sailed from Coruna, Spain, on February 27.—It appeared that the pacifist message that was at first said to have been sent to Berlin by Mr. Bryan, was sent by Dr. Barthelme, a German newspaper correspondent. He was given the use of the navy wireless at the request of former Dean Kirchwey, of the Columbia Law School, who bore a letter of recommendation from Mr. Bryan.

CONGRESS.—The Republicans of the Senate conducted a filibuster against the new revenue bill, with the purpose of delaying legislation so that the President would be obliged to call a special session of the new Congress immediately after the adjournment of the present session. They finally agreed to permit a vote on February 28, and the bill passed by a vote of 47 to 33. The Senate also passed the flood control bill and the Indian appropriation bill. The army, navy, sundry civil and deficiency bills were all awaiting action, and there was a good deal of uneasiness lest the Republicans resume their filibustering tactics against one of them.—The House passed the Post Office bill with the Senate amendment that prohibits the shipment of liquor into prohibition states, or the publication of liquor advertisements in such states; the vote was 319 to 72. It also agreed to the Senate bill prohibiting the sale of liquor in the District of Columbia.—The House voted into the sundry civil bill the sum of \$400,000 to enable the Trade Commission to inquire into the food situation.

PREPAREDNESS.—The General Staff of the Army has sent to Congress a bill that it would like to become law. The bill provides for one year of military training to be given to all boys physically capable of receiving it, during their nineteenth year. War service would be required of all trained men until their thirtieth year, with a further liability in case of national emergency up to the forty-fifth year. The General Staff estimates the cost of the plan at \$472,000,000 a year.

CUBA.—The government troops occupied Camaguey on February 26, and Bayamo a few days later. The rebels are now confined to the eastern end of the island, where they are still in considerable force.

IRELAND.—On February 22 the English authorities arrested about fifty men who were implicated in the Sinn Fein uprising. These men had lately returned from internment in England. It was announced that they were not to be confined, but would be required to leave Ireland and choose some place of residence in England.

THE EUROPEAN WAR

(From February 22 to February 28)

The German submarines were extremely active during the week and a great quantity of British and neutral shipping was sunk. The largest victim was the Cunard liner *Laconia*,

WHAT THE PERISCOPE SEES
A PHOTOGRAPH ACTUALLY TAKEN THROUGH THE PERISCOPE OF A SUBMARINE

a ship of 18,000 tons, on which there was a cargo of considerable value and some 5000 sacks of mail, much of it registered. Most of the passengers and crew got safely into boats and

reached the shore of Ireland; but two Americans, Mrs. and Miss Hoy, died of exposure, and another American named Eva was drowned.

Even more sensational was the torpedoing of seven Dutch vessels in one day, several of them loaded with grain consigned to the government of Holland. This performance caused the greatest anger in Holland, where it was understood that the German government had guaranteed the safety of these cargoes. Berlin "regretted" the occurrence, but said in defense that the ships left Falmouth, where they had been examined by the British authorities, at a time when only "provisional guarantees" could be given, and that if they had waited until March 17 the German authorities would have had time to reach all their submarines and warn them not to interfere with the Dutch ships. The government of Holland made formal protest against the sinking, and added that unless Germany indemnified the owners of the ships it would hold itself justified in seizing enough German shipping now interned in Dutch ports to make good the loss.

On February 23 Berlin announced the sinking of an Italian transport, the *Minas*, with nearly one thousand soldiers on board, all of

A FRENCH BARBED-WIRE CUTTER IN HIS ARMORED, MAN-POWER "TANK"

whom were lost. A French transport, the *Athos*, was also torpedoed on the Mediterranean, and a number of lives were lost. Among them was an American missionary named Haden, who was returning from China.

In all some sixty vessels were sunk. The tonnage destroyed during the month of February was approximately 450,000. About one third of it was of neutral ownership.

It was reported from Japan that a German commerce raider was at large in the Indian Ocean and had sunk two or three British ships. Perhaps it is the same one that was lately cruising in the Atlantic. The *Venetia*, which was one of the captured ships set up in business as a raider by the Germans, has been destroyed by British warships.

Mr. Lloyd George alarmed England by a speech in Parliament in which he said that Great Britain must submit to very much more stringent restrictions on its food supply, and that the cause of the Allies was gravely menaced by the operations of the German submarines. The government has prohibited the import of all luxuries and many articles that are ordinarily considered necessities, such as tea, coffee, fruits, timber, leather, shoes and machinery. Every effort will be made to raise more food in England itself.

In the field the British arms won two considerable successes. The pressure Sir Douglas Haig has been exerting on the German positions along the Aisne resulted in a really significant retirement of the Germans along a line some ten miles in length and two miles or more in depth. Several villages fell into British hands and the advance on February 28th was within two miles of Bapaume, which seemed certain to fall. The Germans are no doubt falling back to new positions prepared to meet the expected Allied offensive.

From Mesopotamia came the news that Kut el Amara had been taken and that the Turks were in full retreat westward toward Baghela. When this record closed, the British were already thirty miles west of Kut. The town was taken by turning the strong positions on the Tigris, which have so long defied the British advance. There are no positions of equal strength between Kut and Bagdad.

The Italian troops in Albania have established contact with the French forces near Lake Presba, and Greece is now isolated from the Central Powers. Large Allied reinforcements are said to have reached Saloniki, and about 350,000 men are now under Gen. Sarraï's command. Virtually the entire Greek army is now confined to the Peloponnese, in accordance with the demands of the Entente Powers, and there would appear to be no further obstacle to a lively offensive along the Saloniki front, if such an offensive is now part of the Allied plan.

Mr. Bonar Law announced that the total subscribed to the third great British war loan was \$7,564,750,000; \$5,000,000,000 of it was "new" money. More than five million persons subscribed. The German Reichstag has voted another war credit of 15,000,000,000 marks—nearly \$4,000,000,000.

The British Colonial Minister, the Japanese Foreign Minister and the Prime Minister of New Zealand have all declared that Germany must not expect the Allies to return its colonies in Asia, Africa and the Pacific.

On February 26 a German destroyer shelled Margate and Broadstairs on the English coast. One woman and one child were killed.

31 Extra Features
24% Added Luxury
100% Over-Strength

Mitchell
SIXES

A New Size Now And Hundreds of Extras

A new-size Mitchell—Mitchell Junior—is in all showrooms now.

It is for those who want a 5-passenger Six, roomy and powerful. And who want the

Mitchell standards and the Mitchell extras in it.

So now you can get in Mitchell two sizes and two prices, and choose from eight styles of bodies.

Found in Mitchells Only

There are 31 extras in this year's Mitchell, most of which nearly all other cars omit.

There are bodies built in our own plant—our exclusive models.

There is 24 per cent added

luxury this year, paid for by savings in this new body plant.

There is 100 per cent over-strength in every vital part. In the past three years we have doubled our margins of safety.

Built for Lifetime Cars

This double strength in every part is to give you a lifetime car. Over 440 parts are built of toughened steel. All safety parts are vastly oversize. Parts which get a major strain are built of Chrome-Vanadium.

Gears are tested for 50,000 pounds per tooth. Engines are tested for 10,000 miles, to prove that they stay new. In two years, not one Bate cantilever spring has broken.

That is what it means to get this Bate-built car.

Cost Us \$4,000,000

These Mitchell extras, on this year's output, will cost us \$4,000,000. That is why other cars omit them.

We make them possible by factory efficiency. John W. Bate, the great efficiency expert, has cut our factory cost in two.

He has built and equipped this mammoth plant to build this one type economically. For less than anyone else could build a like car.

Go see the result. See the extras which these savings buy. See how complete, how strong, how handsome they make the Mitchell cars.

See them and then decide if you want a car with or without them.

TWO SIZES	
\$1460	For 7-Passenger Six—48 h. p. 127-inch Wheelbase.
\$1150	For Mitchell Junior—40 h. p. 120-inch Wheelbase Six.

SPRING WINDS

By Mary Carolyn Davies

THERE is a chill wind somewhere, and the snow
Beats cold across my face as on I go;
But in my heart a mad god sits and sings,
And at my ear a little laugh-sprite clings,
And whispers of such quaintly merry things!

There are no roses, and blue skies are flown;
And all the air is chill and gray as stone.
I stumble laughing through the storm, and see
No reason why my feet should dance in glee—
This is a secret hidden still from me.

There is a wild wind dragging at my hair,
And blowing cold upon my heart; but there
It cannot enter, howsoever it blow,
For something in my heart bars out the snow,
And sets my feet a-dancing where I go—
But what it is, I cannot, cannot know!

THY FATHER'S FRIEND

IN the will of the late Justice Lamar of the United States Supreme Court there was one very unusual legacy. He bequeathed his friendships to his family. "To my family," the will runs, "I bequeath friendships many and numerous in the hope that they will be cherished and continued. True friendships are the most valuable of our earthly possessions, more precious than gold, more enduring than marble palaces, more important than fame. . . . As Henry Drummond has well said, 'Friendship is the nearest thing we know to what religion is.'"

The family that inherits such wealth is truly rich. But it is a legacy that must be used if it would be preserved. Friendships cannot be locked away in safes or loaned to historical exhibits and museums. Like love and faith and courage, they belong to that intangible treasure of the soul that must be kept from destruction by constant service. It is not alone material things that "rust doth corrupt."

How many of us have let slip through busy or careless fingers the beautiful and glowing friendships of our youth? We did not mean to do it; indeed we have often regretted the loss until, as the years pass, the regret gradually fades away. And if that is true of our own friends, how far more true of our fathers' friends! Yet there have been families where friendships have passed down from father to son for several generations.

There is food for thought here. How many fathers are building up fine and loyal and serviceable friendships that they can with pride and gratitude bequeath to their sons? How many mothers are storing up like treasures for their daughters? The question does not end there. How many young people of to-day are fitting themselves to receive such legacies? How many in all the varied and urgent calls of life are heeding the challenge to make themselves worthy of friendships by being loyal and fine-tempered and generous friends themselves?

"A man that hath friends," the old Book of Wisdom declares, "must show himself friendly"; and again, "Thine own friend and thy father's friend forsake not."

THE SECOND SHILLING

THE American traveler stepped off the train at St. James Station, Cheltenham, and looked round for help. Traveling is difficult in England just now, for most of the trained men are in the army. Finally he found a worried elderly station porter, and asked how he could get his luggage to the Lamb Hotel.

The porter scratched his head. "You'd best go up to the hotel and get the boots to bring a cart for it," he said at last. "I'll look after it for you, and if some one don't come for it in half an hour I think I can pick up some one to get it over to the Lamb for you."

At the Lamb they were quite as perplexed. Guests came so rarely that the problem was a bit new to them. "The boots isn't about just now," said the female clerk, after a consultation with the female manager. "You might step in next door and get a taxi to go after it. That would probably be the best thing."

The traveler decided to trust to the porter's promise, and started out to catch a glimpse of the dignified old Gloucestershire college city. In the course of half an hour the crooked streets brought him back in front of the St. James Station. The porter was sitting on a truck, enjoying a well-earned rest.

"Your luggage has gone up to the Lamb, sir!" he called. "I sent it with a boy that works here a bit now and then. He took it in a handcart."

The traveler started back toward the Lamb, but before he had gone a hundred yards he met a shifty-eyed youth clattering down the cobble-stoned street with an empty cart in front of him. "Did you just take a steamer trunk and two grips to the Lamb Hotel?" the man asked.

"Yessir," mumbled the boy.

The American held out a shilling. The boy hesitated a second, then seized the coin and clattered on down the hill as if Satan himself were after him.

As the American went in to dinner an hour or two later, the clerk stopped him. "They brought your luggage a while ago," she said. "I gave the boy a shilling for bringing it," she added apologetically.

"Well, that's a good one on me!" exclaimed the American, as he parted with a second shilling.

The next morning, as he was unpacking his trunk, the chambermaid tapped at his door. "There's a lad out here in the hall wants to speak to you, sir," she said.

"Send him in," said the American. And the boy of the two shillings pushed in through the half-open door.

"Well, young man, what can I do for you?" said the traveler. "Don't you think you were well enough paid for bringing up my luggage yesterday?"

"Yessir, a bit too well, sir. I'm bringing back one of the shillings, sir. I wouldn't have took yours, down at the station, but I needed the money, and I didn't ever say they didn't give me a shilling at the office, and I didn't think it was so bad to take the one you gave me, because you never asked me anything and it wasn't my business to tell you. But when I went off and got to thinking about it, I thought it wasn't right, anyway, and—I thought

you might tell 'em at the station, and I wouldn't get any more jobs, and—my mother died in the workhouse, sir, and I didn't ever have a father, and—it's harder for our sort to be square than it is for people that's brought up decent, and—"

The American was overcome. "Keep both shillings, my boy," he said, when the torrent of eloquence had slackened a little. "It was my fault, after all, more than it was yours, and I don't hold it against you."

"No, sir, I mustn't keep it, sir! Because if I did—" and there was something wanly suggestive of a twinkle in the boy's uneasy eyes—"I might do it again some other time."

And letting fall on the bed a moist, dirty shilling, which he had been holding tightly clasped in his hand, he disappeared without warning, much more quickly than he had come. The traveler, considerably troubled, fumbled aimlessly on with his unpacking, and wondered whether it were wiser to reward the young hero in some way, or to leave him his lesson of real sacrifice.

CHARGED BY A "SEI" WHALE

IN his book, *Whale Hunting with Gun and Camera*, Mr. R. C. Andrews, who made moving pictures of the work of the whalemen, describes an exciting adventure with a "sei" whale while he was with Capt. Andersen of the Japanese whaling fleet:

As we came close we saw that the whale was in a school of sardines, which were frantically dashing here and there, causing their huge pursuer a deal of trouble to follow their quick turnings. But he managed his lithe body with wonderful skill, and before the fish left him many yards behind was always ploughing after them again, with his great tail sending the water in swirling green patches astern. As he rose, about sixty fathoms ahead, and turned to go down, his back came into view. Just behind his fin we saw a large white mark.

"That's a harpoon scar," said Andersen. "It is a bad sign. He may give us a run for it, after all."

We had been waiting two minutes (it seemed hours) when the boatswain shouted:

"He's coming! He's coming! On the port bow!" In a second the water began to swirl and boil, and we could see the shadowy form rise almost to the surface, check its upward rush and dash along parallel with the ship.

In the mirror of my camera I saw the enormous gray head burst from the water and the high fin cut the surface. Andersen's harpoon gun crashed in my ears, and before I could see through the veil of smoke the sailors shouted, "Dead!" The next instant the black cloud drifted away, showing the whale lying on his side motionless. I tried to change the plate in my camera, but before I could draw the slide and reset the shutter the animal had sunk. Apparently he had been killed almost instantly, for the rope was taut and hung straight down.

In a few minutes Andersen gave the word to haul away, and the engineer started the winch. No sooner had the rattling wheels ground in a few fathoms than we saw the line grow slack and then slowly rise. Faster and faster it came, with the water dripping in little streams from its vibrating surface.

In a few seconds the whale rose about ninety fathoms ahead and blew. He lay motionless for a moment and then swung about and swam directly toward the vessel. At first he came slowly, but his speed was increasing every moment.

"Full speed astern!" yelled the gunner, dancing about like a madman. "He'll sink us! He'll sink us!"

The whale was coming at tremendous speed, half-buried in white foam, lashing right and left with his enormous flukes. In an instant he hit us. We had half swung about, and he struck us a glancing blow directly amidships, keeling the little vessel far over and making her tremble as if she had gone on the rocks, then bumped along the side. Turning about with his entire head projecting from the water like the bow of a submarine, he swam parallel with the ship. Suddenly, however, he rolled on his side, thrust his fin straight upward, and sank. It had been his death struggle, and this time he was down for good.

We had had a narrow escape. If the whale had struck squarely, he would have torn such a hole in the steamer's side that she would probably have sunk in a few seconds. The only thing that saved her was the quickness of the man at the wheel.

BUSTER, THE BELL RINGER

A WOMAN employed at our city hall has some nice friends, writes a contributor to *The Companion*, of which she is very proud. The other morning I accepted her invitation to come in and meet Buster, the bell ringer, her star performer.

Miss J— pointed out the bell, a tiny hand bell suspended from a horizontal rod that was clamped to the edge of her desk. It was tied to the rod by the middle of the handle, and a cord attached to the tip of the handle hung just clear of the floor.

"I have never been at all afraid of mice," she explained, "and one afternoon when I was working here alone and Buster came stealing out to nibble at some crumbs of lunch I had dropped beside my desk, I let him stay. That happened several times, and once, when I had lunched out, he appeared so disappointed when he found nothing for him that I hit on this idea for letting him ring for his dinner. I tied a bit of bread to the end of the cord and waited. Soon Buster came sniffing out from behind the desk, and when he began to nibble at the bread he rang the bell, of course. He was frightened, and ran away; but I threw him a few crumbs and he came back after a little. When he had eaten all the loose crumbs, he again tried the one on the cord; and although he ran away when he heard the bell, some extra crumbs brought him back again. Before I went home I drew the cord up so that Buster shouldn't ring the bell and be disappointed."

"The next morning Buster again came out for bread, but instead of running away when he tapped the bell he held his ground and was ready for the crumbs I tossed him. When he had eaten them all, he ate the bread from the cord and paid no attention to the bell. I gave him a few crumbs more, which he had no sooner eaten than he went back to the bare cord and began to nibble at it again, and so to ring the bell. I rewarded him at once, and before the day was over he had learned the trick. Now there are two other mice that come with him to eat, Whisk and Frisk, but Buster sees to it that they don't rob him of his position as bell ringer for the party. There he is now, peeping out from behind the desk. He seems to know my step, and I am never here many minutes before he sends in a call for breakfast."

I happened to be standing near a high office stool, which I immediately mounted in readiness to meet this accomplished mouse.

The bright eyes and inquisitive nose became a sleek body that stole out and whisked over to the dangling bell rope. *Tap!* went the little bell; and then *tap! tap!* more commandingly. At the second call for breakfast two more bright-eyed creatures scurried from behind the desk and joined Buster, squatting on their haunches and looking up expectantly. Buster gave the bell a few more jerks, then sat up and waited politely.

Miss J— took the lid from a tin can that stood on one corner of her desk and tossed down some flakes of oatmeal. The mice were as dainty at table as possible; they sat up just like squirrels and ate slowly from their forepaws. When the oatmeal was all gone, they washed their faces—not with first one paw and then the other, as a cat does, but with both paws at once, as a human being washes.

Tap! Tap! went the bell, for Buster had decided to renew his order. This time Miss J— put down a small dish of milk for them. They sat round it like kittens, and each one quietly lapped up its share. Then they washed again. Still one of the mice was not contented, and stealing over to the cord gave the bell a single tap. At the sound, Buster stormed down upon him. The other mouse dodged and whisked behind the desk, while Buster rang the bell for him.

"They have fought that out before," said Miss J—, laughing. "And Whisk and Frisk know well enough they have no right to touch the bell cord. Whisk never touches it any more, but Frisk either cannot remember that he is not to touch the cord or will not. Now, watch them!"

She took a few broken peanut meats from a jar and added them to the oatmeal flakes. Frisk dashed out for his share before they had more than touched the floor. The bits of nuts disappeared quickly; then, instead of eating the oatmeal, the mice sniffed about for more nuts. Finding no more of them, Whisk and Frisk sat up and washed their faces again. But Buster was not satisfied, and he rang the bell several times, saying as plainly as he could, "More peanuts, if you please."

But Miss J— paid no attention to the demand except to draw the cord up so that Buster could not reach it. Then Buster gave in and ate the oatmeal, with the aid of his two friends. When it was gone Buster nosed about for his bell cord, but, not finding it, he seemed to realize that breakfast was over, and scampered off, followed by Whisk and Frisk.

"Good-by until dinner time," interpreted Miss J—, with a laugh, as the three tails flicked out of sight.

TO FRANCE BY AIR

CONSTANT supplies of aeroplanes from England replace the ones that are lost along the Somme. The recent experience of a war correspondent throws an interesting light on that detail of the war.

When the correspondent, who was in London on leave from the front, asked for permission to fly back instead of going by steamer, train and automobile, the answer was, "Perfectly easy."

"What about my baggage?" asked the correspondent.

"Oh, take it along and strap it on," replied the officer. "A plane that carries one hundred and fifty pounds of bombs will not be bothered by a suit case."

A dozen machines, one after another, were to go to France that day. The correspondent slipped into a wadded jacket that would protect him against the wind, and act as a life buoy if he happened to fall into the Channel, and took his place in the position usually occupied by the observer, who also mans the machine gun.

"She's a good, steady 'bus," said the pilot. "They flew her down from the factory three days ago, and she's tuned up and ready for her part in the big show on the other side. You must not expect any fancy stunts or thrills. My duty is to fly her to France in good condition and ready for work."

Usually the crossing is made at a height of ten thousand feet, but on account of the thick weather the pilot took the Channel this time at a height of four thousand feet. Beneath them were the patrol ships, but suddenly they disappeared from view as the machine ran into a cloud. Then the pilot stopped the engine, and the machine slid downward for a thousand feet until the sea, dotted with the white fleck of wave crests, appeared. Ahead was the white edging of the surf at the foot of the chalk hills of France.

They had made the flight in seventeen minutes. The fastest steamer would have required an hour and a quarter.

MR. PEASLEE'S SNOW SHOVEL

MR. PEASLEE'S expression was one of great dissatisfaction mixed with a none too patient resignation. He grunted as he seated himself upon the long seat in front of the village post office. Mr. Nudd noticed the grunt and mentioned it.

"If I felt half as mean as you look and sound, Kellup," he observed dispassionately, "I'd shut myself up somewhere till I got over it. You act 'bout as sociable as a hedgehog. What's happened to stir you up so?"

"Borrerin' neighbors," responded Mr. Peaslee with a briefness that testified to a disturbed mind. "Jake Winship, mebbe?" hazarded Mr. Nudd, and Caleb nodded ruefully in confirmation.

"Mebbe you've suffered some yourself, Nudd," he began with an air of settled patience, "but I don't b'lieve you'd scarcely credit what I've had to put up with from that Winship gang since they moved onto that hill. It's borrrer, borrrer, borrrer, day in and night out with 'em, till I hardly know whether I'm goin' to find my hat if I want to go outdoors a spell."

"They're 'bout as aggravatin' as anything I've ever had to put up with," Mr. Nudd conceded feelingly, "and the worst part of it, fur's it thorns me, is that they never have any idea of bringin' back anything they borrrer. Ain't they ben that way with you?"

Mr. Peaslee grinned weakly and shuffled his feet uneasily. "'S a matter of fact, Nudd," he explained, "Jake Winship's bringin' back something he borrrered is jest what's wrought me up to such a heat this very day. He's 'nough to mad a saint, seem's if, and yet I can't help laughin' over it, too."

"I've always shoveled my paths in the winter," Caleb began, "with any shovel I had at the time—sometimes a spade—sometimes a round-pointed shovel—whatever came handiest, that's what I'd use. I d'know's I ever made any gre't complaint over not havin' a snow shovel; anyway, I don't remember it if I did. But something or 'nother put

it into my wife's mind to get me one, and so she did—fetched it home one day last fall, much's two months 'fore we had a flake of snow or was likely to. I thanked her for't and stood it up in the shed and let the whole thing go out of my mind complete."

"I d'know's I've thought of that shovel sence the day I stood it there till to-day, for, if you remember, we didn't have much snow last winter that needed shovelin'—two-three little flirts that hardly made sleddin'—and didn't drift any to speak of round my place. Come to that, what little fell mostly blowed out of the way; so you might say I didn't do any shovelin' at all, and I never even thought of my new snow shovel."

"To-day, though," Caleb went on, "I had it fetched to my mind by something else I wanted. There was some grass round the back door that my wife wanted I should cut and I went out to the shed to get the scythe I've always kep' hangin' there, but I couldn't find a sign of it anywhere. I done the same thing that every other man does when he can't find anything—I went to my wife 'bout it and wanted to know where it had gone to."

"Well," s'he, "I d'know's I c'n tell you for certain, but I've got my s'picious. I saw that shif'less Jake Winship comin' round the corner of the shed an hour or so ago with somethin' that looked like that snow shovel I bought for you on his shoulder, and mebbe two minutes after that I ketched a glimpse of him puttin' off cross-lots with something on his arm that looked like a scythe and snath. If you was to press me to give a guess," she says, "I'd say prob'ly he'd brought back the shovel he borrrered last winter and took the lend of your scythe for a spell."

"And," Caleb finished resignedly, "I found out she was right 'bout it—as she commonly is. And I guess that answers the question 'bout whether Jake Winship ever brings back anything he borrrers—he doos, but there ain't any great help in havin' him borrrer a snow shovel in the winter and not bring it home till 'long in July some time."

"I s'pose," said Caleb with a sigh, "that the best I can hope for is that he'll get the scythe back some time durin' the fust of the winter, when he wants the shovel again."

AN APPROPRIATE PUNISHMENT

AT the time of the uprising in Poland, before the division of the elective kingdom in 1772, Frederick the Great decided to have the territory invested for the protection of his own border, but he especially warned the commanders to guard only against possible injuries to Prussian territory and to avoid interfering in Polish affairs. *Bibliothek der Unterhaltung und des Wissens* tells a little story concerning an infraction of the order that incidentally shows the human side of the famous military leader.

A young Pole in the Prussian service was stationed with his regiment not far from his birthplace, where his mother yet lived. It was quite natural in the circumstances that he should be in frequent communication with her. That, however, brought upon the old woman the anger and hatred of her neighbors; for her actions seemed to them nothing less than those of a spy and traitor. As time went on they became more and more incensed against her until finally they took her before a tribunal, tried her, and sentenced her to be hanged. When the son heard of that, he hurried to his colonel and begged for permission to go to his mother's house to try to rescue her from such a terrible and utterly undeserved death.

"My son," replied the colonel, "I can't let you do that. You would endanger your own life, and you can't save your mother that way. But don't worry. I will think it over. Go away now and take care not to do anything without my consent."

The soldier went away obediently, and the officer immediately started inquiries with the result that he learned the exact hour when the execution was to take place. Shortly before the appointed time he ordered a division of hussars to mount, placed himself at their head, and rode at a breakneck gallop to the scene of the intended execution. They dashed into the square as the drop was about to fall, separated the crowd, liberated the old woman and carried her away over the border in safety.

A great hue and cry arose in Poland, and complaints came to Frederick demanding satisfaction.

After the king had learned the truth of the matter he issued an order in council against the colonel, censuring him severely for disobeying his instructions, but concluded the order with these words: "For this action you have incurred severe condemnation and merit a rigorous punishment. You are to be confined to your room from midnight next Sunday until six o'clock Monday morning."

To the angry Poles he sent word that the colonel had received suitable punishment for his intrusion and high-handed conduct.

A JUSTIFIABLE BLOW

EVER punctual himself, King George III expected similar punctuality in others. Lord Hertford knew and respected his royal master's wishes. So one day, when he had an appointment at Windsor for twelve o'clock, he was overwhelmed at hearing the clock strike the noon hour just as he was passing through the hall. Furious at being half a minute late, he raised his cane and smashed the glass of the clock's face. The king, knowing nothing of the episode, let him off with a slight reprimand.

The next time that the earl called on the king, however, he was received less graciously.

"Hertford," said His Majesty, "how came you to strike the clock?"

"The clock struck first. Your Majesty," was Hertford's immediate rejoinder.

The aptness of the speech and the mock solemnity of the culprit in delivering it won the king's laughter and forgiveness.

THE USUAL MEAL

A LAWYER in a local court was questioning a Scottish farmer, says the *Scottish American*. "You affirm that when this happened you were going home to a meal," said the attorney. "Let us be quite certain on this point, because it is a very important one. Be good enough to tell me what meal it was you were going home to."

"You would like tae ken what meal I was gangin' hame tae?" queried the Scot.

"Yes, I should like to know," replied the lawyer, impressively.

"Weel, then," replied the farmer, "the meal I was gangin' hame tae was juist oatmeal."

RAY COON SET OFF DOWN THE ROAD

WHEN RAY COON WENT FISHING

BY G. H. SMITH

ONE day, when the long winter was nearly over and when there were signs of spring in the sunny corners of the woods, on the tops of the hills and in the fields, Ray Coon told Mother Coon that he wanted to go fishing through the ice.

"Very well," said Mother Coon. "I think that is a good idea. I'm getting hungry for a fish dinner myself. But be careful! The ice is getting pretty thin, you know."

"Oh, I won't get into any trouble," promised Ray Coon, as he hurried away to find the pole and the line.

When he finally found them, he put the pole over his shoulder and set off down the road that led to the little pond just beyond the edge of the woods. He whistled as he tramped along, for he was always a light-hearted fellow, and it seemed to him that he could already taste the fish that he hoped to catch through the ice.

He had not gone far when he saw his friends Reddy Fox and Rusty Fox sitting under a tree beside the road.

"Hello, boys!" called Ray Coon cheerily. "Don't you want to go fishing with me?"

"We haven't any fishing tackle," answered Reddy Fox.

"And how can we fish when the pond is frozen?" asked Rusty Fox.

"We can break a hole in the ice," answered Ray Coon, "and I'll share my line with you, and then we can all share the fish."

"Well, perhaps we'll go by and by," said Reddy Fox.

"All right!" said Ray Coon, and he chuckled as he went on his way; for he knew that the Fox boys were lazy fellows to whom even fishing looked like work.

When he reached the little pond he picked up a stout stick that he found on the shore, and he made his way carefully

THERE WAS A SUDDEN TUGGING ON THE LINE

out on the ice a few steps. Then he raised the stout stick and brought down the end, *thump! bang! crash!* on the ice until he broke a hole big enough to fish through.

"Now to catch that fish dinner!" said Ray Coon, and he

smacked his lips as he dropped his line through the hole into the black water, where he hoped that the fish were waiting.

He had to wait a long time for the first bite. At last there was a sudden tugging on the line, and Ray Coon pulled it back sharply as it began to slip through his hands. Then he drew to the surface a plump fish that he removed from the hook and laid on the ice behind him. From that time he had fine luck. Three more fish, as large and as plump as the first one, lay on the ice when his hook caught something that he could not move. He pulled and pulled, but it was of no use.

Now, while all this was happening, the Fox boys had left the tree where they were idling away the morning, and had slowly followed Ray Coon to the shore of the pond. Their eyes almost popped out of their heads when they saw the fish lying on the ice beside the hole where Ray Coon was standing. All at once they decided that fishing through the ice was worth while, after all, and that they should like to join Ray Coon in his sport. Then they saw that he was pulling hard on his line without bringing anything to the surface.

"Hold on, Ray!" shouted Reddy Fox. "We'll be right there!"

"We thought that you might need help, and so we hurried over!" shouted Rusty Fox.

Ray Coon had to laugh a little to himself when he saw them running toward the pond, but he was very glad to see them coming.

"Hurry, boys!" he cried. "I guess I've caught a whale!"

"My!" said Reddy Fox. "Don't let him drag you in!"

RUSTY FOX CRIED, "PULL HARDER, EVERYONE!"

"And don't jerk the line," said Rusty Fox. "That might break it."

The Fox boys ran out on the ice and took hold of the slack of the line behind Ray Coon.

"Now, all together, boys!" cried Ray Coon. "Let's pull him out!"

Something gave way a little, and Rusty Fox cried, "Pull harder, everyone! It's coming, and it's surely a whale!"

But they did not pull out a whale or anything else. The strain of the second hard pull was too much for the line. It suddenly parted with a snap, and Ray Coon and the Fox boys fell sprawling backward on the ice.

"Ouch!" grunted Ray Coon.

"Ouch! Ouch!" grunted the two Fox boys.

But they were not hurt, and if they had been hurt they would have forgotten it in their amazement at seeing two black heads push themselves out of the hole in the ice. Then Mr. Beaver and Mrs. Beaver came scrambling up on the ice. It was plain that they were both very angry.

"What do you young rascals mean by this?" growled Mr. Beaver. "Pulling our house to pieces over our ears!"

"Yes," joined Mrs. Beaver, "when we were all sound asleep, too, just as you ought to be until spring is here!"

"Please, Mr. Beaver, we meant no harm," said Ray Coon.

"I had no idea that we were fishing so near your house; and, anyway, the blame is all mine, for the Fox boys just happened along."

"Well," said Mr. Beaver, who had once been a youngster himself, "of course it cannot be helped now, and I don't suppose you really meant to have your hook catch in one of the logs of my house, but I do wish that your people would keep you out of mischief!"

While Ray Coon was explaining how sorry he was, and how

THEY FELL SPRAWLING BACKWARD ON THE ICE

he wished that he could repair the damage, Mr. and Mrs. Beaver turned and flopped back through the hole into the water.

"Well, it's too bad," said Ray Coon with a big sigh, "but I don't see how I could help it!"

Then he turned to pick up his fish, but there were no fish to be seen. While he had been receiving the scolding from Mr. Beaver and his wife, the Fox boys had taken the fish and run away into the woods as fast as their legs could carry them.

Then Ray Coon sighed again. "Such a fishing trip!" he said. "The Fox boys have taken my fish, and I have lost my hook and can catch no more!"

His spirits, usually so light, were very heavy as he trudged homeward through the woods. He was especially disappointed because he knew that his mother was expecting a fish dinner; and it was very hard to feel that his friends would play a mean trick on him.

But when he reached home, the very first thing that he smelled was frying fish, and that even before he entered the house! And there in the kitchen were the Fox boys busily helping his mother set the table for dinner!

"You see," explained Reddy Fox, before Ray Coon could find his voice and say a word, "we thought that we would hurry right to your house with the fish, for we knew that you would be pretty hungry by the time Mr. Beaver got through scolding you!"

My! How good that fish dinner tasted! But neither Father Coon nor Mother Coon nor the Fox boys enjoyed it so much as Ray Coon did; and the best part of the feast for him was to know that his friends had not played a mean trick on him, after all.

IT WAS PLAIN THAT THEY WERE BOTH VERY ANGRY

HUNTING FOR SPRING

BY HOPE ARDEN

Let's you and I go visiting,
To see if we can find the Spring.
The bird I saw just now go by
Was so much bluer than the sky;
That bird of free and flashing wing
Flew the blue banner of the Spring.

The smell of grass is in the air,
And balsams breathe from branches bare;
Oh, good, sweet air and scent of trees
That draw the hungry, early bees
For honey from red maple trees!

There is a singing in my blood,
And every pulse beats "Life is good."
In screen of thickets drawn about
Who would not race, and dance, and shout
The blessed cry that Spring is out!

Spring sayeth, "I make all things new."
Dearest, it makes us over, too,
In rapture of the liberal air,
Live sun, and incense everywhere
Swung from the branches dreaming bare.

This blissful day when dreams come true
I am no older, dear, than you;
I hope you are as young as I—
And will be, long as Springs go by,
Making our hearts and forests new.

Perhaps you will see fifty Springs
Of songs and scents and sunniest things—
First bees in the red maple bower,
All blood of its quick boughs in flower—
Oh, do not lose one day—one hour!

THE BOASTER

BY CAROLYN WELLS

Young Chevalier Bayard Napoleon
Lee
Was a wonderful, brave little lad, oh!
He said he feared nothing on land or
on sea,
Yet that boy was afraid of his
shadow!

THE BIRDS OF PUZZLE-LAND

BY WALTER WELLMAN

NO doubt you will recall that the boys and girls of Puzzle-Land visited the "Zoo" a few weeks ago and saw many strange animals there. Well, they also saw many birds. If you wish to know the names of the birds just study the pictures below. The twelve pictures will give you the names of twelve of the birds. It is not hard to make them out; but if you have any doubt about the names, you will find the right answers next week, with the answers to the other puzzles that are on this page.

PUZZLES

1. OCTAGON

My first is to plunder, a terrible wrong;
My second, a weapon, to war doth belong;
My third means of frequent occurrence, I ween;
In my next word a mixture of many is seen;
For the fifth, take a small word, "the finish" 'twill mean.

2. BEHEADINGS

My whole grows on trees; behead, I am a small number; behead, I am a negation.

My whole is limited; behead, and I am a weapon; behead twice, and I create a disturbance.

My whole is bright; behead, I am a whip; behead, I am a tree; behead, and you will quiet me.

3. STAR

From 1 to 2 is an inclosure;
from 1 to 3 is a northern race;
from 1 to 4 is a tree; from 1 to 5
is in the rear; from 1 to 6 is an
Indian tribe; from 1 to 7 is a
flag; from 2 to 3 to 4 to 5 to 6 to 7
is a great city.

4. DECAPITATIONS

Whole, I am a line; behead me, and I am a kind of meat; behead again, and I am mature; curtail me, and I am a tear; behead and curtail, and you leave a personal pronoun.

Whole, I am a loud noise; behead me, and I am hasty; behead again, and I am a tree; transpose me, and I am a verb; behead, and leave a Roman weight; curtail, and leave a vowel.

5. GEOGRAPHICAL DELETIONS

Take a letter from a river in Europe, transpose, and find a guiding line.

Take a letter from a river in Europe, transpose, and find perceived.

6. ANIMAL ACROSTIC

Each word has four letters, and the initials and finals each spell the name of an animal:
A fish, an image worshipped, a performance by one, to pass by, the Biblical father of three famous sons.

7. WHAT FLOWERS ARE THESE?

This flower's a color—oh, dainty and sweet!
This big-leaved one says, "Am I lable?"
This speaks of investments, perhaps in the "street,"
And this will put lamb on your table;
This one begs that you will remember it true;
This tells what the sun did this morning;
This speaks of the time when the teacup is due,
This, the glow and the gleam of the dawning.

CHANDLER SIX \$1395

CHARITY AMONG THE BIRDS

FRIENDSHIP between two birds of the same species, if we exclude the companionship of such as pair for life, says Mr. W. H. Hudson in *Adventures Among Birds*, is exceedingly difficult, almost impossible, to detect. If it were not so, we should probably find as many pairs of inseparables in any flock of bachelor chaffinches in winter as in a herd of horses or cattle existing in a half-wild state. It is also possible to mistake for an evidence of friendship an action that, in its origin at all events, is of a different nature, as the following cases show.

One relates to the military starting of the pampas—a bird of a very social disposition. When breeding is over, the birds unite in large flocks and lead a gypsy life on the great plains. They are always on the move; the flock presents an extended front, the beaks and scarlet breasts are all turned one way, and the hindmost birds continually fly forward and drop down upon or a little in advance of the front line. It is a pretty spectacle. One day I was sitting on my horse watching a flock thus feeding and traveling when I noticed behind the others a bird sitting motionless on the ground and two others keeping close to it, one on each side. These two had finished examining the ground and prodding at the roots of the grass, and were now anxious to go forward and rejoin the company, but the third one held them back. On my going up, they all flew away, and I then saw that the one that had hung back had a broken leg. Perhaps it had not long been broken and he had not yet accommodated himself to the changed conditions in which he had to get about on the ground. I found that, again and again, after the entire scarlet-breasted army had moved on, the lame bird remained behind, and his two impatient but faithful companions still kept with him. They would not fly until he flew, and when on the wing still kept their places at his side.

The next case is from Penzance. A lady of that town is a great bird lover and feeds the birds during the winter on her lawn. She noticed that a blackbird and thrush always came together to the food, and that the blackbird always fed the other. Looking more closely, she saw that the thrush had lost its beak; it had been cut off close to the bird's head, probably by a steel or a spring trap, such as the children in Cornwall commonly use to catch or kill small birds. The bird could not feed itself.

Mr. E. Selley of Sidmouth, a gardener and local naturalist, told me that his father kept a magpie in a large hutch surrounded by wires through which small birds could pass in to steal the food. Among these was a robin that had lost its beak in a steel trap; and that bird the magpie befriended, although he always drove the others out of his house. The robin with no beak could only pick up small crumbs, and the magpie, taking a piece of bread to its perch, would pick it into small pieces with which he could feed the robin.

A friend who himself saw the following incident told me that he knew of a lark that was kept in a cage hanging against the front wall of the house. Some sparrows formed the habit of clinging to the wires of the cage and feeding from the seed box. To stop this plundering the box was changed from the front to the back of the cage, where it was out of their reach. Nevertheless, their visits continued. With a little closer watching, it was discovered that the lark itself fed them, not by putting the seed into their beaks, but by conveying it from the box to the other side of the cage floor where the sparrows could get at it.

OLD BILL'S THANKSGIVING TREAT

WELL, he is this kind of a man," said the livery-stable keeper when I asked him about his townsman, Deacon Opdyke: "Last year the deacon had some extra work to do on his farm on the upper road, and I hired out my Old Bill to him. At the end of a month the horse came back in good condition, the deacon paid the price, and everyone concerned was satisfied, including Old Bill, I guess. Along about Thanksgiving time the deacon dropped in here and inquired about the horse. Seemed real pleased when I told him Bill was spryer than usual after his summer's work. Asked to see him, but the horse was out on a job. 'Quite a member of society, that horse is,' he said, and went away after inquiring how many horses I had in the stable, boarders and all.

"Thanksgiving morning there wasn't much doing here after the regular chores were done, and we all sat round the office stove, when the deacon's hired man drove up and unloaded a gunny sack full of something. I remember thinking he had borrowed that kind of satisfied smile of the deacon's, as he said I would find a note inside the bag. I did; and this was about what it said:

"You will find enough carrots here to give every horse in the stable a good dessert after the regular feed to-day. Be sure and have them cut fine enough so they won't choke, and tell the horses that Old Bill is standing treat."

"That's the kind of a man I've found Deacon Opdyke to be," said the liveryman, with what I thought was considerable conviction.

PUTTING UP A BARBED-WIRE FENCE

THE erection of war entanglements, even when the trenches are some distance apart, is at all times dangerous. The men slip over the parapet and, in the first place, pound in the supports with mallets, the heads of which are carefully wrapped in cloth in order to deaden the sound. Two other men carry the wire drum—a wooden cylinder round which the wire is rolled—by means of a long pole through the centre, and a comrade attaches the wires to the supports. The work is slow and nerve-straining, says a writer in the *London Graphic*, for star shells burst often, and compel the men to crouch low and remain motionless until the flare burns out.

To each soldier who takes part in modern warfare thick gloves for gripping wire and strong pliers for cutting it are as essential as the rifle and bayonet. Before an assault by his own regiment, the soldier cuts his own wire, and he must then endeavor as best he may to cut and hack his way through the enemy's, pulling down a support here, cutting the wires while the machine-gun batteries rap out their message of death toward him. Thus barbed wire, so simple in itself, so deadly when used in the ways described, enters into every phase of operation in the firing zone.

There Is No Other Six Like This For Anything Like This Price

THE Chandler offers intrinsic value greater than other cars for which you are asked to pay much more. Greater value in materials, design, equipment, and, above all else, in the dependable and enduring service of its marvelous motor.

You may say it is easy to make such a claim for the Chandler. It is. And IT IS EASY TO PROVE SUCH A CLAIM FOR THE CHANDLER.

Year-old Chandlers command as high or higher price in the used car market than year-old cars of other makes selling, when new, for two or three hundred dollars more.

Could any further evidence be asked, to prove Chandler leadership in value? It wouldn't seem so, but let's make thorough inquiry.

What other make of car, at anything like the Chandler price, offers you a motor which has been developed, refined and perfected throughout four years of conscientious manufacture and not subjected to radical changes or experimental devices? *None.*

What other make of car, at anything like the Chandler price, offers you such a proven mechanism as the whole Chandler chassis? *None.*

What other make of car, at anything like the Chandler price, offers you all those features characteristic of the highest priced, high-grade cars—Bosch high tension magneto; solid cast aluminum motor base, extending from frame to frame; big silent chains instead of noisy gears for driving the motor shafts; full floating and silent spiral bevel gear rear axle and light running annular ball bearings in transmission, differential and rear wheels? *None.*

What other make of car, at anything like the Chandler price, offers you more beautiful and comfortable bodies than the Chandler? *None.*

Chandler policy has always kept the Chandler price low. Relatively it is lower today, when so many prices have been inflated, than ever before.

These are *Facts* and to you they mean a Better Car for Less Money

NEW COMPANION SEWING MACHINE AT FACTORY PRICE

WE OFFER BUT ONE GRADE (five different styles) of New Companion Sewing Machines, and that the very *best* that can be produced. Our unique factory-to-home system, however, enables you to obtain this high-grade machine at an exceedingly low price.

Write to-day for our free booklet. It tells the whole story. PERRY MASON COMPANY, Commonwealth Avenue, BOSTON, MASS.

Come on Boys and Girls!

Let's begin today to plan for the coming summer, for those long, golden days when, free from school, we can explore to our hearts' content the woods and fields and shady, winding roads.

Let's go adventuring! But how? On what? Of course we must have something. Not a boat or a fiery charger, but a *bicycle*—a brand new, swift-wheeled

Columbia Bicycle

Here is a mount that will carry us over hill and dale with the ease of a flying carpet. Seated on a Columbia we are prepared for any expedition.

Let's plan now to own one of these handsome, completely equipped, sturdy, dependable bicycles. It's the bicycle our fathers and mothers rode: ask them about the Columbia. Let's go down to the Bicycle Store today and look at the Superb Models or the Motobike or the Arch Bar—the entire Columbia line. Write for catalog.

NATURE & SCIENCE

PRUNES AND BEES.—For three years the division of pomology of the University of California has been investigating the causes of the variation in prune crops in the Santa Clara Valley. Experiments show that the common honeybee is one of the most important agencies in producing good crops. The fact was proved by covering two pairs of adjoining French and Imperial prune trees with large tents of mosquito netting and placing a hive of bees in one of the tents as soon as the blossoms opened. The bees started to work at once and probably visited every blossom on the trees. After the petals of the blossoms had fallen and there was no further danger that pollen would be brought

from outside sources to the trees under observation, the tents were taken down. It soon became evident that the French prune tree in the tent with the bees had set a much heavier crop than the best of the exposed trees, whereas the two trees in the tent from which the bees had been excluded had set very light crops. Later, the weight of the fruit borne by the French prune tree made it necessary to prop the branches, as shown in the accompanying illustration. In proportion to the number of blossoms, that tree bore fully five times as many prunes as the ordinary French prune tree bears. The results have so deeply impressed the prune growers of California that many of them are buying swarms of bees, and others are planning to hire swarms for use during the blossoming season.

A HINT TO SWIMMERS.—In an address before the leading ear, nose and throat specialists of the country, Dr. Hill Hastings of Los Angeles recently called attention to the danger of a person's swimming, and particularly diving, when he has a cold in the head. Comparatively few persons realize that it is dangerous, and many even believe that when they have recovered from a cold and are still annoyed by excessive thick secretions in the nose they can find relief by diving or plunging the head under water. The purulent matter washed out is not only a danger to others, says Dr. Hastings, but the diver himself runs a risk of forcing some of the pus into his middle ear. Most specialists have observed that cases of mastoid abscess are common every summer during the swimming season. At the large ear, nose and throat hospitals it is recognized that the swimming season invariably brings on "a crop of mastoids." The advice to keep out of the water until a "head cold" is entirely cleared up cannot be too strongly emphasized.

PREHISTORIC COLORADO.—A million or more years ago there was a great lake not far from Pike's Peak, in what is now the state of Colorado. Lake Florissant, as geologists have named it, became choked with volcanic ash and deposits of lava from adjacent volcanoes. Clouds of ash carried down and covered up in layers innumerable plants and insects, and preserved them in beds of shale, which, when split with a knife, reveal flattened but wonderfully perfect remains. More than a thousand different species of insects and plants have been found in the Florissant shales, many of which, like the horsefly in the accompanying illustration from the American Museum Journal, are closely allied to living forms. The Florissant deposits have been described as a sort of Pompeii of the Miocene Age, for they give a picture of past conditions that few other deposits in the whole world can give. They even throw light on prehistoric conditions in remote parts of the world, for the presence of certain forms of life supposed to be peculiar to the Old World suggests that land was or had recently been continuous between Asia and America. The absence of distinct South American forms indicates, on the other hand, that the Isthmus of Panama was still under water.

A NEGLECTED SHELLFISH.—The common sea mussel exists in almost inexhaustible numbers along much of the Atlantic seaboard. An article in a recent issue of the American Museum Journal calls attention to the fact that the sea mussel is a source of most nutritious food, for its flesh is the most valuable in nutritive elements of any of the shellfish, and in palatability and digestibility is second to none. The mussel occurs in masses, literally hundreds to the square yard, adhering to rocks, to sand and to one another. The ability of the sea mussel to exist in such crowded masses depends upon its power of movement, its means of anchoring itself firmly, and the wonderful efficiency with which it can collect food, of which it finds an unlimited supply in the form of minute particles of decaying vegetable matter and in the group of microscopic organisms known as diatoms. Although the mussel has a host of enemies, it has also unlimited powers of reproduction, for each female lays from ten to fifteen million eggs a year. Probably the competition for food between the members of the community itself results in a greater mortality than all its enemies cause, for enormous numbers of mussels are smothered every day by their own offspring, which, in the struggle for existence, bury their parents beneath them. The United States Bureau of Fisheries has issued a bulletin that describes the food value of sea mussels, and tells how to cook them.

Children thrive on IDEAL heating

Chilliness or cold taxes the heart and makes for mental dullness—just as high temperature induces bodily lassitude and mental indifference. The equable, constant warmth of IDEAL-AMERICAN heating, which keeps the house at 72 degrees all over, makes children thrive physically and mentally, and increases their resistance to infectious diseases.

AMERICAN & IDEAL RADIATORS & BOILERS

These outfits guarantee you a lifetime of lowest heating cost. Ask your dealer today!

Due to the scientific design and construction of IDEAL Boilers, the amount of air-mixing to give complete combustion, the liberal fire-pot to consume completely the rich fuel-gases, the self-cleaning fire surfaces which prevent heat-wasting soot formations, the automatic regulation of draft and check dampers giving perfect control of heat, they are endorsed by all architects and engineers and used in over a million buildings at home and abroad.

No need to burn high-priced coals

IDEAL Boilers are made in various types to get maximum, smokeless results from burning cheapest screenings, slack, pea-coal, run-of-mine, low grade soft coals, lignites, slabs, culls, natural gas, coke, oil, etc.

We publish free books on best rules for running heating boilers, on heat regulation, on correction of chimney faults, and upon heating and ventilation data. Our publications are used as text books in many Engineering Universities. You may be absolutely sure, therefore, that in IDEAL Boilers and AMERICAN Radiators we offer ideal heating comfort and greatest heat-making value.

A No. 5-25-W IDEAL Boiler and 485 sq. feet of 38-in. AMERICAN Radiators, costing the owner \$355, were used to heat this cottage. At this price the goods can be bought of any reputable, competent fitter. This did not include cost of labor, pipe, valves, freight, etc., which vary according to climatic and other conditions.

Let us serve you now! Phone or write today for free book "Ideal Heating"—full of dollar-saving heating facts you ought to know!

THE YOUTH'S COMPANION is an illustrated weekly paper for all the family. Its subscription price is \$2.00 a year, in advance, including postage prepaid to any address in the United States, \$2.25 to Canada, and \$3.00 to foreign countries. Entered at the Post Office, Boston, Mass., as second-class matter.

New Subscriptions may begin at any time during the year.

Money for Renewals should be sent by subscribers directly to this office. We do not request Agents to collect money for renewals. Payment to strangers is made at the risk of the subscriber.

Payment for The Companion, when sent by mail, should be by Post Office Money Order or Express Money Order. When neither of these can be procured, send the money in a Registered Letter.

Silver sent through the mail is at the sender's risk. It is liable to be stolen or to wear a hole through the envelope.

Renewals. Three weeks after the receipt of money by us, the date after the address on your paper, which shows when the subscription expires, will be changed.

Always give the name of the Post Office to which your paper is sent. Your name cannot be found on our books unless this is done.

Letters should be addressed and orders made payable to

PERRY MASON COMPANY,
The Youth's Companion,
Commonwealth Ave. and St. Paul St., Boston, Mass.

BILIOUSNESS

THE word "biliousness" has had varying fortune in the language of medicine. At one time it was used to define an indisposition of peculiar character, and at another physicians rejected it because they believed that it implied a wrong cause for the condition in question. Although the pendulum is swinging back in favor of a judicious use of the word, the latest medical dictionary cautiously defines it as "a minor ailment, thought to depend upon a slight disturbance of the hepatic functions."

Whether properly named or not, however, the condition certainly exists, and it is quite probable that the liver, whether or not it is primarily at fault, is often concerned in the digestive upset. The functions of the liver are manifold: it secretes bile, stores up sugar, and destroys many poisons, either derived from without the body or formed in it, especially some of the waste products of digestion, which it converts into urea. If any of these functions become deranged, the system suffers. If something interferes with the secretion of bile or with its passage into the intestine, the symptoms of jaundice appear. If the liver is unable to store up sugar, diabetes results. If it cannot destroy the poisons that are taken into the body or that are accidentally formed in it, an indisposition or actual illness follows.

When we speak of a "sluggish liver" we mean that the organ is unable to dispose of all the poisonous waste products that occur in the system; the result is that acute form of auto-intoxication which we call a bilious attack. The symptoms are headache, dizziness, spots or zigzag figures before the eyes, irritability and depression, indigestion, nausea and perhaps vomiting, and often a pasty complexion and a yellow tinge to the whites of the eyes.

Associated with those symptoms, or preceding them, there is constipation or irregularity of the bowels. And that is no doubt the cause of the whole trouble: The intestines are slow in disposing of the waste products of nutrition, and so a larger amount of poisonous material is carried to the liver than that organ can easily dispose of. Some of it therefore enters the blood stream and causes an attack of biliousness. That checks the appetite; fewer waste products form, and thus the body rids itself of the excess already present. When an equilibrium is restored the "bilious attack" is cured.

HELPING BARBARA

NOW, Barbara, I've got it all planned and I won't take no for an answer. You're to come in Tuesday—come after dinner if you can't trust anybody else to put those precious babies to bed. Dean will meet you at the station. Then we can go downtown right after breakfast, and with an early start like that you'll accomplish twice as much as if you came in for the day, as you always do. Besides, we can have the time I've been waiting to have with you for ages and kill two perfectly good birds with one stone. Remember, I'm expecting you."

Barbara read the letter aloud with tragedy in her voice. Her husband, putting a firm hand over the baby's predatory fork, looked across at her with pleasure.

"You must go, of course, Babs. It's fine of Rita to plan it all, and you need a bit of a holiday."

"But you don't understand!" Barbara wailed. "Rita will want me to go with her, and she never knows what she wants, and takes hours to decide, and I shan't get more than three things done. Oh, I know she means it all in the dearest way, but before Christmas, when I need every minute! And Tuesday, too, when Miss Bennett was coming to sew! It never enters Rita's head that anyone else can have plans to be interfered with!"

But she went, of course—as everyone did when Rita arranged things. She reached Rita's at nine, flushed and tired. Rita welcomed her eagerly and put some new opera records on the phonograph. She was sure that they would be a treat to Barbara. And Barbara, going upstairs at eleven, lay awake for hours from nervous weariness.

They did get started fairly early in the morning—Barbara with her carefully planned list, Rita with a confusion of vague ideas. One concerned a new evening coat.

"Do come and look at stuffs with me, that's a dear!" she pleaded. "We got started so early that you can spare the time."

So they looked for an hour; and then Rita decided she would wait a while, after all, since the clerk had said that a new style was on the way.

Barbara looked at her list. "Tell me where to meet you at noon, and let's be there before the crowd!" she begged.

"How about the Blue Dragon—or—I don't know; the Delft is pleasanter—or the English Inn."

Eventually they went to the Savoy—and had to wait half an hour for a table.

Barbara could not help laughing, although her eyes were wet, when she reached home that night.

"It seemed so wicked for us to waste hours of

time not knowing what you wanted when every moment counted," she said.

At home, Rita was explaining to a caller: "I am a little tired. I've had my cousin Barbara in for some shopping. It's so hard for her to get in—I felt I really ought to help her, if I could."

SNUG SIBERIAN SLEEPING

ASNOW-BOUND Siberian village in the full light of day looks about as desolate and uninviting a human haunt as you can well imagine, but to the traveler who enters it at night, after a long day of sledding against the wind, its cheeriness is overwhelming.

I found Brookhanovor a very pleasant spot, says Mr. Bassett Digby in Through Siberia. Every little window blazed out its warm welcome. Here and there I caught the glint of a brass samovar on a table with a knot of people sitting round it. Cascades of sparks poured from chimneys. Men's voices rose to accompany the brayings and beatings of an accordion.

We stopped at a two-story log cottage. Supper was a banquet of soup, potatoes, meat, bread and milk. There was no guest room here; so I went to bed with the rest of the family—men, women and children.

Going to bed in a Siberian peasant's hut is a simple matter. You take a blanket or two, cocoon yourself in them, lie down on the floor and go to sleep there and then. There are no bedrooms, no beds. You do not disrobe. Men, women and children, cats and dogs, chickens, ducks and turkeys, lie down side by side. The last person to turn in stacks pine logs into the stove to its fullest capacity. Then he extinguishes the lamp, and another day is over. Sometimes there will be a bench, a pair of chests or a niche in the wall to serve as a couch; and sometimes the grandfather or grandmother of the household exercises the prerogative of sleeping on the flat, whitewashed top of the brick stove, hazardous as that may seem. But in the great majority of cases everyone, with a fine democracy, shares the floor.

I found that the thin blanket with which I was provided did not do much toward softening the hard brick floor, and noticing a pile of hay in the corner, with a couple of ducks resting on it, I asked if I might take some to make myself a couch. The family put the matter up for debate. There was a noisy discussion. The ducks woke, snuggled more comfortably into the hay and surveyed me with frigid, unblinking hostility. For a while one of the women seemed to take my part, but eventually she capitulated and a unanimous decision was given against me. The ducks turned their heads under their wings and waddled off to the land of Nod, while I had to resign myself to the bricks.

CLEVER TABBY

CATS have always been considered as less clever than dogs in understanding human beings, although there are many persons who are ready enough to defend feline intelligence. A writer in the New York Sun reports some interesting incidents in which cats have shown an almost uncanny ability to understand their masters.

One day some one announced at The Lilacs (the home of the writer) that one of Tabby's kittens—the black one—must be killed, whereupon that kitten disappeared. Tabby had hidden it.

When a gun was loaded to shoot Bigfoot, nothing was said in his presence, but he ran out of the house like a gray streak, and was not seen again until the fishbone in his jaw, the pain of which had made him so vicious that his masters actually feared rabies, had come out and recovery had set in. He returned sane and respectable, sure of a hearty welcome.

In that case the instinct of self-preservation must have enabled the cat to divine the deadly purpose against his life. It is doubtless the purpose, and not the words, that animals understand.

Tabby was a barn cat that slept on the back of a cow, and a particular incident in her life made her reputation. She brought three kittens back to The Lilacs from her new home—a distance of six miles. It would be interesting to know the time consumed by the cat in transporting three kittens six miles, and also to know the manner in which she did it. No one learned anything about it except that the cat and the kittens disappeared from one place and appeared some time later at the other, perceptibly travel-worn.

It is hardly probable that she "stole a ride"; it is more probable that she came "cross lots," and in a bee line. Without doubt she carried her kittens in her mouth, one at a time, but how long were the intervals? She must have been a very homesick cat, longing for her old familiar barn; or was it important in the mother mind that her kittens should be brought up in the kindly atmosphere of The Lilacs?

A PERPETUAL PUPPY

AN elderly English farmer, says London Notes, had been haled before the magistrates to show cause why he had failed to take out a license for a pet terrier. His oft-repeated reply to the questions of the court was:

"Who, he's nobbut a puppy!"

"Yes, yes, so you say," said the clerk at last. "But how old is he really?"

"I couldn't tell to a bit," was the reply. "I never was much good at dates, but he's nobbut a puppy."

Evidence proved, however, that the dog was long past puppyhood, and the bench inflicted the usual fine.

Talking it over afterwards, the farmer exclaimed: "Ang me if I can un'erstand it! Last year, an' the year afore that, I told the same tale 'bout same dog, an' it wor allus good enough afore! Who's been meddlin' wi' t' law since last year?"

LYSANDER'S APPETIZER

LYSANDER, a farm hand that Everybody's tells about, was recounting his troubles to a neighbor. Among other things he said that the wife of the farmer who employed him was "too close for any use."

"This very morning," said he, "she asked me, 'Lysander, do you know how many pancakes you have eat this mornin'?"

"I said, 'No, ma'am, I ain't had no occasion to count 'em.'"

"Well," says she, 'that last one was the twenty-sixth.' And it made me so mad I jest got up from the table and went to work without my breakfast!"

Strong of Limb and Keen of Eye

—growing more husky, hale, hearty, robust, deepcheated, pink-cheeked, red-blooded every day—that's your boy when he rides a 1917 Electrically Equipped

Indian Bicycle

Nothing like an Indian to keep him outdoors where he can broaden mentally and physically, where he will be in daily contact with the type of boys you want him to cultivate.

Don't Inflict a Truss Upon Your Child

GROWING children need a great amount of care and attention. Especially is this true when the child is unfortunate enough to be ruptured. But the parent who harnesses a ruptured child with a truss is inflicting an injustice. Trusses seldom fit well. Spring trusses are dangerous. No truss can be comfortably worn in bed. Most trusses are conspicuous. Few of them are uninjured by water.

The Brooks Rupture Appliance has none of the drawbacks of a truss. It is especially adapted for wear by children because it is made to the individual measure of the wearer. It rests flat and smooth, and its soft cushion adheres to the flesh, making slipping impossible. This cushion is always cool and comfortable, owing to a constant circulation of air.

SENT ON TRIAL

To convince you of the great comfort and relief which your child will obtain from the Brooks Rupture Appliance, we shall be glad to send you one on free trial. If you are not entirely satisfied, we will cheerfully refund your money. You may deal with us with the knowledge that you are receiving the care and attention of a sanitarium. We are not a factory.

The Brooks Rupture Appliance has the endorsement of the country's leading physicians. Thousands of happy wearers daily sing its praises.

Do not permit your child to suffer any longer. You owe it to the child and to yourself to learn more about this Appliance without delay.

Use the Coupon. Use It Now.

DE LUE'S GOLDEN GIANT SWEET CORN

The most important horticultural acquisition of recent years. Awarded the only Silver Medal ever given by the Massachusetts Horticultural Society for novelty and excellence in Sweet Corn.

DE LUE'S GOLDEN GIANT is the result of eleven years' selection by Dr. Frederick S. De Lue of Boston, Mass., from the product of "Howling Mob" crossed with "Golden Bantam."

With its 12 to 16-rowed ears it gives nearly four times the yield per acre that the Golden Bantam does with its smaller 8-rowed ears. The stalks are short and frequently produce two ears each. Its orange golden color is richer; it is more delicious in flavor and is equally early.

To introduce DE LUE'S GOLDEN GIANT we offer a limited quantity in packets containing 25 kernels each at 25 cents the packet—not more than 4 packets to any one customer—postpaid anywhere in the United States and possessions.

Our 170-Page Annual Catalog and Gardeners' Guide, 450 illustrations, several colored plates and cultural directions, will be mailed on application.

"SURE!" CRIED ANNA GRATEFULLY. "BUT HOW IN THE WORLD DID YOU KNOW?"

DRAWN BY CHASE EMERSON

AN undersized, thin, almost starved-looking young girl with hazel eyes and a mass of very yellow hair that much curling on heated iron had made rough and untidy looking stood behind one of the bargain counters in a department store in one of the busiest cities of the East. It was a hot day in August; the air of the place was very close; there were dark circles that were almost hollows under the girl's eyes, and, although it was not yet eleven o'clock, she looked ready to drop from fatigue.

Her counter was in a conspicuous position; a strong odor of perfumery, sachet powder and various essences revealed the nature of her wares. A stout commercial traveler, making a periodical visit to the store, paused to chat with various clerks on his way to the office; he noticed the girl at the perfume counter, and looked at her, puzzled. It was not that she was new since his last visit—there was a succession of new salesgirls here; it was not that she looked so frail, so young or so pretty; but she reminded him strongly of some one he knew, —or had seen, —where? "Talcum powder, sir?" the girl asked. "Toilet water — Harnett's violet — marked down to twenty-nine cents just for to-day."

When he heard her voice, he suddenly remembered.

"No, not to-day," he said. "I don't want anything, but say! I couldn't help stopping, you look so much like a young lady I saw up in the country last week. Any of your folks got red hair—the pretty sort?"

"I haven't any folks," said the girl briefly; but the shrewd salesman saw that she had started at his question and that her eyes were full of wistfulness.

"Well, now, that's singular," he remarked, "for d'ye know I saw a red-haired young lady, pretty as a picture, all dressed up in brown linen that went well with her complexion, in a good-sized store in a place called Wenham. Ever hear of Wenham?"

"I might have seen it in a paper—railway accident or fire," she said, shrugging her shoulders.

"It's a pretty place. Well, the reason I took such particular notice of this young lady, she was sort of scrappin' with a big fat girl that could have laid out two of her and yet seemed shy of her. The red-haired girl's voice was as like yours as could be, and she looked out of her eyes as you do; but she was taller and not so thin."

"In a store—was she working?" the girl asked almost with horror in her voice.

"Workin'—I like that! My dear, she was

buyin' silk for an evenin' gown, the best messaline at two and a quarter per."

"Did she seem—rich?" The girl's eyes were round with wonder.

"She was dressed to kill, and she passed over her greenbacks as if she had a plenty more," he said, greatly pleased at his keenness in noticing the resemblance. "Funny name, the young lady had," he observed. "I wouldn't have credited my two ears only the fat girl called her by it a number of times."

"What was her name, please?" she asked eagerly.

"Tell me what letter it begins with, and if you're right I'll tell you the whole," proposed the salesman, with a shrewd little smile.

"R."

"Right you are. R stands for right and also for Rusty, which was the name the fat girl called her by."

Anna Miller had her pay envelope in her pocket. At her little hall bedroom in the lodging house she had four dollars more that by going without luncheons she had saved for a lace hat. Altogether she could just scrape together enough to buy a ticket to Wenham.

She left the store at noon, went to her room and packed her pitifully few belongings in a pasteboard box. Then she went directly to the station. She had only fifty cents left after buying her ticket, and she had never meant to go home until she could return in fine clothes with a pocketful of money; but then, she had taken it for granted that her father would always be poor. Now that he had somehow "struck it rich," she was more than ready to give over her pitiful struggle and to let him take care of her.

On the journey she beguiled her weariness and hunger by musing upon Rusty. To think of the funny, homely, red-haired child she had left turned into a pretty, stylish young lady who bought evening gowns! What a temper she had had! Well, getting rich would be good for that. However, she must still have some remnant of her temper, for the traveling salesman had said that she was "scrapping" with the fat girl. How funny he was!

On the same day that Anna Miller was speeding hopefully toward home it happened that the silk stuff that the traveling salesman had seen Rusty purchase went back a

second time to the dry-goods store in Wenham—and this time it stayed. As the days had passed, Rusty's conscience had troubled her more and more until she could hardly eat or sleep. She showed the strain, and her father and mother became greatly worried about her health. At last Seth Miller appealed to his oracle—Reuben.

"I'd like to keep the only girl I have left," he said dolefully. "And I seem to see her slipping away day by day."

Although Reuben was himself filled with consternation, he tried to reassure Mr. Miller. He told him that there was no chance of her going into a decline, and that she was probably only worrying about the prize. And he promised to see what he could do.

He set out that very afternoon to see Rusty, and in spite of his anxiety his heart grew light, for he had missed Rusty as never before. She had come to Miss Penny's to tea twice a week, and he had usually seen her between times; but of late he had often hesitated to seek her out. The knowledge that she considered him as old and sedate and perhaps heavy had often held him back when he was longing to see her; but somehow when she was at Miss Penny's he scarcely thought about that. It would not be many days now before she would be back, and he was to see her this afternoon!

As he approached the Millers' house, he saw her ahead of him, evidently returning from an errand. He overtook her, carried her package back to the house for her, and then they walked down the Wenham road to the bridge. The Millers were moving into South Hollow the next day but one, and Rusty felt that there might not be another chance to visit the river.

She certainly looked pale and worn and seemed quiet and subdued; but when he asked whether she should be glad to begin school again, she was almost fierce in her eagerness. In truth, the girl believed that only in hard study could she ever regain her peace of mind.

"You know, Rusty, I believe you'll get the scholarship," he declared, "for you're so much more interested in school and in our studies than Mabel is."

"Oh, do you think I can?" she cried. "O

Reuben, if I only could!" And to his amazement she wrung her hands.

"Why, Rusty, I didn't know you cared like that!" he said wonderingly.

"I don't," Rusty answered drearily.

She stopped short. Leaning against the bridge, she dropped her head a moment on the top of the parapet. Then she raised a white face full of misery.

"I never cared like this before, Reuben," she admitted, "but now something—I've done something that makes me feel that if I don't get it I shall always be wretched. It won't seem nearly so bad if I get it. Reuben, tell me, do you think that having the result come out well ever makes a wrong action right?"

"Not for the one that does it," he replied without hesitation. "But, Rusty, I don't believe you've done any such thing."

Then Rusty related the story of the opal silk. Reuben understood better than she had believed he could—better than anyone else could have understood. Just confessing to him was a relief; and although he did not make light of the situation, he did not seem to think it hopeless.

"If only they would take it back!" she said.

Reuben considered. "Let me have it. I know Mr. Gorham a little, and I'll see him. It's no harm to try, as long as you say there's enough cut off to make anyone a dress?"

"If they're not too awfully fat. O Reuben, if you would!" she cried eagerly. Then she sobered. "But I ought not to let you. It's such a horrid thing to have to do, and especially for a boy."

"I don't mind. If Mr. Gorham doesn't think it's fair, he needn't do it. I shan't urge him."

They returned to the house and Rusty threw the box out the window to him. It was nearly a week, however, before he had a chance to go to Wenham with it. For two days he helped the Millers to move; then Miss Penny had an attack of rheumatism, and he did not want to leave her. And thus it happened that he went to Wenham on the day on which Anna Miller had left her work and lodgings in a distant city, without a by-your-leave or a good-by, and turned her face toward home.

Reuben had no trouble whatever at the store. People liked Reuben at first sight; and although Mr. Gorham, one of the firm, was not a particularly kind-hearted or obliging

man, he was glad to do Reuben a favor. So he took the purchase back, and would not even accept Reuben's offer to be responsible for the silk if it should remain unsold after a reasonable time.

Reuben was fond of walking, and had driven to-day only at Miss Penny's suggestion that the pony needed exercise; but he exclaimed several times that evening to Miss Penny that it had been a lucky suggestion. For just as he had crossed the railway track on his way home he saw, a little distance ahead, some one whom he supposed to be Rusty, carrying a large package. He wondered how she had come over and why she should have kept her coming a secret. He had left her at the new house half an hour before he had started, and she had said nothing of any errand. She must have driven over with some one.

Perceiving that the box she carried was heavy, he hurried after her. He gained upon her rapidly until he reached the foot of the long hill, and there he had to let the pony choose its own gait—and that gait was as slow as a horse could go and yet move. Before the pony reached the top of the hill, the girl had disappeared from view.

Then Reuben suddenly realized that she wore a dress he had never seen before, bright blue, with shorter skirts than she had worn for a year. Moreover, she must have put up her hair, for there had been no sign of the thick red plait hanging below her waist. What did it mean? Was she trying to disguise herself as well as to conceal her errand?

She was not in sight when he cleared the brow of the hill. Hastening on, he presently saw a spot of blue at the roadside and, drawing nearer, was startled to see that the girl was sitting down. It was not like Rusty to stop to rest; but of course she was tired after the moving, which she had supervised entirely. And her box seemed very heavy.

"Rusty!" he called out eagerly as he came up to her.

Not until she looked up did he discover that it was not Rusty at all, but a smaller, thinner girl with frowsy yellow hair, who still looked amazingly like the other. In a flash it came to Reuben that she must be the lost elder sister. And the boy's heart leaped in unselfish joy.

"Aren't you Anna Miller?" he asked, raising his cap and jumping out. "If you'll get into the carriage, I'll take you home. I'm going right near there. I'm Reuben Cartwright, a friend of your family's."

"Sure!" cried Anna gratefully. "But how in the world did you know?"

Reuben explained as he helped her into the carriage, and Anna reflected that, since this was the second stranger to be struck by the resemblance between her and her sister, it must indeed be strong.

"Rusty must have grown good-looking," she remarked, patting her yellow hair complacently; and Reuben could not help laughing.

Anna laughed, too. "My goodness, don't tell her I said that," she begged, "for she used to be a regular little spitfire! I suppose she still is?"

"Oh, no!" Reuben assured her.

"That's good news. And so pa is rich?" she observed. "If I'd sent him word I was coming, would he have had a brass band out to meet me?"

Somewhat apprehensive, Reuben tried to set before her the true extent of the Millers' prosperity. He knew the relief and joy that her return would bring to her parents, and he feared that when she saw her extravagant expectations disappointed she might do or say something to lessen the happiness of the family.

But the girl was sharp and very good-natured, and, reading Reuben's doubt, she made sundry humorous remarks about what constituted wealth in her mind. For to-night, she declared, nothing in the world seemed so grand as the thought of a "square" meal. It seemed to her at the moment that she had never had such a thing. She could almost eat grass like Methuselah or Habakkuk or whoever the old fellow was. And, although she was so faint that she could hardly sit erect, she laughed gayly.

There was a chill in the air when they were passing over the flats between Farleigh and South Hollow, and so Reuben took out his ulster and wrapped it about her. The coat was blue and large, and gave Anna a bulk that was quite misleading.

Rusty, at the grocery's, saw Reuben going by with this large, blonde girl in blue, and believed it to be Mabel Graham.

Fierce anger seized her. Reuben riding with

Mabel Graham! And he could not pretend that he overtook her and was only driving her to her aunt's. He would have turned in below the academy had he been going to the Mudge place. He was parading by the Millers'

new home with Mabel just to make her mad! He was the hatefulest boy she had ever known, —the very hatefulest,—and she wished that she might never see him again!

TO BE CONTINUED

COACH QUIGLEY'S CODE

By Kenneth Carlyle Beatson

ON the day that Crab Phillips was graduated from

Colgrove High School he announced that next fall he should enter St. Vincent's College. As Phillips had been the star shortstop of the Colgrove baseball team for three years, it was natural that his announcement should be printed in a good many of the newspapers throughout the state. Quigley, the St. Vincent's coach, saw it on one of the sporting pages.

"Crab Phillips," mused Quigley. "He's the young world-beater of a shortstop Clark wrote me about. So he's coming here, is he? Guess I'll stop off at Colgrove on my way upstate to-morrow and have a talk with Clark about him."

Quigley arrived at Clark's home early the

before the opening game with Sherman something happened that proved

that Clark's warning had not been groundless. Toward the end of a hard-fought practice game, little Pete Perkins, the "varsity" centre fielder, came up with the bases full and went out on three called strikes. Later, in the dressing room, Pete remarked that the umpire needed "a pair of glasses."

"That last one missed the plate a foot and a half," he declared.

"Why didn't you tell him so?" demanded Phillips.

"Because I didn't see how that would do any good," said Pete, with some scorn.

"You could have raised a row about it,

Phillips was off like a shot. Quigley held his breath. Old hand at the game though he was, a play like this never failed to set his heart to thumping. If the batter did what he was supposed to do,—if he met the ball and hit it anywhere inside the foul lines,—Phillips had a fair chance of scoring. If he did not—

But the batter did. Bringing his bat up in a careful half swing, he sent a sizzling grounder down to second. The second baseman could have made an out at first with ease, but he tried instead to get Phillips at home. The play was close. It was so close that Quigley had not the slightest idea whether the boy was safe until he saw Hendrie wave him out.

Evidently Phillips was unaware of the decision, for when he got up he was grinning broadly.

"What are you so happy about?" demanded the catcher. "Didn't you hear the umpire call you out?"

"You have to touch a fellow to put him out," said Phillips. "Hendrie did call a pretty fierce one on me a while ago, but he wouldn't —"

"Ask him, then, if you don't believe me."

"Certainly I'll ask him. How about it, Hendrie? You called me safe, didn't you?"

"I called you out," said Hendrie.

"Out?" echoed Phillips. He took a step backward, raised his hands to his hips and stared incredulously. "Out? Why, you're crazy! He didn't even touch me! I slid round behind him and he missed me by a yard!"

"He touched you, all right," said Hendrie with decision. "He slapped the ball on just above the ankle when you threw your leg out, and he slapped it on good and hard."

"You talk like a chump!" cried Phillips. "He missed me clean. It'd be larceny—grand larceny—if you took this run away from us!" Phillips was studying law, and, like many other law students, he seldom lost a chance to use a high-sounding legal phrase. "I tell you," he persisted, "you can't call me out!"

"I was under the impression," said Hendrie, "that I had already called you out. If there's any doubt about it, though, I'll do it again to make sure. You are out—out—o-u-t! Now, are you going to let us

go ahead, or are you going to keep on kicking till you get yourself into trouble?"

"You mean you'll put me out of the game, do you? You act as if you thought I cared."

Hendrie took out his watch.

"I'll give you exactly thirty seconds to get to the bench," he said coldly. "If you're not there then, out you go in a hurry."

"Put me out now, and save the thirty seconds. You might as well. I don't intend to —"

Just then Quigley touched the shortstop on the shoulder.

"S-s-sh!" he exclaimed. "What's the use of raising a row about it? We don't need the run. Come on over and sit down."

"Why, you'd raise a row yourself, coach, if an umpire tried to put a rank decision like that over on you. You know you would."

"Phillips," said Quigley, "are you certain that it is such a rank decision? Hendrie was standing there with nothing to do but watch, and he should have seen it perfectly. Don't you think it's barely possible that you really were out?"

But Phillips did not think so. He thought that he was being treated with high-handed, unparalleled injustice, and he did not hesitate to say as much. He did not hesitate to say a great deal more, in terms that left little doubt of his meaning.

Hendrie listened quietly, with his eyes on his watch. At last he glanced up. "You've had your thirty seconds," he announced. "Now, will you please get off the field?"

"I will not," Phillips promptly returned. "You can't put me off, either."

"I'm not going to try to. But if you're here at the end of, say, another thirty seconds, your team will lose the game by default."

"Think you can scare me, do you? You wouldn't have the nerve to give them the game—not with us eight runs ahead."

His words were bold enough but his tone had lost a little of its assurance. The possibility of Hendrie's forfeiting the game was something that he had not counted on.

"You'd better go," said Quigley; and his tone made that advice a command. "Whether you've been treated as badly as you think or not, we can hardly afford to lose the game over it."

Phillips may have lacked respect for umpires, but he did not lack it for his coach.

"All right," he said. "I wasn't out, and

AS HE TURNED TOWARD FIRST, HE SAW THE BALL STREAK OUT TO THE LEFT OF THE PITCHER

next evening. Clark greeted him cordially. Long ago, in the East, they had attended rival schools, and now that one was athletic director at St. Vincent's and the other director at a famous high school in the same state they had become steadfast friends.

"About this boy Phillips," said Quigley, when they were seated in Clark's den. "I need a good shortstop as bad as I need anything on earth. I haven't had a good one since I lost Pembroke. Is it true that Phillips is coming to St. Vincent's next year?"

Clark nodded. "He meant to go East," he said, "but I persuaded him to change his mind."

"What was his batting average this season?"

"Three hundred and fifty; and his fielding average was nine hundred and eighty-five. In the thirteen games we played, he stole twenty-seven bases. He also figured in more double plays than any other high-school player in the state."

"Whew!" said Quigley. "Considerable record, that. Hasn't he any defects at all?"

"He's got one," admitted Clark, with a frown. "You've heard his nickname, haven't you? Well, they gave him that nickname because it describes him exactly. He's a born crabber, if there ever was one."

"I like a player to be aggressive," said Quigley, "but of course if he carries it too far —"

"That's just it. He *does* carry it too far. If a play is close and the decision goes against him, he pretty nearly tears the grand stand down. He's been getting by with it here all right, but the sort of umpires you fellows have won't stand for much of that stuff."

The next day Quigley wrote Phillips a note congratulating him on his choice of college. Then he dismissed the boy from his mind. With the football season coming on in September, he had other things to worry about. Not until he called out the baseball candidates in February did he again think of the Colgrove shortstop.

Phillips proved to be a big, heavy-shouldered fellow, dark of skin and darker of hair. He proved, too, to be every bit the player that Clark had declared him to be. Before the first week of practice was over, Quigley was certain of one thing: so far as the position of shortstop was concerned, his troubles were at an end.

For a while he saw no signs of the crabiness that Clark had mentioned. But a few days

couldn't you?" retorted Phillips. "If it'd been me, I'd have kicked for a week."

The day of the Sherman game arrived. Phillips went in to get his first taste of college baseball. Quigley watched him quietly. His watching was soon rewarded. Coming to bat in the second inning, Phillips sent a hit crashing down past third base. It appeared to be good for two bases; but Hendrie, the freckled, sandy-haired fellow who was umpiring behind the plate, and who, incidentally, was the official St. Vincent umpire in all the conference games, ruled it a foul.

The shortstop was still grumbling when, after finally striking out, he came back to the bench.

"Why did you let him get away with it?" asked Pete Perkins, with a grin.

Phillips colored. "I won't let him get away with it a second time," he promised. "I didn't like to make too much trouble this early in the game, but he'd better not spring another decision like that on me."

The contest proved one-sided. Quigley's men began to hit the opposing pitcher in the third inning, and by the end of the seventh the score stood 11 to 3 in their favor.

But if the Sherman pitcher was easy for the St. Vincent's team in general, he was anything but easy for Crab Phillips in particular. Not once in those seven innings did the shortstop even get on base. He began to look discouraged.

He was the first batter up in the eighth. Quigley, squatting in the coaching box behind third base, smiled as he saw him take his place. To judge from the boy's expression, he meant to get a hit this time or die in the attempt. And he did get a hit—a clean single to left. Then he stole second base, and a sacrifice put him on third.

Quigley plucked a blade of grass and chewed it thoughtfully. It seemed to him a favorable time to work the "squeeze play," and he decided to try it. He cupped his hands about his mouth.

"Another run, now!" he called out. "Another run! Let's put the game on ice!"

"Another run!"—that was the signal. Quigley saw Phillips glance at him understandingly and then dance away from the bag.

"Careful, there!" warned the coacher at third, who also had heard the signal. "On your toes, but careful! Watch that pitcher! Watch him! Down with his arm, now—go!"

THE PLAY WAS SO CLOSE THAT QUIGLEY HAD NOT THE SLIGHTEST IDEA WHETHER THE BOY WAS SAFE UNTIL HE SAW HENDRIE WAVE HIM OUT

no one can convince me that I was; but if you say so, of course I will do as you say."

The game lasted some twenty minutes longer. Neither side scored again.

Quigley was the last one to reach the dressing room. He usually was the last, because he knew from experience that unless he waited to gather up the team's paraphernalia it would not be gathered up. He supposed that Phillips would be gone, but in that he was mistaken; Phillips was still there.

As Quigley dropped down on a bench, the boy came over.

"See anything of Hendrie outside?" he asked. "He usually comes in here to change his shoes. I shut up on the field when you told me to, but I'm waiting to finish telling him what I think of him. He can't forfeit the game now."

"Rats, Phillips!" exclaimed the coach. "You're not still worrying about that, are you?"

"What did you think—that I'd be ready to apologize to him, and tell him it was all my fault, and promise never to do it again?"

Quigley was silent for a moment. Then he said, "You're registered in the law department, aren't you, Phillips? Well, don't they teach you something over there about a fellow's being presumed innocent until he's proved beyond a reasonable doubt to be guilty? You say that Hendrie robbed you of a run. All the proof you have is your belief that you saw the Sherman catcher miss you. Considering that you were flying through the air at the time, with your eyes probably half blinded with dust and your mind entirely occupied with your slide, do you honestly think that your belief is such very good proof?"

"But —"

"Anyhow, we won the game," Quigley reminded him. "Even if that decision had been different, we couldn't have done any more. Why not forget about it?"

Phillips did not reply at once, but sat scowling at the floor. The coach began to think that his words were going to have some effect. Just then, however, Hendrie came into the room, and Phillips, looking up, saw him. His face reddened and he jumped to his feet.

"Why not forget about it?" he repeated, raising his voice so that everyone there could hear him. "Why not forget about that decision? Well, I certainly hope I can; but you don't come across a decision as bad as that every day in the week, and I'm afraid it's likely to stick in my memory."

Turning, he strode past the astonished Hendrie and out through the door.

It was with some misgivings that Phillips reported for practice the following Monday. He had had a chance to think over Saturday's altercation with a fair degree of clearness, and he was beginning to realize that his conduct would not add greatly to Quigley's regard for him. He remembered that, whereas that last speech of his in the dressing room had been intended for Hendrie, it had been made in direct reply to the coach; Quigley might very well have thought his language highly impertinent.

But Phillips need not have worried. Quigley greeted him in the same amiable way that he greeted everyone, made a remark about the weather, and asked him pleasantly whether he did not want to go over and bat to the outfielders until a game was started. Apparently the affair was a closed chapter with him.

Phillips breathed easier. He ridiculed himself for his fears. Very likely the coach had

known all along that Hendrie was in the wrong and had only talked as he had for the sake of appearances.

The week went by. Saturday brought another game.

Phillips got along without trouble for an inning or two. Then Hendrie, who was the field umpire that day, called him out on a close play at second. The fracas of a week before was reacted almost in detail. Phillips protested the decision volubly, and Hendrie ordered him to the bench. Phillips refused to budge. Hendrie ordered him to leave the field and threatened to forfeit the game if he did not go. Phillips declared that he would stay there until doomsday—but Quigley interceded, and he left.

After that, this performance came to be pretty nearly a common event. Only once in the next five games did the shortstop last the full nine innings. Not all of his trouble was with Hendrie; he found the other umpires just as unreasonable. It became a joke with his team mates.

"Well, Crab," one of them would say before a game, "how long do you think we'll have the pleasure of your company to-day?"

It was not much of a joke with Quigley, however. One night the coach came up to the boy's room and had a talk with him.

"You're a fine shortstop, Phillips," he said. "I don't mind admitting that you're as good as Steve Pembroke was, and that's saying a great deal; but you can't be much help to the team if you are never going to be in the game more than an inning or two, can you?"

When Phillips went to bed that night he had made up his mind to hold himself in check for a while. Quigley's words had awed him more than he would have cared to admit. What the other plainly meant was that, so long as he was forced to play the substitute shortstop most of the time anyway, he might conclude to play him all of the time; and Phillips certainly did not want anything of that sort to occur. He decided to let the umpires alone, no matter how they treated him.

And in the next game he did let the umpires alone—for a time. Then, as the fight grew warmer, he gradually lost control of himself. There came a very close play, in which the decision was against him—and his good resolution went flying.

With affairs in that state, the Berkley game came along. Berkley and St. Vincent's had been rivals from time immemorial. Whether either team had a chance for the conference championship or not, their game never failed to rouse great interest. This year, however, both teams stood high in the percentage column, so that the interest was even keener than usual.

The first four innings went by quickly. Berkley scored three runs, one in the second and two in the third. St. Vincent's, on the other hand, failed to get a man on base; and Quigley began to look worried.

But he did not look worried long. In the fifth inning his team began to do better. Capt. Durkee, the first man up, started the good work by rapping out a scorching single. The next batter walked. A sacrifice fly advanced them each a base, and big Don Blodgett, the nine's "clean-up hitter," strode to the plate swinging his bat eagerly.

Crab Phillips, who was next in the batting order, watched Blodgett dubiously. Wrinkling his forehead, he brooded over the possibility of his team mate's hitting into a double play and ending the inning.

To his astonishment, Blodgett did not try to make a long hit; instead he tried—ineffectually—to bunt.

"Why, what's the idea?" he demanded of those on the bench. "What's he bunting for?"

"He's bunting," said Quigley, "because I told him to."

"But—but we've got their pitcher going, and one safe hit would bring both runners in easy," argued the boy.

"It's safer to bunt," replied Quigley. "Most any sort of a bunt will give Durkee a good chance to score. We're three runs behind, and we can't afford to take chances."

Phillips scowled. Like most heavy batters, he despised bunting. Very likely, he told himself, Blodgett would push the ball straight into some one's hands, and —

But Blodgett got four balls and filled the bases.

"It's up to you now, Phillips," said Quigley. "Pick out one you like, and dump it down toward third."

Phillips got to his feet. Then he hesitated.

"Why not let me hit it out, coach?" he asked. "I might be able to tie up the score."

But Quigley shook his head.

"Time enough to try hitting it out when there are two down," he said.

Phillips selected a bat and dragged it over to the plate. There he took it up and studied its small end thoughtfully.

"Humph!" he said to himself. "With a runner on every base, all I'm allowed to do is poke out a measly little bunt! Why, we may not have another chance like this in the whole game!"

The pitcher took a lightning wind-up and threw. With a wary eye on the ball Phillips set himself. It was coming along shoulder-high, apparently headed straight for the centre of the plate. The boy grunted in

disgust. It was exactly the kind of ball he wanted. Oh, what could he not do to a ball like that! Why, he could —

He never did know just how it happened. One moment he stood there mumbling to himself about the absurdity of Quigley's order, but not dreaming of disobeying it; then, the next thing he knew, he had braced himself in his usual batting attitude and swung, with every ounce of his weight.

There was a report like the crack of a

teamster's black-snake whip. Glancing over his shoulder as he turned toward first, he saw the ball streak out to the left of the pitcher. It looked like a safe hit for a moment—but for a moment only. Then, seemingly out of nowhere, Berkley's second baseman appeared. He leaped high into the air, brought down the drive, and, swinging round, shot the ball like a bullet to third. Durkee was caught a dozen yards off the bag; and the St. Vincent's team's chance of scoring—in that inning, at least—was gone.

So quickly had it all occurred that Phillips was left a little dazed. Standing halfway between first and home, he stared foolishly at his feet and tried to collect his scattered wits. For a moment he did not quite know how it had happened.

Some one touched his arm. Turning, he found Quigley there beside him, and the expression on the man's face made him uncomfortable.

"Well, Phillips," the coach said quietly, "if you've any explanations to make, you'd better make them."

"What—what do you mean?" stammered Phillips.

"I guess you know. I told you to bunt, and you got up there and tried to knock the trademark off the ball. I'm used to having a little more attention than that paid to my orders. Why did you do it?"

Phillips swallowed with difficulty.

"I—I don't know, coach," he faltered. "I meant to bunt."

"What's that?"

"Oh, I guess it sounds fishy, all right; but it's true. I didn't have any more idea of hitting that ball out than I did of flying. It looked so easy, though, that I—I just forgot myself and slammed into it."

Quigley was silent a moment. Phillips tried to remember when he had heard of the other's leniency in the matter of discipline, but what came to his mind instead was the disturbing memory of two star football players whom the coach had summarily dismissed last fall for insubordination.

"Look here, Phillips," said the coach. "That day after your first rumpus with Hendrie, I reminded you of the rule of law that deems a person innocent until he's proved beyond doubt to be guilty. You weren't greatly impressed. At least, you didn't act as if you were, and haven't acted so since. Now, with the evidence against you a good deal stronger than it was against Hendrie, you switch round and ask me to recognize the rule you refused to recognize. What if I agree that you were right in refusing to recognize it, and judge this affair as you judged that?"

Phillips had a feeling that everyone on the field had stopped dead still to listen to them.

"However," Quigley went on, "I haven't any intention of agreeing that you were right. If you say you meant to bunt just now, but that you unconsciously did otherwise, I believe you. Your word is all that's necessary, and—but you'd better get out to your place. They're waiting for you."

Later in the game, when the St. Vincent's team had put itself on the safe end of an 8 to 3 score, an incident occurred that puzzled many of those who noticed it. Phillips was batting, and there were three balls and no strikes, when the pitcher put a fast ball across close to his knees. He let it pass, and the umpire called it a strike.

"Strike!" repeated Phillips, swinging round like a flash. "Why, that wasn't any relation

"I—I DON'T KNOW, COACH. I MEANT TO BUNT"

to a strike! It —" He broke off suddenly, and stood hesitating. He glanced over at the bench. Then he grinned somewhat sheepishly.

"Oh, all right!" he said, stepping back to the plate. "It looked like a ball to me, but I guess whatever you say goes."

could it be such a thing as—anybody's milking her in the field?" Joey ventured to suggest.

"Anybody?" Deacon Pettis put strong emphasis on the "body," as if that settled the matter at once and forever. "No, of course not. She may hold up her milk; some cows do."

"You know what father always said, don't you, Sam?" Mrs. Pettis put in. "He said that a heavy milker always had her good days and her poor ones. That's why he never had much faith in them. He used to say that men who bragged about having a 'great cow for milk' showed the pail one day in the week, and slipped round the back way into the house the next."

"I've heard the very same thing!" Joey broke out explosively. "The men down at the store were talking about it one morning. Mr. Hempstead said a great milker was likely to shrink up—give a lot more one day than she did another."

"Well, I don't know," said Mr. Pettis. "That might be. It seems more reasonable to me, though, that the cow has been cropping some wild-cherry bushes round the fences. You take a look when you drive them down, Joey. Some cattle have a great hankering for that kind of rubbish. Take along the hatchet and cut down anything you see."

Joey found a single clump of chokecherry bushes at the farther end of the pasture, but there were no tracks in the soft ground round them, and he was convinced the cattle had not been there. Once more his suspicions turned in other directions, and not unnaturally they fastened on Silas Hempstead.

"He wanted the Dempsey cow," Joey reasoned. "He's bragged that she wasn't worth the money Mr. Pettis paid for 'er. Don't seem's if he'd sneak into the pasture and milk 'er, but—but if this keeps up I'll find out, if—it takes a year. It wouldn't be a mite of use saying any such thing to Mr.

occurred before, but it happened several times during the next fortnight.

"She's not doing anywhere near so well as she did," Mr. Pettis told Ellis Green, who, coming over one noon to borrow a hoe, inquired casually about the Dempsey cow. "I'm going to try feeding her a little grain, and see if she won't pick up. The pastures are better than they've been in years, and the others haven't fallen off any. I don't see into it at all."

"Those extry good cows are kind of uncertain critters," the old man drawled. "Dempsey pushed her for all she was wuth, meanin' to make a big sale some day; that's what he was workin' for all the while."

That was on Monday. On Thursday a short, dark-complexioned, sharp-eyed man drove into the Pettis yard and inquired for "milch cows and heifers coming two." Although Mr. Pettis was away, the stranger insisted on going down to the pasture and looking the herd over; and Joey noticed that he quickly singled out the Dempsey cow and asked many pointed questions about her. The boy answered as discreetly as he could.

"I'll be through here again in a week or ten days," the man said, as he was preparing to leave. "You tell your father that, if I shouldn't get what I want over in the next county, I'll make him a good offer for that tawny yellow one in his herd; I like her looks first-rate. You don't have any idea what he'd ask, do you?"

"I'm pretty sure he wouldn't sell at all," Joey replied, and then, on second thought, added, "He might, though. I'll tell him what you said."

Deacon Pettis confirmed Joey's first conjecture. "If she proves as good as I expected she would, I want her myself," he said, when the boy gave him the buyer's message. "If she doesn't, I won't try to palm off a bad bargain on anyone else."

"He went from here right over to Mr. Hempstead's," Joey ran on. "I climbed up into the loft over the wagon shed and watched. He didn't look at any cattle, either. He just talked a long while with Mr. Hempstead in the yard and then drove off. I believe Mr. Hempstead is the man who wants the cow."

Deacon Pettis smiled indulgently. "You have a rather active imagination, Joseph. You must be careful not to let it run away with you, though."

But suspicions are easier to raise than to allay; they kept Joey awake that night, and, tossing restlessly from side to side, he thought of Silas Hempstead and the Dempsey cow. Hempstead wanted her—Joey took that for granted. And he was trying to cheapen her value, and thus get her at a low price. The boy grew so indignant at the thought that he sprang out of bed and drew on his clothes in the dark; after listening a moment at the upper landing of the stairs, he slipped down into the kitchen and out into the sultry summer night.

It was after one o'clock; the clock struck just before he got out of bed. A yellow moon hung low in the west. Joey followed the pole-fenced lane to the pasture bars. Noiselessly letting down one bar, Joey crept through. The uneven field was flecked with patches of moonlight and black shadows, and as he went the boy kept well within shelter of the bushes. He found the cattle near the "east line," and hid himself in a clump of undergrowth a little beyond them.

For a time the spice of adventure kept Joey open-eyed and watchful. Then, by degrees, his lids grew heavy, and once or twice he caught himself dropping off into a doze. Again and again he drew up his cramped knees with a resolute jerk, but it is doubtful whether he would have held out for long if something had not happened.

An odd cooing sound came to his drowsy ears and brought him wide-awake. The next instant the Dempsey cow swished through the brambles to his right, and he heard her feet clattering among the loose stones of Silas Hempstead's tumble-down wall.

For a full minute Joey sat there, dazed and bewildered; then, almost forgetting his caution, he scrambled across toward the brush-lined fence. It was not easy to find a gap in the bushes, but Joey painfully forced his way through a tangle of blackberry canes and peered out. He could not see much, for the little corner was shut in by a screen of alders and white birches, but he could hear plainly the noisy slobbering of a cow's lips over "slop feed," and the unmistakable play of milk on the bottom of an empty pail. At that moment a familiar figure strode across a better-lighted corner of the shaded spot, and Joey gasped. It was Deacon Pettis.

"Good morning, Silas!" he heard the deacon say in a voice that, although it was firm, was as gentle and kindly as when it had offered a home to a homeless waif three years before.

Then came the clatter of a falling pail, and a medley of dismayed exclamations.

"Don't get excited, Silas. This is between you and me, and it shan't go any further by my telling it. I wouldn't believe it for a spell. —I didn't want to believe it,—but the boy kept talking, and I thought it wouldn't do any harm to watch. I most wish I hadn't, Silas. I most wish I didn't know anything about it."

"I just put it up for a joke," Hempstead

THE DEMPSEY COW

By Charles T. White

"DEACON got that Dempsey cow, didn't 'e, Joey?"

The boy addressed as Joey was coming down the high steps of Fenton's store, with a big brown-paper parcel under his arm and with a newspaper projecting from the pocket of his coat. He halted with a jerk, and turned a much-freckled face toward the men who stood by the hitching rail.

"Yes, sir,—yes, sir, he did." When anyone put a question to Joey he always stopped that way, fixed the questioner with his eyes as if he were aiming at a target, and then "shot off" the answer with explosive emphasis. "Yes, sir, we went after her last night."

"I always reckoned that Dempsey would give in, if he got a price to suit him," Steve Baldwin commented. "She stood an even hundred the last I heard. S'pose likely the deacon bettered that a little, didn't 'e?"

The boy nodded. "Yes, sir, I think he did. They say she's great for milk and butter."

The last remark was lost in the rising discussion round the hitching rail. Joey did not wait to listen; but as he trudged off toward the shed where he had left the horse, a few sentences came to his ears.

"A fool and his money are soon parted," Silas Hempstead said, with a growl under his puffed-out lips. Joey recognized the growl without looking back. "A cow is a cow—that's my idee. Some are better, of course, and some not so good, but there ain't a hundred dollars inside the hide of the best of 'em. These great milkers folks brag about! They give a big mess one day and shrink up the next."

"Shaved pretty close to the hundred mark on the offer you made for 'er, didn't ye, Silas?"

That was Baldwin's good-natured, bantering voice, but it was the last remark Joey heard, for the laughter of the men drowned Silas Hempstead's grumbling rejoinder, and Joey had already backed old Duncan out of the shed and started for home.

For two years "the Dempsey cow" had been a familiar phrase on the lips of the farmers of the neighborhood, and Joey had frequently heard them discuss her good qualities and comment on the price that Dempsey asked for her. A hundred dollars seemed an almost fabulous sum to Joey, and others thought it a large sum to "put into a cow." That an animal so highly valued might prove false to her reputation by "giving a big mess one day and shrinking up the next" had never occurred to Joey before. And Steve Baldwin's gibe was the first intimation he had had that Silas Hempstead—one of Deacon Pettis's nearest neighbors, and the only troublesome one—had been slyly bidding for the Dempsey cow.

A little less than three years before, a tattered, dust-covered urchin, with bristly red hair and an earnest, explosive manner of speech, had presented himself at the Pettis farmhouse and asked for supper and a night's lodging. He told a pathetic story of childish years spent in a "home," five months of ill treatment by a man who "took him out on trial," a midnight flight, and three weeks of aimless wandering on country roads. Deacon Samuel Pettis listened to the recital, put a few soft-spoken questions, surveyed the newcomer over his horn-bowed spectacles, nodded understandingly at Mrs. Pettis, who nodded assentingly in response; and thus Joey Heath found a home. Perhaps that partly accounted for Joey's unflinching loyalty to Deacon Pettis, and for the fact that his heart fairly seethed with indignation as he recalled Silas Hempstead's remark about a "fool and his money."

"He'd like to make folks think that," Joey said to himself. "He'd—he'd do anything he could to make it seem so. He'd do it all the quicker, too, 'cause he wanted 'er himself. He's just that kind of a man."

Joey would have liked to report what he had heard as soon as he reached home, and to add thereto his own angry reflections, but Mr. Pettis discouraged that sort of thing. He had persistently refused to quarrel with Silas Hempstead, even when Silas's cattle had made havoc of a field of young corn, or when he had insultingly demanded "line fence" of the impregnable kind that he himself never built. On that occasion the deacon had rather sharply silenced Joey when he began to make caustic comments on the offending neighbor.

"That's rather an ugly word, Joseph, to use of a man old enough to be your grandfather," he had said. "Mr. Hempstead has his peculiarities, to be sure, but so have all of

us. To-morrow we'll fix that fence behind the swamp lot, so that the cattle won't get over it again. It's said, you know, that good line fences make good neighbors, and I guess there's some truth in it."

"But what use will it be to fix ours, Mr. Pettis, when there are places in his lying flat to the ground?" Joey had asked. "He won't build 'em—you know he won't."

"Well, we'll do our part, anyhow," the deacon had replied.

The fact that, after his return from the village that afternoon, Joey stopped in the yard and took a prolonged and critical survey of the Dempsey cow, showed plainly the channel in which his thoughts were running. The Dempsey cow was a mild-mannered animal, with a sleek, fawn-colored coat that betokened some Jersey blood in her; she blinked lazily at Joey, as if she were asking why she should be restricted to a diet of dry hay on such a bright and sunny day in June.

"She looks slick and nice," Joey decided, stroking her shapely neck. "But a hundred dollars seems like an awful price to pay. I wonder if it's so that big milkers do shrink up from one day to another. I wonder if Mr. Pettis knows about it."

The Dempsey cow had been making a local reputation for two years, but she laid no claim to princely pedigree; indeed, the reputation

DRAWN BY W. F. STECHER

JOEY GASPED. IT WAS DEACON PETTIS

rested chiefly on what Dempsey had said about "big messes" and "rich milk."

That same evening Joey stood beside Mr. Pettis and watched Mrs. Pettis measure the "night's milking" from the new cow.

"There's eight quarts and that much over," she announced, tipping up the tin measure to show the surplus. "I don't know but what I filled some of them a little full."

"That's as much as I expected," Mr. Pettis said in a satisfied tone. "She's been off grass now for twenty-four hours, and she's in a strange place. I thought I'd keep her in the yard a day or two, till she got wonted, but she's quiet. I'm going to turn her out with the others to-morrow."

Joey felt reassured, and he felt even more relieved the next evening, when the Dempsey cow gave a quart more; on the following morning she bettered her performance still further, and she kept up that liberal yield, with slight variations, for a week. John Dempsey had boasted of larger messes, but Mr. Pettis seemed satisfied, and Joey's fears of a "shrinking up" gradually subsided. Then, one morning, the deacon came in with a half-filled pail, and the boy's suspicions revived.

"I don't understand it at all," the farmer admitted, scratching his head. "Three quarts, or more, short from what we got yesterday morning! If the young cattle ran in the same field I'd think there might be a sucker amongst 'em, but they don't. We've never had any such trouble before. I don't understand it at all."

"If it ain't the young cattle, Mr. Pettis,

He's so good himself he wouldn't believe anyone did a mean trick if he saw it with his own eyes."

After that morning the Dempsey cow appeared intent upon redeeming her reputation. The milk yield astonished even Mr. Pettis; and when the poundage of butter, churned separately for a week, got abroad in the neighborhood through Mrs. Pettis it caused no little comment. Deacon Pettis was not given to boasting, but whenever the Dempsey cow was mentioned to him he smiled complacently, and cheerfully confirmed all reports that had not grown beyond their original dimensions.

Then a second shrinkage came, and came to stay. The morning milking failed suddenly by two or three quarts, and that went on for a week or more. Mr. Pettis said little, but his face showed perplexity. Joey broached the subject of a "night milker" again, but the deacon would not listen, and after that the boy kept his suspicions to himself.

One night after the house had become quiet he slipped out at the back door and spent several hours in the pasture; but his vigil was fruitless, and two hours before daylight he returned, sleepy and disgusted. The next morning the Dempsey cow touched her lowest mark thus far; the mess measured six and one half quarts.

"She wasn't milked last night, that's sure," Joey said to himself. "I was right there most all the time, and the whole of 'em were lying down, quiet as could be."

As if to confirm his conclusion, the evening milking showed a shortage, too; that had not

replied, with a forced laugh. "I saw Dempsey call 'er away from the rest to feed 'er one day when I was up there, and—and I got wondering whether a man could call 'er into this little corner here with a slop mess. I only meant to take you down a peg or two. I'm willing to settle in hard cash for the fun I've had."

"There's nothing to settle with me, Silas." The deacon paused a moment. "I wouldn't have come up here to-night, only I was afraid Joseph would ferret it out for himself. I had the notion I'd rather he never knew how it was. It wouldn't do a boy like him any good, and it might do him harm. It's bad to lose our faith in men, Silas—next thing to losing our faith in God, seems to me."

"Of course it—it won't happen again!"

Hempstead growled sheepishly. "As I say, it was only a joke, but maybe I went too far. I see it would look ugly if the story got out."

"It won't get out, Silas," said Mr. Pettis. "If you want the cow for what I paid, you come up to-morrow and get 'er. I think that's the best way. That'll put the whole matter into your own hands, and no questions asked."

"I'll do it," Hempstead declared stoutly. "I'll be up soon's I get the chores done. It is the best way if—if you're willing to sell."

"Yes, I'm willing to sell."

Joey raised his head a moment later and watched a black figure moving across the moonlighted pasture.

"I'll never let on I—I know a thing," he whispered softly.

Georgia, and through some misfortune—according to his account—had got implicated in the theft of some mules. He assured the boys that he was entirely guiltless; but one of the stolen mules was found in his stable, and eventually he was sentenced to three months' imprisonment.

Imprisonment bore hard on the mountaineer; day and night he thought of escape, but it was two months before he found a chance to get away. He did not stop to think that he had only four weeks more to serve. One day when he was working with a small gang on some job outside he knocked the guard down with a pick.

He hit hard. The man fell, and Wilson thought that he had killed him. He took to his heels and got away, although another guard fired two loads of buckshot after him. Two days later Wilson arrived at the house of a cousin, twenty miles away. There he got clothing, a rifle, ammunition and provisions, and started for the mountains across the North Carolina line.

He traveled by night and hid by day, until he came into the wild mountain country. There he breathed a little more freely, and even ventured out in daylight; but he had the fixed

when he saw with what determination the boys stuck to his trail, he had felt sure that they were members of the Georgia police. Fleeing to his cave, he had crept into the passage at the rear, gone in his panic farther than he intended, and, while trying to squeeze through a narrow crevice, had brought the loose rock caving in upon him.

A stone had struck him on the head and stunned him. He had brought one of his candles with him, but when he recovered consciousness he had found himself in pitch darkness; the candle had probably been buried under the debris. For a long time he had lain there in agony, torn between his dread of capture and his fear of a lingering death in the cave. At last the fear of dying where he lay proved the stronger. With groping hands he had found the shotgun, fired it, and shouted as loudly as he could.

"Wilson," said Tom, when the other had finished, "suppose that jail guard wasn't dead, after all?"

"But I'm sure he is," said the outlaw.

"Well, I remember hearing about the affair, for I had an uncle living near the place where it happened, and several times I heard my father speak of it; but I never heard that the guard died. I'm almost certain that he got well again, and I reckon everyone has forgotten by this time that the thing ever happened."

Tom lighted the torch, which he had put out during the hermit's narration, for he knew that they would need its light on the way out. As the flamesprang up, it showed a strange convulsion of the outlaw's features.

"Land o' livin'!" the man exclaimed chokingly. "Just supposin' I've been a-livin' up yere for nothin' all this time!"

"I believe you have," said Tom. "I'll find out all about the case when I go home, and I'll send you word. If the guard is alive, all you'd be likely to get now would be a short sentence for breaking jail—but the chances are that no one would bother you any more at all."

"It's most too good to believe!" Wilson exclaimed. "Boys, to think that I 'lowed you-uns was comin' to take me, and now you've brung me life! Come along, let's get out yere!"

He stumbled to his feet, but he was so weak and dizzy that he had to lean against the rock for a moment to steady himself.

"The sooner we get out the better," Tom said in a low voice. "This torch won't last very much longer. It would be no joke to get caught here without a light."

Wilson declared that he could find his way out in darkness or light; with Tom going ahead carrying the torch and with Ellis in the rear with the recovered shotgun, they set out.

The man advanced confidently. When they reached the chamber from which many passages radiated, he unhesitatingly chose one of them; but after traversing it for a few yards they came to its end—a pile of fallen rock.

"This isn't the way we came!" said Ellis, in alarm.

"It shore ain't," said Wilson. "That knock on my head has done unsettled my directions. Let's sit down yere a few minutes and it'll come back to me."

Tom put out the torch and for several anxious minutes they sat in the darkness while Wilson tried to straighten out in his mind the windings of the maze. Getting up at last, he announced that he saw where he had made the mistake, and that he was now sure of the way. Tom relighted the torch.

For a long time they groped slowly through the passages. Presently the torch burned out and they had to rely on their stock of matches; they lighted them only when they came to turns in the passage or to a branching of the way. The air seemed denser and damper. Tom was convinced that they had not traveled that way before, but Wilson was confident.

"I'm sure this isn't the way!" said Ellis from behind, in a frightened voice.

"Yes, it is," Wilson insisted.

Tom, who had just thrown away the stub of a match, noticed a spot of denser blackness at his feet and felt a sudden cold draft of air. With a cry he tried to throw himself backward. It was too late. His feet slipped on the wet stone. He slid forward, seemed to fall some distance, and then went helplessly down into a rush of water that swept him into blackness.

In Eight Chapters · Chapter Five 2

AS Tom disappeared into the hole, Ellis resolutely crept in after him. For about fifteen feet the passage ran straight ahead. It did not give much more than enough room to get through; at one spot indeed they had to lie almost flat in order to crawl under an overhanging rock. Ellis had a terrible feeling that the roof might cave in at any moment; but Tom, with the torch thrust out in front of him, kept steadily advancing, and Ellis stuck close at his heels.

The passage presently turned to the left, and a little farther on it began to get a little larger; they were soon able to stand almost upright. The flaming light showed damp, fissured walls of stained limestone, worn by dripping water. When the boys had cautiously made their way a little farther, the passage split into three or four ways.

"I wonder which way he's gone!" Tom muttered.

"Hello! Where are you?" Ellis shouted.

The sound rolled and echoed strangely in the confined space. A hollow answer came back, but it was hard to say from which passage it had come.

Again Ellis called, and again a dull sound came in answer.

"It's this way," said Tom, "but I believe he's still a long way from here."

The passage seemed no more than a huge fissure. It was a yard wide in the middle and narrowed to a sharp angle at the top and the bottom. Setting one foot carefully before the other, the boys made their way along it. The walls were dripping with moisture, and water ran along the bottom of the passage, which began to descend sharply. Several other rifts and holes crossed the way, and from one of them a little rill gushed out, ran for a few yards, and then disappeared. Soon after they had passed the little stream the boys came out in a large, three-sided chamber seven or eight feet wide; five or six passages opened into it.

Again Tom stopped and shouted for guidance. "This time the answer sounded much nearer, and its direction was unmistakable."

"He must have been in a terrible fright to have crawled so far back," Ellis remarked.

Followed by Ellis, Tom dove into one of the passages, which was wide and smooth, but so low that he had to bend almost double. Once it enlarged considerably, and then, after crossing several smaller passages, narrowed into a cleft. At last Tom's light showed a wider space ahead.

"Right yere, boys!" said a hoarse voice.

They were in a wide, low chamber. On the floor Tom saw the bearded face of a man. His legs and body were buried under a huge pile of loose rock and gravel that seemed to have caved in from the walls. Beside him lay the shotgun.

"What's the matter? Are you much hurt?" cried Tom, stooping over the man.

The wild-looking face of the cave dweller was plastered with dirt and smeared with blood from a cut on his forehead.

"I reckon you-uns has got me!" he mumbled. "Well, you kin take me. Get me outen here and I'll gin up. Only I don't reckon ez you kin git me out."

He hesitated in his speech, and his voice was queer and creaky, like the sound of machinery that has not been used for a long time.

"We'll get you out all right!" cried Ellis.

"And we don't want to take you," said Tom. "We won't hurt you. All we want is the things you took from us."

The boys set the torch in a niche and began to scrape away the gravel and rubbish that held the man down. It was slow and rough work, and they nearly wore the skin off their fingers; but at last they reduced the pile so much that they were able to drag the man out. He made a feeble effort to rise, but collapsed.

"Both my legs is broke!" he gasped.

Tom examined his legs, and found that the bones were sound; but the man had suffered several painful cuts and bruises.

"Your legs are cramped and the blood has stopped circulating," he said cheerfully. "That's all the trouble. You'll be all right in

a few minutes, and then we'll get you out of here."

"But who are you and what are you living in these caves for?" Ellis demanded, curiously. At Ellis's words the hermit started and stared sullenly.

"You-uns know right well who I am, I reckon," he answered. "Ain't you been a-huntin' me all summer?"

"Certainly not," answered Tom. "We're hunting crystals and ginseng, and we'd never have seen you if you'd let us alone."

"Ain't you-uns from Georgy? Ain't you the sheriff's posse?"

"Nothing of the sort."

The wild man sat silent for a time, casting suspicious glances at them.

"You hain't got a drop of water?" he asked at last.

There was no water fit to drink, but Tom wet his handkerchief in the muddy drip from the walls and applied it to the man's face.

"Thankee!" said the man gratefully. "You-uns may be good boys enough, and I don't say you ain't. I just 'lowed you was a-huntin' to find me up here."

"What did you want to take our gun for?" asked Ellis. "And our meat and coffee?"

"Why, I hadn't tasted no coffee nor salt meat for—for near five years; and when I smelt it I just couldn't hold back."

"Five years!" cried Tom. "You haven't lived in this cave for five years?"

The hermit nodded.

"But how have you lived all that time?"

"Mostly I lived like the wild things. At first I had a rifle, but my cartridges run out, and I dasn't buy no more. And I lost my fish-hooks; I had ter make fish snares. That's why I lifted your fish pole. But mostly I honed after coffee and salt meat, and I ain't had none, not for so long that I most forgot how it tastes. And when I et yourn it done made me sick," he added pathetically.

"You've lost the habit," said Tom.

The remarkable confession made Ellis stare in amazement. Either the wild man's suspicion of the boys was abating, or else he found great relief in talking freely after so long a silence, for he went on volubly. His voice was creaky and his speech was often rambling and disconnected, but he managed to pour out the details of his hardships and loneliness. As he talked, the torch burned out, and Tom made a fresh one out of the extra wood that he had brought.

"But why didn't you go down to the settlements and get some grub?" Ellis demanded.

The cave man stopped short, and his face wrinkled with suspicion again. But he had already told the boys so much that he could plainly not hold back now.

"Well, I reckon you-uns is good boys," he said, with a sigh. "You wouldn't gin me up?"

"Of course we wouldn't!" cried Ellis.

"I reckon you've heard tell of me. I'm Bob Wilson."

"Never heard of you," said Tom.

The man looked astonished, half relieved and half disappointed; he seemed to imagine himself notorious. While he waited for his numbed legs to grow fit for use again, he told his story from the beginning—and a stranger story has rarely been told than the one that the two boys heard in that strange place.

Wilson had been a mountain farmer in north

DRAWN BY H. C. EDWARDS

AT ELLIS'S WORDS THE HERMIT STARTED AND STARED SULLENLY. "YOU-UNS KNOW RIGHT WELL WHO I AM, I RECKON"

idea that a posse was on his trail, and, moving ceaselessly from place to place, he kept as far as he could from any sign of human life.

For several months he shifted about in that manner. Winter came on. It was bitter cold in the mountains, and his clothes were wearing thin. He might have perished had he not happened on the cave. In that he contrived to make himself more comfortable. While his cartridges lasted he shot several deer and one bear, and their hides kept him warm at night. He made himself moccasins from deerskin, but his clothes became so dilapidated that at last he made a thirty-mile journey to a remote group of cabins and appropriated some old clothes, sacking and horse blankets that he found in an outhouse. It was in terror that he made the raid, and he took the utmost pains to cover his trail.

Although he used his cartridges sparingly, the supply of them had at last become exhausted. Then he made traps for wild turkeys and rabbits and snared fish. He robbed bee trees occasionally, ate the honey and made rude candles from the wax; but what he chiefly "honed for," as he said, was coffee, bread and salt.

Several times he had thought of going out to buy rifle cartridges. He had a few dollars with him, but he never could summon the courage to risk the journey; for he imagined that he was still in danger of capture, and that officers were searching for him continually. In his utter solitude that idea became fixed like an obsession. When once in a long while a party of hunters would happen into that region, he never failed to scout about their camp like an Indian until he felt sure that they meant him no harm.

In the same way he had reconnoitred the camp of Tom and Ellis, puzzled by their raking among the gravel beds; but when he had smelled the pork and coffee, he could no longer resist his craving for those delicacies.

"But I meant to pay you-all for 'em," he said earnestly. "I brung a bunch of sang with me to-day. I was aimin' to leave it by the fire, but I reckon I drapped it when you-uns jumped up at me."

As for the shotgun, Wilson had yielded to the temptation to take it, for he knew that it might mean life to him at some time; but

but he was so weak and dizzy that he had to lean against the rock for a moment to steady himself.

"The sooner we get out the better," Tom said in a low voice. "This torch won't last very much longer. It would be no joke to get caught here without a light."

Wilson declared that he could find his way out in darkness or light; with Tom going ahead carrying the torch and with Ellis in the rear with the recovered shotgun, they set out.

The man advanced confidently. When they reached the chamber from which many passages radiated, he unhesitatingly chose one of them; but after traversing it for a few yards they came to its end—a pile of fallen rock.

"This isn't the way we came!" said Ellis, in alarm.

"It shore ain't," said Wilson. "That knock on my head has done unsettled my directions. Let's sit down yere a few minutes and it'll come back to me."

Tom put out the torch and for several anxious minutes they sat in the darkness while Wilson tried to straighten out in his mind the windings of the maze. Getting up at last, he announced that he saw where he had made the mistake, and that he was now sure of the way. Tom relighted the torch.

For a long time they groped slowly through the passages. Presently the torch burned out and they had to rely on their stock of matches; they lighted them only when they came to turns in the passage or to a branching of the way. The air seemed denser and damper. Tom was convinced that they had not traveled that way before, but Wilson was confident.

"I'm sure this isn't the way!" said Ellis from behind, in a frightened voice.

"Yes, it is," Wilson insisted.

Tom, who had just thrown away the stub of a match, noticed a spot of denser blackness at his feet and felt a sudden cold draft of air. With a cry he tried to throw himself backward. It was too late. His feet slipped on the wet stone. He slid forward, seemed to fall some distance, and then went helplessly down into a rush of water that swept him into blackness.

ALAN SEEGER

FACT AND COMMENT

ONE way to keep a body from becoming a busybody is to keep a body busy.

This World would be as clean as Heaven's Floor
If each should sweep before his own House-door.

YOUR lips are the bow; your words are the arrows; there are a million marks. The arrows are of your own choosing.

THE United States Bureau of Fisheries engages in various activities that seem to have small relation to fishes and fishing. For example, its agents have taken 566 blue foxes and 38 white foxes on the Pribilof Islands this winter. The pelts will go to the fur market.

THE general food shortage is not bringing everywhere the increased acreage that is so desirable this year. In Australia, for example, the area sown to wheat is 11,084,874 acres, as compared with 12,388,376 acres in 1916. The Australian wheat yield runs from ten to sixteen bushels to the acre.

WHY is sugar high? One reason is that in 1916 we exported almost eight hundred thousand tons of refined sugar. That is ninety million dollars' worth—or four times as much in quantity and five times as much in value as we exported in 1914. Even a big market like ours cannot stand such a drain as that without disturbance.

THE recent extension of the Southern Pacific Railroad to Coos Bay, Oregon, means that the only large harbor between San Francisco and Puget Sound is to be made an important commercial outlet to the Orient. There are vast resources of coal and agricultural lands tributary to Coos Bay, and the forests of that region are said to be the largest single unit of timber wealth in the country.

OHIO and Indiana are the thirteenth and fourteenth states—and the most eastern ones—in which women may vote for presidential electors. Like their sisters of Illinois, the new voters will lack the privilege of registering their choice for governor, although women in the eleven other suffrage states have it. The results in the two states came through legislative action—in Ohio after the voters had defeated equal suffrage at the polls.

IN the interest of accuracy the Weather Bureau some time ago urged the use of the word "tornado" for "cyclone" when the meaning is a violent storm of small diameter. In the same interest it now offers "glaze" for "sleet." The official description of sleet is small globules of rain that freeze before they strike the ground. When the rain freezes on trees and buildings, the condition is a "glaze," and when the glaze is severe and there is a strong wind, it is an "ice storm." But not even the Weather Bureau is likely to find a substitute for "slush."

ONE of the chivalrous young Americans who have given their lives for France is likely to be remembered as a poet of high achievement and of even greater promise, which happier times might have fulfilled. Yet Alan Seeger's most memorable poem could never have been written had he not cast in his lot with the defenders of France and faced voluntarily and valiantly the death that came to him in battle at the age of twenty-eight.

I have a rendezvous with Death
At some disputed barricade,
When Spring comes back with rustling shade
And apple blossoms fill the air.

So begins one of the most poignant poems in the annals of American verse. Alan Seeger kept the rendezvous.

POSSIBLY one result of the war will be to end the Englishman's system of measuring money in pounds, shillings and pence. The British Association of Chambers of Commerce has referred to the chambers of commerce throughout the country a proposal to approve a reform of the coinage. The plan is to make

the florin, which is two shillings, the unit of value instead of the pound, and to divide it into one hundred cents. The cent would thus be the one-thousandth part of a pound, and would have almost the same value as the present farthing, of which there are 960 in a pound sterling. The plan is very simple; but Englishmen are conservative, and so it is only possible that the change will be made—not at all probable.

DOES IT MATTER?

OUR traditions, our ideals and, as we believed, our self-interest, all conspired to keep the United States neutral during the first two years of the war; but the war has educated us and set in action other influences that are steadily driving us into the conflict. We have a tradition of standing up for the rights of our ships on the high seas as well as a tradition of noninterference in European affairs. We have an ideal of justice and humanity as well as an ideal of peaceful and friendly relations with our neighbors. We have learned that our self-interest is no longer served by neutrality—if it ever was so served; that it means a great deal to us—perhaps even our existence as a self-respecting democracy—which side wins in this great war.

Germany has unsheathed its last weapon. If it can actually destroy the ships that serve England, England can no longer fight; it must submit, and with its fall must come the fall of its allies. Germany hopes to win with its submarines, ruthlessly and illegally used, what its army and navy have failed to win—the hegemony of the world. What will it mean to the United States if Germany succeeds?

First, the annexation of the richest part of France to Germany, and the ruin of that sister republic, the nation to which we owe more of gratitude and sympathy than to any other. Second, the destruction of the British Empire, and the end of Great Britain as a naval and commercial power of the first rank. Third, German domination of the seas and absolute German control in Europe and, to a somewhat less degree, in Asia and Africa. Fourth, the necessity either of submitting to German dictation on the seas and in Pan-American affairs, or of fighting the greatest of world powers.

What the humiliation of the great European democracies and the enthronement of German military autocracy would mean, we begin at last to realize. It would mean the triumph of every political principle that the United States was born to deny and combat; it would leave us virtually alone in the world to stand for the principles of freedom and self-government.

We know well enough what the conditions of trade and commerce are while England is most powerful upon the seas. What they would be with the German navy in possession of the seas and with Germany controlling the colonies and trade opportunities that now belong to Great Britain, France and Holland, we cannot think of without anxiety. England has learned to administer its power liberally. In time of peace it has asked no privileges for itself even in its own territories that it would not grant to other trading nations. That has never been the policy of Germany; still less would it be the policy of a Germany wholly in the hands of the military party, and the victor in a costly and bitter war. We have seen the German method in authority in Belgium, and in the matter of the submarines we have seen its lack of regard for the rights of others, and its interpretation of the "freedom of the seas." There would be a violent readjustment of all international trade relations, a readjustment that could not fail to be harmful to us, and that would bear with it a constant threat against our peace and prosperity.

The startling revelation of the plot against us in which Germany tried to involve Mexico and Japan while we were at peace with all three countries must convince every one of us that to serve its own ends the German government stands ready at any time to interfere to our hurt in Pan-American affairs, and if possible to embroil us with our sister republics. There is no other European power from which we have any such conduct to fear. Germany and Germany alone threatens the Monroe Doctrine, which is the corner stone of American foreign policy, and makes it its business to foment treachery and war in this Western Hemisphere.

We can no longer imagine that it makes no difference to us which side is to win the war. In the past, some Americans have said that it made no difference, and doubtless they have been sincere in their belief. The very real danger that the submarine may after all win the war for Germany has cleared their vision. At last they see what would then lie before their country. It is as essential to the

future of the United States that England and France be not beaten down as it was essential to the future of England that Belgium and France be not conquered.

A NOBLE CALLING

WE believe that there is no nobler calling than that of the teacher. And we do not mean especially the advanced teacher, the learned professor with his trailing degrees. We mean, above all, the thousands of women all over this broad country who are teaching millions of little children the essence of life. Those women, with their humble, constant, patient, ill-rewarded industry, are making the future of this nation and the future of the world. It depends upon them primarily whether democracy shall work out to slow, enduring triumph or to gigantic disaster.

They are conscious of the vastness of their task and try to perform it worthily. No doubt many of them are careless and negligent and think mainly of themselves; but the great mass labor tirelessly and with daily prayers that they may put into those children's hearts some little seed that will go on and prosper to the glory of God.

What the difficulties are no one knows who has not closely watched the effort. The children are so often unresponsive and wayward and intractable and easily misled, rarely if ever appreciative of the care and love bestowed upon them. The parents are seldom thoughtful to praise, and are often ready to find fault, convinced that, if Willie does not do well, anyone but Willie—or themselves—is to blame.

The reward is meagre in dollars; in thanks, more meagre still. The teacher must find it chiefly in the consciousness of having done her best, and that is a consciousness often denied to those by whom the very best is done. Only rarely does one among hundreds of pupils who come later to look at their teacher's work with love and gratitude think to tell her of it. But what a ray of sunshine that means! If you have prospered in the world and are happy and successful, and feel that you owe it very largely to her who formed your character in school, write and tell her so. You will give more pleasure than you can imagine.

OUR TRADE WITH THE WORLD

WE have ceased to be amazed at the magnitude of the foreign trade of the country, just as we have ceased to shudder with horror when it is announced that a great steamship has been sunk with all on board. The one fact has become a commonplace, and we are hardened to the other by repetition. Nevertheless, we all like to see the big figures that show how the markets of the world are taking the products of America as never before; but we must not forget that the foreign trade of to-day represents merely a spurt, not a healthy and lasting growth. That it gives us an advantage for the future is doubtless true, but it is an advantage that we cannot hold without a vigorous effort.

In the calendar year 1916 the aggregate foreign trade was valued at \$7,873,077,924, of which \$2,391,654,335 represented imports, and \$5,481,423,589 exports. So the excess of exports was more than \$3,000,000,000. Half a billion dollars, or a little more, in gold was sent in to pay for that excess; the rest, it is estimated, was met in about equal amounts by the return to this country of American securities owned abroad and sold here, and by loans to foreign governments.

The details are as marvelous as the totals. It is difficult for the mind to grasp the full significance of the statement that last year we exported nearly 800,000 tons of refined sugar; that we found foreign purchasers for more than 80,000 automobiles; that the value of iron and steel manufactures sold abroad was \$867,000,000; that we supplied the belligerents with gunpowder and other explosives worth \$715,000,000—more than one half the value of all exports to all countries in the year 1900. Those are only examples of the largest classes of exports. Hundreds of others might be given, equally astonishing, although drawn from articles in which dealings are necessarily on a smaller scale—copper, lead, leather, textiles, India rubber, oil, tobacco.

It must not be supposed that the spurt in our foreign trade is wholly in the trade with belligerents, or in material useful for war purposes. Yet in a certain sense much of the increase in our sales to neutral countries must be classed as an increase caused by the war; that is, the neutral countries, being no longer able to get what they need from the peoples

with whom they formerly traded, are now buying in this country. That is the trade that we shall have to exert ourselves to retain.

There was an increase of more than \$400,000,000 in the sales to North America and the West Indies in 1916, as compared with those of 1914—in other words, the trade nearly doubled. It more than doubled in South America, where the aggregate last year was \$220,000,000; in Asia it more than tripled, —the total was \$363,000,000,—more than doubled in Africa, and greatly increased in Australasia. Leaving Europe out of the account altogether, our exports to the rest of the world were valued at \$774,000,000 in 1914; at \$981,000,000 in 1915; and at \$1,668,000,000 in 1916.

AMERICAN SOLDIERS IN FRANCE

ALL Americans are agreed in hoping that the American soldier, wherever and whenever he is called upon to fight, shall quit himself honorably and like a man. There are, as The Companion has already told its readers, about fifty thousand Americans in service abroad, most of them enlisted in the British and French armies, and more than half, probably, in the Canadian contingent. We have heard most about the aviators and the ambulance men; they have had plenty of praise, although no more than they deserve; but there are several times as many Americans in the trenches as there are in the special services above and behind the lines. It is interesting to read in an English paper what a keen observer thought about them when he saw them in action along the French front.

He found them always cheerful, eager to take their share of the most perilous duties, determined to fight the war out to a victory, quite sure of the reality and importance of the issues at the back of the war, and yet never anxious or depressed or gloomy. In the trench raids, which have become so constant an incident of warfare in the west, they show daring, cleverness, obstinate courage. They are, he says, men who think and understand, who need the least possible direction from their officers, who are deficient sometimes in formal, parade discipline, but who in the face of danger are steady, obedient, cool, resourceful.

Next to their cheerfulness, it was their quickness of movement that most impressed the observer; they are nervous in the best sense of the word, alive to their finger tips, as full of energy as of high spirits. Altogether it is an attractive picture of the American fighting man. We are a pacific people, as the whole world can see, whether or not it thinks more or less of us on that account; but there is still good military material among us, and only a very small part of it has found its way, in defiance of our official neutrality, into the European trenches.

To this little body of Americans the writer ascribes, also, two minor revolutions in the art of warfare as practiced by the armies of Europe. The Yankees have taught Tommy Atkins and his French ally the uses of chewing gum as a sedative in time of nervous strain, and they have converted Tommy at least to an abiding faith in pork and beans as a diet, instead of the beef on which the Englishman—crossbowman, grenadier or rifleman—has fought ever since the Normans came across the Channel.

CURRENT EVENTS

CONGRESS.—The Sixty-fourth Congress ended under sensational circumstances, for a few Senators who were opposed to the bill giving the President power to arm American merchant ships were able, by taking advantage of the Senate custom that makes unanimous consent necessary before a vote can be taken on any bill, to prevent that measure from coming to a vote at all. Mr. La Follette of Wisconsin, Mr. Stone, the chairman of the Foreign Relations Committee, and Senators Cummins of Iowa and Norris of Nebraska were the most conspicuous members of the group. Their conduct greatly incensed other members of the Senate, and the closing hours of the session were embittered by the feeling that was aroused. When Congress adjourned without taking action on the armed ship bill President Wilson issued a statement to the nation, in which he accused the filibusters of having rendered the government of the nation "helpless and contemptible" in the eyes of the world, and added that it would be useless to call the new Congress in special session to pass needed legislation unless the Senate first changed its rules so that a handful of "willful men" could no longer block all the purposes of the great majority of the body.

A movement was at once begun in the

Senate, which was as usual called in extra session to act on appointments, to put into effect some moderate form of cloture. On March 7 both Republican and Democratic caucuses voted to accept a new rule permitting the Senate to limit speeches to one hour by a two-thirds vote. All over the country there were meetings to express popular indignation at the failure of the Senate to act, and several legislatures passed resolutions to the same effect.

The confusion of the closing days of the session made it impossible for the Senate to pass the army, sundry civil, general deficiency, rivers and harbors, and military academy appropriations bills; and the espionage bill, the conservation bill, the water power bill, the Webb bill to legalize combinations in international trade and other important legislation failed for the same reason.

Both houses did finally pass the naval bill, carrying an appropriation of \$535,000,000, the general revenue bill, the Danish West Indies government bill, the pension bill and several smaller appropriation bills. The House passed the armed ship bill by a vote of 403 to 13, and 75 out of the 96 Senators signed a manifesto declaring that if the bill could have been brought to a vote in the Senate they would have voted for it.

THE INAUGURATION.—President Wilson was inaugurated for the second time on March 5. The ceremonies were brief and the procession less brilliant than usual, owing to the serious feeling regarding the situation in Washington. The President in his inaugural address warned the country that, in spite of our desire to remain at peace with the world, events were likely to drag us into actual participation in the war. He pleaded for national unity in the moment of crisis; declared that permanent armaments beyond the need of domestic order and safety were wrong, and said that nations should be careful not to permit their citizens to encourage or assist revolution in neighboring states.

VIOLATIONS OF NEUTRALITY.—Albert A. Sander and C. W. Wunnenberg were indicted in New York for directing from this country the work of German spies in England. A Hindu named Chakraborty and a German named Se Kunna were arrested for conspiring to set on foot uprisings in British India. A man named Kolb was arrested in Hoboken, and several bombs and a quantity of explosives were found in his room. The police believe that the explosives were meant to be used on ships or in munitions factories.—On March 6 the United States Supreme Court decided that the German prize crew that brought the captured British ship Appam into Hampton Roads more than a year ago had thereby violated American neutrality; and it directed the return of the vessel to its British owners.

RELATIONS WITH GERMANY.—On March 3 it became known that Dr. Zimmermann, the German Foreign Minister, had virtually admitted to the Reichstag that the note to Minister von Eckhardt in Mexico, instructing him to sound the Mexican government in regard to an alliance with Germany against the United States, was genuine. He defended his course by saying that the step was to be taken only in case of war, and that in such a case Germany was justified in finding alliance and support wherever it could. The Reichstag budget committee voted a formal approval of Dr. Zimmermann's conduct. Mr. Aguilar, the Mexican Secretary of State, denied that the Carranza government had ever had the proposal conveyed to it, and the Japanese ambassadors to this country and Mexico, as well as various statesmen in Japan, declared that Japan would never have considered the alliance with Germany and Mexico that Dr. Zimmermann's note suggested. President Carranza maintained entire silence on the matter.

RECENT DEATH.—On March 8, Count Zeppelin, inventor of the Zeppelin dirigible airship, aged 78.

CUBA.—Dispatches from Santiago declared that Commander Belknap, who commands the United States naval squadron there, had undertaken to arrange an armistice between the rebels and the Menocal government, but the report was denied at Havana and remained unconfirmed. On March 7 it was announced that Gen. Gomez, the rebel leader, had been captured with all his staff by a government force under Col. Collazo.

IRELAND.—Mr. Lloyd George, speaking in Parliament on March 7, agreed to put home rule into immediate effect, in all parts of Ireland that desired it, but added that he would not coerce Ulster into accepting it. He also offered to submit the whole question to the

decision of an imperial conference. His proposals did not satisfy the Nationalist members, who marched out of Parliament in a body by way of protest.

SWEDEN.—The Hammarskjöld ministry resigned on March 5, having failed to carry through the chambers its bill for a considerable grant of money to be used in maintaining Sweden's neutrality. The King asked the ministers to remain in office and endeavor to come to an agreement with the majority of the Diet, and they consented to do so.

THE EUROPEAN WAR

(From March 1 to March 7)

The British continued their advance against the German positions in front of Bapaume during the first two or three days of the week; but it soon appeared that the retirement of the Germans was at an end, and that they were entrenched in new positions. At some points those positions were not more than one thousand yards from Bapaume. The withdrawal has somewhat shortened the lines that the Germans must hold, and has relieved the dangerous salient at Gommecourt. The British officers believe that the new line is not as strong as the original line that was broken last summer, and are confident of going through it when dry weather comes. Berlin declared that the German withdrawal was voluntary, and that the new positions were stronger than the old ones. The British have taken over thirty miles more of the French trenches, and now hold all the line involved in the Somme offensive of last summer.

There were air raids and trench raids in Flanders, Champagne and near Verdun; in some of them the Germans had the advantage, in some, the Allies. None were of unusual importance.

London reported that the Turkish defeat at Kut el Amara had become a rout, and added that Gen. Maude's army had pursued the enemy nearly to Ctesiphon, which is only twenty-eight miles from Bagdad. More than four thousand prisoners and a great quantity of military supplies were taken during the retreat. A British gunboat taken by the Turks last year was also recaptured.

At the same time Russian activity in Persia began again, and it was reported that the Russians had retaken Hamadan, which they abandoned last summer. The advance threatens the flank of the Turkish army at Bagdad, and if it is made by a strong enough force can cooperate with Gen. Maude's army to seize that important city.

The severe weather prevented any hostilities worth recording on the eastern fronts.

The United States ships that were sent to carry relief supplies to Syria and to bring away American citizens from Beirut and Smyrna are still at Alexandria, since they have been unable to get guarantees of safety from submarine attack either from Berlin or from Constantinople. The suffering throughout Syria is said to be acute, and the deaths are almost as many as in Armenia last year.

Great Britain and France announced that hereafter weekly instead of daily reports of the number of ships sunk by submarines would be given. On March 7 the British government reported that twenty-three British merchant ships had been sunk during the week. The tonnage involved was not made public. Berlin declared that an armed transport of no less than 34,494 tons had been sunk in the Mediterranean, besides two or three smaller army transports. If the report is true, the great transport sunk is probably the Statendam. That ship was building in England for the Holland-America line when the war began, and it was seized by the British government for military use.

It was reported from various sources that China was likely to follow up its protest against the German submarine campaign—in which it supported President Wilson—by an actual rupture of diplomatic relations and perhaps by a declaration of war. According to these reports, the cabinet was in favor of such action, and expected to gain thereby the remission of the Boxer indemnities that still remain unpaid to England, France and Belgium; but the President, Li Yuan-hung, was unwilling to go to the length of war, whereupon the premier offered his resignation.

The Austrian government replied to the American request for a statement of its position regarding submarine warfare. It declined to modify its decree, which is similar to that of Germany, and declared that armed merchantmen were to be regarded as pirates. It defended the submarine campaign as a legitimate retaliation against Great Britain.

The rumor gained currency that the Argentine government was planning a movement by the Latin-American republics to bring about mediation in Europe. The report was denied by high officials at Buenos Aires.

Flour Facts

A poorer, cheaper grade of Pillsbury's Best is never sent out to catch the cheaper trade.

We absolutely refuse to lower the quality of Pillsbury's Best flour in order to meet a lower price.

The Pillsbury Flour Mills Company is staking its success and the life of its large business on the plan and policy of marketing but one, single, uniform, highest quality flour under its Pillsbury's Best brand.

No one, anywhere, can buy better Pillsbury's Best flour than you can buy. Pillsbury's Best is always the same—always Pillsbury's Best—everywhere—all the time—at the grandest grocery—or at the crossroads store.

We believe this policy will win in the long-run.

The Flour Question Settled "Because Pillsbury's Best"

Send 10c for a copy of the famous Pillsbury Cook Book. Address Dept. 19 Pillsbury Flour Mills Company, Minneapolis, Minn.

BACH AT THE ORGAN

By Agnes Lee

THE silent organ waits in the silent church.
The Leipzig Cantor walks in the falling snow.
Nobles in painted coaches hurry on;
The powerful of the city pass him by;
The little men and women of a day
Go whispering, "The Cantor of the choir!
He makes the music few will pause to hear."

He gropes amid the gray,
The shadowy loft ascending;
He sees the angels bending
To light the old stairway.

Enthroned before the keys,
The humble citizen
Builds for a world of men
A world of harmonies.

Oh, eager human hands!
What now are earthly kings?
King by heaven's grace, he flings
The full tone that expands

Till sound-paths newly trod
Lead up the heights of wonder,
And in the organ's thunder
Thunders the voice of God.

The last notes die away, and he goes forth.
No footprints in the snow about the church
Give sign that any heard his cadences.
And yet he smiles. For who should know as he
The gift that he has given to souls of men?

And those who listen for eternity
Listen forever to the Cantor's smile.

FAITH AND REASON

TO many persons faith and reason as applied to the Christian religion are two separate and distinct things. But is that true? What is Christian faith? Some think of it as putting on strange, owl's glasses, and seeing the world as if it were an Aladdin's cave—a sort of topsy-turvydom. As a matter of fact faith as applied to religion is the same mental process that is used in any other sphere of life. Faith as applied to science, for example, means reasoning as far as you can, and then projecting your guess along the lines where reason ends. That is what a scientific hypothesis means.

The scientist starts by assuming something to be true. Then he marshals his facts to prove his theory. His assumption or hypothesis was, however, an act of faith. That is true also in business. One of the wealthiest families in New York won its riches by an act of faith—business faith. A century and more ago the head of the family saw New York large, while it was still small, and he bought land right and left. He did not know that New York was to be the chief port of the United States. As a matter of fact other persons were just as sure that Perth Amboy, New Jersey, was to be the leading city. This family reasoned as far as it could, then made the venture on faith, and bought in New York. And its faith was realized, with the attendant reward.

With a similar meaning we speak of Christian faith. None of us can prove mathematically that the soul is immortal, or that Christ saves from sin. We say it looks true. We take it as an hypothesis of religion. Then we act on the hypothesis; that is, we make a venture of faith. We act just as if the soul were immortal, and as the years go by the belief becomes confirmed. Likewise we make a venture on the hypothesis that Christ saves us. We trust Him and obey Him, and then we find that He stiffens our will, quickens our conscience and makes us better men. This is the pragmatic method in philosophy, which says, "Try it on. If it works, it is true for you."

Christ never begins by telling us anything. He touches us, and when we respond to that touch the proof comes. "If any man will do his will, he shall know of the doctrine."

MOTHERS

DO you hurt yourself, Stanley? Big boys don't cry, you know. Let mother see how brave you are. That's splendid—you are a big boy. Yes, Maudie, you may go over to Nancy's for an hour. Come here first and let mother tie your hair ribbon. There, that's right. Don't stay more than an hour, remember!

Maudie flew down the path with her hair ribbon fluttering like a big blue butterfly. Little Stanley, insisting upon his courage, went back to his play. Their mother, with eyes full of pride, turned to her old schoolmate.

"I never can get reconciled to your not being married, Mary Armstrong!" she cried. "You who always loved children so! No woman knows what life is till she is a mother—and you'd have made such a great one. I could cry over the waste of it."

Mary Armstrong's gray eyes, wise, deep and tender, studied her friend a moment.

"But, dear, you don't have to be married to be a mother; if it were so, it might be hard. But there are never half enough mothers to 'go round' in the world. Maybe that's why God needs some of us free, so that He can send us to lives that need mothers."

"Oh, I know—but that isn't at all the same," Maudie's mother insisted.

"Two years ago," Mary Armstrong said slowly, "a little girl of sixteen came to me. She had been neglected all her life. Her mother was no mother, cared nothing for the child, cared nothing for anything except dress and amusement of the cheapest kind. Where the child got her little white soul, God only knows. But she dreamed always of a mother who cared—who cared about what she was and what she did; to whom she could go with all her perplexities and problems and girlish battles. She looked like a broken flower when she came to me. I wish you could see her now—strong and eager over life, and so pitiful over other lonely girls! She calls me 'mother' in her letters."

"I don't see how you dared," Mrs. Carey murmured absently, with her eyes upon her little son.

"And there is Michael. He is in a reformatory. He never had been loved in his life. I happened to see the look in his eyes one day. He used to have ungovernable fits of rage. If you could see the way he is working to conquer them now—because some one cares!"

"Stanley has the sweetest disposition," Mrs. Carey said. "It's no use, Mary, you simply can't

imagine what you're missing. It makes me so cross! There, I'm going—I can't talk about it."

She called Stanley, and they went down the path together. Miss Armstrong, smiling to herself, watched them out of sight.

FIGHTING A BAGGAGE ELEPHANT

BEFORE the days of railways, the British Indian army used elephants to move its guns and heavy baggage. Many of the beasts were docile enough, but at times an elephant became unruly and even developed the treachery of a "rogue." Such was the leader of a regimental transport column that once crossed the Ganges when in flood. He had killed three mahouts, and the keeper refused to drive him to the ford. Finally, Sher Sing, a strapping native, offered to drive the man-killer. A contributor to Chambers's Journal says that the volunteer carried a short spear in place of a mahout's hook and that he had himself securely strapped to the elephant's neck.

A shout went up from the onlookers when Sher Sing, with a slight prod of the spear, made the huge beast rise from his knees. The elephant stood quite still and, turning his trunk first to one side and then to the other, seemed to sniff his rider. Sher Sing spoke to the elephant, and silence fell on the watchers as they parted into two lines, down the centre of which the great beast took his way. Arrived at the water's edge, he stopped and began playfully to squirt water over himself and his rider. Then he lifted his trunk and, catching Sher Sing's leg, tried to pull him off. But the straps held securely. At the same moment Sher Sing raised his spear in the air and brought it down with a thud on the elephant's head. Roaring with rage and pain, the animal plunged forward.

An instant later he stopped, and the excited watchers on the bank saw that the huge beast was gradually lowering himself in the water. Down, down he sank, while Sher Sing rained blows on his head. At last only the elephant's trunk and the moving right arm of Sher Sing appeared above the surface of the river.

Then a gasp of relief came from the watchers. The elephant had risen and was again trying to unseat his rider with his trunk. Sher Sing plied his spear with all his might, and the great brute, giving himself a shake, dashed into deep water. Once more he sank, and again Sher Sing's relentless arm hammered blows on his head.

Suddenly a great cry arose. The elephant had come to the surface, and Sher Sing was still clinging to him. He seemed to be waving his spear as if in triumph. The elephant was wading quietly toward the opposite shore.

The next day everyone in the regiment, from the colonel down, came to look at the big elephant, which stood quietly eating and taking no notice of anyone. His head was covered with cuts and gashes, but they did not seem to trouble him at all, and they quickly healed. From that day he acknowledged man as his master.

Sher Sing, too, quickly recovered from his exertions. He was a faithful soldier and servant of Queen Victoria, to whose jubilee he came with a detachment of his regiment. At the time of King Edward's coronation he again visited England; he was then an old man and had gained his pension, but he was sent because of his good influence over the younger men.

ALL FOR NOTHING

A RECENT amusing sketch in Punch depicted a stout British matron, during a midnight Zeppelin raid, panting her dutiful way up to the attic bedroom of the new maid to invite her to join the family downstairs—of course, for greater safety. But the girl, kneeling in the window seat, merely turned an excited countenance over her shoulder long enough to reply politely:

"Oh, thank you, ma'am, but it isn't necessary. I've a beautiful view up here!"

The artist may have invented the scene, but probably he did not, declares an American woman who recently visited London; for in the household of the friend with whom she was staying a parallel incident occurred. In that case it was not the mistress who went up, but the maid who came down, hastily but decorously kimonoed, to offer to any of the family who wished to see what was going on the hospitality of her tiny, top-story chamber, which commanded a wide view over roofs and chimney pots to the horizon. She was surprised and disappointed that no one accepted, and only a downright command deterred her from returning to her post of observation.

The housekeeper of another American, married to an Englishman, was very deaf, but something of the commotion going on outside penetrated to her consciousness and roused her from her slumbers. Half-dressed, she ran from her room, and gasped as she encountered the other members of the household, excited and very much in negligence.

"Great 'evings, ma'am, whatever 'as 'appened?"

"Zeppelins!" some one shouted in her ear. She dropped limply into a chair.

"Hand I thought it was an 'urricane, and bricks tumbling down the chimney!" she cried. "My 'eart, my 'eart, what a fright, and hall for nothing!"

THE REDBIRD'S RIVAL

TWU-ETE, twu-ete, twen, twen, twen!" sounded the brave notes of the redbird in the apple tree. As I was strolling round in the front yard, waiting for breakfast, writes a Companion reader, I heard him and, accepting his challenge, whistled back, "Twu-ete, twu-ete, twen, twen, twen!" We challenged each other back and forth until I was called in to breakfast.

As I entered the house, my sister said, "I just heard a redbird in the back yard and one in the front answering each other."

"I was one of them," I replied.

A few minutes after I had seated myself at the table facing an open door toward the trees, the nervous and irritated "Tweet, tweet, tweet!" of the redbird attracted my attention, and, looking up, I saw him darting against the basement window of the house next door. Thinking that a prowling cat might be the cause of his excitement, I went out to investigate.

I found the redbird flying furiously against the basement window, and actually panting with exertion and excitement. He scarcely noticed my presence, and permitted me to come within a few feet of him before he flew up to a near-by twig. Wondering whether his mate might not somehow have got into the basement, I looked in at the window, but I saw nothing. Presently I went back to my breakfast, but in a few minutes the redbird was again attacking the window.

Again I went out, and this time I saw that he was

fighting his reflection in the glass; I suppose he fancied it the rival who had answered his challenge. I took a wide board and leaned it against the window casing, thinking to shut off the reflection, but I had got only a few feet away before he returned to the fray. He had to go round and under the board to attack the scarlet reflection.

Again I went to his rescue, and that time placed the board so close to the window that he could not see his reflection or get to the glass. As I turned away I was surprised and amused to see him return and attack the board vigorously. At that I took the board away and, calling a boy from the neighbor's home, went into the basement. The persistent cardinal was returning to the assault as we raised the sash and fastened it open. Once more the bird came back, but this time his imaginary rival was not in sight, and he flew away.

When I had returned to my neglected breakfast, I heard him with his faithful mate, for whom he was making such a valiant fight, happily singing and twittering. They flew from vine to tree, from tree to bush, he whistling, "What there—what there—what there!" and she answering sweetly, "Tweet, tweet, tweet!"

A CABBAGE THAT FIGHTS DISEASE

THE plant shown in the accompanying illustration is not a weed; it is a cabbage gone to seed. Although it looks like other seed cabbages, it is not the same, for it is a disease-fighting cabbage of a strain that was originated in the Lakeshore district of Wisconsin. There are

TWO ROWS OF THE OLD VARIETY OF CABBAGE, ROTTED: ON EITHER SIDE A PERFECT STAND OF THE NEW VARIETY

many cabbage growers and many cabbage store-houses in the fertile regions along Lake Michigan. For several years, however, the "yellows," a disease that causes rotting, has injured the crop. The germs of the disease remain in the soil for years; and so the ordinary methods of crop rotation are of no help in fighting it.

For several seasons Dr. L. R. Jones of the State Experiment Station tried unsuccessfully to find a preventive or a cure. Eight years ago, however, he came upon a single head of sound cabbage in a field destroyed by the disease, and it occurred to him that by use of the principle of "the survival of the fittest" he might breed and select a variety of cabbage that would resist the disease.

He saved the head, and the next season gathered seed from it. He carefully selected the heads for six more years. So this parent head of cabbage has become the mother

of a new strain that does not take the "yellows." Those farmers who planted seed of this variety last year sold their crop at thirty-five dollars a ton—about five times the usual price. The "yellows" had nearly destroyed the ordinary kind.

MINTY BARTLETT'S HENS

"I'm goin' to break myself of the habit of tryin' to do a kind turn for a neighbor and at the same time seek to better myself," announced Caleb Peaslee decidedly, as he paused at Deacon Hyne's gate. Caleb's hands were scratched and his face was flushed. The deacon grinned sourly but understandingly.

"What foolishness have you been up to now?" he asked.

"Them hens of Minty Bartlett's," said Mr. Peaslee plaintively; "they've been wuss'n the plagues of Egypt to me all summer. I hadn't more'n got in my early stuff 'fore they'd got it scratched out and et and was lookin' the ground over careful to see if they'd overlooked anything—but they hadn't."

"What time I wain't chasin' 'em out of my garden, Minty, she was chasin' 'em out of her'n—she had a strip 'bout twice as big as her apron that she had planted out to garden flowers—and it seemed to me that them hens thought 'bout eckly well of both them places. If Minty ketched a hen among them marigolds and bach'ler buttons, or one so much as makin' towards 'em, she'd harass it out of there, and like 'nough it would run over into my garden."

"She had somethin' that had been a hen yard once, 'fore it got torn down and destroyed. One side and one end was gone so that you could drive a cow through it, and it didn't hender them hens from goin' where they willed any more'n so much June grass would."

"I knew well 'nough that Minty'd never think of buyin' new fencin'—she couldn't afford it, for one thing,—so I kind of turned the thing over in my mind till I thought I'd found a way out of it for both of us. I had 'bout forty foot of new fencin' that I'd been callatin' to use to make my hen yard bigger, and I made up my mind to give her that. I judged that if I worked careful and didn't say too much she'd take it and use it 'thout resentin' its bein' a gift, mebber."

"So yesterday mornin' I made the fencin' up into a roll and put it on my shoulder and went over to Minty's. She was out in the garden when I got there, houndin' a hen out of her flowers, and I stopped 'sif I was thinkin' of nothin' but passin' the time of day with her, and waited for her to say somethin' 'bout the hens' botherin' her; I knew she would if I give her a chance."

"Sure 'nough, she hadn't more'n got the hair pushed back out of her eyes 'fore she begun to complain and tell me how them hens plagued her. I let her run on a spell and then I says:

"Well, here's in the neighborhood of forty foot of fencin', and mebber if you're willin' to take it

from a neighbor you can find a use for it. If you can, jest say the word."

"When Minty kind of got her breath she thanked me, and I pitched the roll over the fence and put off, thinkin' if I stayed she'd be likely to want me to help her put it up; and then, too, I didn't want to be thanked for somethin' that I was doin' full's much for my own sake as I was for her'n."

"I had an errand down the road a piece that afternoon, and when I got back home I saw a sight that almost made my legs limber under me. If there was one hen in that garden of mine, Lysander," Mr. Peaslee affirmed earnestly, "there was all of thirty, and what they hadn't done to the garden in the way of scratchin' and burrenin' couldn't be done by anything weaker'n a hay tedder."

"Thinks I, 'What in tunket—!' and then I started out to see how them hens ever happened to be there, when she had fencin' to keep 'em shut up. I went down the road to her front gate, and there was Minty settin' on her porch, rockin' away as contented 'sif there wa'n't such a thing as a hen in the world, and they wouldn't do such a thing as scratch if there was."

"She hadn't any more'n sighted me when she sot up a squeal—you know how women will when they're tickled and pleased over anything?"

"O Mr. Peaslee," she says, 'you don't know how much obliged I be to you for that fencin'! With what I had in my old hen-yard fence,' she says, 'I had jest enough to go cleverly round my garden. So now,' she says beamin', 'I don't have to worry 'bout the hens' scratchin' up my flowers, and yet they have a free run to pick up their livin'."

"Yes, Hyne," Caleb declared soberly, "that was jest what she'd done—she'd fenced her garden with the fencin' that I'd call'ated to have her patch her hen yard with, and I was left jest as bad off as I was before—wuss, if anything, for they didn't have any place left to go except my garden. That's right—laugh!"

"So," said Caleb, grinning a little himself, "I've had to go to the trouble and expense of fencin' clear round my garden, to say nothin' of what I give away to Minty—and I might have saved the heft of it if I'd been neighborly 'nough to have stayed and helped her put it up where she'd ought to. But," he added with a kind of cheerful ruefulness, "mebbe it's learnt me a lesson to try to help other folks as well as myself. I dunno."

AS TO ROBINSON CARUSOE

IN commenting on the unfortunate tendency of some readers to hurry through books and magazines with such carelessness that they have very little idea of what they have read or of who wrote it, the Bellman quotes the following review of a famous book, submitted by a New York boy in his second year at the high school:

Robinson Carusoe

This book was chosen by Depoe, a man of many qualities and professor at Fordham University. It was edited by Glun & Company, containing one hundred and forty-nine pages, costing sixty-five cents.

Professor Depoe's selections are very interesting. He shows where Carusoe left his wife and went up to the summit of a high mountain with his gun in hand, accompanied by a dog. While he was there for a short time, darkness came upon him and he felt drowsy, so he put his gun at his side and fell asleep. Here, he slept for a number of years and when he awoke he found out that he had grown old and his gun was rusty. Moreover, there were men playing tennis and dining on the mountain. This, he too, soon partook of. Finally, he thought of home and he began to descend the mountain. He now found himself in a city. After searching for his home, he was made known to his wife, and they lived happily ever after.

All of Depoe's books are on this style and should be in every home.

THE PARADISE OF ARTISTS

THE death of William M. Chase brings to mind a story that that artist used to tell in the course of a lecture on Japan:

I was standing on a railway platform in Japan, waiting for a train, and while away my time by watching a particularly beautiful sunset.

Suddenly a freight train pulled in and, stopping in front of me, cut off my view. Being a good American, and trained in a very proper respect for "business," I merely turned philosophically away and proceeded to look at something else. In a moment, however, the station master appeared at my side and inquired with the politest of bows if I had been enjoying the sunset.

I admitted that I had, and smilingly accepted his apology for the intrusion of the train. Of course I recognized that trains were the first consideration in stations, I said.

Imagine my surprise, then, when the little Japanese shook his head firmly. "But no," he said, bowing even more deeply than before, "the train must not be allowed to obstruct the honorable artistic traveler's honorable aesthetic enjoyment"—or words to that effect. "I will cause it to withdraw."

And he actually did precisely that!

AN EYE FOR BARGAINS

"SIRE," said the grand vizier of a certain Oriental potentate, "I suggest that in the future we buy our automobiles from the Western company that has just offered us a thirty-per-cent discount."

"Good!" said the potentate. "Order a consignment of five hundred automobiles, assorted sizes, at once, and tell the company to send us a check for the discount by return mail, and the bill will be settled in due course."

WORDS WITH WINGS.

BY JEAN HALIFAX

SOMEBODY TOLD ME
THAT OUR WORDS
HAVE LITTLE WINGS
AND FLY LIKE BIRDS.

IF WORDS WERE BIRDS,
WHAT WOULD YOURS BE—
HAWK, OR BUZZARD,
OR GAY CHICKADEE?

A NEW KIND OF MARBLES

BY NANCY BYRD TURNER

IT had been a warm winter, with no ice at all. "I'm afraid," said grandfather one day late in March, shaking his head soberly, "that this means no ice cream next July, and no cold lemonade, and no —"

"O dear!" chorused the children. "Who ever heard of a summer without ice cream?"

"Well," answered grandfather, "who ever heard of a winter without ice?"

"It may freeze yet," put in grandmother.

"Maybe," grandfather said, "but it's nearly time now for robins and violets."

When Ted and Jean and Molly went to bed that night they felt the windowpane with their cheeks. "It feels very cold," Ted decided. "Maybe there'll be freezing to-night."

When they waked there was a queer, dull whiteness on the walls and a curious silence. Snow had fallen all night long, and now every roof had a heavy white blanket like eider down, and every fence post wore a tall white cap.

"The heaviest snow I ever saw so late in the year," father remarked at breakfast. "Well, it looks as if the ice house would stay empty, sure enough."

"No ice cream in July," began little Jean, but grandfather suddenly pinched her cheek.

"Plenty of it," he said. "That is, if you three chicks are willing to play marbles a while."

"But how can playing marbles fill the ice house?" cried Ted and Molly in one breath. "Now, grandad, you're making fun of us!"

"Not a bit of it," he answered. "Put on your togs, and I'll show you."

Ten minutes later, coated and hooded and finished off with good, dry rubbers, the three dashed out to their grandfather. "Here," he said, "hold out your hands. There's a marble apiece for you. Go to work and roll them."

MAJ. MOOSE FLUNG HIS HEAD HIGH AND RUSHED ON FASTER THAN BEFORE

The children looked astonished. Each little right-hand mitten was clasping a snowball.

"But, grandfather," Ted began, doubtfully.

"Roll your marbles," said grandfather, "and roll them carefully. Then you'll see."

So the three obeyed, puzzled but tremendously excited. Ted rolled east, Molly rolled west, and little Jean rolled south, down the long slope of the lawn. Laughing and shouting, they followed the little balls with care, pushing them whenever they stopped.

"Mine's as big as a pumpkin!" cried Molly in a few minutes. "Just watch it grow!"

They pushed harder and harder, and every moment one would call to the other. Presently, from the bottom of the yard, came a cry.

"Oo-oo!" Jean sang out. "Somebody come! My marble is so big I can't get it up the hill!"

Sure enough, Jean's snowball had grown so fast that now it was entirely too much for her. Ted ran down, laughing, and rolled it to the top of the hill. Then they spied grandfather.

"Will you look at his marble!" screamed Molly. And indeed grandfather's ball was a regular giant, and was getting fatter and fatter.

"Forward march! to the ice house, now!" said grandfather. And the children, who had forgotten all about the ice house, went to work with a vim, trundling their big marbles gayly toward the open door.

Most of the morning they worked joyfully, and after dinner father and the hired men turned in with them, so that the long-empty ice house began to fill very rapidly. Before the snow had left the fields the ice house was quite full, and the hired men had pounded the great snowballs with shovels until the snow was packed almost as hard as ice. Then the children helped to pile in the straw on top and to pack it; and at last they shut the door.

"I can just taste that July ice cream!" said Molly happily.

"I can taste it too," Ted agreed, "and I've also learned a new way to play marbles."

THE MOOSE RACE

BY G. H. SMITH

THIS is the story of the third race that the wood folk had during the winter in the forest that lies beside the mountain.

The first race, as you will remember, was through the forest from side to side. The second race was on the ice, once round the lake. The third race was called "the moose race" by all the wood folk, although there was only one moose in it. For that matter, there was only one moose in the whole forest when the race was held, and he is there no longer, as you will see before you get to the end of the story.

Maj. Moose was the biggest and strongest of all the wood folk. He was also vain and more given to boasting than some of the others thought was becoming. One day, toward the end of the long winter, Maj. Moose said:

"I am tired of grubbing here in the woods. To-night I shall go to the haystack of Farmer Goodman, a mile beyond the edge of the forest, and have a good feast."

"Be careful, Major," said Ray Coon. "I think that Farmer Goodman has a dog."

"Poof!" answered Maj. Moose. "Little do I care for a dozen dogs. Come along, all of you! I'll show you some fun, and perhaps there will be something good for all to eat."

When night came a party of the wood folk set out with Maj. Moose for the haystack of Farmer Goodman. The three deer did not go, because they were too timid. Grandpa Fox and Grandpa Coon said that the walk was too long for them. But Dame Bear and her son, Billy Bear, Ray Coon and the two Fox boys, Bouncer Rabbit and his friend, Gray Squirrel, and several other young folk of the Rabbit and Squirrel families—all were in the party, which set forth in high spirits.

It was late when they started and the walk was a long one. Some of them were pretty tired before they reached the haystack, which was just behind Farmer Goodman's barn. There was nothing to feast on except the hay, which none of them, except Maj. Moose, cared much for; but no dog appeared, and when the wood folk had rested a bit all were in the mood for a frolic.

"What strange thing is this?" called out Billy Bear from the barnyard.

"That?" said Ray Coon. "Why, that is Farmer Goodman's pung! He hitches his horse to it and rides to town. I have often seen him."

"I wish that we had a horse to haul us home!" sighed Dame Bear. "I've walked far enough for one night. I am tired."

"What's that?" said Maj. Moose. "Who is tired? Just pile into that pung, all of you! I'll haul you back home in a jiffy. I'm stronger than ten horses, and I'm the fastest of all the wood folk."

"You are the strongest, but not the fastest!" promptly cried out Gray Squirrel. "My friend Bouncer Rabbit is the fastest of all the wood folk. Ask the deer or the skaters. They know! See! Here is a tiny toy sleigh that Farmer Goodman's little boy forgot to take in last night. I'll get into that, and Bouncer will haul me home faster than you can haul the others in the pung."

Maj. Moose fairly snorted with scorn at the idea that Bouncer Rabbit could run faster than he could. While he was fuming and scolding, Billy Bear put the harness over his shoulders and tied the reins to his broad antlers. Then Billy Bear and all the others, except Gray Squirrel and Bouncer Rabbit, climbed into the pung.

Meantime Gray Squirrel was harnessing Bouncer Rabbit into the little toy sleigh, and as he did so he whispered something in Bouncer's ear and patted him on the back

until Bouncer fairly danced with eagerness for the homeward race to begin.

It was daybreak by the time they were finally ready to begin the race. Then Ray Coon, who sat behind Billy Bear in the pung, gave the word.

"Go!" he shouted.

Maj. Moose plunged forward down the road that led from Farmer Goodman's barn toward the forest a mile away. He dragged the pung with all its passengers as if it had had no weight at all. Right beside him went Bouncer Rabbit in long leaps that would have made the little toy sleigh a very hard place for Gray Squirrel to ride in had he not been clever in keeping his balance. When they had crossed the field and were entering the forest, Maj. Moose looked out of the corner of his eye and saw that Bouncer was still close beside him. He flung his head high and rushed on faster than before, but he could not leave Bouncer Rabbit behind.

The wood folk who had not been to the haystack were astir by this time. Jet Crow cawed loudly overhead, and the others stood aside in amazement as the racers rushed by.

So they sped onward, Maj. Moose plunging ahead with a great show of strength, and Bouncer leaping lightly beside him. Soon they came in sight of the frozen lake. It had been agreed that the race should end on the farther side, and the course was up round one end of it.

"We are almost there!" shouted Gray Squirrel, as he leaned forward in the little sleigh.

"Now is the time, Bouncer! Now is the time!"

With faster leaps and longer leaps Bouncer Rabbit flashed to the front. All that Maj. Moose and those in the pung could see was a flurry of snow as he flew ahead of them, far toward the head of the lake. Maj. Moose half stopped and threw high his antlers in disgust.

"Look at that!" he grunted, panting hard.

"Shall a rabbit beat a moose? No, indeed! I'll cut across the lake, and get there first, after all."

"But that will be cheating!" cried out Ray Coon.

"Who cares?" answered Maj. Moose. "If I can't win in one way, I will in another!"

So saying, he crashed through the snow-covered bushes to the shore of the lake, with the pung bouncing heavily behind. Then he stepped out on the frozen surface. But it was late in the winter, and the sun had weakened the ice near the shore; it buckled under the weight of Maj. Moose and the pungload of wood folk. There was a sudden crackling and crashing, and all in an instant Maj. Moose and the others were splashing in the cold water. Maj. Moose flung himself about so desperately that he quickly broke the harness and floundered ashore, and the others, dripping and shivering, followed him as best they could. On the distant shore of the lake they could see Bouncer Rabbit loping leisurely along toward the finish line.

"What a mess!" exclaimed Maj. Moose, cross with himself and with everyone else. "To race with a rabbit and have it end like that! I'll have nothing more to do with a place where such things can happen!"

So he lumbered off through the forest toward the other side of the big mountain, and the wood folk saw him no more.

That is how Bouncer Rabbit, whom all the wood folk like because he is a modest fellow and everyone's friend, won the third race of the winter. That night he and Gray Squirrel took the little toy sleigh back to the yard of Farmer Goodman, whose little boy had wondered all day what had become of it; but the big pung was too heavy for the wood folk to drag out of the lake, and there it stayed, close to the shore, until Farmer Goodman himself found it. And he never ceased to wonder how it got there.

A Japanese Tale.

This is a farmer who lived in Japan,

And this is his little wife;

This is the farm where they tilled the soil

And led their simple life.

This is the beggar who came one day,

Saying that he was an honest man,

Who stood by his words and wanted work,

Then stole a mixing pan.

So they had a quarrel right then there

And were put in jail for their strife;

And that is the end of my little tale

Of the man from Japan and his wife.

—Clara E. Atwood.

THUMBS UP

By Alice Hutchins Drake

IT was Dr. Harmon who first called him Thumbs Up. Everyone was amazed to learn that it was the great surgeon who had coined the name. He was so austere and strictly "professional" in his manner that no one dreamed he was human enough to invent a nickname for a small patient. In secret the nurses had long referred to Dr. Harmon as the Great Bear, and until Thumbs Up came to the ward no one at the hospital ever saw any but the Great Bear side of the surgeon.

be skeered. And you must do it, too. See, this is how."

That is the way it began. Within a week thirty little passengers of the White Bed line were playing the game. The nurses and internes played it with them. Everyone in Ward C

knew the way to keep brave. Dr. Harmon heard of the success of his little patient in buoying up others like him in the hour of distress. He had never forgotten the morning when Jack lay before him with his little thumbs up. He was deeply interested in the child and in the psychological element involved in the expression.

One drowsy morning four months after Jack entered Ward C there was suddenly a crackling noise outside the door. Miss Herbert, on duty, hurried to see what had caused it. She found the corridor on fire.

Quickly she turned to Jack. "Sweetheart," she said gently. The child was asleep, and she did not dare to startle him. "Sweetheart, wake up. You've got to help the lady captain. There's a fire outside, and we've all got to leave. While I run to the telephone, you think of a way to help."

Outside, the crackling noise was growing louder and curling smoke slipped in round the door. Jack's bed was the first one in the ward. He had come in by that door. He knew they would all have to leave by it. He could see Miss Herbert flying from bed to bed, wrapping blankets round each little patient.

"No, you don't!" he said, when she reached him. "No, sir, I'm going to stay till the last feller's out! I says thumbs up."

And thumbs up it was. As strong men rushed in and bore little patients, Bradford frames and all, out into the smoke, Jack lay by the exit calling shrilly, "Thumbs up, fellers, thumbs up! Don't be skeered! Say thumbs up."

He felt very drowsy when he awoke—just the way he did after Dr. Billy had put him to sleep. Some one was holding his hand, and he could hear a man's voice saying, "Bravest thing I ever knew. Dear little man!"

He opened his eyes. It was not Dr. Billy who sat beside him, but a very famous surgeon, whose eyes were misty with tears. His beard was singed and there was a gash across his cheek.

"Well, Capt. Jack, how do you feel? You were pretty brave this morning. You're a real live hero."

Jack took a long breath, and found it was a painful operation. "Why, I didn't do nothin'," he said. "I couldn't run if I'd wanted to with that anchor on my leg. I'm glad if Miss Herbert thinks I helped, but I didn't do nothin', really. I just called thumbs up when the fellers went."

Dr. Harmon closed a white little hand in both of his. "You did a good deal, little man. When I picked you up and started into all that smoke, I was 'skeered to death.' But you said thumbs up, and I said thumbs up, and here we are."

NATURE'S SWEET

HONEY, which is now a luxury, was in old times a necessary, for it was then the principal sweetener of food. Sugar was not introduced until the latter days of the Roman Empire, and was first oddly described as an Indian salt that was as sweet as honey. The numerous references to honey in the Bible are due, says a writer in Chambers's Journal, to its being the common sweetener used by the people.

Honey from the comb is considered to be the most luxurious form of this delectable sweet, and many people eat the wax with the honey. That is a foolish thing to do, however—as foolish as it would be to eat the paper the butter is wrapped up in, or the bag that contains sugar. The wax in the honeycomb is in no way nutritious, and is decidedly indigestible.

The proper way is to put a piece of honey in the comb on your plate, with the cells in a vertical position, and press your knife firmly upon it, so that all the honey runs out. Eat the honey and leave the wax.

The bees do not care for blossoming flowers, as the poets imagine. They are practical, utilitarian creatures, and prefer the period just before fructification. They dearly love clover, but most kinds of fruit blossoms and some kinds of forest trees are very useful to them. The flavor and the quality of honey vary with the plants upon which the bee feeds. Heather honey is naturally popular in Scotland, and the famous Narbonne honey owes its flavor to rosemary. Occasionally the bee is injudicious, however, and chooses injurious herbs. The soldiers of Xenophon, after eating the honey of Trebizond, became either mad or drunk. The effect was owing to the bees' having eaten a poisonous azalea.

If people had given the matter thought, they would have known that beneath the impressive dignity there was deep sympathy for suffering childhood. His friend, Dr. Phillips, could tell of a day when he and the surgeon stood before a certain Sorolla canvas. A padre has gathered along the beach for a morning bath his young charges from a children's hospital. It is a painting of the infinite tragedy of handicapped childhood. Sorolla has said he will never paint another picture of the kind. Suddenly, as the two men stood gazing, one spoke.

"Man alive, Phillips, I've got to get home. This holiday business will have to wait until there aren't any suffering children." And the first steamer brought Dr. Harmon back to his profession.

Two mornings a week the clinic at St. Luke's was conducted by this great surgeon, who gave his time and mastery of surgery to the alleviation of pain.

Thumbs Up was just one of hundreds of cases. The morning he lay upon the operating table there were six other children awaiting their turn, and apparently there was nothing to distinguish him from any of the others. But individuality asserted itself as little Jack lay waiting.

The young anesthetist smiled down at him and said, "Now, old man, I'm going to put you to sleep. What do you say to that?"

Instantly two little hands changed position. "I guess I says thumbs up. I allus do when I'm skeered to death."

Dr. Harmon turned from giving some directions to a nurse and looked at little Jack. He lay with his eyes tightly closed, every muscle in his little body taut and his hands at his sides, with both thumbs up.

"Hurry up, please. I've said it seven times already. Most allus it helps a lot."

Suddenly two strong, large hands covered Jack's. Dr. Harmon grasped the little fingers in his own. "Now," he said, "while you go to sleep, I'll keep saying thumbs up for you, and when you wake up everything will be all right."

No one ever called Dr. Harmon the Great Bear again.

Some time afterwards a little figure was laid upon a little white bed. When Jack entered the room, it was known as Ward C. Months later, when he left it, there closed behind him a door bearing a brass tablet upon which were the words:

Thumbs Up Ward
Named in Honor of a Brave Little Patient,
John Henry Grayson.

But we are anticipating the story.

The days were tediously long for John Henry after his operation. A very heavy something swung from one ankle and his back ached "from using it so much," as he said to his nurse. Everyone who took care of him wore a blue dress and a white apron, and all the young doctors looked alike in their white suits, and so there was a pitiful absence of variety in what he saw. All the other little boys were ill, too, and they all occupied the same kind of bed. Life was deadly dull. But the young physician who had "put him to sleep" visited him every day, and his coming always cheered the boy. Jack loved the doctor, and the doctor loved Jack.

One day when Dr. Billy was sitting on the side of Jack's diminutive bed, the little patient in the next bed began to cry.

"Here, what's the matter to starboard? Helm steady, old man." Dr. Billy was inclined to be nautical. "Thought I told you last night that as long as you're on the White Bed line you've got to show your nerve. Tell the captain what's the matter. We're standing by to help."

A great deal was the matter. Benny was frightened. There was a burning thirst and a pain all the way from the first mate's head to his feet, and in particular there was pain where a heavy "anchor" swung from the larboard ankle.

Crushed ice wrought a miracle in Benny's burning throat. Then Dr. Billy suggested to Jack that he, too, help the first mate. "Tell him about thumbs up, old man. You know how it helped us that morning."

So Jack revealed to the mate of his sister ship just how it is possible to hold fast to one's courage. "Just keep a-sayin' thumbs up, and pretty soon you'll be so busy you'll forget to

Be ahead this Spring with a Dayton Bicycle

Come on Boys!

SPRING is about here, boys, and it's high time you were getting ready to enjoy it. Get ready now, by picking out a fine new Dayton Bicycle. Then, when the buds begin to pop, and the grass shows its first green, straddle your DAYTON—and go it! That is life! Every Dayton Bicycle is built for long service and easy riding. Dayton Bicycles run smoothly—"take a hill" like a rabbit. Get there first on a DAYTON—and tell the other boys to "hurry up!"

DAYTON Bicycles are made in seven models—including the fine new DAYTON Motor-Bike (following closely motorcycle construction). There's also the light, fast, Boy's DAYTON Roadster. All mighty good-looking, and backed by a straight-forward five-year guarantee of satisfaction.

FREE TO BOYS:

Here, boys, is a fascinating book that actually tells you 50 different ways in which you can make money with a Dayton Bicycle. You are ambitious. You want to be a good business man—and you're ready for good, live, money-making suggestions. Here they are. Write us to-day, asking for Booklet No. 12. It is free.

AS HE EXTENDED HIS HAND FOR IT . . . I KICKED THE REVOLVER FROM HIS GRASP

A PONY EXPRESS ADVENTURE

By Col. William F. Cody

NO enterprise ever undertaken in America was more fruitful of

picturesque incident, hardship and adventure than the famous pony express line that Russell, Majors and Waddell established in the fifties.

The route extended from the Missouri River to Sacramento, a distance of nineteen hundred and sixty miles. It traversed a country full of hostile Indians and white desperadoes, and led across plains, through valleys and over lofty mountains. Yet over this rough route the mail and express packages must travel two hundred miles a day, a condition that called for an average riding pace of about ten miles an hour.

Naturally, the riders were picked men. They had to face deadly dangers and were often called upon to do double duty in place of a slain or wounded comrade. The pay, however, was good, as befitted so dangerous a calling; it ranged from one hundred to one hundred and twenty-five dollars a month.

I was about sixteen years old when I applied for a chance to enter this service. My mother and sisters needed my help, and the good wages paid by the pony express company tempted me.

At first I was told that I was too young to stand the tremendous strain, but after considerable pleading on my part the company consented to give me a trial as an "extra" on a run of forty-five miles that was to be covered with three horses in three hours.

I accepted the offer, and it was on this route that, quite early in my experience as an express rider, I met with a most peculiar adventure.

My first trip was made a little ahead of the schedule time, and I immediately started back with the west-bound pouch. As day after day passed without serious mishap, I began to think less of holdups and Indian ambushes and feel more inclined to congratulate myself on having secured so good a route.

But one morning, as I was crossing a rough bit of country on the gallop, there came suddenly the cry of "Halt! Up with your hands, boy!"

A man had risen apparently from the very ground under my feet. While he covered me with the revolver that he held in his right hand, he extended his left to catch my bridle rein.

There was nothing to do but obey, although I knew that the pouch contained a large sum of money.

"Give me that pouch, boy!" I held it out, but as he extended his hand for it my opportunity came. I kicked the revolver from his grasp, drove the spurs in deep and made a dash.

I was just beginning to chuckle over my escape when a bullet whistled by my ear. That was too much for me. I should have known better than to stop, but without thinking I wheeled in my saddle and returned the shot just as the desperado fired again. This time he hit my pony, which gave one leap and then fell heavily.

Luckily I landed on my feet, and jumped to the shelter of a big rock. The outlaw was coming toward me and trying to fire as he ran; but I noticed that at each pull of the trigger his revolver missed fire. I believed that I had him at my mercy, but, as the event showed, I was too quick at drawing conclusions. I wanted to capture him and march him

to the next relay station, where the men would take charge of him. With this in mind I refrained from firing, and so he was enabled to reach the cover of the same boulder behind which I myself had taken shelter.

There we were, a rock ten feet in diameter between us, and each very well aware that it was a fight for life.

For a time neither of us dared to move. Then gradually and as silently as possible I crawled back from the rock far enough so that I could watch both sides of it at once. I could not tell, of course, which way he might choose to come if he decided to force the fighting, and I knew that I must be prepared for him, whichever way it was.

But as I lay there watching, my poor pony gave what seemed an almost human moan and turned his faithful eyes upon me. He made a desperate, vain attempt to rise and uttered a low neigh so full of grief and pain that it filled me with pity for him and hardened my heart toward the man on the other side of the rock.

I determined to put the horse out of his misery, and, resting on one elbow, I took careful aim and sent a bullet through his brain.

Instantly my shot was followed by one from the other side of the rock—so quickly in fact that the two reports were almost simultaneous. I could not tell whether it had been aimed at me or not, but I knew I was not hit.

The struggles of my pony had ceased, and everything was still. I waited and watched until I could stand it no longer. Then I began slowly and cautiously to creep round the rock, holding my revolver ready to fire on the instant. I even stuck my hat out ahead of me as a decoy, but it brought no response.

Suddenly I saw the outlaw's boots, and to my surprise the toes were turned up.

Another step brought me within full sight of the man. He lay on his back, quite dead, his revolver beside him as if it had just fallen from his hand.

A little examination showed me what had happened. The outlaw had been reloading his revolver when I fired at the pony. In those days the only ammunition was powder and ball, which had to be forced home with a ramrod. During the loading the weapon was held upright, and when that part of the operation had been completed the caps were placed on the nipples.

The outlaw had not removed the caps that had failed to explode. My shot had startled him. He had accidentally pulled the trigger, and his own bullet had slain him.

Col. Cody, one of the most picturesque figures in American life, died in Colorado, January 10, 1917.

CONJUGAL COMPROMISE

"WHEN you and your wife have a difference of opinion," said the father who was giving advice to his newly married son, "and you are unable to persuade her that you are right, you must compromise. To illustrate my point, I will give you a little experience of my own. One summer your mother wished to spend the season in Maine, while I was anxious to go to the Adirondacks."

"And how did you compromise, father?" "Well, we stayed from Friday to Monday in the Adirondacks, and spent the rest of the summer on the Maine coast!"

How Hudson Solved the Gasoline Problem

Now Furnished on the New Light Super-Six

The gasoline saver is one more new invention of the Hudson Super-Six.

It was shown for the first time at the New York Automobile Show in January. Now most all Hudson dealers are showing the new cars equipped with this and ten other important new features. The gasoline saver is the only new feature shown on automobiles at this year's shows.

and speed with cars of the earlier production. No one has yet equaled anything we have done with stock Super-Six cars. And yet the cars we turn out today are infinitely better because of the increased skill and experience Hudson workmen have acquired in building the 25,000 cars that were produced last year.

Think What a Year Has Shown

Remember what was claimed for the Super-Six one year ago. Then we had only our own records to show—records proving the Hudson Super-Six the fastest stock car built.

We then had established only the 100-mile and the one-hour records for a fully equipped stock touring car. But since we have won the 24-hour record for a stock chassis, the Transcontinental Run both ways, the fastest stock chassis mile, and have outsold any other high grade car in the world. So if you want a fine car that outperforms any other car that is built your choice must be a Hudson Super-Six.

Buyers Waited for Months

At this time last season orders exceeded our production by 8,000. At no time during the season were there enough Hudsons to go around. From this you can see what the demand will be this year. We are only producing 30,000 cars as against last year's 25,000 because we cannot build more and build them well. That is not a large increase. It shows, however, that if you want a Hudson you cannot afford to postpone buying. Unless you act now you may be like other thousands who will be disappointed this year because they could not get prompt deliveries.

Don't fail to see the gasoline saver.

Overcomes the Poor Gasoline

Hard starting and wasteful gasoline consumption due to cold weather and the low grade gasoline are overcome. Radiator and hood covers are not needed on the new Hudson Super-Sixes even in the coldest weather.

This device has been in use on hundreds of Hudson Super-Sixes during the coldest winter weather. Its effectiveness has been proved. It is as easily operated as the damper on a stove.

Low grade gasoline gives low mileage and is wasteful and harmful to the engine, unless the motor is operated steadily at a high temperature.

Primer Insures Easy Starting

In zero weather, even at 20 below, the new Hudson Super-Six motor starts. The primer is another new feature of the new Super-Six.

On the new cars there are also other worth-while features you should see. There is the new plaited upholstering, more attractive door fasteners, hard rubber handles, an improved body finish and other details you can see. And then we have made many improvements in the building of the car. The car that last year won every worth-while record is a much better automobile now because we have learned to build them better.

We made those records of endurance for acceleration

Neolin Saves Soles Neolin Saves Colds

Scuffle and pound, pound and scuffle—the children are at it again!

How they play! How their little shoe-soles wear! How the bills roll in at the end of the month!

And how—how on earth are we going to meet them? How?

Down with shoe-bills—off with leather! Use Neolin—better than leather.

Health will keep up and shoe-bills will keep down then. For Neolin, the synthetic, modern sole, is created for wear and for comfort and health beside.

Loyal and strong and durable, it lasts, yes lasts. Light and strong and flexible, it develops little feet.

Waterproof, it protects them from damp trudges to school—then keeps them dry all day.

And remember:—Neolin will grip—it won't slip. Needs no breaking in. Noiseless indoors—scratch-proof on floors. Costs no more. Comes in black, white, tan, on new shoes or as new soles.

Beware imitations and mark that mark; stamp it on your memory: Neolin—

Better than Leather

DIVIDING THE SPOIL

GREEDINESS wiped out half the population of a small village in China, according to Capt. Fritz Uttmark, who was formerly principal of the Seamen's Church Institute in New York City. There were only thirty people in the village, a retired spot on the Hwang River, and of the thirty, fifteen were instantly killed.

The Chinese government had been making experiments with some new shells. A mile from the village a company of soldiers had been doing target practice with the shells, and had then been sent to garrison a fort some distance away. During the target practice the soldiers would not let the villagers get nearer than half a mile to the guns, and the people, all ignorant coolies, had no idea what the shooting meant.

Some months after the target practice had ceased and the villagers had forgotten about it, two coolies, digging in a field, came upon a bright, round object. It was very heavy, and pointed at one end. Neither knew what the object was. As a matter of fact it was an eight-inch shell that had not exploded.

"It is mine," said the man who had dug the shell up.

"No, it is mine! I saw it first!" cried the second coolie. "You would not have known it was there if I had not seen it."

"And you would not have seen it if I had not dug it up."

For half an hour the two men argued, each advancing his claim in high-pitched, squealing tones. At last they agreed to let an aged Chinaman, who was said to be very wise, settle the question for them.

"You must divide it equally," was the verdict of the old man.

Then came the question as to how they should divide it. They tried to break it with a rock, but the shell could not be crushed that way.

"Let the blacksmith divide it," suggested the old man.

To the blacksmith they went.

"I do not work for nothing," declared the smith. "I will divide it into three parts: one for the man who found it, one for the man who saw it first and one for me."

That arrangement had almost been decided upon when the old man who had given the decision in the case objected. If the blacksmith was to have a third, then he himself ought to have a piece for settling the dispute.

"Divide it into four parts," urged the old man. "One for the finder, one for the man who saw it first, one for the blacksmith and one part for me."

To that they all agreed.

By this time the entire village had become greatly excited, the relatives of all four men crowding into the little blacksmith shop to see that justice was done. The blacksmith laid the shell on his anvil, and round him gathered all the people of the village. He swung his heavy hammer in the air and brought it down on the shell.

Bang!

The explosion killed all but two of the coolies who were in the blacksmith shop and injured half a dozen others who were standing at the door and the two windows.

For a long time the Chinese government could not find out the cause of the accident. The natives were convinced that a miniature sun had fallen from the clouds and, offended by the rough handling it had received, had become angry, and annihilated the guilty ones with their relatives and friends. The mystery was not explained until a small part of the shell casting was found.

KANAKA COURAGE

IN the story of his wanderings over East Indian waters, Mr. J. E. Patterson, author of *My Vagabondage*, describes a novel South-Sea method of dispatching a shark. The crew of his schooner had captured a Kanaka pirate, who offered, in the hope of appeasing his captors, to give an exhibition of shark killing.

The pirate slid down a brace that had been lowered over the side of the ship and entered the water without causing the least noise. Just before his head went under he took a keen six-inch blade from his mouth; then down he sank. He was gone so long that we thought he had drowned himself. Never was man more wronged! While we were watching, we saw the shark's little pilot fish darting excitedly about his great master's head. But the eighteen-footer merely came a few yards nearer to the ship.

How the seconds dragged! Then came a hurried whisper, "He's there!" Before the news could be passed fore and aft, we saw the upward flash of a black body and a gleaming knife in the blue water directly under the shark. The next moment the great fish shot clear into the air; his blood dyed the surface under him, and we saw that there was a great wound in his stomach. The pirate appeared above the water, gasping, yet only for half a minute. He moved into clearer water farther off, where he sank from sight. We watched here, there, everywhere, within a cable's length, but we did not have long to wait.

"Here he comes!" shouted the mate.

There they were, scarcely three fathoms away. At the moment in which we saw them the shark was in the act of diving, and his great tail was out of the water, showing on one side a gash that had reached the backbone. Plainly the pirate's intention now was to bleed the fish to death by tapping the spinal artery, and in the meantime to rob him of his second-best weapon. Before we could wonder whether the shark would turn or go under us he had dived, leaving the panting gladiator at the surface of the troubled waters.

"Throw him a line!" cried the captain, willing to spare the man further risk.

There was a rush to obey the order, but before anyone could throw the line the pirate was off into quieter water, the better to see his foe returning. There the man remained for some minutes, now sinking to reconnoitre, then on the surface to fill his lungs, never still. We were thinking and hoping that the funny terror had been beaten, when the cook gave a warning cry that he was coming back. There he was, rising slowly, almost spent; but the tiger of the seas dies a hard death. We again gave the shark fighter notice of his adversary's return, and he struck out for the brig's head.

So fast a swimmer was he that in a very few moments after disappearing forward he had passed along the starboard side and rounded the stern of the vessel, ready to take the great fish in the rear. But the dying shark had already sunk to the bottom.

No one between Your Company and You

PROTECT Your Family

Do you realize that the moment you pay your first life-insurance premium you have created an estate worth the face-value of the Policy? That is where insurance beats the savings bank; and the

Postal Life Insurance Company

in turn, beats other companies because it does away with agents and lets Uncle Sam do the work for a stamp or two. Insurance by mail saves agents' commissions, office expenses, etc. The direct by mail method which does not lessen your protection in any way and materially increases your saving.

First: Standard policy reserves. Resources \$9,000,000. Insurance in force \$40,000,000.

Second: Old-line legal reserve insurance—not fraternal or assessment.

Third: Standard policy provisions, approved by the New York State Insurance Department.

Fourth: Operates under strict New York State requirements and subject to the United States Postal Authorities.

Fifth: High medical standards in the selection of risks.

Sixth: Policyholders' Health Bureau arranges one free medical examination each year if desired.

Call at the Company's office or simply write and say "Mail insurance particulars as mentioned in THE YOUTH'S COMPANION for March 22." In your letter be sure to give:

1. Your full name.
2. Your occupation.
3. The exact date of your birth.

You will receive full information based on official reports regularly filed with the New York State Insurance Department. Writing places you under no obligation and no agent will be sent to visit you. The resultant commission-savings go to you because you deal direct.

It will pay you to get the Company's Official Booklet, "SOUND INSURANCE PROTECTION AT LOW NET COST," also official figures for your own age, on any form of policy.

Let the Company show you what there is in it for you—for your family. You can see just what you will get—what you will save. The POSTAL is paying more than a million a year in settlement of policy-claims, has \$40,000,000 insurance in force and resources of \$9,000,000.

KINDLY "BURGLARS"

NOT long after Dr. Lyman Abbott had declined a call to a prosperous Congregational church in Meriden, Connecticut, and had told his parishioners in Terre Haute, Indiana, that he should remain with them, he had the following unusually pleasant experience with "burglars," which he describes in his entertaining Reminiscences:

At the other extremity of the city from our home, a mile away, was one of the finest places in Terre Haute, known as Strawberry Hill. One afternoon my wife and I were invited to take tea at Strawberry Hill. Tea was hardly over before the young man of the household brought word that an omnibus was outside waiting to take us home. It had come, he said, by his order, but he was surprised that it had come so soon. When we reached our house it was dark. To rouse the maid I began pulling the bell handle back and forth. Instantly the front door was flung open, our host and hostess of the evening stood in the open door to admit us to our home, the before-darkened house was ablaze with light and filled, hall, stairs, parlors, with members of the congregation.

When the following day I attempted to express my thanks in a note to the daily paper, I found myself almost as much at a loss as I had been in my impromptu address of thanks the night before. I finally hit upon the plan of writing a fanciful description of an invasion of my home by a body of burglars who had gained access to the house during the afternoon, had brought with them "a great quantity of plunder, evidently taken from other houses, not only bread, cake, jellies, ham, and other articles, under the weight of which my substantial dining table bent (literally bent, so that it had to be supported in the centre by a dry-goods box), but also a magnificent silver water pitcher and a coffee urn."

They also left behind them, I said, two hundred and twenty-five dollars, and a great variety of other articles of every description. The local readers, knowing the facts, understood the letter, but when a prosaic reporter in the East made a paragraph out of it, treating the incident quite seriously, I received from Eastern friends some letters of condolence, and, to correct misapprehension, wrote for the New York Independent a description of my ministerial experience in this mid-Western parish, where my salary was promptly paid, where I was treated justly and even generously by the tradesmen, where I preached temperance in a community cursed by drink, and liberty in a community pervaded by proslavery prejudices and "no one got up and went out of the church," where my people vied with one another in hospitality, and where I was writing this letter surrounded by Christmas fruits—"books for my library, silver both elegant and beautiful for my table, toys for my child, food for my larder."

THE PERILS OF POWDER WORKERS

SMOKELESS powder is made in sticks, something like macaroni. It goes through a number of processes, and for the sake of safety those processes are conducted in small buildings remote from one another.

In a New Jersey plant the powder is conveyed from one building to another on flat cars drawn by electric motor cars. Six one-hundred-pound open boxes are loaded on each flat car. The wheel trucks have to be blocked by a wooden bar, which the brakeman adjusts before the motor starts.

One day last spring a brakeman failed to adjust his wooden bar properly. The car was derailed and the powder was spilled down an embankment. No guard happened to be near, and as quickly as possible the brakeman and the motorman shoveled up the powder and put it back on the car. In a few minutes the load was delivered at the grinding house, and no one except the two men knew of the accident. Unfortunately, they had shoveled up some gravel with the powder. The three men in the grinding house heard the harsh crunching of the small stones as they passed through the rollers.

Every powder-mill employee receives minute instructions about what to do when anything goes wrong, and one of the three, following instructions, threw open the door to make a way of escape.

The crunching continued. One of the gravel-stones emitted a spark as the rollers crushed it. In an instant there was a great flash and a roar, and the building disappeared. Three blackened and mangled corpses were picked up. In order to save themselves from rebuke and perhaps from discharge, two workmen had sacrificed the lives of three other faithful men and placed the lives of thousands in jeopardy.

In a Delaware plant a young man operating a cutting machine, in which long sticks of smokeless powder are cut into shorter pieces, saw an iron nail coming down with the powder. He did not have time to stop the machine before the knives struck the nail. If he tried to snatch it out he might lose a hand. If he let it go nothing but a miracle could prevent an explosion, for the nail would be sure to give off a spark if struck by the knife.

There was only a fraction of a second in which to decide. With the coolness that characterizes those who spend their days in the presence of danger, he snatched the nail from under the knife and put it into his pocket. So quickly did he move that not even the skin of his hand was broken.

WAR FILMS

WAR films, says the Boston Transcript, have proved to be very useful to the French general staff, and presumably to those of the other fighting nations. Used only as an experiment at first, they have been of such practical value that the return of the cinematograph operator from his aerial reconnaissance is always impatiently awaited at headquarters.

The moving-picture man who volunteers for this work undertakes a very difficult and daring feat. He must be a master of his profession, have nerves of steel, and be willing to take great risks. More often than not he is obliged to fly at a low altitude, for otherwise his pictures would be without value. Many men who have gone out on those perilous expeditions have never returned.

The war films show the experienced observer a great deal that is going on behind the enemy's lines. The trenches are clearly visible. It is even possible to discern the men digging trenches or placing big guns in position. The cinematograph men have often brought back excellent pictures, taken from waterplanes, that show the movement of ships and the track of enemy periscopes.

"Gee—I wish I had one"

That classy Bicycle Tire is the Goodrich "Giant." Its thick, black tread is made of the same gristly rubber that is used in the famous Goodrich Automobile Tires.

This is the king-pin of Bicycle Tires.

There are other Goodrich Tires in a wide range of treads and prices.

Even She Had Corns

Until a Little While Ago She Thought Them Unavoidable

If you have corns don't blame yourself too much. Many an old person has had them fifty years. Yet they have done what you do—pared them and used old-time, useless treatments. But what folly it is when nowadays about half the world keeps free. Just try one corn. Apply a Blue-jay plaster in a jiffy. Then forget it. It will never pain again. In two days take the plaster off. The corn will disappear. Only one corn in ten needs another application. The cost is five cents per corn. The trouble is a moment. The results are sure. You will laugh at the old ways when you try Blue-jay. You will wonder why people ever let corns hurt. Please start tonight. You have suffered long enough.

THE LENGTH OF LIFE

SICKNESS and death have always existed in the world and always will so long as man's physical constitution remains what it is. The body is evidently intended to last only a certain time, although man himself has unquestionably greatly shortened the length of its endurance. The limit of threescore years and ten, set by the Psalmist, deprives us of many years that are our due. Students of longevity have established the rule that the animal body, including man's, should endure, barring accident, five times as long as it takes it to reach full maturity, as marked by the complete ossification of the bones. In man that period is about twenty years, and man should, therefore, live to round out a century. That he usually lives only a half or three quarters as long is his fault and the fault of his ancestors. A French writer once asserted that a man is as old as his arteries, meaning that the degenerative changes of old age were dependent upon or measurable by the degree of hardening of the arteries. That is undoubtedly true to a certain extent, but epigrams do not solve problems or even explain facts. It affords slight comfort to know that we are as old as our arteries if we do not know how to prevent them from aging prematurely. Fortunately, we do know many of the causes of the presenile degeneration that cuts us off before our time. Heredity counts for much. Some families are long-lived; in others, most or all of the members die young. That sounds hopeless, yet we can do much by hygienic living to lengthen our days even if we come of a short-lived family. More than that, we can transmit to our descendants a still higher degree of stamina. The other causes of early aging may be summed up in the one word excess—overwork, mental or physical, worry, overeating and even oversleeping. Moderation (not insufficiency) in all things—eating, drinking, working, playing, sleeping—is the secret of health and longevity.

UNCLE BILLY

EVERYONE in the community knew Uncle Billy, whom Rhoda, his seventy-year-old sister, described as a "preserved boy." The little old man's sixty years had subtracted all the hair from his head except a thin remainder of white silken fuzz on a level with the tops of his ears. The back of Uncle Billy's head looked like a big egg in a nest of wool; his face suggested a full moon on the disk of which two twinkling stars stood guard above a smile. Uncle Billy was always busy, and usually he was doing something worth while. One of his favorite expressions was, "Doing nothing is the hardest sort of work." Uncle Billy tried to like everyone, but he had little use for one of the neighbors named Bruton, whose wife worked the garden while he spent the day at the village store playing checkers and talking politics. But Uncle Billy had faith in other people. He often commented upon the fact that the persons we like best are usually those we know best, and one day he said to his sister, "Rhody, that man Bruton is all right; the fault was in my mind. I didn't look at him the right way." Uncle Billy was always hopeful. If he ever had the "blues," no one knew it except himself. Usually when two people meet, one says, "Good morning!" or "How-dy-do?" and the other replies, "Good morning!" or "How-dy-do?" When anyone greeted Uncle Billy,—morning, afternoon or night,—his response was always, "It's all right." If you suggested that the world is growing worse, the little old man shook his bald head vigorously and replied, "No, no, no, no! And even if it were, it would be our business to leave it better for the next generation." The fact that Uncle Billy was undersized caused some thoughtless remarks that would have hurt the feelings of another. But they did not hurt Uncle Billy's. He would say, with a laugh, "You can't hurt my feelin's," and go whistling about his business. Even the dogs recognized the little old man as their friend. More than once, when some thoughtless or cruel boy tied a tin can or a package of firecrackers to a dog's tail, the frightened creature ran to Uncle Billy for help and protection. No one ever heard Uncle Billy recite a creed, and no one ever heard him boast of what he had done, was doing or expected to do; but everyone knew that he was religious and that his life was clean and his heart was pure. Uncle Billy believed that people are affected by the language they use. One day one of his nephews spoke profanely in his presence. "Oh, my dear boy!" exclaimed the old man. "If you expect some day to get through the pearly gates and shout 'Glory!' you'd better begin now to shape your mouth for it." One blustering March midnight Uncle Billy's sister, Rhoda, leaned over him, placed her wrinkled hand gently on his brow, kissed his hot cheek and whispered, "Billy, the doctor says you cannot stand this pneumonia." Out of his eyes there came a twinkle, as of the stars, and, attempting to pat his old sister's cheek, he panted, "It's all right, Rhody; it's all right."

LONG-LIFE KOKOMO BICYCLE TIRES

TRY any one of the seven splendid KOKOMO Bicycle Tires this spring, and you'll find out how good a bicycle tire really can be!

There are seven different styles and prices, and various treads and colors, in the KOKOMO line of tires—a tire there, surely, to please every one.

They are all good tires—every one of them the best tire we know how to build at its price.

KOKOMO Tires will wear the way you've always wanted a tire to wear. And, you can be proud of them, too, for in the KOKOMO line, with the famous OXFORD and the rest, are the two top-notchers of tiredom—EVERLASTER and Kokomo KORD. But, no matter which of the seven you buy, you're sure of a generous return for your money.

The price of KOKOMO Tires has NOT been increased. When you buy a new bicycle, see that it has KOKOMO Tires. When buying tires, ask for KOKOMO.

SAXON "SIX"

Repeatedly Has Saxon "Six" Proved Its Superiority

Not once but many times has Saxon "Six" shown itself a better car than those that claim rivalry by way of price.

And these repeated proofs have had their effect.

People now seem to know very definitely and decidedly why Saxon "Six" is the best car at less than \$1000.

Evidently they have been comparing Saxon "Six" with others in its class.

And they have usually arrived at the same deliberate opinion—that Saxon "Six" is a far abler performer, a far better car.

Recently another piece of evidence was added to the proof of the economy of Saxon "Six" when 206 Saxon "Sixes" traveled 300 miles apiece without stopping and averaged 23.5 miles per gallon of gasoline.

And proof of its stability and strength is found in the fact that the average cost per car for repair parts over a period of two years is \$8.50.

Saxon "Six" is \$865; "Six" Sedan, \$1250; "Four" Roadster, \$495; f.o.b. Detroit. Canadian prices: "Six" Touring Car, \$1175; "Six" Sedan, \$1675; "Four" Roadster, \$665. Price of special export models: "Six," \$915; "Four," \$495; f.o.b. Detroit.

THE YOUTH'S COMPANION

THE BEST OF AMERICAN LIFE

IN FICTION FACT AND COMMENT

PUBLISHED EVERY THURSDAY IN THE YEAR

Copyright, 1917, by Perry Mason Company, Boston, Mass.

TWO DOLLARS A YEAR · FIVE CENTS A COPY

REUBEN need not have worried. Anna Miller was far from being disappointed in her homecoming. She was surprised and delighted at the warm welcome she received, and quite satisfied with everything she found. Her mother looked ten years younger than Anna remembered her; Mrs. Miller's hair was dressed prettily, her gown was becoming, her face cheerful and almost animated. The contrast between the home that she had left and the present one was great. Furthermore, the contrast between what she now found and the best that she had been able to get for herself through painful drudgery during her long absence added to her content. From the moment of her return the girl bloomed and thrived.

Although perhaps Anna was rather shallow, she was bright and gay, and more generally amiable than her intense sister. To the casual observer Anna, with her fairy yellow hair, — which Mabel Graham declared was bleached, — her merry hazel eyes and pink cheeks, was also much prettier than Rusty, although the thoughtful eye found the younger girl more attractive.

From the first, Anna liked her "kid sister," as she called her, although Rusty was half a head taller than she. Rusty had no intention of relinquishing her position as manager of the household into the hands of the newcomer. Indeed, Rusty had not shared equally in the general rejoicing at Anna's return. Perhaps the circumstances under which she learned of her sister's arrival had something to do with it. Supposing that the girl whom she had seen in the carriage with Reuben was Mabel Graham, she had gone home in a black mood—not a propitious time in which to receive so great a surprise. Although Rusty's first instinctive resentment at her sister's return lingered, she struggled against it; and largely because of Anna's astonishing good nature, the two got on fairly well. To herself Rusty admitted that she was the elder brother of the parable. She was ashamed, and yet—well, she had always been secretly sorry for that elder brother, and thought it mean that he should not have had a gold ring and a fatted calf.

However, she was glad of one thing: now that Anna was at home, her family could not refuse to let her go to Miss Penny's. Her father could no longer harp on the fact that he should thereby lose the only daughter he had left. Moreover, Miss Penny had rheumatism and needed her.

None the less, when she proposed it at dinner a day or so after Anna's return, dismayed silence fell upon the group round the table.

"Aw, Rusty!" cried Frank reproachfully, and was immediately echoed by Freddy.

"But, boys, I shall be home every single day," Rusty protested; "it won't be at all as it was at the other house."

"You won't be here to jolly us in the morning!" pleaded Frank.

"But Anna will."

Mrs. Miller sighed much in the old way. Her husband pushed back his plate disconsolately and told her she had given him too large a piece of pie.

Anna giggled. "Rusty still prefers rubes, Frank, though she has moved into the city," she said.

Rusty left the table suddenly.

"Anna, you'll have to be careful how you joke about Reuben to your sister," said her father kindly. "She's so fond of him that she'll flare up at a word, where you could say anything about her—even call her red-headed."

"Poor Rusty's nervous," returned Anna. "I'll be careful how I handle her, pa. She's a dear, anyhow."

"She hasn't been very well lately," said Mrs. Miller.

"She's considerable worked up about the prize at the academy that that fat

DRAWN BY CHASE EMERSON

"MIGHTY GLAD TO KEEP YOU WITH US, RUSTY, MY GIRL," HE SAID HOARSELY

Mabel Graham came way over from Wenham to take away from Farleigh children," said Seth Miller.

"If it's that, we can help her out," said Anna. "She ought to have all her time for study, and I'll tell you what I'll do. I'll go over and help Miss Penny in her place—she seems to have that on her mind, too. I wouldn't do that sort of thing anywhere else, of course, but here in the country you can do it and be just as good as anyone else. How much does the old lady pay?"

"O Anna!" cried her mother, horror-stricken. "I wouldn't have Rusty hear you speak that way of Miss Penny for all the world! Do be careful, child!"

Mr. Miller was considering Anna's proposal. Although he was delighted to have Anna at home again, no one could take the place of Rusty with him. If he could not keep both girls all the time, he should prefer to lend Anna to Miss Penny. He praised the girl for her kind, sisterly thought, and that afternoon he spoke of the matter to Reuben.

The idea came to Reuben with a shock. He had counted a good deal on Rusty's coming back. He did not especially care for Anna, — if she had not belonged to the Miller family, he might even have disliked her, — and in any event he could not bear to think of her in Rusty's place; but if it were better for Rusty, as her father and mother both believed? They ought, he reflected, to know best. He made no comment, but agreed to speak to Miss Penny about it.

At first Miss Penny absolutely refused to consider the proposal. She liked Anna; indeed, she thought her very bright and attractive. When Anna had come to tea, she had seemed a handy little thing, and had helped clear the table and dry the china afterwards. But to give up Rusty for her? She would not think of it!

Of course, she said to herself, if it were true that Rusty was not well — Every time Miss Penny met Seth Miller he spoke of his anxiety about Rusty. As a matter of fact, the girl had for some time seemed somewhat

pale and languid, although she looked better now.

"I suppose it's that scholarship," Miss Penny said to herself one evening, "and that fat Graham girl." She turned suddenly to Reuben, who sat at the table with his book.

"Reuben, do you think Rusty would get more time to study if she stayed at home than if she came here?"

Frowning, Reuben thrust his hand through his thick hair, which looked black nowadays except in the sun.

"She does an awful lot of work at home, and still — I suppose she might get more time to study," he admitted. "For she's so fond of you and so anxious to do all she can that perhaps she keeps about more here. Of course she does a lot for her mother, too, only—well, I suppose it's different—in her own home."

"I suppose it is," admitted Miss Penny. "I'm sure I loved my parents, and wanted to help my mother, and yet I was quite another girl when I visited my Aunt Hetty." She laughed. "I used to get all worn-out and have to get home to rest."

Reuben still frowned. "I suppose," he said slowly, "that if she didn't want to do a thing at home, she'd say so."

Miss Penny rocked and rocked, and Mrs. Tramp, who liked a quiet lap, went disconsolately out into the kitchen. Reuben was wondering what Rusty herself really thought about the plan. Of course her father would not have suggested it without Rusty's approval; and if she wanted to stay at home, it was all right. Still, it was very hard to face such a change.

After talking the matter over again with Reuben at breakfast, Miss Penny decided that, if the others all thought it best, she would try Anna; but her heart was heavy, and so was Reuben's.

Seth Miller and his wife were pleased when they learned the decision, and Anna was soberly gratified; but somehow no one wanted to tell Rusty herself.

"Rusty's been boss so long that we don't any of us know how to make up our minds for ourselves any more," said her father.

"Get Reuben to tell her," Anna suggested; "she'll take anything from him."

That seemed a capital way out of the difficulty, and Mr. Miller promised to see Reuben directly. But the words were hardly out of his mouth when Rusty came in and announced that, since she was going over to see Miss Penny after tea, she could take some of her things along in a bag.

A silence followed her words, and everyone looked meaningfully at her father. He winked frantically at Anna to indicate that she had better do the talking; but Anna pretended not to understand.

When the pause became prolonged, Rusty looked inquiringly round the circle.

"Rusty," said her father, at last, "Miss Penny, having the rheumatiz, might want some one with her as could stay with her all the time—some one that don't go to school."

"Did she say that?" demanded Rusty.

"N-n-no, not just that," he faltered, "but —"

"But what, father?" the girl cried impatiently.

"Rusty," he began again deliberately, "we all felt that you ought to have more time to study, and—well, we want you should get that prize and go to college, though I don't know how we shall ever spare you. But—Anna here, not being in school, is willing to go over and help out Miss Penny and save your time and strength."

Rusty flushed deeply, and then became

very white. "But Miss Penny wants me!" she cried, astonished and hurt.

"Yes, Rusty, but she thinks she can get on with Anna," he said; and then, seeing that Rusty was taking it hard, he thought of Anna's suggestion. In his anxiety, he did not realize that he was not telling the exact truth.

"Reuben thought it might be better, you know, Rusty," he remarked in a conciliatory tone. "Of course there's Miss Penny with rheumatiz, and I guess Reuben's dreadful sot on your getting the prize away from Wat Graham's girl."

Rusty stared at him, whiter than ever. "Reuben said that?" she demanded.

"Why, not just them words, Rusty?"

"He said it was better to have Anna?"

"So he and Miss Penny seem to think, Rusty, all on account of that prize—oh, yes, and the rheumatiz!"

There was another pause, and then Rusty spoke.

"Oh, very well," she said quietly. "Then Anna had better go."

Rusty did not have to fly to her room to-day. She did not want to storm or weep. Her heart felt like ice. She hoped that it would stay frozen forever, because if it should melt it would ache. Her unwonted conduct deceived her family. They had been very uneasy, and now felt much relieved. Her parents noticed that she was strangely quiet all the evening but supposed that it was because Anna talked so much.

As Rusty went to her room that night, her father stopped her at the foot of the stairs.

"Mighty glad to keep you with us, Rusty, my girl," he said hoarsely.

Rusty nearly choked. At the head of the stairs, her mother waited.

"O Rusty, it didn't seem as if I could let you go!" she said, with a kind of pathetic humility.

Rusty tried to speak, then kissed her mother instead and hurried into her room. As she shut herself in, the coldness in her heart seemed to melt, and she gave way to tears.

But they did not ease the burden. Reuben had not wanted her back! He had chosen Anna. He preferred the pretty stranger to his old friend. After all these years! Well, of course two years were not many, but it was really a long time, and they seemed like the oldest friends! Oh, it did not seem that she could bear it!

Anna was pretty. She was dear and sweet and amusing, and she had no temper. It was undoubtedly a great relief to Reuben to be with some one who was not likely to burst into a rage and blow his head off at any moment. And Anna would never criticize him and pretend to wish that he were more like other boys who could not compare with him in any way. And yet—Reuben was not Reuben any longer if he were not a faithful friend.

Anna was established at Miss Penny's, doing her best, and school was going on steadily, before Reuben realized that anything was wrong. Rusty had chosen occasions to go to Miss Penny's when she knew that he was not there, and it was only when he walked home from school with her one night that he suddenly discovered that she was different. It almost seemed that in some unknown, inexplicable way he must have deeply hurt or offended her; but partly because he knew himself to be innocent, and partly from the way she carried herself, he decided that it could not be that. She did not seem vexed, only distant and perhaps scornful.

And although he searched his memory that night and many nights, Reuben found nothing to change his conclusion. He sometimes thought that he would question Rusty, but the question always froze on his lips. Her manner would not permit him to ask it. And more and more he inclined to the belief that it was not anything that he had done—it was just what he was and could not help. He was too old and stolid; Rusty was tired of his stupid companionship. She had proposed sending Anna to Miss Penny. It must have been largely because she did not want to see so much of him.

For the first time in his life Reuben was unhappy; but because he was naturally so serious, no one noticed it. He applied himself to his studies as never before. And meanwhile Rusty was trying to forget her own unhappiness in equally hard study. Whereupon a pace began to be set at the academy that warned Mabel Graham to look to her laurels.

TO BE CONTINUED.

AN IMPROMPTU BULLFIGHT

By E. E. Harriman

WE had moved out to Minnesota in 1862. When we had been there ten years and I had reached the age of nineteen we had sixty-five acres under the plough and were fairly prosperous. As my brothers left home to begin life for themselves, more duties fell to my lot, until at last I had all the care of the live stock.

I liked to name all the animals. Among the cattle there was One-Horned Cherry, a cow that knew more sly tricks than a circus mule. Bughorn Daisy got her name from the fact that her horns, which came out in front and made a level circle until the points were not more than four inches apart, reminded me of the "pinchers" on large beetles. The others all had names, too, but I shall mention only the three steers—Dick, Judge and Barney—and the bull, Duke Timothy.

Dick was tall and red, with the manners of a gentleman. Judge had a white face and a look of almost human solemnity. Barney was black and white; and he was always ready to fight anything that wore hair. His belligerency did not extend to the human family, however, for he would let me walk up to him anywhere in the woods and ride him home. I named him one day after I had seen him whip a neighbor's steer that was half again as big as he. I was sure he was Irish.

Duke Timothy was a three-year-old Durham, large for his age and full of life. He had the springy walk of a deer and his head was

as I had finished my work I was going hunting, and my heart was light at the prospect. Father had allowed two days for the repair work, and was willing to let me have for myself all the time that I could save on it. I had figured that I could do the work in a day and a half; and I could get more fun out of half a day in those woods than the average boy of to-day could get in six.

I was blessed with a big body and strong muscles and with well-nigh perfect health. At that time I measured six feet one and a half inches and weighed one hundred and eighty pounds. Hard work, and play that was sometimes harder than the work, had toughened my muscles. My specialty was catch-as-catch-can wrestling, and all was grist that came to my mill. I never refused to wrestle any man that challenged me, regardless of his age, size and ability. There was no form of athletic sport practiced in the woods that I did not try, but, because I was rather heavy, I never could run or jump well. My brother Will said that I was a draft-horse build; it was true that I did draft-horse work most of the time.

About ten o'clock I heard sounds of trouble in the yard. I had just picked up a board for the bottom of the manger, when I heard Duke "swear," as I called it. That rumbling bass "Booo-uh!" meant war. Dropping the board I ran to the door to see what had disturbed him, and found him with his back to me, his head down and his hoofs sending the dirt up over his back in a shower.

The other cattle were staring at him in wonder. I could not make out what had angered him until I noticed Dick, the steer; he seemed to know what the trouble was, and was evidently prepared for some warlike demonstration from Duke.

He was halfway across the yard, standing quartering; but at the next challenge from Duke he turned until he faced him, although he still held his head high and looked more disgusted than angry. Again and again the deep "Booo-uh!" came from Duke; the bull was plainly working himself up to the fighting pitch.

I ran back to get a club from the broken scraps, but found nothing except a tapering piece of one-inch lumber about four feet long. As I raced back to the yard I realized that it was a very inadequate weapon, but it was all that I could get in a hurry. I shouted to Duke in an effort to scare him away from Dick; but the bull took it for the starting word and lunged furiously at his foe. Dick's head dropped like a flash, and I saw the muscles on his thighs roll and knot themselves as he met the bull squarely.

I knew that I had no business in that mix-up with such a weapon, and so I dropped it and ran for a pitchfork. There was none in the stable, and the only one in sight was up on the haymow, fifteen feet above me. From the sounds from the yard I knew that the struggle was becoming more furious, and I hurried back to the doorway to see how the battle fared.

The two beasts were very evenly matched, and their feet went ploughing through the damp soil of the yard. First one would get the advantage and then the other. Dick pushed the bull back against the east fence, and then Duke got Dick to slipping, and forced him almost across to the west fence. They tipped over the feed rack and the water barrels, smashed a bran-mash pail and knocked down a yearling that was trying to cross the yard.

The rest of the cattle watched the fight with as much interest as I did; Barney walked up until his head was within two feet of the belligerents and danced round to keep his relative position, as if he were the referee.

At last the battle began to swing in favor of Dick, chiefly because his adversary became so angry that he was almost crazy; shutting his eyes, the bull would rush blindly at the other. Once, when Duke was charging, Dick shifted his position just a little; the instant that Duke's head went past, the steer swung and caught the bull off guard. Dick had him then where he wanted him, with his horns against the other's neck, and in an instant he had whirled the bull half round and was at him in his most vulnerable spot, the flank.

It was all over except the shouting then, for Dick chased Duke round the yard at his best pace until I turned the bull into the stable and shut the door.

A wave of my hand in front of Dick was enough to stop him, and he stood still while I went up to him and looked him over for injuries. There was only one, and that was merely a scratch, which he had got when he knocked the feed rack over with a swing of his heavy hips.

After petting Dick for a moment I went into the stable; I intended to put a rope on Duke and lead him to another stable, where I would

leave him tied until he had repented of his sins. I fastened the door on the inside with an iron hook that I had to push down smartly in order to make it enter the staple. To unfasten the door I generally knocked the hook up with the handle of the pitchfork.

I had no sooner got the hook into the staple than I heard a rumble from Duke and, turning, saw him lower his head and start for me full tilt.

He was not more than ten feet away and I had little time to dodge. In fact, I stood still until he was within three or four feet of me; then I turned quickly on the balls of my feet and bowed my back.

He went past me so close that one horn caught in my half-buttoned waistcoat and ripped two buttons off. As his head hit the post at the side of the door a resounding thump, I sprang behind him to get him by the tail.

But I was not quite quick enough. He whirled to the right so swiftly that he almost cornered me, and I just managed to dodge his rush by throwing myself to the left so that I struck on my hands. My feet described a half circle and I came up nearly twice my length from the bull.

I tried to rush to the hay hole, but before I could reach it Duke had made a half turn and was skirting that side of the stable at full speed. Dodging to the left, I made a quick turn and was behind him. I tried again to get a grip on his tail, but was so far from succeeding that I very nearly ran on his horns as he whirled round at me. For an animal of his size he could turn with astonishing quickness. He made me think of the cow pony that the cowboy said could turn on a dime and have a nickel to spare.

It is easy to joke about it now, but it was far from seeming funny to me while it lasted. Every time I bowed my back to let one of those sharp horns pass my stomach nervous fear sent a sharp pain through my body. I was afraid that he would strike with a sidelong swing of his head and catch me full in the abdomen.

In quick succession he made half a dozen rushes at me, and I escaped them by efforts that wet my face with perspiration and made my legs begin to feel the strain.

I realized that, if I did not do something very soon to end the bull's attacks, in one of his quick turns he would catch me. As he rushed at me again I leaped as far to one side as I could, but I had to wait until he was close before I leaped, or he would have followed me so quickly that I should not have had time to recover for his charge.

He turned this time a little quicker than before, and again I had to shift like a boxer and bow my back as his head swept through under my breast. This time I did not recover as I should have and his shoulder hit my side. I grasped for his neck with both hands, as the only thing within reach, but missed my grip; my body whirled in a half turn, and I fell heavily on my right side.

I had no time to rise, for the bull, with an angry bellow, turned swiftly toward me. His great head was fairly over my body, and in an agony of desperation I reached for his nostrils with my right hand and closed my left hand on one of his horns.

I felt my thumb and two fingers sink into his nostrils, and, with a heave that took every ounce of strength that I had, I pushed his nose up and at the same time pulled down on the horn.

When his head was in the bent position that this manoeuvre gave it he could not use his horns on me, and he fought hard to free himself. I knew that this was the crucial moment and resolved that I would not relax that grip while I had any strength in me. Duke heaved his neck and stamped his feet, and all the while blew his breath over me like a hot blast from a furnace.

I struggled to my knees, and at once the bull dragged me halfway across the stable; then I rose to one knee and one foot, staggered to both feet and hung on while the creature swung me back and forth.

I had twisted his head halfway round, and held it across my left thigh; I had to bear down with all my strength on his right horn to keep his head in that position. Round and round we whirled on the wet planks; at times we got on the dry flooring next the haymow, only to swing back at the next jerk to the wet part.

I did not dare let go his nose or his horn for a second, but I knew that I must end the struggle soon, for my arms were beginning to feel the strain in the hollow of the elbow; presently they would begin to tremble from the long tension, and then they would lose strength rapidly.

Twice I tried to throw the bull by jerking his head suddenly when his feet hit the wet places, but each time he foiled me. Then I tried to turn his nose higher and to throw him as a cowboy throws steers—bulldozing, they call it; but his neck was too strong for me to twist it any farther, and I went back to my former methods.

Three times more I tried unsuccessfully to throw him by a sudden jerk on his neck. Then I managed to get him to turn in the opposite

I FELT MY THUMB AND TWO FINGERS SINK INTO HIS NOSTRILS

up high all the time except when he was grazing or challenging. He was a handsome animal, and I was very proud of him. He had never shown a sign of ugly temper to me or to my father, and we thought him perfectly safe.

One day in the fall I had begun the job of rebuilding the mangers and stalls in the long stable that took up the entire west side of our barn. The lumber was piled up against the north end, and left an open floor about twelve feet wide by fifty feet long, planked over and a little wet. Through the open door in the south end of the stable I could see the cattle in the cow yard, busy with a good feed of timothy hay and cornstalks.

I was whistling as I worked, for I was as happy as a boy of nineteen could be. As soon

of discovering yet much more in the future. Let us hope that man will learn to use all the great possible benefits of science, not for

perfecting engines of destruction, but rather for building up the basis for a nobler life in the years to come.

THE SINGLETON OAKS

By Samuel A. Derieux

IN khaki and leggings and broad-brimmed hat, Arthur Singleton stood halfway between the house and the road and directed three negroes who were ploughing deep for cotton. Three months ago he had come home from the state agricultural college to take charge of the plantation; and even in that short time the results of his vigorous administration were visible.

The old hedgerows that had once stretched from the mansion to the big road had been cut; the site of the flower garden had been ploughed under; an avenue of half-dead trees had been removed and the driveway narrowed. Only the Singleton oaks remained. They bordered the road on either side for a quarter of a mile. Their rugged outlines were softened now by the filmy green tracery of early spring. On the topmost branch of the tallest tree a mocking bird poured out his joy to the morning.

As Arthur's father, Maj. Francis Singleton, came out on the big white-columned portico and took his seat in the sunlight, he turned toward him. Then with a final look at the three negroes, who were shouting at their mules and who were ploughing faster than they had ever ploughed before, he strode toward the house. The major smiled as his son came up on the portico. Arthur leaned against one of the columns and looked at his father.

The young man cleared his throat. "I have decided," he said, "that those oaks out there on the road must go."

The old gentleman grasped his stick tighter and, with challenging eyes, glanced up from underneath his broad hat. "Why?" he demanded.

"They shade the cotton, father. Their roots rob the soil. The lumber company will pay well for them cut and hauled, and we need the money to meet the note for fertilizer."

"Why, Arthur, do you know, sir, that those trees have been famous for two centuries, that travelers from afar have praised them, that Gen. Marion in the Revolutionary War used to rest his forces underneath them?"

"I know all that, father, but —"

"All these years," continued the major, not heeding the interruption, "they have blessed tired man and beast. Now that the forests are cut, they form an oasis along a blazing road. To cut them, sir, would be sacrilege!"

"That's sentiment, father."

"Yes, sir," admitted the major, "it's sentiment."

"Don't you think that sentiment has cost us enough in the past, father?"

Arthur flushed and checked himself. Perhaps he had gone too far. Under his father's mismanagement the original plantation had sadly dwindled. Notes signed without question for army comrades in need and for distant relatives had consumed hundreds of acres. In Arthur's opinion sentiment had been the old gentleman's besetting weakness, and he had come home firmly resolved to fight it. The fight was on, and he must win.

"You see, father," he continued, "we have to meet that note for fertilizer. You can't meet a note these days with anything except money. As for the oaks, I love them as much as you."

The major smiled a little bitterly. "Do you?" he asked. "You do not remember your mother well, Arthur. She died when you were quite young. She loved those trees. When she was a slender bride she used to walk under them. After you learned to toddle she took you out there." The major smiled. "Such a tiny tot under such giant trees—I see it all again. Those trees are entwined with the life of your ancestors. They —"

"Father!" Arthur interposed, more deeply moved than he would admit to himself. "You are getting away from the matter in hand. The note! I say we must meet the note!"

"Can it not be renewed? I know the president of the bank well. He comes of a good family."

"O father, you know nothing of modern business! A note promptly met means ready credit in the future, and that means everything to us! I have just begun this

work. I must, I will, see it succeed—unless you, father, tie my hands with sentiment!"

"Are your hands so easily tied?" asked the major serenely.

Arthur flushed angrily. The impossibility of standing on common ground with his father in these matters stung him to a sort of desperation. He took a step forward and looked straight into the major's eyes.

"I took charge of the plantation under an agreement, sir. That agreement was that in matters of this sort I was to have my way. You said at the time it was a gentlemen's agreement, and —"

"Have a care, young man!" cried the major. "I do not need you to remind me that a gentlemen's agreement is binding. I might remind you, though, that there are certain tacit considerations—that a gentlemen's agreement is not to be pushed to its technical limits. If so, it ceases to be a gentlemen's agreement."

"There's the note," Arthur said grimly. "Nothing except money will satisfy the note. I appeal to our agreement."

The major rose from his chair and, straightening his bent shoulders, looked Arthur steadily in the eye. "Do you interpret the agreement as meaning that you have a right to cut those trees?"

"Emphatically I do!"

"Then the oaks shall be cut. Hank!" he called to an old negro who just then came round the corner of the house. "Tell the boys first thing in the morning to get at those oaks along the road."

"What you gwine do wid 'em, suh?" asked Hank.

"Cut them down."

"Cut 'em down! Cut 'em!"

The old negro's jaw dropped in blank amazement, and his eyes suddenly grew big.

"They shade the cotton, Hank."

"But cotton grow up in a year, suh!" pleaded Hank, twisting his limp hat as if it were a rag. "It take a t'ousand years to grow dem trees."

"The matter's settled. Tell the boys."

Hank, mumbling to himself, hobbled down the steps. The major went into the house.

Dinner that day was eaten in silence. Old Mandy, the cook, as she waited on the table, now and then cast angry glances at Arthur. Hank always sought the kitchen with his griefs and indignation. Arthur knew that most of the silent rebellions against his régime originated in the kitchen.

"I am going to Charleston this afternoon, father," said Arthur, when the meal was over. "I shall now be able to meet the note. It removes a burden from my mind."

"I am glad the burden is removed," replied Maj. Singleton. "You have worked hard, my boy."

That afternoon Arthur drove to the station and took the train for Charleston. He was going to attend to business, that was true; but if he had looked deep into his heart he would have discovered that he was in fact running away. He did not want to be with his father that afternoon, and he did not want to see the trees come crashing down in the morning.

Once in the city, however, his feelings changed. Here was life and stir and business. He walked briskly uptown. The sight of the cadets drilling in Citadel Square thrilled him. Like him these were clean-cut young fellows, members of a new generation, practical and

efficient. With a touch of pity he thought of his father and the old generation that had dreamed away their lives.

He had turned into King Street when a touring car, spattered with mud and with a trunk strapped on behind, passed him. The driver turned suddenly and waved his hand to him. It was Fred Graham, an old college friend from the upper part of the state, in whose home he had spent Thanksgiving. Beside Fred sat Mary Graham, with her veil flying out behind. The car turned to the curb and stopped, and Arthur hurried toward them.

"Climb in," commanded Fred, as they shook hands. "We are taking our spring-vacation trip. You must eat supper with us to-night."

As the car moved on, Mary Graham turned half round to him. Her cheeks were flushed and her eyes dancing. "You can't guess whom we saw this afternoon," she said. "We saw your father! I'm sure it was he."

A skeptical snort from her brother indicated that he was less certain.

"It was your father, wasn't it?"

"I don't know," said Arthur, laughing. "Where was he and what was he doing?"

Mary turned round and rested her little gloved hand on the back of the seat. "About

forty miles back on the road, near Eutawville, we passed him. He and an old negro were walking along the road under a grove of trees. It was your father, wasn't it?"

With a sober face Arthur nodded assent. Mary turned to her brother triumphantly.

"I told you so," she said. "For one thing, Arthur, he looked like you."

At that moment Fred stopped the car in front of the hotel, and the conversation was interrupted. A few minutes later the three went into the large white dining room; they had it almost to themselves, for the winter tourists had departed and the travel to the coast had not begun.

"Now," began Arthur, when they had ordered supper, "tell me about father."

The girl leaned forward eagerly. "We had been driving through a level, dreary country, when we suddenly ran into an enchanted spot. On both sides of the road grew great, wonderful oaks that met overhead. I just made Fred slow down. Then I saw across the fields the old mansion with its white columns and the other houses grouped round. I remembered your description of your home, and I told Fred I believed that was the very place!"

"You haven't said anything about father yet," Arthur said.

"Oh, that's the best of all! Your father and an old negro, both bareheaded, were walking under the trees. They did not hear us coming. Now and then they stopped and looked up at the trees like children, and your father pointed out something with his cane. In the afternoon sunlight the whole scene was magical."

"She's full of sentiment," said Fred, laughing. But Arthur was wondering whether, after all, sentiment was not one of the best things in the world.

"They both bowed low as we passed," Mary went on. "When I looked back they had continued their walk. You know I had a strange feeling. I felt that the old gentleman and his servant were in some sort of trouble, and that I should like to serve them."

There was another burst of laughter from Fred. The waiter was coming toward them at last, balancing his tray; but Arthur, rising suddenly, glanced at his watch.

"Perhaps you have served them," he said gently to Mary. "I hate to break away like

this, but I've got to go home, and I have only ten minutes to catch the train."

"Oh!" cried Mary. "There was nothing the matter, really there wasn't. Your father looked well and ruddy. I didn't mean —"

"I know," Arthur replied, with a smile. "There is nothing serious. I just feel that I ought to go. This train is the last chance until to-morrow afternoon."

"Now, what's all this?" demanded Fred, rising with his napkin in his hand. "Mary, you have played thunder with the delicate feelings of our one-time all-star tackle. Are you really going, Arthur? Well, it looks like a case of temporary insanity, but I'll take you to the station in the car. I'll be back in ten minutes, Mary."

Arthur shook hands with Mary, and the two young men hurried out of the dining room and to the garage. Then Fred drove swiftly to the station; the two jumped out and ran through the waiting room to the shed. The train was pulling out. The gates were closed.

Fred put his hand on Arthur's shoulder. "Nothing serious, old man, is it?"

"Oh, no," replied Arthur.

"Taken this way often?"

"No—not often enough."

They went back and had their supper. Then all three took a walk through the city. When they said good night in the lobby at the hotel, Mary came close to Arthur.

"What was the matter?" she asked, with a serious look on her face.

For a moment Arthur was on the point of telling her about the trees, and then he said, "Why, I just thought of something that I ought to attend to—nothing serious."

Arthur crawled wearily into bed, but he could not sleep. Now that the sounds of the street were silent the picture of old Hank and his father taking their last walk under the trees became more and more vivid in his mind. He went over again and again his conversation with his father that morning. He knew that he had over-emphasized the importance of meeting the note—that he could renew the note without much hurting his credit.

His father's words about the agreement recurred to him. Had he not overstepped the bonds of a gentlemen's agreement in insisting that the trees his father loved be cut? The trees themselves seemed to rise before his eyes in long, stately lines—giants that had battled a hundred tempests. He could see them prostrate now, with only the ugly stumps to mock the spot they had blessed.

Midnight struck—one o'clock—two o'clock. In four hours the destruction would begin. Through his window he could see the moon, shining bright. Was his father looking at the oaks now in the moonlight for the last time?

Springing out of bed, Arthur Singleton turned on the light and dressed. He hurried down the silent hall to Fred's room. He knocked on the door until at last Fred, frowzy-haired and blinking, opened it. Fred looked at his friend with unfeigned astonishment.

"Another fit?" he asked.

"Fred," said Arthur, "I am going to ask a favor of you. Will you take me home?"

"When?"

"Now."

"What for?"

"I must go, Fred, I must."

"Arthur Singleton," said Fred seriously, "you used to be a sensible fellow, or at least I thought so; but if you aren't acting like a crazy person now, I'm crazy myself. I don't understand you, but I'm game. I'll take you home."

Fred began to dress.

"Now," he continued, when he had put on his coat, "I'll tell Mary. If she wakes up and finds I'm not here, she'll be worried."

He was gone for some time, and when he returned he said, "Mary insists on going, too; she'll be along in a minute. It's catching, Arthur, this complaint of yours. I feel it coming on myself."

Day was breaking when they came in sight of the oaks. Arthur had told Mary and Fred why he wanted to get home, and Fred, although he had laughed, had driven like a

madman. Up the driveway they sped to the big porch. Hank came round to meet them.

"Where is father?" Arthur demanded eagerly, as he climbed out of the car.

"He riz early, suh," replied the old negro coldly. "He walked off dat way." Hank pointed in the direction opposite the oaks.

"He couldn't stand to see them cut," said Mary softly to Arthur, and her eyes were bright with happiness. "Oh, he'll be so happy now!"

"It's cold and damp for him to be out," Arthur said to Hank.

"Me and Mandy done

"ON BOTH SIDES OF THE ROAD GREW GREAT, WONDERFUL OAKS THAT MET OVERHEAD."

wrapped him up, suh," the old negro replied. "Me and Mandy been a-lookin' arter him for twenty year, suh."

"The trees are not to be cut, Hank," said Arthur. "Tell the boys to go on with the ploughing."

"What dat, Marse Arthur?" cried Hank. "What dat I hear you say, suh? De trees, de trees!" His face was trembling with joy.

"They are not to be cut down."

"Mandy, Mandy, whar are you, ol' woman? Is you deaf?"

Hank hobbled toward the kitchen.

Arthur turned to his friends. "I think I know where father's gone. There's an old negro in a cabin in those woods. He went through the war with father."

"We'll follow!" cried Mary. And the three started by a path across the fields.

The sun had risen bright when they reached the cabin. Maj. Singleton heard their steps and came out to meet them.

"Father," Arthur drew himself up like a

soldier making his report, "I came home to save the Singleton oaks."

The major glanced quickly at the faces round him. "But how about the note?" he asked.

"I exaggerated the importance of meeting the note now," he said. "We can renew it, of course. I wanted to have my own way, sir."

Arthur turned to Mary. "She changed my mind, sir. This is Mary Graham. You have heard all about the Grahams."

As Maj. Singleton bared his head, the sun glistened on his silvery hair. He took the girl's hand and looked into her eyes.

"My dear young woman," he said, "if Arthur had not changed his purpose in your presence, he would not have been a son of mine."

Arthur took a deep breath of the morning air. The tears were not far from his eyes. For as he looked at the old gentleman and the young woman, he knew that something of his father's sentiment lived in his own heart, and he thanked God for the heritage.

THE CRYSTAL HUNTERS

By Frank Lillie Pollock

In Eight Chapters

Chapter Six

WHEN Tom fell into the stream he was so completely dazed that he scarcely struggled. The water was not deep, but he could not stand against the fierce current that swept him helplessly along. The place was pitch black, and the roaring of the water almost deafened him. He was being carried along at a faster and faster pace; he dashed against a rock, whirled off again, and then shot with frightful speed down what seemed like a cataract.

The fall lasted for only a second or two, and then he found himself struggling in calm and shallow water. Regaining his wits a little, he managed to get on his feet. The water was knee-deep and icy cold, and all round him was thick darkness. The hollow roar of the falling water echoed from walls of rock.

"Ellis! Ellis! Wilson! Help!" he shouted wildly. He had a dazed idea that his two companions had fallen with him. The thunder of the cataract drowned his voice. Again and again he shouted, but he heard no answer.

Putting his hands cautiously before him, he started to explore his prison. He could feel no walls on either side or a roof above him. He took a step or two, and still felt nothing. This cavern was evidently big, but how big he could not guess.

Still thinking of his friends, he waded about with his hands extended, fearing or hoping to touch a drifting body; but he found nothing, and as he remembered his fall more clearly he realized that his first cry must have given Wilson and Ellis ample warning.

When he knew that he was utterly alone, beyond help, far underground, and with no apparent way of getting out again, panic almost overcame him. The horror and desolation of that moment were such as he had never felt before. His head swam; his throat choked. He made a few wild steps through the water, and then, afraid of falling into some new trap, stopped.

"Come, now!" he said to himself. "I've got to keep my head."

In his mind he went over again the exact circumstances of his fall. The subterranean river could not have carried him many rods before he entered the cavern where he had regained his feet. His friends were probably now anxiously peering into the hole where he had gone down. The thought gave him energy; he knew that they would not desert him so long as there was any hope. And there was one ray of hope for him. If he could go back as he had come, if he could reach the spot where he had fallen in, his companions could surely haul him up to where they stood.

The intense darkness and the rush of water had confused Tom's sense of direction, so that he no longer had any idea where the stream entered the cave. He waded about, trying to find the place, but only became more completely bewildered. At last he bumped into the wall of the cavern. It was of rough rock, dripping wet. When he turned back, his head struck sharply on a hard, jagged object suspended in mid-air—evidently a stalactite hanging from the roof of the cave.

By following the wall, Tom at last came to the place where the stream entered the chamber. It seemed to come out from a sort of tunnel, and when he started to wade against its current he realized that its bed ran sharply uphill. This was the cataract down which he had shot. The water did not come up to his waist, but the floor was so smooth and slippery and the current so strong that he had hard work to keep his feet. Indeed, he had not gone more than two or three yards when he lost his balance. Gasping and half choked, he was whirled down into the cavern again.

Picking himself up, he returned to his task. Escape was going to be harder than he had

expected, but he was grimly determined to succeed.

Leaning forward and bracing himself against the force of the water, he managed to get nearly twice as far as the first time. Then his foot went into a hole; he stumbled, and in another instant he was being swept helplessly down into the cavern.

But he was not discouraged. He had almost made the distance, and felt sure that the next time he should succeed. After resting for a short time he once again attacked the chute. Keeping close to the edge, and clinging with his fingers to every irregularity in the wet wall, he worked his way upward foot by foot; he had gone far past the place he had reached before, when a louder roar of water sounded ahead of him.

The next instant he found his path blocked by a big boulder that half choked the tunnel. When he tried to go round it, he met a rush of water so fierce that it lifted him off his feet; he would have gone down if he had not caught a firm grip in a deep crevice of the boulder.

Clinging desperately with his hands, he found his footing again. The water poured round the boulder in a torrent waist-deep. Tom, beaten and choked, made a last feeble attempt to breast the raging stream, lost his footing and was instantly swept downward.

This time he nearly drowned, for when he reached the quieter water in the cavern he was so thoroughly chilled and exhausted that for a moment he could not get to his feet. At last, however, he managed to raise himself and to stagger to the wall of the cavern, against which he leaned heavily.

As soon as he had got back a little strength he felt round for some spot where he could rest. By good luck he found a place where the wall shelved a little at the bottom, and he sat down in about three inches of water. Leaning back, he closed his eyes. He was so badly shaken up, so much bewildered by the darkness and the noise and the strangeness of his surroundings, that for a while he could not think. The whole experience seemed as unreal and horrible as a nightmare. Nothing seemed true—not even his numbed and aching limbs.

After a time, when his brain had begun to clear a little, he thought of his match box. It was supposed to be waterproof, but could its contents possibly have remained dry? He got it out and opened it. By the feeling the eight or ten matches that it still contained were quite dry; but the trouble was to find anything dry enough on which to strike them.

The rocks, his clothing, the outside of the box itself, were dripping wet, and there seemed to be no chance of drying any of them. He tried to strike a match on the roughened end of the box; it spat a blue flicker and went out. Wiping the box with his hands he held it next his skin for some minutes. Another match failed to light. Again he warmed the box, and then struck a third match. To his delight a clear blaze flared up.

By the light of the match he saw the eddying black water and the seamed and fissured wall of rock behind him; the cavern was too wide, however, for him to see the other side. Over his head hung clusters of weird and jagged stalactites, like huge icicles of rock. In a moment the flame of the match died down to a tiny red ember.

Although he longed to light another match, he would not let himself, for he knew that he must use them sparingly. Moreover, now that he had seen his prison and knew what was round and above him, he did not feel the same terror of the place that he had felt before. He tried to remember what he had heard of subterranean streams. He knew that they were common in the numerous caves of the southern mountains; indeed, nearly all of the caves have been hollowed out by water. But the stream

DRAWN BY H. C. EDWARDS

BY THE FLARE HE SAW THE TOP OF A TRIANGULAR OPENING ONLY A FEW INCHES ABOVE THE SURFACE OF THE WATER

that had carried him into this chamber probably began its course above ground, and he thought that probably it came to the surface again; but he could not be sure of that. It might go deeper and deeper, and finally lose itself in the depths of the earth.

As he thought over the situation he became sure of one thing: the cavern he was in must have an outlet, for otherwise the stream would have completely filled it. That outlet he must find. After resting for some time, Tom began to grope along the wall of the cave. He thought that the outlet would most likely be nearly opposite the intake, and he counted on the pull of the current to tell him when he approached it. He felt his way along by inches until a strong suction round his legs told him that the water was escaping near by; but when he passed his hands over the wall he could find no opening. Perhaps the river went out through a hole in the floor.

In deathly fear of dropping into another deep pit, he took out his match box again. Two matches failed before he obtained a light. Then by the flare he saw the top of a triangular opening only a few inches above the surface of the water. The eddy round the hole showed that a strong current was setting through; the outlet was almost entirely below the surface.

Tom's heart sank. With his feet and his hands he explored the opening under water; it seemed scarcely more than a yard wide, and, worse still, the tunnel led downward at a sharp angle, as if the river were flowing into the bowels of the earth.

At that discovery Tom nearly gave up hope. It seemed little better than suicide for him to plunge into that narrow sluiceway. He knew that if he went down through that tunnel he could never return even to the cavern.

Hoping that there might possibly be some other way out, he groped all round the edge of the cave. Except for the two holes that formed the intake and the outlet, however, the wall was unbroken.

In despair Tom found his resting place again and, huddling himself up, tried to think. He could see no chance of getting back to the daylight. As he crouched there, chilled, numb and sick at heart, he sank into a state of dull lethargy.

He must have fallen into a sort of sleep, for he suddenly awoke from a hideous dream; but the rest had done him good. His head felt clearer and his nerves steadier. He knew that he should perish if he stayed where he was. It could be no worse if he passed into some cavern a hundred feet deeper. And there was a chance that the outlet might lead to the open air.

With a coolness that almost astonished him, he decided to trust himself to the narrow outlet. He groped his way to the opening, buttoned his coat tight round him and placed himself squarely in front of the tunnel. The current was so strong that he knew he should go through the opening like a bullet. Then, with the thought that he was perhaps performing his last conscious act, he launched himself foremost into the outlet.

The rushing current sucked him down—down: there was a deafening roar in his ears.

He had put his arms over his face to protect himself, but the racing stream scraped him against the roof of the passage and pounded him against the sides.

But his ordeal did not last long. In a few seconds he found himself drifting round and round in a shallow eddy, with a thousand sparks flashing before his eyes. When he struggled to his feet the water was only knee-deep. As he got the water out of his eyes he found to his joy that he could see something of his surroundings.

The light was very dim, it is true, but after the intense darkness of the other cavern it seemed very cheerful. He was in a long, narrow cavern; he could make out very faintly the stalactites on the roof. And suddenly he realized with a thrill that he could see the stalactites at the lower end of the cavern even more distinctly. Wild with hope, he began to run down the bed of the stream. Within twenty paces or so the water poured through a low, rock-heaped fissure. Stumbling and slipping, Tom scrambled through.

"Daylight! Daylight!" he cried almost hysterically.

The cavern in which he found himself was light; after the subterranean darkness he felt almost blinded, and for a while he stood blinking. When he could look round him, he saw a great wide chamber, with a forest of stalactites hanging so low that he had to stoop under them. The floor was of gravel, and the stream, which seemed to have lost its ferocity, spread mildly over it a few inches deep.

The stalactites and the walls were of a pale reddish and amber color, with a glow and lustre that Tom subconsciously recognized; but at that moment he did not think of the rocks. All his thoughts were centred on the lower end of the cave, where he saw a green glow.

Knocking his head recklessly against the points of the stalactites, he ran toward the gleam of bright light. He was not disappointed. The stream flowed out of the cavern through a tangle of laurel and shrubs that partly choked the opening. Tom tore his way through them, and emerged in a deep, narrow gorge that was overgrown with trees. Their leaves dripped with dew. Over his head the sky was growing blue with early dawn.

Then came the reaction. Tom's knees weakened and he collapsed on the gravel. All his strength seemed to leave him, but he felt such happiness as he had never known before in his life.

After a while he picked himself up and stumbled feebly down the gorge. He had not gone ten yards when he heard a shout. Ellis and Wilson were rushing toward him. Tom stopped and tried to shout in answer, but he could hardly bring out a sound.

"Tom, Tom, old chap!" cried Ellis, as he ran up. "What have you been through?"

Tom stammered, and waved his hand toward the mouth of the cavern through which the stream poured.

"Cave onyx! Cave onyx!" he cried thickly, and then suddenly collapsed at their feet.

TO BE CONTINUED.

WENCESLAO BRAZ, PRESIDENT OF BRAZIL

FACT AND COMMENT

BE gentle, but like the nettle, which is not so gentle that it is trampled on.

Read all the Books on every Shelf—
But do your Thinking for yourself.

ADVERSITY sometimes gives a man courage; prosperity too often takes it out of him.

DO you think of bobwhite as a song bird? Probably not; but the Ohio Legislature has decided that he is, frankly because, knowing that he eats enormous numbers of destructive insects, it wishes to protect him permanently by casting over him the broad mantle of the law.

ON account of the high price of leather, *subots*, or wooden shoes, are in such demand in England that an English firm has had to decline a Belgian order for one hundred thousand pairs. The mill workers and the school children are taking again to the clogs that were worn in earlier times. Those for children cost about seventy-five cents a pair.

ARTIFICIAL irrigation for the cultivable lands in the French Alps and a greatly increased use of the water power of that region have brought about remarkable results. The lure of the city had left the mountain farms almost deserted, but the natural wealth of the land has been made so easily available that both the villages and the farms have been repopulated with an industrious and intelligent farming class.

OLD cypress trees are often attacked by a fungus that leaves the heart wood pitted and perforated with minute holes. The wood from such trees is called pecky cypress, and until recently has been almost worthless. Lately, however, architects have discovered its decorative value for interior finish, especially where an antique effect is sought. In consequence pecky cypress is in great demand and bids fair to become the Cinderella of the whole cypress family. Builders are even offering special prices for the "peckiest" specimens.

THE higher price of foodstuffs has been used as a practical and very convincing argument that we should eat less. Most of us believe that we eat too much, but do we realize how much we do eat in a lifetime? A man of science estimates that "the average man" of seventy-five years has eaten fifteen hundred times his own weight. The bread would make a pile like a house, the meat would fill many freight cars, the vegetables would make a trainload, fish and sugar would fill other cars, and the eggs would make the man blush to look a hen in the eye.

AS one result of the war, the nonconformists of Great Britain look forward to greater power and influence; for the active advance of democracy has brought many of their members into the highest public offices. Mr. Lloyd George, who is a Baptist, is the first nonconformist in actual membership in a free church to become prime minister. Moreover, the new ministry, instead of being composed almost wholly of members of the Church of England, as was the case in the old days, has another Baptist, besides Mr. Lloyd George, three Methodists, two Congregationalists, two Presbyterians and one Unitarian.

THE toys that our grandparents played with were few and mostly made at home. In 1859, according to census figures, there were only twelve toy-making establishments in the United States. The value of their product was \$184,000, whereas the value of the imported toys was \$353,000. By 1914 the number of our toy-making establishments had increased to 280, and they were making goods worth \$13,757,000, yet in that same year we also imported toys worth \$8,307,905. But is the child

of to-day any happier with his toys, and does he get any more out of them than the child of sixty years ago got out of his few simple playthings?

☪ ☪

THE DUTY OF THE HOUR

TWICE before in the history of the United States a President has taken his oath of office in a time of grave national peril. James Madison entered upon his second term one hundred and four years ago—nine months after war had been declared against Great Britain; and the issue of the war was then uncertain. Abraham Lincoln began his first term fifty-six years ago—eleven weeks after South Carolina had seceded; and already six other Southern States had taken the same step. Let us recall a few words of each of those fathers, solemnly spoken at his inauguration.

"On the issue of the war," said Madison, "are staked our national sovereignty on the seas, and the security of an important class of citizens whose occupations give the proper value to those of every other class. Not to contend for such a stake is to surrender our equality with other powers on the element common to all, and to violate the sacred title that every member of society has to its protection." Although the present situation is not quite like that which confronted Madison, Madison's language is tremendously suggestive.

Lincoln devoted his inaugural address to a calm discussion of the futility of secession, addressed to those in the South who "still love the Union." But this sentence from the address is far from being inappropriate at the present time: "Intelligence, patriotism, Christianity and a firm reliance on Him who has never yet forsaken this favored land are still competent to adjust in the best way all our present difficulty."

The administration that has just been placed in office owes its power to a party triumph; but it is none the less the administration of the United States and of every citizen. And just as in the times of Madison and Lincoln, who also were chosen as the representatives of parties, the honor and integrity of the nation required that the whole people support the administration, so now the honor and integrity of the nation require that the whole people support the present administration. Let those who think that they can range themselves in opposition to measures of defense and of vindication of national rights without leaving a stain upon their names remember the odium that still clings to the supporters of the Hartford Convention and to the "Copperheads" of our Civil War.

But suppose the President makes mistakes—must we stand by him then? Yes, although we need not defend the mistakes. Of course he will make them. No man is infallible. We can only hope that they will be few and harmless; and when he makes them, let our criticism be friendly. He must be our leader. He can be neither deposed nor recalled. For better, for worse, our fortunes for peace or for war are committed to the keeping of the administration.

No man need surrender his opinions, but if he translates his opinions into acts hostile to the safety and honor of the country, or into attempts to defeat the measures devised to that end by the chosen delegates of the people, he invites and deserves the execration of posterity.

☪ ☪

EDUCATION IN ENGLAND

IT would be too much to say that education in England has ceased, but hardly an exaggeration to say that it is wholly different from what it was before the war, and that apart from that which is directly or indirectly military in character there is much less of it. Pupils, teachers and school buildings are all less numerous. The boys who in former days would have been the pupils of graduating age are in training camps. Twenty-five thousand school-teachers are bearing arms. More than one thousand school buildings have been transformed into military hospitals and barracks.

The universities of Oxford and Cambridge have shrunk to about one tenth their normal size. Their students are now either foreigners or youths physically disqualified for military service. Cambridge has sent to the war more than thirteen thousand of its sons; nearly fifteen hundred of them have been killed, two thousand have been wounded, and two hundred are missing. So with Oxford; out of its twenty-two colleges Christ Church alone has contributed to the army and the navy about eleven hundred men, of whom more than a hundred have been killed.

As with the universities, so with the technical schools. The students unfit for military service are employed in subsidiary branches

of work—in chemical research, map making, wireless telegraphy and aeronautics. Throughout England education has lost its former academic character and become practical.

Will it continue to be so after the war? Has the study of the classics, which has been a tradition of English education for centuries, been abandoned forever? If so, there must be many in this country as well as in England who will deplore it. Our language has been enriched, our appreciation of the English tongue has been cultivated, through the unbroken devotion of English scholars from generation to generation to classical models. Education in the classics has also been called education in the humanities. It is natural enough that during war education should throw over the humanities. We hope that with peace it may return to them.

☪ ☪

BARRIERS

WE smile sometimes when we hear the quaint phrase of Homer about not letting our thoughts and feelings get beyond "the bulwark of the teeth." But whether teeth or lips or whatever you please, there is a real bulwark there—a barrier that, however strange and subtle and inexplicable, makes it often out of our power to express our feelings. What is it? Why is it? Again and again we have fed our souls full of beauty and thought and enthusiasm and hope. We burn to convey those things to others. It seems to us that we can convey them, that we must convey them, that we shall convey them. We go into the presence of others and are dumb. The dim and insuperable barrier is there. We cannot throw it down or overleap it. That is true even with our nearest and dearest; sometimes it seems perversely truer with them than with the rest. There is something inside us, perhaps what is best and noblest in us, that cannot be got into words. Instead, we jest and trifle and talk about the fashions and the weather.

There are crises when we feel that it is essential to speak. We have a full plan made, of golden and compelling eloquence. We know just what we wish to say, are at no real loss for words, feel sure that, if we say what we have in our hearts, conviction and conclusion must follow. The hour and the opportunity come—and pass. We have said nothing that we meant to say, and we remain as misunderstood and unappreciated as we were before.

Again, how often are we disappointed in our hope of agreeable society because of those same mysterious barriers. We counted on giving ideas and getting them. Instead, we yawn and go away empty. Lady Holland, one of the great social leaders of the world, complains, "So sure as I propose to my imagination an agreeable conversation with a person where past experience warrants the hope, so sure am I disappointed."

Emerson says, "We descend to meet." Why? Because of the barriers. The lesson of it is that what is true of ourselves is true of others also. If we are tongue-tied and find it impossible to utter our hearts, the same may be true of them. Because lips are dull and trite and trivial, it does not always follow that souls are. Behind the barriers souls may be swelling with light and fire and secrets unutterable. If so, it is our business to search closely and cunningly and find it out.

Yet, after many long, vain efforts to burst the barriers or pierce them, how often are we driven to the sweet words of the petty courtier, Le Beau, in *As You Like It*:

Hereafter, in a better world than this,
I shall desire more love and knowledge of you.

☪ ☪

THE GREAT FILIBUSTER

NOTHING could have given more convincing evidence of the real sentiments of the American people on the crisis in our international relations than their response to the successful filibuster in the Senate on the morning of March 4.

By a vote of thirty to one the House of Representatives had passed the bill to enable the President to defend the rights of Americans at sea. Seven eighths of the Senators, too, were ready and anxious to give the President the necessary power, but a group of about a dozen of them made use of the privilege of unlimited debate to defeat the will of the majority.

The country was profoundly shocked at learning that members of its highest legislative body were willing at such a time to use their individual privilege to defeat the patriotic impulses that moved President, Congress and people alike.

But condemning the Senators does not undo

the evil they have done. They denied to the President the power to resist foreign aggression that has found expression in acts of war against our commerce and even against the lives of our people; and in doing so they gave those who have injured us reason to believe that the nation is not united in the purpose to defend itself. At the same time the filibustering Senators have quite unintentionally united public sentiment throughout the land in favor of vigorous action to maintain the national honor. From unexpected quarters have come professions of loyalty and of eagerness to support any measures deemed necessary for the defense of American rights. That is a blessed gain. It began when the plot to incite an attack upon this country by Mexico and Japan was discovered, and attained full maturity when the people learned of the conduct of the filibustering Senators.

Another result of the filibuster, which those responsible for it may not have anticipated, was the overthrow of the Senate rule that made such an episode possible. That may not after all have been a wholly desirable result; the rule has been employed quite as often at the end of a session to defeat bad bills as to defeat good ones; and there is no example of a filibuster that actually prevented a vote by the Senate except when, as in this instance, the Constitution put an end to the session. Nevertheless, the country will undoubtedly welcome the change that limits debate and permits the Senate by a two-thirds vote to demand a roll call, after reasonable discussion.

☪ ☪

LATIN-AMERICA AND THE WAR

THE certainty that Germany thought it wise and practicable to urge Mexico into open hostility to the United States, and the probability that its agents have been busy also in Colombia and certain Central American countries, make it advisable for us to know just what the attitude of the various Latin republics is toward the present world crisis.

If it were merely a question of sympathy with one or other of the warring alliances, there is probably no South American nation that would be pro-German in sentiment; for none of them has anything to gain by a German victory, and the call of the blood would be sure to attach them to the cause of France and Italy and Portugal rather than to that of Germany and Austria.

Nevertheless, there is a strong German party in each nation, made up partly of immigrants of German birth, and partly of native citizens who are in close business relations with Germany. That party would undoubtedly be stronger if we were at war with Germany, for there are many South Americans who, without any special love for Germany, fear and distrust the United States more than they do the Kaiser's government.

That is chiefly the case in Colombia, which still feels itself wronged by our action in the Panama Canal matter; in Nicaragua, where we have alienated a large part of the population by using our military forces to support the existing government; and in Mexico, where apprehension concerning the intentions of the United States is chronic. It is true that in none of those countries is there a large body of intelligent public opinion, but an ignorant majority is all the more easily aroused by reason of its ignorance. Moreover, ambitious leaders who resent the political oversight that the United States often assumes over its smaller neighbors, and the commercial authority that Great Britain has long exercised in the Caribbean, are promising subjects for German diplomatic intrigue. Carranza, for example, may or may not have received any hint of the plan outlined in Herr Zimmermann's famous letter; but when he answered President Wilson's appeal to neutrals to protest against the submarine campaign by a proposal that the Latin republics should suggest a world embargo on both food and munitions intended for either belligerent, he showed that he was in considerable sympathy with the plans of the German government and in very little sympathy with our own.

The greater nations of South America, the "A B C powers," fortunately understand us and our point of view better. Brazil is in real sympathy with us, perhaps because it has its own problem in the great German population in southern Brazil. More than once those people have been suspected of the desire to dismember Brazil and to attach themselves to the Kaiser's empire, if not to make the entire country a German colony. Argentina and Chile do not pretend to acquiesce in the submarine campaign, but individually they have

suffered little from it, and are not at all disposed to run any risk of getting into trouble. Of all the civilized world, South America is most aloof from the passions and sufferings of the war, and it naturally wishes to keep itself so. Moreover, there are public men in Latin-America who see in the situation a wonderful opportunity for their own nations to become the mediators and the peacemakers in this greatest of world wars. It is a legitimate ambition, although it is not likely to be gratified. At all events, it will help to keep the really important Latin republics from taking any irrevocable stand with either alliance.

CURRENT EVENTS

CONGRESS.—The Senate by a vote of 76 to 3 amended its rules so that it can by a two-thirds vote limit the length of speeches and press a measure to a vote.—On March 9 President Wilson called both houses of Congress to meet in special session on April 16.—The treaty with Colombia was under debate in the Senate.

RELATIONS WITH GERMANY.—The Secretary of State and the Attorney-General having advised the President that he had the authority to order the arming of merchant ships without awaiting the consent of Congress, Mr. Wilson, on March 9, issued such an order. The Navy Department at once began to place guns on all American ships that desired them, and armed merchant vessels were instructed to submit to visit and search by belligerent war-ships, but they are free to open fire on submarines on sight, since the submarine policy of Germany is to fire without warning on vessels entering the war zone.—On March 8 fifty-nine American seamen brought into Germany on the prize ship Yarrowdale were released from quarantine, and permitted to leave for Switzerland.

VIOLATIONS OF NEUTRALITY.—Several men were arrested during the week accused of violating the neutrality of the United States in one way or another. It appears from the papers seized from Wolf von Igel last year that Se Kunna and Chakraberty, who were engaged in plotting uprisings in British India, received at least sixty thousand dollars from Igel, on the order of Dr. Zimmermann of the German Foreign Office.—It was reported that a number of powerful radio stations have recently been built in Mexico and Salvador by German engineers.—It was reported from Washington that the United States government had proof that Germany had urged President Carranza to attack Guatemala, and had promised, if Germany were victorious in Europe, to protect him in the occupation of that territory.

TARIFF BOARD.—On March 14 the President appointed to the new tariff board Prof. F. W. Taussig of Harvard University, D. C. Roper of South Carolina, former Congressman William Kent of California, D. J. Lewis of Maryland, E. P. Costigan of Colorado and W. S. Culbertson of Kansas.

RAILWAY STRIKE.—On March 12 the officials of the railway brotherhoods announced that unless the railways granted the eight-hour day at once, in advance of the decision of the Adamson law, they would order a general strike. A conference with the railway managers was called for March 15.

CUBA.—The government forces regained possession of Santiago, and a force of marines from the United States ships in the harbor were landed to help in policing the city. American marines are doing similar duty in Guantanamo, Manzanillo and Nuevitas. The rebels still controlled a good deal of the country round Santiago, and the government troops awaited reinforcements before advancing against them.—Former President Gomez, the rebel chief who was captured on March 7, was brought to Havana and put in prison to face a charge of treason.—The Cuban government declared that it had evidence to show that the revolution had financial support and encouragement from Germany.

MEXICO.—On March 11 Venustiano Carranza was elected President of Mexico. A new Congress was also elected.

IRELAND.—The Nationalist members returned to Parliament after issuing a manifesto that charged the premier with bad faith in the matter of home rule. The Nationalists will not oppose the government on the

conduct of the war, since they believe the cause of the Allies to be just, but they will vote against it on all domestic questions.

RECENT DEATH.—On March 8, George W. Guthrie, United States Ambassador to Japan.

THE EUROPEAN WAR

(From March 8 to March 14)
The defeat of the Turks at Kut was more complete than anyone at first realized. They were quite unable to re-establish their line anywhere south of Bagdad, and, harassed by the British cavalry and field artillery, fled northward toward Mosul. Bagdad, the ancient capital of the Arabian caliphs, was entered by Gen. Maude's army on March 11, and the pursuit of the flying Turks was still proceeding when this record closed.

The collapse of the Turkish arms in Mesopotamia, which may be due either to a failure of ammunition or to the increasing difficulty of the food supply in Turkey, is a matter of the greatest importance. It puts Great Britain in control of the valuable region that Germany proposed to occupy as the eastern bulwark of a new political and commercial confederation, and it threatens the entire Ottoman Empire with disruption.

The Russian forces in western Persia were reported to be driving the Turks before them, and likely to effect a junction with the British army north of Bagdad very soon. If the Russians are able also to advance from Bitlis and the British from southern Palestine,—their advance is already reported at El Chalil, only fifteen miles from Jerusalem,—the greater

part of Asiatic Turkey will fall into the hands of its enemies. Under ordinary circumstances these would be difficult ends to accomplish, but, if the result at Bagdad correctly indicates the degree of demoralization of the Turks, they may follow swiftly.

In France there was much spirited fighting in spite of discouraging conditions of slush and mud. The British made further gains to the west of Bapaume, and the fall of that town was expected. Paris reported that the French troops broke into the German lines near Mesnil in Champagne, and held their gains in spite of counter-attacks.

Nowhere else was there any fighting of importance; local skirmishes were reported from the Russian and Roumanian fronts.

A British special commission, of which the late Lord Cromer was a member, made public its conclusions concerning the fatal Dardanelles campaign. It criticized the Asquith cabinet's way of conducting war business, and particularly the silent domination of the war council by Earl Kitchener. It put the responsibility for the ill-judged naval attack on Mr. Churchill, but finds that Lord Fisher, the First Sea Lord, did not protest as he ought against it.

The British Admiralty reported 20 ships sunk during the week by submarines. Berlin announced a great number of ships sunk in the Mediterranean, but they were mostly those sunk in February and just reported by returning submarines. A German U-boat sunk the grain-laden Belgian relief ship Storstad, although it was plainly marked as such. On March 12 the American ship Algonquin was sunk unwarned by a German submarine. The crew made their escape in small boats. A German commerce raider sunk a Japanese steamer in the Indian Ocean.

The Dutch authorities at Rotterdam would not permit the British ship Princess Melita to enter that port until her captain had thrown overboard the gun with which she was armed. The President and cabinet of China have broken off relations with Germany, and seized the German merchant ships lying at Shanghai.

The Roumanian government was said to be moving from Jassy to Kherson in Russia.

The Czar has suspended the sittings of both the Duma and the Council of the Empire. There are disquieting reports of food riots in Russian cities; it is certain that there is privation there. The same is true of Germany and Austria. A speaker in the Prussian Diet recently declared that the situation was desperately serious. Greece is in great straits, owing to the Allied blockade of its ports, and in England and France there is more difficulty with the food supply than ever before. The inevitable result of the small crops of last year is felt everywhere.

On March 10 Mrs. Wheeldon and Mr. and Mrs. Mason were convicted of plotting to kill Mr. Lloyd George, and they were given long terms of penal servitude.

Gen. Lyautey, the French minister of war, resigned on March 14 as a protest against the attacks upon the Briand cabinet in the Chamber of Deputies.

The British government has persuaded Parliament to put a protective duty on cotton goods entering India.

A 40-Year Car

Several Mitchells, built by Mr. Bate, have run over 200,000 miles. That's about 40 years of ordinary service.

But now Mr. Bate has doubled most of his margins of safety. Every vital part has 100 per cent over-strength. So any Mitchell, with ordinary care, should render lifetime service.

Over 440 parts are built of toughened steel. All safety parts are vastly over-size. Many parts are built of Chrome-Vanadium.

Gears are tested for 50,000 pounds per tooth. Engines must run, under heavy load, for 10,000 miles without wear. In two years not a single rear spring has broken.

No Extra Cost to You

All this added strength means no extra cost to you. All the Mitchell extras are free. Yet they include

**31 unique features—
24% added luxury—
100% over-strength.**

There are 31 features—like a power tire pump—

which nearly all cars omit. There is beauty and luxury such as you see in no other car in this class.

This year we added 24 per cent to the cost of finish, upholstery and trimming. But the savings made in our new body plant pay it all.

The New \$1150 Model

This year we build two sizes—Mitchell and Mitchell Junior. Even the smaller Six is roomy and powerful. You never saw such a car at this price.

All these marvelous values are due to John W. Bate, the famous efficiency expert. He built and equipped this mammoth plant to build this one type economically. His methods will save us, on this year's output, at

least \$4,000,000. That saving pays for all these extras. No other fine car offers anywhere near such value.

Go prove these facts, in justice to yourself. They are bound to win you to this Bate-built car.

TWO SIZES

\$1460 For 7-Passenger Six—48 h. p. 127-inch Wheelbase.

\$1150 For Mitchell Junior—40 h. p. 120-inch Wheelbase Six.

Both Prices f. o. b. Racine

THE COMPASSION OF THE SWALLOWS

(A Galician Legend)

By Nora Archibald Smith

O HAPPY house and fortunate, however poor it be,
Beneath whose eaves the swallows build and dwell there trustingly!
Those gracious birds, compassionate all other birds above,
Who learned to know the Master's face and summed them in his love.

That day of dread on Calvary they lingered round the mount,
Each pitying heart aflame for Him whose heart was Pity's fount.
Naught might they comfort, naught avail, the woeful deed was done;
Yet, fleet of wing, they circled there, till, bleeding, set the sun.

Ere darkness fell upon the Cross and on the Crucified,
The swallows spied the crown of thorns that beauteous head beside;
Swift as the light they sped to aid, and till the Sabbath morn
With tender beak they plucked them forth, each sharp and piercing thorn.

Forget not, when the swallows dart across the twilight sky,
A flash of feathers down the dusk, a shadow passing by,
Forget not from whose wounded brow they caught the grievous thorn,
And bless them when they build their homes thy roostree to adorn.

THE NEW WORLD

WHEN the business matter was settled, the merchant leaned back in his chair and looked at young Harding. There were hard lines about the young man's mouth, bitterness in his eyes.

"John," the old merchant said quietly, "you know what your father was to me. May I say a word to his son?"

The young man hesitated a moment—then nodded; but it was manifestly only courtesy to his father's friend that made him yield. The old merchant looked past him out across the city.

"You were only a boy when your father died; he never told you about my black year, did he?"

"No, sir," John Harding answered, winching. "It was a black year. First, I failed. It took ten years to climb back again; but I lost a whole year through my own weakness. Nervous breakdown, the doctor said; it was really spiritual worry and lack of grit. And in the midst of that, Any died."

"I know, sir," John Harding said in a low voice. It had been a lonely house ever since he could remember.

The old man did not seem to hear. He went on slowly: "Your father stood by. I never can tell you how he stood by me through it all or of the patience with which he met my rebellion. One night he was staying at the house with me when a heavy electric storm came up. In the midst of it there was a tremendous crash and two great oaks in front of the house went down. My grandfather had planted those oaks and I had inherited a love for them. It seemed to me then, warped as I was by my illness, another real calamity. But in the morning Jack called to me suddenly, 'Look at your view, man, look at your view!' And there before us lay the city, a thing of magic beauty in the early light, and beyond, the hills—miles and miles of them. Jack turned to me with deep eyes.

"It's a parable of life, old fellow," he said. "There's a whole world waiting."

"I knew what he meant, and I resented it. But I couldn't get away from that view and the parable of it. All my life I had been shut in by my own possessions. God had to strip me of them to open my eyes. It was a hard battle, but I surrendered at last and went out to discover the world."

"You've found it, sir; everyone knows that," John Harding said.

"What I want to say to you, Jack, is that it is worth it. Looking back now, I would not dare give up what sorrow and trouble have given me. I wanted to tell you that God's ways are big, Jack, even with our little lives. Trust Him, and find your new world. It will be greater than the old."

The two gripped hands, and then the young man was gone.

AS FRIEND TO FRIEND

AS her nieces used to speak of them, half in impatience and half in sympathy, were indeed many and various. They haunted the house, often inconveniently and furtively, while she was well; they hung round it openly and anxiously while she was sick; they waylaid the family to bear fearful, awkward, stumbling testimony to what she had done for them, after she had died. No one was impatient with them then—not even half impatient. Somehow, strangely, there was more comfort in what they had to say than in the condolences of those who were wiser and more skilled in speech.

"And then, when she gave you things," said poor old Mrs. Ambey as she put her trembling hand on young Lavinia's arm, "it was so different, deary; so different. Ever since my rheumatics got bad I've been dependent on folks for a good deal. I can't work stidly any more; it's a good many years since I could do a reel day's work. I've had to let folks give me things. I haven't asked 'em, no, nor ever will,—but I've had to take what's offered, and be grateful. It ain't so easy as you think, being grateful. Well, I don't know as I can make you understand; but it's this way. I mean my 'Thank you's' when I say 'em—honest, I do; but I don't feel I'm really grateful to folks clear through so long's I know I'd be glad—my, wouldn't I be glad—if I could decently forget I'd ever took things from 'em; or if I could pay 'em back, and something over, and be quits."

"And that's how I do feel about most everybody—except Miss Vinnie. I've never felt that way about her. I never wanted to pay her back, not in the way of pride and getting quits. I'd have liked to do things for her or get her anything she wanted, if I could; but that ain't the same thing. And I wouldn't want to forget the things she's give me, nor the way she gave 'em, not for anything."

"She made me feel always, whatever it was she

had for me—whether it was new shoes for Christmas, or an old turned petticoat any time, or a torn waist she'd patched up new for me—it didn't matter *when* and it didn't matter *what*—anything Miss Vinnie gave wasn't *charity*; it was a *present*. Maybe there doesn't seem much difference to you, when either way they're given a person because a person's poor; but oh, there is! I can't get it into words, but there is!"

"I know; I understand," said young Lavinia, softly, winking her brimming eyes. "Aunt Vinnie never gave just things; she gave something of herself every time. That made it like friend to friend; and friends needn't mind which gives and which takes."

"That's it, deary," assented Mrs. Ambey, dabbing her eyes with the end of a much-darned muffler. "That's it. As friend to friend."

WHEN THE MOOSE CHARGED

IN A Book-Lover's Holidays in the Open, Col. Theodore Roosevelt takes his readers into the less familiar corners of both North and South America. Many of his experiences were exciting, but perhaps the most thrilling was his encounter with a bull moose when on a recent hunting trip in Quebec.

When we were half a mile from the landing, he says, we saw a big bull moose on the edge of the shore ahead of us. He looked bigger than the one I had shot that morning, and his antlers were rather more palmed. We paddled up to within a hundred yards of him, laughing and talking, and remarking how eager we should have been if we had not already got our moose.

At first he did not seem to notice us. Then he looked at us, but paid no further heed. We were surprised, but paddled on past him; we supposed that he did not realize what we were. But another hundred yards put us to windward. Instead of turning into the forest when he got our wind, the moose merely bristled up the hair on his withers, shook his head and walked along the shore after us. Plainly he meant mischief. So we turned the canoe round and paddled on our back track. But the moose promptly turned and followed us along the shore. We yelled at him, and Odillon struck the canoe with his paddle, but with no effect.

For more than an hour he thus kept us from the shore, running to meet us wherever we tried to go. The afternoon was waning, and a cold wind began to blow. He was not a pleasant-looking beast to meet in the woods in the dusk. We were at our wits' ends to know what to do. At last he turned, shook his head and, with a flourish of his heels, galloped—not trotted—for fifty yards up along the little river that paralleled the portage trail. I called Arthur's attention to that, as he had been telling me that a big bull never galloped. Then the moose disappeared at a trot round the bend. We waited a few minutes, cautiously landed and started along the trail, watching to see if the bull were lying in wait for us. Arthur told me that if he now attacked us I must shoot him at once or he would kill some one.

A couple of hundred yards on, the trail led within a few yards of the little river. As we reached that point a smashing in the brush beyond the opposite bank caused us to wheel; and the great bull came headlong for us. Arthur called to me to shoot. With a last hope of frightening him I fired over his head, without the slightest effect. At a slashing trot he crossed the river, shaking his head, with his ears laid back and the hair on his withers bristling.

"Tirez, m'sieu, tirez; vite, vite!" called Arthur, and when the bull was not thirty feet away I put a bullet into his chest, in the sticking point. It was a mortal wound, and stopped him short.

I was sorry to have to kill him, but there was no alternative. As it was, I only stopped him in the nick of time, and had I not shot straight at least one of us would have paid forfeit with his life. Even in Africa I have never known anything except a rogue elephant or buffalo, or an occasional rhinoceros, to attack so viciously or with such premeditation when he was neither wounded nor threatened.

TARLETON'S TOMB

WHAT became of Maj. Tarleton after the Battle of Yorktown? Except for a very few people, says Mr. A. G. Bradley in the Nation, everyone in England has forgotten the very name of the young cavalry leader. But many persons in America must have wondered what became of the dashing soldier, and how it happened that in the long years of war that shook England and Europe his name never once appeared.

When Mr. Bradley, in a leisure hour, entered the fine old fourteenth-century village church at Leintwardine, in Herefordshire, he did not think that the bare, unseated chapel promised much of interest; indeed, he was just turning away when in a far corner and partly concealed by ladders, buckets, planks and other articles necessary to the cleaning of the church, he caught sight of a lofty mural monument. The lettering on it ran as follows:

"Near this place are deposited the mortal remains of Sir Banastre Tarleton—Baronet-General in the Army—Knight Grand Cross of the Order of the Bath, Governor of Berwick-on-Tweed, Colonel of the Gallant 8th Hussars—He represented his native town of Liverpool for seven Sessions and closed his distinguished career in this place Jan. 25, 1833."

In 1798 Tarleton was sent to Portugal, but was very soon recalled at his own request, and with that exception he never saw a shot fired after Yorktown or served anywhere abroad, although England was constantly fighting until Waterloo. He got promoted regularly, however, for he stood well at court and was a member of the Prince of Wales's circle.

Tarleton belonged neither to the nobility nor to the landed gentry. He was the son of a Liverpool merchant, an unusual origin at that time for a dashing cavalry officer and the best horseman, according to good authority, in the British army. He had entered Oxford and had studied to become a barrister, but gave up classics and the law for soldiering and a commission at twenty-one years of age. He had a genius for the training of men and officers and for rapid and successful strokes.

On returning from America, however, he turned from soldiering to politics; he lost no time in entering the House of Commons, and sat for his native city of Liverpool for twenty years. He became a major general in 1794, a lieutenant general in 1801, a full general in 1812, a baronet in 1815 and a G. C. B. in 1820. He also held the full colonelcy of several cavalry regiments in succession and was for some years governor of Berwick. He apparently retired with his wife to Leintwardine

for the last years of his life, lived there quietly and did not mix with the neighboring county families.

The seclusion of his gorgeous tomb, behind the cobwebs of a disused aisle, gives a final touch of mystery to the romance that early associations with Virginia have connected with Tarleton's name.

AN AIRY NOTHING

Hairdresser—Hi see there's been another hair raid, sir!
—George Belcher in the Tatler.

AARON PIKE'S TWO JOKES

WHEN I was a young man," began Amos Gray, "I used to clerk for Aaron Pike, over at the Harbor. He was as kind-hearted a man as you would wish to see; but he liked his joke, or, rather, his two jokes. I never knew of his having any more, but it was surprising how those two lasted him. When you come to think of it, there is a sight of wear in a joke."

"One of 'em he always brought out in the latter part of December."

"Do you realize," he would say, some evening when there were a number of people in the store, "that Christmas and New Year don't come the same day of the week this year?"

"Well, at that some one would be sure to begin to reckon up, and then like as not offer to buy peanuts for the crowd if Aaron wasn't wrong. When Aaron had proved that he was right, he'd chuckle over it till closing-up time. Then he'd pack that joke away, so to speak, and have it out as good as new the next December."

"His other joke came in April. Aaron always had a daily paper at the store and, of course, it was natural for people that came in to pick it up and read it. The first day of April, instead of that day's paper he would have another one that he had been saving up lying on the counter. It would be dated April first and, whenever he could make it come right, the same day of the week; but it would be several years old."

"Well, year after year it never failed that some one, and often two or three, would read that paper without once realizing that it wasn't fresh news."

"One year we had a lot of fun hearing Joe Brown read out loud and make his sarcastic comments. Joe was on the opposite side in politics, and he had a good deal to say about the paper's raking up dead issues to deceive the public."

"Later in the day old Uncle Higgins came in for a quart of molasses, and I saw him pick up the paper and look at it for a minute. I was just going to speak to him about it, but he laid it down and seemed to be in a hurry for his molasses; so I said nothing."

"About an hour afterwards young Seth Green, who had been loafing in the store half of the forenoon, came in again with a broad grin on his face."

"You've got another victim for your old newspaper joke, Aaron!" he sung out before everybody in the store. Then he went on to say that Uncle Higgins had just started off in his cart for Bayport, to buy a secondhand wheel chair that Cole, the furniture dealer, had advertised for three dollars. "He was terribly afraid it would be sold before he got there," says Seth; "and when I asked him where he saw the ad, he said he found it in to-day's paper at the store."

"Then Seth haw-hawed right out, but nobody joined in. The picture of old Uncle Higgins, who was as poor as poverty, driving six miles to Bayport to buy a wheel chair for his bedridden wife, only to be disappointed when he got there, didn't strike the rest of us as very comical."

"And you never told him the ad was six years old?" says Aaron.

"Why, no," says Seth, kind of taken aback. "I wasn't going to spoil your joke."

"Don't you know that a joke ought to be spoiled before it gets to be a mean one?" says Aaron. Then, after thinking a minute, he says, "I'll see if I can't spoil it myself"; and at that he stepped to the telephone.

"This is Pike's store at the Harbor," we heard him saying. "Got a secondhand wheel chair to sell? Well, a new one, then? What is your very lowest price to me? All right. Old Mr. Higgins from this place will be along later. When he asks to see the secondhand wheel chair that you advertised, show him the new one; and let him have it for three dollars—or two and a half if he beats you down. Charge the rest to me. Do you get it? Good-by."

"Then Aaron took the old newspaper and tore it up. 'This is getting to be a little too expensive,' says he, 'and I guess I'm done with it.'"

"So after that, in the room of two jokes, Aaron got along with one."

MOTION PICTURES IN CHINA

AT the end of the Russo-Japanese War, says the Los Angeles Times, Mr. Brodsky, a native of Odessa, Russia, came to San Francisco. After the great San Francisco fire he left the city with an old motion-picture machine and forty or fifty reels of "junk" film. With that he sailed for the Orient. The motion picture was unknown in China when he reached there with his paraphernalia, and he ran into many dangers in showing his wares. To the natives his camera and projecting machine was a "magic box." He had to pay

his first audiences to enter his theatre, which, by the way, was only a tent. In that way he finally won the crowds.

Matters were progressing well when Brodsky one day put on a wild-West film in which a band of cowboys appeared on the screen, charging straight at the spectators and firing revolvers. The moment the audience saw those shooting cowboys bearing down upon them, they rushed panic-stricken from the tent theatre, cutting their way out with knives.

After that the cautious natives were slow to come back; but finally Brodsky hit upon the plan of having a few Chinese come and examine the apparatus, pass their hands over the blank sheet that was the screen, and assure themselves that there was nothing to hurt them.

Gradually he established picture theatres throughout the country, until now there are eighty of them.

Once he was thrown into a Chinese jail, but finally made his escape after getting the whole populace into the jail to view his motion pictures. At another place he was to have been executed as a "devil," but he frightened the people and made them change their minds by telling them that he could easily put them on the screen and make them work there forever.

DE WET'S ESCAPE

OF the three great figures that emerged on the Boer side in the war of defense that developed after Ladysmith—Botha, De Wet and Delarey—De Wet was much the most impressive. His face was a study in resistance, says Mr. Harold Spender in Gen. Botha, the Career and the Man. His body seemed all muscle. Looking on him, one could understand the fear that he inspired in his own men. But it was his schemes of escape, almost miraculous in their cunning, that perplexed an empire and puzzled a planet.

On one or two occasions I have seen his face light up when he referred to one of his own achievements in evasion, and of those achievements one still stands out in my memory.

One evening, after a long day's march,—so he told us,—all his wanderings seemed to have come to an end. The lights of the British bivouac fires twinkled from every point of the horizon. De Wet, as was his wont, went apart from his men and sat alone in dumb despair. Then there came to him softly one of those wonderful scouts who served him so well. The scout had discovered a slight gap in the British lines between two regiments that were not quite keeping touch.

In a moment De Wet was on his feet. Within an hour every horse's foot was muffled with cloth or wool and every wagon wheel was swathed. The Boer camp fires were lighted and were left burning brightly. Then the whole Boer force crept out through the darkness of the night in utter silence, penetrated the gap in the British lines and started on a new course of fugitive warfare.

GOOD LATIN IF NOT GOOD LAW

A CERTAIN lawyer of a bygone generation, Mass Jones by name, says Case and Comment, had a case before a justice of the peace out in the country. He was for the defendant, while a wisecrack of a schoolmaster, who had picked up a few Latin words, appeared for the plaintiff.

The facts were all in the schoolmaster's favor, and in summing up he would exclaim with great gusto as he made his points, "and that is the *summum bonum* of the matter, and the case must go to the plaintiff."

Mass had really no defense, but his ready wit and keen sense of the ridiculous supplied him with one. So when he came to reply, he said to the justice, "I have a great regard for that old law of *summum bonum*, on which the gentleman wholly relies, for its antiquity. It was an old English law, and served well its day and generation. But the people finally outgrew it and became dissatisfied with it; and it was one of the laws England tried to force upon the colonies."

"But," said Mass, raising his voice and arm on high, "our forefathers fought and split their blood in the Revolution to overthrow that law, and they did overthrow it, and then they reared in its stead the law of *a pluribus unum*, which must govern this case."

Thereupon the justice said, "I have a great deal of respect myself for that old English law of *summum bonum*. It was good enough for that time, and good enough for the English, but I agree with Mr. Jones that our forefathers tumbled that law over in the Revolution, and this case will be decided in favor of the defendant under the law of *a pluribus unum*, which was put in its place."

BROTHERS IN THE TRENCHES

TO illustrate the fact that soldiers of very different social classes, after fighting side by side, often become affectionate friends, the author of Notes on the War, a Frenchwoman, tells the following story:

A very jovial young soldier used to entertain his companions most delightfully by his irrepressible gaiety. One day his spirits failed. When one of his comrades asked the reason, he said:

"In time of peace I am a clown in a music hall. It's my business to entertain people; but to-day I got a letter from my wife telling of the illness of our two children. She can't go out to work, and things look black. That's why I can't joke to-day."

Some days later the same comrade said, "You are merry to-day. What's happened?"

"Why, a letter from my wife says a man called and handed her three hundred-franc notes from his client, M. Jean Breton; so things are bright again for us. But who can M. Breton be?"

The other soldier was silent for a moment, but finally said, "Don't worry, mate. I am Jean Breton. I am rich enough to afford it. Now cheer us with one of your comic songs, please."

HAVING EYES, HE SAW NOT

ONE day last summer a tourist drove hurriedly up to the home of Enos A. Mills at the foot of Longs Peak, leaped out and approached the naturalist. "Mr. Mills," he said brusquely, "I have been told that there is fine scenery in Estes Park. I want to get you to show me some of it."

The naturalist's eyes turned toward the hundred-mile sweep of snowy mountains that cut the blue sky, then swept the valley below and rested on noble crags and streams that wound among groves of pine and aspen. Slowly he shook his head.

"I guess you must have been misinformed."

THE CHILDREN'S PAGE

WHEN APRIL IS ON THE WAY

BY JOHN CLAIR MINOT

The grasses in the meadow are underneath the snow,
But they're calling, calling, calling for the spring;
Across the dreary hilltops the winds of winter blow,
But there's music in the message that they bring.

They told a tale this morning that thrilled me through and through;
They were telling, telling, telling of the day
When the clouds that come a-sailing across the skies of blue
Will bring the April magic on its way.

Oh, the wondrous clouds of April that come from southern lands;
They are sailing, sailing, sailing through the sky;
And they bear the April fairies, who have filled their busy hands
With the joys the world will welcome by and by.

The fairies of the cloudland, a happy band they are,
For they're teaching, teaching, teaching birds to sing;
And they're building all the rainbows that will gleam for us afar,
Above the buds and blossoms of the spring.

They are bringing things of beauty to brighten up the land
That is dreaming, dreaming, dreaming of the day
When it knows the cloudland fairies — oh, what a busy band! —
Have brought the April magic on its way.

Sammy's mother went downstairs after he had said his prayers and she had tucked him into bed; she supposed the little fellow would fall asleep in less than three minutes. He did not! The reason Sammy did not go to sleep when he closed his eyes was that he heard a curious tapping at the window after his mother had left the room; a gentle *tap-tap-tap! tap-tap-tapping!* When Sammy opened his eyes wide and looked through the window, he saw only the man in the moon, looking pleasant. Again came that gentle *tap-tap-tap! tap-tap-tapping!* Sammy sat up and wondered.

HOPTOAD'S NEW COAT

BY MINNIE LEONA UPTON

"Homely Little Hoptoad,
Sitting by your door,
Just come up to sunlight,
Now the winter's o'er,
Oh, but aren't you dingy,
Such a looking sight,
Here among the blossoms blithe,
All so fresh and bright!"

Humble Little Hoptoad
Never answered back,
Just began to wriggle—
Coat began to crack!
Wriggle, wriggle, wriggle!
Cracking, bit by bit.

"Mercy me! He's pulled it off,
And he's swallowed it!"

Happy Little Hoptoad,
Blinking in the sun,
Shining like the blossoms,
Almost looks like one,
For beneath the old coat,
Ready, all the while,
There had been a new coat fine,
Just the season's style.

Hightly-tighty Hoptoad,
Starting for a stroll,
In his eyes so sparkling
Is a twinkle droll;
Maybe he is thinking,
"Don't you wish that you
Got your new spring toggery
Just the way I do?"

A LIVELY GAME

BY ELIZABETH H. THOMAS

Marble time is here at last,
Merry times for you;
Even March and April clouds
Play at marbles, too.
First they take some drops of rain,
Green and red and blue,
Where the dancing sunbeams send
Sparkles through and through.
Then they hang them in the sky
Where the winds that blow
Freeze them hard and smooth and
round,
And as cold as snow.
Then they roll them through the air
To the earth below;
And the little children ask,
"How do hailstones grow?"

MOTHER ROBIN'S APRIL FOOL

BY FRANCES MARGARET FOX

MOTHER ROBIN played an April-fool joke on little Sammy Patterson; she played a joke and said "April fool!" at the right time, only of course she said it robin fashion. When any robin laughs after sunset and says "Cheer up!" it sounds like "April fool!" and Sammy's robin probably knew what she was talking about.

She and Father Robin came back early that year, and built their nest the last week in March. Ever since Sammy was big enough to have a room of his own near his mother's room upstairs, the robins had built in an apple tree just outside his window. This was the first time, though, that they had come in March.

Sammy did his best to help them so long as March lasted. He put string on the fence for Mother Robin to use, and bits of wool and cotton. He did everything a country boy could do to help a pair of robins get settled for the season. And they must have been birds of exceptional intelligence for they used the string. And then, the minute April came, Sammy forgot them.

The only reason Sammy forgot the robins for a few hours was because the first day of April was his day to play jokes on the family and then shout, "April fool!" He had much fun with everyone that day, and was so tired at bedtime that he was glad to believe what the clock said without asking a question.

It seemed to him then as if the man in the moon were laughing, for the man in the moon never seemed far away and Sammy always thought of him as a good friend.

Sammy said afterwards that he knew some one was trying to play a joke on him; he guessed that the very first second he heard the tap-tap-tapping. Of course he did not think of Mother Robin. If he had thought of her he would have believed that she was too busy to play April-fool jokes on a little boy.

Tap-tap-tap! came that sound over and over, until at last the little boy called to his father and mother.

"Come quickly, please," he urged, "and come softly, because some one is playing tick-tack on my window, and maybe you can catch him!"

Father and mother came quickly and softly and both of them were laughing. They thought that the neighbors' boys were hiding outside the house with a ticktack. Mr. Patterson laughed, because he used to do tricks like that when he was a boy. Mrs. Patterson laughed, because she thought how surprised some one would be when she opened the window wide and said, "Who's there?"

Sammy's pretty mother did open the window and she did say, "Who's there?" But she was the one who was straightway surprised, because no one answered but Mother Robin. Mother Robin had laid one blue egg that morning, and she was on the nest keeping the treasure warm. When Mrs. Patterson said, "Who's there?" Mother Robin untucked her head from under her wing and answered, "April fool!" cheerfully.

"Sure enough!" exclaimed Sammy's father. "It was Mother Robin who has been playing ticktack on your window. Look at this, Sammy!"

Sammy looked. What he saw was a long string dangling from the top of Mother Robin's nest. A nail was tied to the end of the string, and it was that nail that made the tap-tap-tapping noise, helped by the April breeze.

How Sammy and his father and his mother laughed when they saw that string that Mother Robin had woven into her nest, nail and all! The robin laughed, too, robin fashion.

LITTLE MISS APRIL

BY DOROTHEA DIMOND

Come here, dear lads and lassies all,
And see if you can say
What little maiden this may be
Comes tripping up this way.

On one side walks a brother bold,
On one a sister fair;
And in between this maid in green,
With snowdrops in her hair.

Who may she be? Whence can she come?
I would I knew her name;
For round her feet the crocus bulbs
Are bursting into flame.

The pussies on the willow bough
All crane their necks to see,
And hyacinths thrust up their heads
To learn who she may be.

She laughs and cries, she flouts and flirts,

She frowns, and then she smiles;
There's mischief in her canty looks,
And in her frolic wiles.

Don't venture near, my lassie dear,
In that spring hat and dress;
She'll turn the sprinkler on your clothes,
Then laugh at your distress.

And you, my lad, she'll pat your cheek
With such a coaxing air,
Then pinch your ears, and tweak your nose,
And rumple up your hair;

She'll pelt her friends with petals white
(Or are they flakes of snow?);
With dancing footsteps she'll advance,
Then turn her back to go.

She'll wheedle out the timid flowers,
Then snip them with her shears;
She'll whistle to the nestling birds,
Then whirl and box their ears.

With all her faults we love her still,
And joy that she is here;
The gladness, grieving, teasing elf,
The naughty, tricksy dear!

HOW I LOOKED INTO THE CRATER OF VESUVIUS

By Prof. Angelo Heilprin

IT happened when I was still in my college days in Europe. I had come up in a long and weary way from Resina, the small town near Naples that occupies part of the site of ancient Herculaneum, and now stood on the top of the volcano. On one side the beautiful Neapolitan gulf stretched out its azure blue as far as the eye could reach, while on another, in the direction of Castellamare and Sorrento, rose up mountain heights that somewhat overtopped Vesuvius itself.

The crater of the volcano was near to me, only a few feet off, but there was little of it that could be seen. Puffs and clouds of steam were coming out from it, nearly filling it on rising, and only at intervals, between the puffs, could the eye follow the crags, made scarlet and red by coats of iron, sulphur and arsenic, that formed part of its surrounding wall.

The situation did not please me. It was the crater that I wished particularly to see and study. One might easily have been satisfied with the magnificent view that opened out from the mountain top and have looked for nothing more; but for me the mystery that reigned within made the stronger appeal, and I determined to get a little closer to the mountain.

Following the line of summit round the crater pit for perhaps fifty or sixty yards I came to a point where the wall of rock took a less steep plunge than elsewhere, and where seemingly a foothold might be had in a careful descent.

Feeling my way as best I could where but little was to be seen ahead, I succeeded in reaching about halfway down, when a sudden change of rock material threw me off my feet, and for the rest of the way I rolled to the bottom. The sensation of not knowing precisely where a landing would be made, whether into a lava mass or into a pool of steaming water, was a rather peculiar one, and even now, after an interval of many years, it comes home to me very vividly. I struck solid rock and sand. The whole descent could hardly have been more than a hundred and fifty feet,—it may have been less,—and this, of course, measured the depth of the crater.

Once on its floor, it was not difficult to see its general features. My position was beneath most of the clouds of steam, and it gave me a fairly clear view of all that was going on within.

The volcano was preparing for an eruption. Its steam clouds were bewilderingly active, surging up and down as if they were wind-tossed, but there had been as yet no true eruption. The spectacle was a beautiful and most inspiring one, and I felt, although still puzzled by the possibilities of an imprisonment in the crater pit, that the descent had been well paid for.

Near the centre of the floor of the crater, which measured perhaps three hundred and fifty or four hundred feet across, there was a small cone-shaped hillock, and it was from an opening in the top of this diminutive volcano that all the steam that was about me escaped. My geological studies told me that this hillock or conelet, which measured six or eight feet in height, and hardly more than two or three times that across its base, was slowly building itself up, and was now to be considered as the active part of the whole Vesuvius. It was, indeed, the *active* crater. From it came steam and ash, and at times red-hot cinders that looked like glowing coals.

The steam was thrown out in explosions, and at times carried with it much of the powdery material that is known as volcanic ash or dust. The cinders were shot up thirty or forty feet into the air, and fortunately for me were invariably thrown out on the side opposite where I stood, the direction being in a way directed by a rather stiff wind that was blowing over my back into the volcano.

After each explosion, whether of steam or of cinders, a deep thud was audible, telling me that a massive body had fallen in the neck of the volcano and come suddenly to rest at some deep point in the interior of the earth. I knew that this falling mass could only be lava—lava that had tried to come up completely to the surface, but was by some means prevented from doing so. From this lava came the particles of red-hot cinders that were being shot out.

In attentively watching what was going on in front of me I caught hold of the fact that the explosions were singularly regular in their intervals of time, taking place, as told by my

watch, in periods of very nearly the same number of minutes and following closely one upon the other. Furthermore, I noticed almost immediately that the two kinds of explosions or eruptions always alternated; the one was a steam eruption, and the other an eruption of the red cinders, this again followed by a steam eruption, and so on.

This being the case, I determined to take advantage of the situation and mount the conelet, believing that, if I were sufficiently active and took my time properly, an opportunity might be had to

look into the chimney whence came the steam and cinders—a chance to look into the working laboratory of nature.

There was an explosion of steam. I waited for the turn of the cinders, and it came at its proper period. A shower of glowing particles was thrown to the off-side, and I immediately scrambled to the top of the conelet.

Pulling myself close up to the summit opening, I hung over and looked in. Something in color that I could not at first clearly make out was seen to fall away from me, disappearing rapidly, and vanishing entirely at about the time when the deep thud was heard. I kept my position until the reddish mass reappeared, coming up higher and higher in the chimney and sending before it a column of hot air. I knew now that this was the lava rising from the deeper interior and that very soon from it would come an explosion of steam. It was time to retire, and I did so rapidly, even if not gracefully, losing much of one shoe in a rather precipitate retreat.

The outburst of steam was followed in its proper time by an explosion of cinders, and I renewed my attack upon the conelet. Up I scrambled to the summit and again looked in. This time the falling mass could be easily followed by the eye, and it was a magnificent spectacle to watch its descent into the bowels of the earth. Again the lava rises, pouring out its hot air above it, and once more my heels came to my rescue.

So, for a half hour or more, I tested the great Vesuvius in its own workshop, scrambling up and scrambling down, and wondering all the time. The experience was not of the ordinary kind, and I suspect that it has not been repeated often since. A few days after my visit the volcano went through a paroxysm, and a number of lives were sacrificed to its fury. The little cone had grown into a mountain mass, and there was no longer any looking into the crater.

FIRE FIGHTING IN SIBERIA

THEY fight fires in a very curious way in the Asiatic realms of the Czar, say Mr. Richardson L. Wright and Mr. Bassett Digby in their book, *Through Siberia*. First, you find the fire. The city is plotted into districts, each with its engine house and watchtower. On the watchtower, by day and by night, stands a guard who scans the rooftops for a sign of smoke. When the fire has got well enough under way for him to see the smoke, he gives the alarm and the engines dash out. You are amused not so much at the dash as at the engines. They are primitive, and the use of them is more so.

We went to a fire one Sunday afternoon in Irkutsk. It was close by our hotel, so that we got an excellent view of the engines as they arrived. First came a troika team dragging a hook-and-ladder carriage. On it clung the firemen—howling Cossacks with brass helmets jammed down over their ears, and carrying in one hand—how the symbolism would have stirred the heart of Maeterlinck!—flaming torches. Behind the hook and ladder was the hose cart, and then came a hand engine of the type our grandfathers dragged to fires. After that, for two blocks, trailed a queue of water-filled hogsheads on wheels. The cavalcade passed us in a cloud of dust, accompanied by the yells of the torch-bearing firemen. When the water gave out, the carts dashed down to the river and replenished the supply.

This rather crude high-pressure service once gave rise to a rather humorous incident that the Irkutskians tell with great glee. During a fire several years ago a string of water wagons had gone down to the river, had got the fresh supply and rumbled back. When they reached the fire, the water was gone. The enthusiastic captain of the hogsheads had neglected to put back the plugs in his barrels and had spilled his water for two blocks along the Bolshskaia.

Our Relation With You

A great business like this isn't so difficult to carry on, when you reduce it to first principles, as we do.

We look upon the hundreds of thousands of American motorists with whom we do business as one gigantic buyer, and the millions of tires we market yearly as one immense transaction.

We feel that if we disappoint this buyer in any degree, either as to quality of product or our trade relations with him, our business will suffer—he will not deal with us any more.

So we are mighty careful not to disappoint him, and to make everything we build *good* enough, and *worthy* enough, to invite his further custom and good-will.

The Goodyear Tire *you* buy is built this way—to uphold the good name of *all* Goodyear Tires.

The nature of our trade relation with *you* is of the same complexion as our relation with the motoring public at large.

For it is of men like yourself that the motoring public at large is composed—and it is to the individuals in that public that every Goodyear Tire must give account of its worth, every Goodyear transaction bear evidence of its sincerity.

Naturally we make each tire and transaction of a character to bear this responsibility.

Goodyear Tires, Heavy Tourist Tubes and "Tire Saver" Accessories are easy to get from Goodyear Service Station Dealers everywhere.

AKRON

AVENGING the COLT

By Frank Oakling

SOME time ago in the fall two young stockmen of the upper White River country in Colorado, whose names are Gale Purcell and Ed Prewitt, rode one morning up on the mesa fronting the river to drive down some beef. They had with them a trained half-breed shepherd dog, very useful in driving the cattle down the steep inclines and brushy trails of the mesa.

A three-inch snow had fallen in the valley overnight. It was, however, so much deeper on the mesa and higher hills forming the backbone of the divide that the stock, which had been feeding on the bunch grass above, were straggling down into the valley. Hence the boys met a scattered band of range horses below the quaking-asp groves that fringed the bunch-grass plateau. Riding through these horses, the stockmen came on the half-devoured carcass of a suckling colt.

The tracks in the trampled snow showed that the killing had been done by a very large mountain lion.

"For here's his tracks as big as saucers," said Gale. "They are right fresh, too. We must have scared him off as we rode up. If we follow him now, he's our meat. Let's put Shep after him."

For although the mountain lion will prow close to a corral at night to seize a dog unawares, he will flee from one in daylight, especially if the dog be accompanied by man.

The fresh trail of the lion led directly toward a little spring-fed stream that was fringed by a heavy growth of service bushes and oak brush, forming a thicket almost impenetrable to any horseman but these mountain riders in leathern "chaps" and coats.

Fending off the brush with both arms, Gale rode in after the dog, while Ed Prewitt hurried through on a cow trail to intercept the lion. They had ridden well through the thicket, when a furious barking from Shep gave notice he had treed his game, and the riders emerged just in time to see the lion climbing a stunted pine that stood in an opening some little distance from the edge of the thicket.

At their approach he crouched on a big limb well up in the tree, displaying his uneasiness at their presence by laying back his ears and jerking his tail. Halting near the tree, they sat in their saddles, looking up at him. Ed's hand was on his six-shooter, when Gale stopped him with, "Hold up, Ed. It will be more fun to rope him."

To this Ed agreed, but the intervening branches made it useless to throw a rope at him as he lay. So Gale dismounted, gathered clubs from the dead oak brush, and flung them with whoops at the lion to dislodge him, while Ed, rising in his stirrups, with the coil of his rawhide rope in his left hand and his right swinging the loop over his head, waited the lion's leap to the ground.

Gorged from his meal on the colt, the lion was not inclined to jump, and the heavy oak clubs caused him merely to shift his position uneasily.

"Wait a minute, Ed," said Gale. "I'll climb the tree, and he'll either clear out so you can get a throw at him, or I'll drop a rope over his head and we can snake him down and snub him up to the trunk. Find me a good long pole."

While Ed was hunting for a pole, Gale took off his spurs, coat and hat. Uncoiling his rope, he slipped the hoodoo end through his belt, leaving it to dangle after him. He rode under the tree, stood up in his saddle, grasped the lowest limb and swung himself up. Ed then passed up to him a dead quaking-asp pole.

"Be ready to beef him if he shows fight," said Gale, looking to his six-shooter. "And look out, Ed, if he gets—make your loop small so he won't jump through it." Then Gale began his climb.

The lion, seen from below and so near, looked bigger than ever to Gale; but the click of Ed's six-shooter as he cocked it was reassuring. Now the lion's uneasiness increased. He backed out as far as possible on the limb; his big yellow eyes grew green, his ears were laid back, and, displaying his fangs, he exhaled his breath with an audible sound.

Slowly Gale gained the limb on which the lion crouched. He stood up firmly on it and braced his back against the trunk. He then hung the loop on the small end of the pole that he had dragged up after him and cautiously endeavored to drop the loop over the lion's head.

But as the pole with its dangling noose neared the lion, his jerking tail suddenly rose and stood out stiff as a poker, with every hair in it on end, until it appeared monstrous in the eyes of Gale.

"Look out, Ed!" he shouted.

Even as he spoke, the lion sprang upright on the limb, knocked the pole from Gale's hands with one stroke of his paw, and leaped from the tree.

With a whoop Ed struck spurs to his sportling horse and swung his rope, in a dash after

the lion, which was no match in speed for a cow horse. Before he could gain the cover of the brush, Ed threw. But in his haste he had made his loop too large, and the agile lion got one paw through it before the roper could tighten it with a turn of the loose end round his saddle horn.

The horse was badly frightened; but Ed had him in control, and as he braced himself back the lion was flung heels over head. Then Shep, excited beyond all prudence, rushed in, to be knocked twenty feet over the bunch grass as the lion regained his feet.

The loop had caught him in front of one shoulder and behind the other, round the brisket; so while he could not slip out, neither was he choked or prevented from "handling himself." With a snarl and a twist of his body, he jumped ten feet into the air; but the nimble cow pony had now got over his first fright, and he took up the slight slack, so that the lion was thrown squarely on his head as he came down.

Clawing at the tightened rope as he was jerked over on his back, the lion walloped over the tall bunch grass, making the snow fly in his eccentric gyrations. So agile were his movements that Ed, skillful as he was in handling his horse, could not always succeed in keeping his rope taut. He was glad enough when Gale, hatless and coatless, just as he had leaped from the tree, hurried to his aid.

It was difficult to plant a loop from his shying horse over the neck of the gyrating lion, but Gale did it. The two ropers then pulled against each other, choked the creature down, "snaked" him up and snubbed him to the tree; then, winding round him in narrowing circles, they bound him fast with the lassos.

Gale remained to guard him, while Ed went to the ranch and returned with a trusty team and a "go-devil"—a rough sled hewed from the fork of a tree and used for dragging poles down the mesa. On this they chained the lion and took him to the ranch.

But a big, live mountain lion is an expensive possession. For two months, during which he showed no signs of being tamable, the boys had to keep him in fresh meat, and so they were very glad when Bailey's traveling agent bought him for the menagerie for one hundred and twelve dollars.

WASHINGTON'S SEED DRILL

IN George Washington's day seed, such as corn, wheat and oats, was usually sown or dropped by hand and then covered with a harrow or a hoe or something of the kind. But the first President was not satisfied with that slow method, and, as Mr. Paul Leland Haworth recounts in his recently published book, *George Washington—Farmer*, tried to make a machine that would do the work more expeditiously. He succeeded in making what he called a "barrel plough," although it should be said that his plans were not altogether original; Duhamel had a plan for a similar machine, and about that time Arthur Young published another plan in the *Annals of Agriculture*, which Washington was perusing with much attention.

Washington's drill, as we should call it today, consisted of a barrel or hollow cylinder of wood mounted upon a wheeled plough and so arranged that as the plough moved forward the barrel turned. In the barrel there were holes through which the corn or other seed could drop into tubes that ran down to the ground. By decreasing or increasing the number of holes the grain could be planted thicker or thinner, as desired. Behind the drill ran a light harrow or drag that covered the seed, but in rough ground it was necessary to have a man follow after with a hoe to assist the process. A rope made it possible for the driver to lift the harrow when he turned at the ends of the rows; he managed the drill itself with a pair of handles.

As Washington said, the drill would probably work well under ideal conditions, but it had faults that sometimes disturbed the temper of its operator. A leather band that ran round the barrel, with holes that corresponded to those in the barrel, prevented the seeds from issuing out of more than one hole at the same time. This band had to be "slackened or braced" according to the influence of the atmosphere upon the leather, and sometimes the seed got between the band and the barrel—a fault that put the Father of his Country to some bother to remedy.

Washington was, however, very proud of the drill, and it must have worked fairly well, for he was not the man to continue to use a worthless implement merely because he had made it. He even used it to sow very small seed. In the summer of 1786 he records, "Having fixed a Roller to the tale of my drill plow, & a brush between it and the barrel, I sent it to Muddy Hole & sowed turnips in the intervals of corn."

The Puffed Wheat Hour When Is It?

At Breakfast—Says the housewife—with sugar and cream or with fruit.

In millions of homes, Puffed Wheat and Puffed Rice have become the all-hour foods.

They are taking the place of part-grain foods, because of their whole-grain nutrition.

They are taking the place of grain foods less fitted to digest.

They are taking the place of sweets and confections.

Think what they combine.

Here are whole grains made wholly digestible. Every food cell is blasted by a steam explosion. Every atom feeds.

Yet they are also flavory confections, airy, flaky, toasted. They seem like bubbled nuts.

Think how often they can take the place of flour foods, to the child's immense advantage.

Think how their ease of digestion makes them the ideal foods.

And how often—between meals—children who don't get Puffed Grains eat things far less healthful.

Every month these hygienic foods gain a larger place. They are Prof. Anderson's invention. The grains are steam-exploded by being shot from guns.

Every element in the whole grain is perfectly fitted to feed.

There is nothing else like them. No other process so breaks up the food cells. No other grain foods have such fascinations.

At Noon—Says the man—when I want a whole-grain luncheon which doesn't tax digestion.

At Night—Says the child—floating like bubbles in a bowl of milk.

At Playtime—The boy says—nut-like confections.

At 4 P.M.—At candy time, the girl says—used in place of nut meats.

At Dinner—Says the cook—as a flimsy, nut-like garnish for ice cream.

Puffed Wheat **Puffed Rice**
and Corn Puffs
Each 15c Except in Far West

Keep all three kinds on hand. That gives variety. Serve them in any way folks like them. The more folks eat the better. There are minerals in whole grains which flour foods don't supply. This is a delightful way to get them.

"Good Morning, George!"

THE man who is just entering one of New York's biggest banks is the president of the bank himself. And it is ten minutes before office hours!

"Yes, he gets here early every morning," the door man will tell you. "That's why he's so successful." Sometimes it takes a big man to point a simple little lesson. The first thing to learn in business is punctuality—just the matter of being on time.

Of course, to be on time, you must have a watch that will keep time. For boys a splendid watch is the "Ingersoll Junior", \$2.75, small, accurate and sturdy. Then there's the Ingersoll "Radiolite", \$2, to tell time both day and night, with its glowing hands and figures, made of a self-luminous substance containing genuine radium. And there's the "Triumph", \$1.50, the "Eclipse", \$2, and the famous "Dollar Watch"—"war price" now \$1.35; and for girls, the "Midget", small and dainty, for \$2.75.

See them at the dealer's; or, if he is out of any model, it will be sent on receipt of price by Robt. H. Ingersoll & Bro., New York, Chicago, and San Francisco.

Ingersoll
WATERBURY
A handsome watch for older boys and men. Smaller than regular size, jeweled, accurate and strong; \$3. Waterbury "Radiolite," \$4

Given to Parents

Valuable Book on Child Training

When your boy or girl grows up and goes out to face the world, success will largely depend upon self-control acquired at home.

Without this vital requisite, a host of other advantages will go for naught.

For the mere asking you can have a book on Child Discipline Control, written for parents by R. C. Beery, A. B. (Columbia), M. A. (Harvard), President of the International Academy of Discipline. This is a veritable Introductory Course in this highly important department of child development in the home—shows how you can guide your children along proper mental lines which will stand them in such wonderfully good stead when they reach the age of Success. The greatly reduced illustration above is taken from this free book.

No Charge or Obligation

Writing for this book costs you nothing—places you under no obligation. Having it is to have the means to a successful career for your boy or girl—the aim of every thinking parent. Drop a postal NOW, to

"ROOKIES"

By Harriette Wilbur

"I WAS once marking some boundaries on the shore of a northern Minnesota lake," remarked the surveyor reminiscently, "when I saw several 'rookies' swimming in an open space in a wild-rice bayou."

"And what is a 'rookie'?" I asked quickly.

"It's the ruddy duck, blessed, so they say, with sixty-seven different names—dumb bird, deaf duck, fool duck, bull-neck, salt-water teal, spinetail duck, dipper duck, and sixty others. Didn't you ever see one? It's a queer-looking bird for a duck—bunty and short, whether on the wing or in the water. It looks as if odds and ends of several different birds had been put together by some ingenious person to make a new species. It has a dished beak; a wedge-shaped tail fanned like a pigeon's and spined like a cormorant's; broad-tipped coot wings; the plump, squat body of the teal; the bobwhite's small head and thick neck; the flight of a partridge; the diving tricks of a grebe; and a goose-like egg."

"Then my only wonder is the bird hasn't more names," said I.

"Well, there they were, a dozen or more of them, idly floating about in the smooth water, the prettiest sight you could wish to see. The males were elegant creatures, in all their faultless courting apparel. In the spring and summer their plumage is rich and striking, you know—a bright, glossy, chestnut-red coat, a grayish-white vest, blue-gray bill, white cheeks, a jet-black pompadour from the beak over the eye and down on the back of the neck, and brownish-black tail feathers spreading from a white tail tuft.

"They were beauties, and their plain, brownish-gray mates seemed enchanted with their dashing bridegrooms, and kept close to them, as if they had forgotten that all this beauty must fade in the fall, and that during the winter they must put up with husbands as dull and prosy as themselves.

"About their tails—I forgot to tell you that the males always carry them cocked up at right angles to the body when they are floating on the water, full spread like a sail in the breeze! You can always tell a ruddy duck by that manner of carrying the tail; no other duck has it, although it is effective enough to be copied by every member of the family. No doubt it does serve the purpose of a sail, for I noticed that each male kept his tail turned to the wind whenever possible, and that he was always in advance of his mate. In circling the pond Mr. Ruddy was often obliged, when sailing against the wind, to swing round sideways and tack his way along, for of course he would never proclaim that beautiful tail a nuisance by folding it up. When he found difficulty in making progress, his mate considerably dallied in the rear.

"I watched them for half an hour. Then, wishing to see them on the wing, I tossed a stone into the group. Those nearest the rice swamp dived and immediately disappeared; but those farthest out, which could command space for starting, ran on the surface of the water for some little distance, with that splattering gait of the coot taking to wing. While getting under headway, they faced directly into the wind and beat their wings rapidly. After leaving the water, they flew low, with a drumming partridge beat of their broad wings, and soon all had disappeared in the rice.

"Still curious about the 'rookies,' I decided to look for some nests. I searched along the banks and scrutinized the wild-rice clumps closely, but without success. But I kept looking. Surely, I thought, mid-May should be a good time to find them brooding. Finally, I succeeded in scaring a female 'rookie' from a mass of reeds, dry rushes and grass and loose feathers, half floating on the water. She was brooding eleven eggs, which I never should have thought hers had I not seen her leaving the nest. They were too large, relatively, for her size, white with a tinge of stone gray, as if made from crockery, and pebbled like a goose's egg.

"Near by this nest was another one, which I should easily have missed had I seen it first. It was resting on the water, rising and falling with the ripples as I paddled the water with my hand. I waded out to it, and was surprised

upon lifting a covering of feathers and loose reed stems to find ten of the same goose-like eggs there. It was evidently either the abandoned nest of a coot, or one made in imitation of the coot design. The flags and rice stems round it had been broken down and the nest material piled upon them, just as a coot builds. Had I happened upon it without previously seeing the ruddy ducks about, and without seeing the other nest, I should have gone forth proclaiming that I had indubitable evidence of a goose brooding in a coot's nest!

"A few days later I found eight of those stone-colored eggs in the same nest where I had seen a coot brooding a few weeks previously. As the eggs are so different in appearance,

coots' eggs being creamy white and freckled and noticeably smaller, there could be no mistaking the fact that Madam Rookie, finding a ready-made nest at hand, had moved in and gone to brooding without the trouble of preparing a cradle.

"I watched the nests daily, and one morning was fortunate enough to see a hatching. The young lay in the nest until they had got their breath, while the

mother waited near by in the water, leaving the hot sun to do the work of drying her brood. An hour later the nest was deserted, and the little downy 'rookies,' of their mother's nondescript color, were swimming about here and there, with their fond parents in close attendance; for now the male, who had stayed strictly away from the nest, had joined them, and was apparently as proud and as loving a parent as the mother."

DAYLIGHT OBSERVATIONS OF POLARIS

VERY few people would be inclined to believe that a star like Polaris can be observed at any hour of the day. That, however, is the case. Mr. William H. Thorn, a United States surveyor in the General Land Office Service, continually makes use of it in his work.

In order to make really accurate public-land surveys, the compass cannot be used, but every line must be determined with reference to the meridian established by observing Polaris. This observation is taken preferably when the star is at elongation; that is, when it is farthest east or west of the celestial pole. By reference to his astronomical table, the surveyor knows when Polaris is approaching elongation.

Shortly before that time, he sets up his instrument, determines a meridian as exactly as possible by means of the solar apparatus, sets off his latitude on the proper arc of his instrument, and, in a moment, with his practiced eye, picks up Polaris as it slowly approaches elongation. He follows it with the cross hair of his telescope until the star begins to move in the opposite direction. By depressing his telescope, he can mark a point on the ground from which he simply lays off a certain calculated distance to the east or west, as the case may be, and he has an absolutely true meridional line.

In surveying, the ability to see Polaris by day is of the utmost convenience. A slight jar may throw the instrument out of adjustment entirely. Even the difference between day and night temperatures will sometimes do the

same thing. To detect such an error by observing Polaris at any time during the day saves many hours of time in looking for errors caused by unavoidable mechanical irregularities. Mr. Thorn discovered his daylight method of observing Polaris by taking an early morning observation and following the star until after the sun had risen.

After some experimenting, he found that he could use the method in the full light of day. The transit used is only eight or nine inches long and magnifies from fifteen to twenty diameters.

It would seem, then, that the ability to see stars in daylight is largely a matter of knowing exactly where to look and what to expect. Atmospheric conditions, of course, have much to do with such observations. The clear, dry atmosphere of the southwestern part of the United States is especially adapted to the daylight method of obtaining a true meridian, which, however, has been used successfully in the Northern States and in Alaska.

That Spin to School In the Morning Air

just naturally tickles a boy pink, makes him feel good all over, brightens his wits, puts him in fettle for those studies of today which will mean so much a few years from now.

Growing boys find their ideal fun, exercise, development, and companionship when they ride the 1917 Electrically Equipped

Indian Bicycle

They find the Indian is known as the foremost in construction, strength, lasting qualities, and trouble-proofness.

They find its motorcycle style lines make it the snappiest looker in the bicycle world. Indian streamline effect; battery holder; strongest crank hanger; big headlight, a necessity where the law requires that bicycles be lighted; strong reflector; quadruple crown and braced members; motorcycle type handlebars; Troxel saddle; coaster brake—more big, useful features than any other bicycle ever offered.

The Portable Electric may be used on any table

New Companion Portable Electric Sewing Machine

This newest addition to the well-known New Companion Sewing Machines is sure to appeal to many prospective purchasers. The Portable Electric Sewing Machine consists of a regulation full-size sewing machine head complete with an electric sewing motor, all mounted on a quartered oak base with carrying cover. This machine has a complete set of attachments and accessories, and will do exactly the same quality of work as our other machines. It may be placed on any table, attaches to any electric light socket, is easily run at any desired speed by slight pressure upon foot control, costs very little to operate, and is easily put away when your sewing is finished.

The Portable Electric is easy to put away

Our unique factory-to-home system cuts the usual price in two, making the cost to readers of *The Companion* only \$24.75, complete, freight paid. Write to-day for our free descriptive booklet.

Foot Power Machines Also

We offer six different styles of the high-grade New Companion Sewing Machine, including our regular foot power machines, which are recommended and

used in tens of thousands of homes throughout the country. We warrant each machine for 25 years, allow a three months' trial, pay all freight charges to your nearest freight station, and sell to Companion readers at a very low price.

Find Out All About It

How all this is accomplished can best be explained in our free illustrated descriptive booklet. A postal request will bring it by return mail. Write to-day to

NATURE & SCIENCE

THE ROMANTIC ELEMENT.—We live by breathing an atmosphere that contains eighty per cent of nitrogen, although that is the gas which in combination with certain other things is dealing out death on such an appalling scale on all the battlefields of the war. There are almost no useful explosives in which nitrogen has not some part. Without its aid ships could not be sunk by mines or torpedoes, or property destroyed by airplanes. Rifles, howitzers, machine guns and grenades are all dependent upon nitrogen. Every day we take into our lungs about four hundred and fifty gallons of it, which is enough to make thirty pounds of trinitrotoluol or forty pounds of guncotton. We are wont to regard nitrogen as a singularly uninteresting gas because of its negative behavior. It does not burn like hydrogen, it does not support combustion like oxygen, and, in short, its presence is generally assumed because of its inactivity and because it does not directly respond to any test. And yet this element is the most important of all in the manufacture of ammunition. It is remarkable, too, that nitrogen is the central figure in the protein or tissue-building material of food. To say that without protein we die means that without nitrogen we die. The gas is as necessary in one form to sustain life as it is in other forms to destroy it. Because of the inertness of nitrogen,—that is, the weakness of its affinities,—the least provocation causes it to release its partner, oxygen, and hand it over to the combustion of other elements that are present. Thus a great volume of gases is formed instantaneously, which means an explosion, and the nitrogen returns to a state of freedom that appears to be its most congenial condition. Nitrogen is also the great fertilizer, without which crops could not be produced. Thus this element is both destructive and constructive. It is the essentially romantic element, devil or god, according to its associations.

BIRDS IN THE WAR ZONE.—A writer who has had an excellent opportunity to study bird life in the war zone of Flanders says in *Bird Lore* that the effect of cannon fire on birds is amazing. Almost without exception they entirely disregard it. Even easily disturbed birds, like crows and wood pigeons, seem quite indifferent. "My first experience of a heavy cannonade was in the early spring of 1915. The blackbirds were all singing in the trees that lined the Yser Canal when on a sudden hundreds of guns of every caliber burst into a terrific and continuous cannonade; the enemy answered, and for hour after hour shells tore through the trees. The effect was almost stunning to us human beings, and when after three hours there was a sudden and complete cessation the first thing that the senses realized was that the blackbirds were still serenely fluting away. I do not think they had ever ceased. At another time I was listening to the rich chucklings and gurglings of a nightingale—the first of the season—and had found the songster with my glass, when the morning calm was shattered by a burst of rifle fire close by; the retiring and elusive bird paid no attention, nor did he seek a lower or less conspicuous perch. The only exception I have noticed out here to the general disregard of noise is in the case of the green sandpiper, which is the Old-World relative of our solitary sandpiper. Twice I have seen that bird, and each time it was in a highly nervous state from shell fire. One of the instances afforded me some amusement at a time when a diversion was welcome. For nine hours we had been under heavy shell fire, with very inadequate shelter. As I lay behind a breastwork of sandbags, I watched the antics of a green sandpiper that was trying to get its breakfast in the water-filled shell holes close by. Every time it settled, a big high-explosive shell would burst near by with a deafening crash and a geyser of black loam, and away would go the poor bird to circle in the blue for perhaps ten minutes. Then it would pitch down in front of me again to repeat the same performance almost immediately, as another shell would land near it. Meanwhile an unruffled cuckoo called continuously in some near-by pollard willows, and larks (crested larks, very much like skylarks) rose one after the other, sometimes from the close vicinity of a bursting shell, singing serenely as if there were nothing to mar a perfect day. A friend who is driving an ambulance for the French in the Vosges tells me that the birds in that region show the same indifference to shell fire."

A HENHOUSE THIEF.—A correspondent of the Scotsman who owns a small hennery was unable to account for the constant disappearance of eggs. But one morning, after a fall of snow, he noticed a track that looked as if made by something rolled along the surface of the snow. He followed the trail for about sixty yards, and there, under the root of a fallen tree, discovered five nest eggs and a number of real eggs, two of which were whole. From the footprints in the snow he perceived that the thief was a weasel. Curious to

know how it had managed to get the eggs so far, he concealed himself and watched. After a long wait the weasel appeared and made straight for the henhouse, in which some new-laid eggs, left on purpose, were awaiting it. In a very short time it came out, tall first, drawing an egg along with its forepaws. After it got the egg away a bit it reversed its method, and propelled the egg in front of it with its breast and forepaws. The exact position of the egg could not be distinctly seen from the ambush, but twice on the journey, when the weasel came to uneven ground, it again turned tail and went backward for a few yards at a time. The time it took was not noted, but as nearly as could be guessed it was from three to four minutes. Immediately after it had put the egg beneath the root the weasel returned to the henhouse for another, and was moving it in the same way when it was stopped by a charge of shot.

Announcing the CONRON Roller Skate

The Skate with the Backbone

The Sidewalk Roller Skate with all the features of the higher price Rink Skate—

THE Conron Roller Skate has two large rubber bumpers or cushions which give great resiliency, absorb jars and shocks on rough or uneven sidewalks and permit of the short turning radius of the best rink skate. Rugged strength is assured by the Conron "Back Bone" construction and the Conron Trussed Axles. Ball bearings, of course—16 balls in each wheel with bearing surfaces of heat treated high point carbon steel—Price **\$2.50**

Before you buy any roller skates, ask the dealer to show you the "CONRON." If he hasn't received his stock, ask him to write us and we will send him a pair for your approval, by parcel post prepaid.

Conron-McNeal Company, Kokomo, Indiana.
Makers of Conron Extension Ice Skates. The Ice Skate that fits any size shoe.

In GLACIER NATIONAL PARK

AT GLACIER NATIONAL PARK refined hotel comforts contrast with Nature's wildest, most tremendous sights.

Last year thousands more tourists than in any previous year scaled its Alpine heights—fished its tumbling streams—rode by launch on its azure lakes—motored through its pine-laden valleys. Modern hotels-in-the-forest and chalets. Teepee camps. Vacations \$1 to \$5 per day.

Glacier Park is on the main trans-continental line of the Great Northern Railway. Visit Glacier National Park, the Spokane Country, and the wonderful Lake Chelan Region, directly en route to the Pacific Northwest.

A camping tour 'long the shores of Lake Chelan is a big experience. Then go on to Seattle, Tacoma, Puget Sound, Portland, Astoria, Vancouver, Victoria—each with a delightful resort-country of its own—and Alaska.

The twin Palaces of the Pacific—S. S. "Great Northern" and S. S. "Northern Pacific"—three times weekly between Portland, Astoria and San Francisco. Folder on request.

TERMS

THE YOUTH'S COMPANION is an illustrated weekly paper for all the family. Its subscription price is \$2.00 a year, in advance, including postage prepaid to any address in the United States, \$2.25 to Canada, and \$3.00 to foreign countries. Entered at the Post Office, Boston, Mass., as second-class matter.

New Subscriptions may begin at any time during the year.

Money for Renewals should be sent by subscribers directly to this office. We do not request Agents to collect money for renewals. Payment to strangers is made at the risk of the subscriber.

Payment for The Companion, when sent by mail, should be by Post Office Money Order or Express Money Order. When neither of these can be procured, send the money in a Registered Letter. Silver sent through the mail is at the sender's risk. It is liable to be stolen or to wear a hole through the envelope.

Renewals. Three weeks after the receipt of money by us, the date after the address on your paper, which shows when the subscription expires, will be changed.

Always give the name of the Post Office to which your paper is sent. Your name cannot be found on our books unless this is done.

Letters should be addressed and orders made payable to

PERRY MASON COMPANY,

THEORIES OF CANCER

MODERN medicine has many victories over disease to its credit. One by one the great scourges of mankind—smallpox, yellow fever, the plague, typhoid and typhus fevers—have been forced to give up their secrets, and now number their victims by tens instead of by thousands. Even tuberculosis, one of the most stubborn of all our enemies, is gradually yielding ground. But one dreaded disease continues to baffle all attempts to determine its cause and discover its cures. That is cancer.

All over the world there are institutes, filled with the most brilliant and eager workers in the profession of medicine, that were established solely for the study of cancer, and as yet no one has discovered anything that can be said to promise a solution of the enigma. Among the many theories of the nature and origin of cancer there are four that physicians regard as plausible.

The theory that has the greatest following to-day is that of local irritation. Its supporters call attention to the undoubted fact that cancer often occurs at points that have been the seat of repeated and long-continued injury—for example, the side of the tongue when it has been made sore by rubbing against the edge of a broken tooth, or the hand of a physician who has exposed himself repeatedly to the action of the X rays.

A second theory is that cancer is a germ disease. Some one, of course, may yet prove that to be true. The arguments against it are that there is no positive proof of contagion or infection and that no one germ is agreed upon as the exciting cause. Each adherent to the theory blames a different microbe.

Another theory is that of "embryonal rests." According to that, during the growth of the child before birth cells of one kind of tissue become accidentally displaced into the midst of another kind of cells and, becoming inclosed there, form little islets, or "rests." Then late in life, when something happens to stimulate these islets of foreign tissue, they begin to grow rapidly, as embryonal cells do, and form tumors.

All those theories regard cancer as a local disease that in its early stage can be cured by the knife of the surgeon. The fourth theory, however, declares that cancer, or rather the predisposition to it, is a general disease, caused by intestinal auto-intoxication, an overabundance of protein, chiefly meat, in the diet, insufficient secretion of the thyroid gland, or some other disorder as yet unknown. The chief argument of those who favor this theory is that cancer is mainly a disease of meat-eating peoples, and that, although it may appear in India and in other vegetarian countries, it occurs very rarely there; and further, that in America it is much more frequent in persons of foreign birth or descent than in their former compatriots who, because they have remained at home, are not able to indulge so freely in meat and other foods that are rich in proteins.

MISS MINTY

As a child Ellen always supposed that Miss Minty's name was the inevitable consequence of her gifts—the big, luscious pink-and-white peppermints that seemed to dwell, an inextinguishable supply, in the queer-looking black-velvet bag that she always carried on the street. No child ever passed her without receiving one. People laughed and said that Henry Payne, the druggist, would have to go out of business if ever Miss Minty stopped buying peppermints.

At Miss Minty's tiny cottage there was a stone jar that always contained currant cookies or jumbles. Every child in the village knew that cookie jar. Ragged, sharp-eyed Callie Brennan from the Corners knew it, too. Callie's father was a drunkard, and none of the village children had anything to do with her.

Ellen, stopping at Miss Minty's for a call (and a cookie) one afternoon, and finding Callie with a whole plate of cookies and a cup of cambric tea, stood speechless. Callie with a plate of cookies! And Miss Minty looking so shining!

After Callie had gone (she sprang up at the sight of the other girl and slipped away, seizing two cookies in one swift motion as she left the table), Ellen asked her amazed question:

"Is she nice, Miss Minty? You look so happy."

Miss Minty, who, absently stroking Ellen's hand, was still gazing after her other guest, looked down into the child's eyes at the question.

"She was hungry, Ellen. I guess she's hungry most of the time. Oh," Miss Minty cried, as her faded eyes filled with sudden tears, "if only I could feed all the hungry people in the world!"

The years flew swiftly after that. They changed Ellen quickly, although they did not seem to change Miss Minty at all. But during Ellen's second winter at college Miss Minty went quietly to sleep one night and did not wake again. Ellen missed the little figure that summer, but when you are twenty, many things call you and make you forget. Four years later Ellen married and went to live in a city. Life was busier still there—so busy that when, one afternoon, she was called down to see an agent whom Katie let in by mistake, her first

impulse was to refuse sharply to see her goods at all. Then something in the thin, sharp-eyed face stirred a memory. Before she realized it she was saying impulsively:

"You look tired. Won't you let me give you something hot—tea or chocolate?"

The agent was plainly tired and hungry, although she tried not to show it. As the door closed behind her, half an hour later, Ellen stood thinking. A tender look was in her eyes. Who had ever heard of endowing a cup of tea? But that was what she was going to do—in memory of Miss Minty, who had wanted to feed all the hungry persons in the world.

THE SENSITIVE APES

SO well do the keepers of the modern "zoo" care for their charges, the wild animals, that much of the sympathy that the visitors feel for the captive beasts is out of place. Any sympathy that a soft-hearted person has for captive gorillas, however, is not misplaced, says Miss Ellen Velvin in From Jungle to Zoo.

Many gorillas have been captives, but in spite of the greatest care none have lived more than a comparatively short time. There seems to be no particular ailment from which they suffer; nothing except intense home- or heartsickness. They grieve themselves to death.

At first they show some interest in what goes on round them—perhaps because of a feeling that there is some way of escape. After a time they show less and less interest and take smaller quantities of food. There invariably comes a time when they refuse food altogether. Then the case becomes hopeless. They sit with their shoulders hunched up, their knees under their chins and their hands hanging listlessly in front of them or else raised to their heads, as if they suffered from headache. They never lift their sad and weary eyes for hours at a time. If you induce them to look up, there is an expression in their eyes that haunts you, so immeasurably sad and forlorn it is. They even cease the little futile show of temper that previously broke out at intervals.

All the anthropoid or man-like apes, such as gorillas, orang-utans and chimpanzees, are extremely sensitive to surroundings and environments. In order to keep these big apes in good health it is absolutely necessary to give them plenty of company, either of their own kind or of men—anything, in fact, to relieve the tedium of captivity, which they undoubtedly feel. When a chimpanzee gets a new companion he goes into the wildest state of excitement; he thumps the floor and walls, scampers round his cage and screams with delight.

ADVICE FOR THE BESPECTACLED

AN optician, writing in the New York Sun, gives some information that may benefit the wearers of shell-rimmed spectacles.

It is of the utmost importance, he says, to be very careful not to subject the shell frames to a sudden atmospheric change. You must not go from a room in which the temperature is about seventy degrees into the open where the temperature is as low as ten degrees. If you make that sudden change, the shell frames will crack in some place. A low temperature makes the shell frames contract, and since the lenses will not "give," the frames must.

A high temperature, especially on humid days, causes the shell to expand. That loosens the frames and allows the lenses to get out of position. Sometimes the heat of the body has the same effect.

To prevent scratching the lenses, never lay your glasses down so that they rest on the glass. Instead, turn them so that the frames have the weight. It is equally important to clean the lenses in the right way. Always use a cloth made for the purpose, and be sure that your method is correct. Take your glasses in your left hand and the cloth in the right and rub the lenses gently. Be careful never to twist the glasses. Hold them firmly and do the twisting with the hand that holds the cloth. Then you will not work the lenses loose in the frames.

MORE INDIAN COUNTING

A SUBSCRIBER who read the article on Indian counting that was printed in The Companion several months ago, writes as follows concerning a variant form of that system of notation—if it can be so called:

An aunt of my father's, Olive Beckwith, a native of Charlemont, Massachusetts, lived in our house near Rome, New York, until her death in 1891. She taught me to count "in Indian" thus:

Nucket, nucket nucket; nee, nucket nee; swee, nucket swee; yow, nucket yow; nepaw, nucket nepaw; nuckadunce, nucket nuckadunce; swunce, nucket swunce; nezunce, nucket nezunce; puskokum, nucket puskokum; nepiog, nucket nepiog.

I wonder if anyone else learned the counting in this form?

THE NOVICE'S MISTAKE

IN Tales of the Flying Services, Mr. C. G. Grey tells about a strange entry in the official report of an officer who had recently joined the service and was sent to pass a seaplane through its test for the English navy. He had to go up as a passenger with the constructor's pilot and to keep a log of what occurred during the test.

This is what he put down: "9.5 A. M., left slip. 9.10 A. M., altimeter shows 300 feet above sea. 9.12 A. M., curious phenomenon. Met a sea gull flying backward!"

That meant that the machine, flying at the rate of about eighty miles an hour, overtook a sea gull—which is not a fast flyer—going at about forty miles an hour, and that up in the air, without any background to give a proper sense of direction, the bird looked as if it were flying toward them tail first. Probably the officer knows better now.

A RARE TREAT

TWO Washington ladies, says Everybody's Magazine, hired a broken-down hack, and when they paid for the ride gave the driver a dollar in the following coins: a twenty-five-cent piece, three dimes, five five-cent pieces and twenty pennies.

After looking at this miscellany for a moment, the driver showed all his teeth in a grin and asked whimsically:

"Well, now, ladies, how long you-all been savin' up for dis nice little treat?"

Don't Scold the Children If They Tear Their Stockings

Get HOLEPROOFS—Set Your Mind at Rest

We speak to the mothers who never have tried these famous, long-wearing stockings. The parents who have bought Holeproofs rarely go back to others.

They know too well how Holeproofs stand rough wear for months! Wouldn't you also like to escape the work of darning?

Children's Ribbed Holeproofs are the friend of thousands of mothers. You should certainly try them.

Holeproof Hosiery

For Men, Women and Children

Yarns of fine-spun strength and special ways of knitting make these stockings doubly strong. No other method, it seems, can equal the Holeproof way.

Even the thinnest closely woven styles for men and women stand much harder wear than average hose.

Children's, 35c Per Pair and Up; Men's, 30c and Up; Women's, 40c and Up

Any obliging store will supply you. Should you fail to find genuine Holeproof Hosiery close by, we'll ship direct, charges paid.

Write for interesting descriptive booklet free. (886)

Principal Coffee Roasters Boston—Chicago

Our Great Spring Offer

Some Big-Value Offers to Our Subscribers to Pay Them Handsomely for Introducing The Youth's Companion to New Families

HELD TO ANSWER

By Peter Clark Macfarlane

Mr. Macfarlane has here written a really big, emotional American novel. In his hero, John Hampstead—railway clerk, actor, book agent and preacher; in Marien Dounay, the actress, and in the other girl—blue-eyed Bessie, whose love for John is undisclosed until he blunders under the spell of the actress. Mr. Macfarlane has depicted characters destined to live in American fiction. *Publisher's price \$1.35.*

UNDER THE COUNTRY SKY

By Grace S. Richmond

In the story of Georgiana and her three rivals we meet again the same sort of delightful people we knew in Red Pepper Burns. It is a tender romance with a surprise at the end and a catch at the heart for poor "Father Davy," who loses a very dear daughter to see her happy with the man whom he himself had chosen. *Publisher's price \$1.25.*

"Best Sellers" Given Free

Send us one new subscription (not your own) for The Companion and we will present you with your choice of any one of these popular books, sending it to you postpaid. These books cannot be purchased for less than \$1.25 to \$1.35. We do not offer them for sale.

NOTE: The Book is given only to a present Companion subscriber to pay him for introducing the paper into a home where it has not been taken the past year.

WILDFIRE By Zane Grey

Zane Grey has written many fine books, but Wildfire outruns them all. The author's characters have usually been men and women who loved adventure, but in this story the adventures of his characters partake of the wild freedom and strength of the desert and mountains to which they belong. In vivid delineation, as well as in high dramatic power, Wildfire will stand as one of the best the author has written. *Publisher's price \$1.35.*

JUST DAVID

By Eleanor H. Porter

Just David is one of those books that bears its message of courage and inspiration straight to the heart of every reader. If you want to make a lovable, lifelong friend, read this story of the boy who brought happiness to a whole village. *Publisher's price \$1.25.*

SEVENTEEN

By Booth Tarkington

Seventeen, by Booth Tarkington, author of The Turmoil and Penrod, is a tale of youth and summer time and the Baxter family—especially William. As Mr. Tarkington portrayed once and for all the boy in Penrod, in this new book he draws the perfect portrait of hobbledehoy youths. It would not be fair to tell here all the exploits, tragic sufferings and joys of William Sylvester Baxter; it would be spoiling a feast. *Publisher's price \$1.35.*

The "8" Combination Aluminum Cooking Set

Here's a set of cooking utensils that will go a long way toward satisfying the desire of every housekeeper for a complete aluminum kitchen outfit. The Set consists of four pieces, so made that they fit together perfectly in various combinations to form eight different utensils such as are needed in the kitchen every day of the year round. Each piece is of solid aluminum, which cannot flake or rust off like enamel. The Set is one of the most attractive as well as most practical articles we have ever offered.

The Set will make 6-Quart Preserving Kettle, Double Roaster, 6-Quart Covered Berlin Kettle, Colander, Covered Baking Dish or Casserole, 2½-Quart Deep Pudding Pan, 2½-Quart Double Boiler, Steam Cooker. The eight combinations made by this Set would cost at least \$5.00 if purchased separately. We are, therefore, anticipating a very large response to our liberal offer, and have contracted for a large number of these Sets so that no one may be disappointed.

How to Get This Fine Set

Send us one new subscription (not your own) for The Youth's Companion, with 50c. extra, and we will send you one of these "8" Combination Aluminum Cooking Sets. The Set will be sent by express or parcel post, charges to be paid by receiver. If parcel post shipment is desired, ask your postmaster how much postage you should send us for a 3-lb. package.

NOTE: This Set is given only to a present Companion subscriber to pay him for introducing the paper into a home where it has not been taken the past year.

Get a "BIG GIANT" At Special Terms While They Last

THE YOUNG ENGINEER. Every boy ought to own one of these superb Engines. It will not only afford hours of pleasure, but in many cases will develop a taste for mechanical work and engineering. The Engine is designed for running toy machinery at a high rate of speed. These toys, such as machine shops, mills, forges, etc., can easily be made by the boys. They will thus enjoy both the making and the running of their "plant." Power can be transmitted to the machine shop or mill through an attached pulley wheel, with a cord for a belt.

USES KEROSENE. The illustration does not show the full size of the Engine. It stands eleven inches high, and the boiler, which is formed from heavy brass, is absolutely safe. It is an improvement over all former styles in that ordinary kerosene can be used as fuel, instead of alcohol. It can run full speed continuously for ten hours at a cost of less than one cent. It has a safety valve, steam whistle, and a finely fitted water gauge that will indicate the exact amount of water in the boiler. It has a large balance wheel and other necessary parts to make it the most powerful Steam Engine for toy machinery now on the market.

Our stock of this remarkable Engine, with its SOLID BRASS Boiler, was purchased before the price of metals advanced to present high figures. When these Engines are gone, therefore, our attractive offer must come to a close. Don't miss this opportunity to get one while our supply lasts.

BOYS—Don't Miss This Opportunity!

Send us one new subscription (not your own) for The Youth's Companion and we will present you with one of these popular "Big Giant" Steam Engines. Value \$1.25. This offer good only as long as our stock lasts. The Engine will be sent by express or parcel post, charges paid by receiver. If parcel post shipment is desired, ask your postmaster how much postage you should send for a 3-lb. package.

NOTE: The Engine is given only to a present Companion subscriber to pay him for introducing the paper into a home where it has not been taken during the past year.

PERRY MASON COMPANY, BOSTON, MASSACHUSETTS

THE LARGEST ANIMAL

THE blue whale is not only the largest animal that lives to-day upon the earth or in its waters, but, so far as is known, it is the largest animal that has ever lived, declares Mr. R. C. Andrews in *Whale Hunting with Gun and Camera*. Even those extinct reptiles, the dinosaurs, which splashed along the borders of the inland seas of Wyoming and Montana a million or more years ago, could not approach a blue whale either in length or weight.

In 1903 Dr. F. A. Lucas weighed in sections a blue whale taken at Newfoundland. The animal was seventy-eight feet long and thirty-five feet round the shoulders; the head was nineteen feet in length, and the flukes sixteen feet from tip to tip. The total weight was sixty-three tons; the flesh weighed forty tons; the blubber, eight tons; the blood, viscera and baleen, seven tons, and the bones, eight tons.

Exaggerated accounts of the size of this species are current even in reputable books on natural history; but the largest specimen that has been measured and recorded was eighty-seven feet long. It was stranded a few years ago on the coast of New Zealand, and it must have weighed at least seventy-five tons. I have measured two blue whales eighty-five feet long, but specimens of that size are very rare.

All the whalers who have hunted in the South Atlantic or Pacific tell remarkable tales of the enormous blue whales that are killed off Kerguelen and the South Georgia islands. No doubt the species sometimes reaches ninety, or possibly ninety-five, feet, but the stories of one-hundred-and-fifteen- and one-hundred-and-twenty-foot whales are certainly myths. As Dr. Lucas aptly says, "All whales shrink under the tape measure."

The principal reason why whales are able to attain such an enormous size is that their bodies are supported by the water in which they live. A bird is limited to the weight that its wings can bear up in the air. A land animal, if it becomes too large, cannot hold its body off the ground or move about rapidly, and is doomed to certain destruction. But a whale has to face none of these problems, and can grow without restraint. The sperm and right whales float when killed, but the fin whales usually sink, although the specific gravity of their bodies is very little greater than that of water.

UNCLE BILLY'S RETORT

DURING the time of intense political feeling that succeeded the War of Secession, there lived in Porter County, Indiana, a harmless eccentric man by the name of Bingham, popularly called Uncle Billy, who, although possessed of some money, was something of a vagrant, and sponged his meals and his lodgings whenever he could. Often he slept on the hay in barns of well-to-do citizens.

When Uncle Billy presented himself at the polling place to cast his vote on one occasion, Augustus Starr, the son of a prominent and wealthy Democrat, was one of the clerks of the election. He was furious at the idea of receiving this vote, which he knew would be Republican.

"Why, gentlemen," said Starr, "this man has no residence, no home, no domicile, no locus, no habitation! He is a mere vagabond. He often sleeps, as I have had occasion to know, with the mules in my father's barn."

Uncle Billy turned to the other judges with a twinkle in his eyes, and drawled out:

"Your Honors, it is true that I sometimes sleep with jackasses and mules, but I never vote with them; and that is what worries Mr. Starr."

The young Democrat was effectually silenced by the loud roars of laughter from men of all parties who stood by, and Uncle Billy was permitted to vote.

MISPRINTS AND MAXIM GUNS

THE late Sir Hiram Maxim says in his autobiography that when he organized the United States Electric Lighting Company the printer sent home its stationery with the heading, "The United States Electric Lighting Company." When he established his new gun company in England, he told of this mistake in order to emphasize the importance of getting the stationery printed correctly. When the first sheets were brought to him, however, he found that the English printers had made his concern appear as "The Maxim Gun Company."

"One of the Maxim guns," said Sir Hiram, "was designed to fire a shell weighing about a pound. These shells were, of course, expensive; they cost about one dollar and a quarter each. When we demonstrated the gun before Li Hung Chang, it fired four hundred of these shells, costing more than five hundred dollars, in a minute. The old Chinese statesman, on being told the cost of the shells, said, 'This gun fires altogether too fast for China.' The King of Denmark's comment was, 'That gun would bankrupt my little kingdom in about two hours.'"

A "SIDEREAL DAY"

IN answering a correspondent who asked the meaning of the term "sidereal time," the Irish Times explains that that is the only truly scientific manner of reckoning time, and is that which astronomers and navigators use. A "sidereal day" is the precise time taken by the earth in revolving on its axis, and is twenty-three hours, fifty-six minutes and four seconds. Our sundials, however, record a very different day.

If you set up a sundial in a garden and observe when it is noon to-day, and again to-morrow, you will find that it exceeds the "sidereal day" by three minutes and fifty-six seconds. The difference is due to the distance that the earth has traveled on its orbit while it has been revolving on its axis. The orbit motion makes it necessary for the earth to turn nearly four minutes longer in order to bring any place to the same position with regard to the sun that it had on the previous day.

A MISTAKE SOMEWHERE

The following appalling incident in the musical world is taken from Judge:

Trombone of Village Band—What do we play next, Sir?

Sir—Sousa's Grand March.

Trombone—Gosh all hemlock! I jest played that!

Oscar Saenger

The Victor Company announces a complete course in vocal training by Oscar Saenger in twenty lessons on ten Victor Records \$25

Soprano; Mezzo-Soprano; Tenor; Baritone; or Bass

Every student of vocal music, every aspiring young singer, every one who has a voice, even though it be untrained, can now develop his or her talents under the direction of Oscar Saenger—America's greatest and most successful vocal teacher.

The Oscar Saenger Course in Vocal Training is a practical efficient system for teaching people to sing.

It is based on the simplest and most direct principle of all teaching which, for the first time, is now applied to singing in a new and original way.

No matter where they may live, all those who wish to sing may now learn to do so under the direction of a master who is credited with having entered more pupils upon successful operatic, oratorio or concert careers than has any other teacher in the United States.

The course consists of ten double-faced Victor Records, which provide twenty lessons in vocalization.

There is a separate set of records for each of the following five voices: Soprano, Mezzo-Soprano, Tenor, Baritone and Bass.

With the Mezzo-Soprano course, special instructions will be found for the training of children's voices.

With each set of records, there is also provided a text book of supplementary information for the student, which information is set forth so definitely and clearly that the art of singing may be fully understood by those who have had no other vocal training.

All the necessary technique and all the necessary exercises for the development of perfect vocalization are provided, explained, and worked out, in the same definitely constructive way as they are in Oscar Saenger's own studio.

The one essential requirement in vocalization is that the student shall learn to produce perfect tones in the proper way—this, the Oscar Saenger Course accomplishes in the simplest and most direct way.

For each set of lessons, perfect examples of tone production have been secured through Oscar Saenger's personal choice of the artists best qualified to serve as exemplars.

These tones, phrases or scales are "sung" by the records to a piano accompaniment "played" by the records. The accompaniment then continues, but instead of the exemplar

DE LUE'S GOLDEN GIANT SWEET CORN

The most important horticultural acquisition of recent years. Awarded the only Silver Medal ever given by the Massachusetts Horticultural Society for novelty and excellence in Sweet Corn.

DE LUE'S GOLDEN GIANT is the result of eleven years' selection by Dr. Frederick S. De Lue of Boston, Mass., from the product of "Howling Mob" crossed with "Golden Bantam."

With its 12 to 16-rowed ears it gives nearly four times the yield per acre that the Golden Bantam does with its smaller 8-rowed ears. The stalks are short and frequently produce two ears each.

Its orange golden color is richer; it is more delicious in flavor and is equally early.

To introduce DE LUE'S GOLDEN GIANT we offer a limited quantity in packets containing 25 kernels each at 25 cents the packet—not more than 4 packets to any one customer—postpaid anywhere in the United States and possessions.

Our 170-page Annual Catalog and Gardeners' Guide, 450 illustrations, several colored plates and cultural directions, will be mailed on application.

TWO DOLLARS A YEAR · FIVE CENTS A COPY

"I AIN'T going to church," Mrs. Horn declared, "Easter or no Easter! What's the difference of one day from another when every day's as hard as can be for old folks like us?"

But little Mrs. Pepper laughed softly. "Easter's different! Just look out and see! The grass is greening up, and the air's as soft as a baby's hand, and the little white clouds in the blue sky couldn't belong to any other day. Easter's the resurrection, and everything comes alive again to tell about it."

"It don't tell me nothing about it. If there's a God anywhere, I guess He's forgotten all about any resurrection for old bodies like us. I can't see as Easter helps much. We live on in this Home just the same, and we're going to have corned beef for dinner same as if 'tweren't Easter, and wear our same old clothes. What good does it do us to have the grass green and the sky blue? Might as well be tother way round for all I care."

"You do make it sound sorter plain," said Mrs. Pepper, with a sigh; but then she brightened. "'Tain't plain, though. It's a world full of love and life and beautiful things, and I'm glad I'm in it, even if I am only an old woman, and no good to anyone. A day like this makes me feel young, like I was going out on adventures."

"I declare, Mis' Pepper, I don't believe you ever growed up!" Mrs. Horn exclaimed. "If you don't hurry you'll miss your trolley, and that's all the adventure you'll get."

Mrs. Pepper settled her bonnet and pulled on her gloves. "I'm sorry you won't come, Mrs. Horn; it's a nice trolley ride to Fenton. You won't be lonely, will you? I always like a long quiet morning like this to go back and remember all the happy things I've had; I never know how many they are till I really sit down to think 'em out. Good-by!"

Mrs. Pepper got as far as the hall and came back with a bunch of shining daffodils.

"Mrs. Mollin gave them to me," she said, in delight. "Some one sent her a big boxful, and she gave me seven. I'm going to carry them to church, and then I'll bring them back to look at all the week. I'll leave one now to keep you company while I'm gone. Good-by! I'm real fond of you. I sorter hate to leave you." She bent and kissed her friend's cheek.

"You'll get left yourself if you don't go," said Mrs. Horn grimly. "If you get invited out to dinner, be sure you accept."

Mrs. Pepper laughed at the joke and tripped out of the building. When she had gone, Mrs. Horn grudgingly touched the spot that Mrs. Pepper had kissed and gazed at the gay spring blossom. When she was a little girl in the country there had been a row of yellow daffodils beside the grape arbor.

Mrs. Pepper barely caught her trolley. She paid her first fare out of a purse that held just two quarters, and settled down into her corner.

"I'd like to be up on one of those scudding white clouds to-day, or I'd like to ride in a big, fast automobile like that one going past; but it's a good deal to be thankful for that I've the strength to ride in a trolley and the thirty cents to pay my fare to Fenton and back on an Easter. If I make believe the trolley is an automobile, I can feel just as grand as the woman in that one that passed us. I suppose it is silly, but I like to pretend that I'm one of the ones that help the world on. The Lord's got plenty of smart people to do his work. He don't need me, I suppose, but it's something just to be in such a beautiful world and know there is a resurrection."

The car, full to its limit, ran through the open country, while Mrs. Pepper smiled happily in her corner and watched the greens of the earth and the blues and the whites of heaven. She smiled at the conductor each time she paid him a nickel, and he relaxed a little the scowl on his brow set there by persons who had not put on their Easter hearts

DRAWN BY F. R. GRUGER

"OH, THE DARLING! THE DARLING!" MURMURED MRS. PEPPER

MRS. PEPPER PASSES

By Helen Ward Banks

with their Easter hats and who pushed and crowded and scolded. One woman who, to catch the car, had lost her breath used it with increasing volume as she recovered it to let the world know her opinion of the conductor. The man's brow grew blacker as he listened, and it was only by great effort that he kept quiet.

"Please let me off here," Mrs. Pepper said.

As she stepped down she picked a daffodil from her bunch and put it into the conductor's fingers. "I know you have a lot to stand," she whispered, "but it is Easter all the same in spite of folks' tongues."

The man flushed, and his scowl melted into a hearty smile. "Thank you, ma'am," he said. "It's a long time since anyone's given me a flower."

He started the car and with a tug of new life at his heart watched Mrs. Pepper's retreating little figure. "She got me just in time," he thought. "Another minute and I'd have let fly at that woman and then it would have been all up with me—one more complaint at the office and out I'd go."

Mrs. Pepper trotted down to the big church that she had come so far to attend. She was little and inconspicuous among the crowd in the vestibule, but she stood smiling with childlike content in her blue eyes until some one smiled back and led her to a seat well up toward the front in a pew with an elegantly dressed woman. Mrs. Pepper smiled at her as she sat down; she recognized her as the woman in the big automobile that had passed the electric car, and she felt as if she had met an old friend.

Mrs. Ashton did not return the greeting, but Mrs. Pepper, not realizing in the least that she had been snubbed, settled herself happily to enjoy the service.

She missed something as it went on. The chancel was wonderfully dressed with flowers; the soft breeze came in through the open windows; the choir sang hallelujahs—but the clergyman's voice was toneless as he read and prayed.

Since Friday he had thrilled with the simplicity and wonder and inspiration of Easter; eagerly he had written his sermon, and eagerly he had prepared his plea for an offering that should provide summer vacations for all the needy mothers and babies in the city. And when he had come to church and looked out over his congregation, the inspiration dropped out of the

service. He suddenly shrank from preaching to the worldly, unsympathetic faces before him the sermon that he had written with fast-beating heart. And when he gave his notices he left out entirely the plea for the mothers' vacations.

As he went into the pulpit for the sermon he looked down into Mrs.

Pepper's blue eyes, smiling faith and confidence and childlike joy. Straightway in the minister's heart confidence and faith and joy leaped again. He knew that at least one would understand his message.

Mrs. Pepper drank it in breathlessly, while the congregation rustled round her, shaken by the discovery that they possessed souls.

As the minister ended his sermon he paused, and then asked for an Easter offering for the mothers and babies of the city. The congregation pondered doubtfully—it was a little irregular; but Mrs. Pepper had no doubts. She opened her purse to put her dime into the contribution plate. Mrs. Ashton, looking into the purse, saw the one quarter and the one dime. She saw the fingers fumble for the dime and then close resolutely round the quarter.

"They need all I can give," Mrs. Pepper thought, "and I'll walk the last fare; ten cents'll take me most home."

She took out the quarter and closed her purse. Mrs. Ashton understood. With a slight flush she reopened her own mesh bag, thrust back the five-dollar bill that she had taken out and groped down to the bottom for the bill that had "100" printed in its corners. It fell into the plate on top of Mrs. Pepper's quarter.

Mrs. Pepper gasped. "Oh, how wonderful!" she whispered to herself. "Just to think of being able to do that! My quarter won't give half a baby half a day, and hers will keep ten babies five weeks. It does make me most wish I could do something that really counted; but if I can't, I'm glad I can see it done."

Mrs. Ashton's bill preached its way down the aisle, until it was covered by fluttering notes of all denominations. The plates were put back into the minister's hands, and his eyes were misty as he spoke the few words of prayer. There was no doubt now about the mothers' vacations.

Mrs. Pepper was waiting for him as he came down from the chancel. "I can't go away without thanking you for that beautiful sermon," she said.

"The sermon you preached," he said. "Do

you suppose you could spare me one of your daffodils? I'd like to wear it to-day."

Mrs. Pepper flushed with pleasure, picked out the best and gave it to him before he was swept away by the crowd of his own parishioners. She went down the aisle puzzling over his words.

"How funny! He said 'the sermon I preached'!" she exclaimed, laughing to herself. "How mixed up he did get! Now I guess getting through all this crowd I'll miss my trolley."

As she reached the door the electric car was just passing out of sight; the next one would not go for forty minutes. Mrs. Pepper settled herself to patience, while the crowd slowly dispersed. At the other side of the vestibule Mrs. Ashton was waiting for her car. Mrs. Pepper smiled at her. This time Mrs. Ashton smiled faintly in return.

"Are you expecting some one?"

"I've missed my trolley; but it's only forty minutes before another comes."

"Forty minutes! That's an age. If you will come with me, we shall probably

overtake your trolley. I don't know why Edwards is so late."

"I never rode in an automobile," said Mrs. Pepper, laughing. "It's

real good of you. Now I'll get home in time for dinner. Mrs. Horn and me this morning were saying we got a little tired of corned beef for Sunday all the year,—even Easter,—but when I lost my trolley, corned beef seemed as if it would taste pretty good, after all. You see, at the Home, if we aren't there by one, we miss our dinner."

For twenty minutes Mrs. Pepper chattered on while they waited for the car, and Mrs. Ashton listened with an interest that amused her. She learned that her guest was Mrs. Pepper and that her roommate was Mrs. Horn. She heard what fun it would be to walk into people's houses and see how they looked, so that you could pretend the Home was furnished like that; she discovered that, if you pretended that corned beef was roast duck, it really tasted like it, and that, if Mrs. Pepper were not a person, she should like to be a tree, because its roots were so deep and its head was in the heavens.

Then, just when Mrs. Ashton awoke to the fact that her car was long overdue, it slid round the corner and drew up before the church door. Mrs. Pepper, lingering politely behind, did not hear the cutting words of reproach that fell from Mrs. Ashton's lips. The chauffeur flushed hotly, but Mrs. Ashton gave him no chance to explain his delay.

"I'm afraid we shan't overtake your car now," Mrs. Ashton said, as she put Mrs. Pepper into the automobile, "but I'll take you home."

"Oh, don't!" protested Mrs. Pepper. "It'll be all out of your way. And I ain't a mite hungry. I don't need any dinner on a day when I can ride in an automobile. It's such a wonderful Easter!"

Looking at the little woman who had such great capacity for enjoyment, Mrs. Ashton pondered the difference in their circumstances and their gratitude. A softer feeling stirred her suddenly. She realized that it was again Easter morning as it used to be before life had died for her.

"I'll tell you what we'll do," she said, with a little unexpected laugh. "I'll take you home with me for dinner. I actually am going to have roast duck. I'll telephone the Home and send you back in the afternoon."

"It's a real adventure!" breathed Mrs. Pepper.

"I shall want you at four, Edwards, to take Mrs. Pepper home," Mrs. Ashton said as she left the car.

Edwards touched his cap. He was still smarting under Mrs. Ashton's sharp, unjust words. He had used his best efforts to repair a sudden break and had made the delay as short as possible, and had received only blame.

Mrs. Pepper followed Mrs. Ashton into the

YOUNG Mr. Davis laid down his newspaper and glanced apprehensively across the breakfast table at his wife's costume. Her hair was neatly and becomingly arranged, but even to the dull, masculine eye her gingham dress was decidedly "out of style." Mr. Davis had learned to associate such callous indifference to fashion on his wife's part only with some violent, domestic cataclysm.

"Hello, Clarissa! What's going on this morning? I thought you cleaned the attic and hoed out the furnace only last week."

"Horace," his wife answered solemnly, "I am going to dye to-day."

Mr. Davis's round face paled a little; then he caught the twinkle in her eye, and rallied.

"Huh! Not in that dress. You can't scare me," he declared. "If you felt that anything like that were going to happen—with all these stylish neighbors round us—you'd have on that Georgy crape thing of yours and a tall, white lily clasped in your left hand instead of that roll. Whatever or whomever you are going to dye, Clarissa, don't do it!" he pleaded. "Let Schucks do it. I pass their sign every time I go downtown. 'Other dyers do not amount to Schucks,' and it is such a pretty green and yellow sign that I have always wanted to try him. Can't Schucks do your dyeing for you, Clarissa?"

Mrs. Davis shook her head. "And waste three packages of dark-blue dye—ten cents apiece or three for a quarter? I should say not!"

Mr. Davis held up a warning finger. "Clarissa, when will you learn that it doesn't pay to eat a spoiled ten-cent watermelon to save it, and then call in the doctor at three dollars a visit? Remember the tamales you bought when we first came to California. You insisted on getting three because they were three for a quarter. You took a bite, I took a bite—and neither of us ever took another bite of those tamales."

Mrs. Davis rose from the table with great dignity. "I have affairs of moment to attend to to-day. I cannot longer listen to your childish prattle."

"Be sure to think up something nice for us to do this afternoon, Clare," Horace said, as he kissed her good-by at the front door. "You know I have a half holiday. How would a picnic do, with some of your nice potato salad?"

But evidently his wife's mind was already intent on her day of dyeing, for without answering she thrust him out of the door and hurried to her kitchen.

In the kitchen he found her when he returned home at one o'clock. The room was permeated with a strange, pungent odor, and Clarissa stood above a steaming wash boiler; with a small lath and a broom handle she was alternately lifting and prodding a furry, seething mass.

"What in the world—" began Mr. Davis.

"Don't stand there talking all day, Horace Davis, but come help at the obsequies. Take a stick and help me steer this into the dish pan. Don't touch it! There, your fingers will be all black! I told you not to. Of course it's hot—that's a striking peculiarity of boiling water. It's my blue chinchilla auto coat that this California sun was turning pink. It has no lining—so I'm sure—it will—turn out—well."

Her words came disjointedly, jerkily, but unceasingly, for they were designed to head off any verbal resistance on the part of Mr. Davis; but indeed he experienced such surprise at

house, and discovered beauty and luxury that were beyond her fondest dreams. She took it all in with bright, eager eyes; henceforth she should have no difficulty in furnishing her castles in Spain.

The soup and the roast duck and the salad were delicious. Mrs. Pepper laughed softly, and the maid, who was passing her the cheese, looked at her in wonder.

"Things do taste a little better real than when you pretend them," Mrs. Pepper said to her hostess. "I'll have so many new things now to tell stories about I shan't need to use the old ones. Some of the old ones, though, I never get tired of—like my mother. I often play I'm back with her. We were very fond of each other always; it's a comfort remembering you've made people happy, isn't it? I go over and over those days, and I'm sorry for all I didn't do for my mother and glad for all I did. You always are glad—afterwards."

The maid carried away the salad plates, thinking of a letter upstairs full of a mother's pining for a sight of her daughter's face. And the girl meant to have a gay vacation this year, and not to go home at all.

When the ice cream was served and Mrs. Pepper had taken a piece of cake, she laid it down, with a sober look.

"It makes me think of Mrs. Horn," she said. "I'd clean forgotten her. Here I sit eating all these good things and she with the same old corned beef and bread pudding. Do you think your cook would mind if I didn't eat my cake and took it to Mrs. Horn?"

"She shall have some, and cold duck, too,"

THE DAY CLARISSA DYED

By Florence V. Mead

being suddenly raised to the position of chief helper that he scarcely opened his lips until he was hoisting the unwieldy, flapping garment to the clothesline in the back yard.

"The neighbors will think that we have skinned a black sheep," he remarked.

Clarissa giggled. "It does look like it! Wouldn't it be fun to carry out the idea and ask the Carrs and Harpers in for a lamb roast to-morrow night? Only they will have to wear dark clothes for fear the chairs will rub off."

Mr. Davis stopped short in his progress toward the house and looked at Clarissa suspiciously. "What have you—"

"They're fine, Horace, simply fine!" she interrupted hastily. "You know the man at Barker's told me there wasn't any possible

fine. You're a genius. And now what are we going to do this afternoon?"

The anxious look in Clarissa's face had given way to one of serene satisfaction, which was in turn replaced by a wheedling expression. "You know, Horace, how dreadfully that blue Brussels rug in the guest room is faded—a regular dirty white. I really thought we'd have to buy a new one, but it occurred to me that, if you'd clean that squirter thing that you use to spray the orange trees and fill it with blue dye, we could tuck old newspapers all round the sides of the room, and then you could spray the rug a yard at a time, and I'd put on my rubber gloves and take a small scrubbing brush and rub it in. I'd add a bit of green to make it a lovely shade of Gobelin blue."

DRAWN BY R. M. BRINKERHOFF

FIVE MINUTES LATER HE REAPPEARED, STILL FULLY DRESSED, AND SAT DOWN GLOOMILY UPON THE BEACH

way to restore the color to those leather seats that this California sun had faded out, but I just couldn't give it up; so I gave them a good dose of navy-blue dye—rubbed it on with a sponge—of course I didn't 'boil them,' Horace—and then I applied a coat of floor wax, and they're improved a hundred per cent.

"A hundred per cent," she repeated nervously, as her husband silently inspected a rejuvenated chair and gingerly seated himself on the shining leather.

"No, I shouldn't ask the neighbors to dinner," he said. "I'd close my eyes to say grace, and when I'd open them again I'd find that every last little Carr had slid off his slippery seat and come to a stop beneath the tablecloth. It would be worse than one of those slippery napkins that you have to crawl after on your hands and knees under the table.

Really, though, Clare, these chairs do look

Clarissa stopped, quite out of breath. Her husband gasped and looked at her stonily. "Oh, let's send for Schucks!" he said.

"No," replied Clarissa firmly, "we can't afford it. It is a perfectly feasible plan. Before we were married you said you'd die for me, and now you won't even dye with me."

"But this is such a glorious day to be outdoors!" protested Mr. Davis.

"Well," sighed Clarissa, with apparent resignation, "I suppose I'll have to give it up. It would take two hours, of course, but I thought that after that we should have plenty of time for a dip in the ocean and a supper on the beach by moonlight with some sponge cake and that potato salad that's in the refrigerator."

There was a deathlike silence, and Clarissa fired her last gun. "A new rug costs exactly eighty-five dollars," she murmured.

"Oh, well! I ought to have known enough

to give in at once," Horace said, with a laugh. "Dye everything in the house except me, if you wish, Clare. Nothing can make or keep me blue, though, so long as I've got you."

Clarissa smiled sweetly.

"Then you won't mind that

I dyed all those white socks of yours, Horace? I looked all round over the house for something to dye,—it seems a pity to waste any of the dye,—and I came across your stockings. You know you never would wear them because they were white, and they are such a lovely quality! They came out a little light in color because they are cotton and the dye really was for wool, but I laid out a pair on the bed for you to wear to the beach, and I am sure you will be pleased with them."

"D'you know," remarked Mr. Davis jovially several hours later to Mr. Carr and Mr. Harper, as they walked toward the beach, "my wife is the most economical and ingenious person I ever saw! I appreciate it more every day. I helped her dye a large rug this afternoon, and by George! it looks as fine as an eighty-five-dollar rug straight from Barker's! She dyed these stockings, too. They didn't look quite so bright at home in a dark room," he added somewhat ruefully, as he turned his foot to one side.

Fitting his key into the bathhouse lock, Mr. Davis opened the door and disappeared with a grin.

Five minutes later he reappeared, still fully dressed, and sat down gloomily upon the beach.

"Have concluded I don't want to go in to-day. Water's too cold," he replied to all wondering inquirers, and with that they were forced to rest content. To their pleadings he remained obdurate, and he even subsided into a morose silence, from which the moonlight supper and the sponge cake failed to rouse him.

But once at home, he roused himself into action. He feverishly unlaced his shoes, pulled off his stockings, and thrust two bright, Dutch blue feet before the astonished eyes of his wife.

"Why didn't I want to go in swimming?" he asked, with caustic emphasis. "Why couldn't I enjoy that potato salad? Look! D'you suppose I wanted to be the laughing stock of that beach? Do you suppose I could think of anything else except how long it takes blue dye to wear off?"

"It—it—will all come off if you boil them," faltered Clarissa.

"Boil them!" cried Mr. Davis. "It's near enough to tragedy already. Clarissa," he said, and his voice was low and full of feeling, "this has got to stop right here! Not another thing in this house is going to be dyed a dark, deep, rich navy blue, even if we do waste two cents' worth of dye. I told you to stop your nefarious operations when you reached me, but you didn't, and now this abominable fluid is going to lick the dust!"

Marching into the kitchen, he seized the wash boiler; silently Clarissa opened the door and meekly she led the way out to the moonlight.

"Pour it right here."

He obeyed mechanically and then stiffened with sudden suspicion.

"Why?"

"Because," said Clarissa in honeyed tones, "this is my forget-me-not bed, and this California sun is so strong it fades even fl—" But the kitchen door slammed, and Clarissa, giggling gently, crept into the house, stole a look of pride at the dining-room chairs and the guest-room rug, and rejoiced that she had that day not dyed in vain.

said Mrs. Ashton, with a laugh; "so you needn't hurt the cook's feelings."

"You're so generous!" sighed Mrs. Pepper. "We don't get rich cake in the Home, and Mrs. Horn has a real sweet tooth. She don't get so much pleasure out of life as I do, for she takes things hard. She frets. The matron does speak out pretty sharp sometimes, but of course she gets tired, having forty old ladies to look after. That's the worst of it—we're all old; if there could only be some children among us!"

She ate her ice cream in silence. They went out to the library for coffee. As Mrs. Pepper took her cup she looked up with an apologetic little laugh.

"It always makes me quiet when I think about children. I love them so! I never had but one of my own,—she died when she was seven,—but I think about her just as if she were here; sometimes she's grown up and sometimes she's a baby."

Mrs. Ashton drew a sharp breath. Since her baby had left her she never had spoken of her, but little Mrs. Pepper would surely understand. She took a photograph from her desk.

"That is my baby," she said softly. "She lived to be five."

"Oh, the darling! The darling!" murmured Mrs. Pepper. Then she glanced round the big room. "Houses are empty without children. There ought to be young feet in every home, and young voices."

"It's not fair," Mrs. Ashton said fiercely. "My brother has eight children and no money to bring them up on, and I lose my only one!"

"I used to feel that way," Mrs. Pepper agreed, "but now I'm glad other folks can

have 'em if I can't. When I see a pretty little one I make believe it's mine; there's so many children needing mothers and so many mothers needing children; but they wouldn't let me have one at the Home even if I could afford to have it. Best I can do is to keep some peppermints always in my pocket and give one to every child I can. It's in a woman's heart to love children and do all she can for them, isn't it?"

"Would you care to go over the house?" Mrs. Ashton asked abruptly.

"I'd love to," Mrs. Pepper answered, and her happy tongue pattered as fast as her happy feet upstairs and down. "What a place for young folks!" she murmured as she went.

They came back to the library as the clock struck four. Mrs. Ashton rang for the maid to bring Mrs. Pepper's things and went herself to ring for the car.

"Thank you, my dear," Mrs. Pepper said to the girl. "I'd like to give you one of my Easter flowers."

"They're the ones my mother loves best," the maid answered, with a sudden warm surge of love and longing for her mother through her frivolous little heart. "I have a vacation next month and I'm going to see her."

"Could you put me some water in that little vase?" Mrs. Pepper whispered.

She placed the vase before the baby's picture on the desk and set in it one of her yellow daffodils. Then, with the two left her, she went into the hall, where Mrs. Ashton was waiting—with a little book in her hand.

"Do you like poetry?" she asked.

"I love it," Mrs. Pepper answered promptly.

"Do you know these lines of Browning's? I've been thinking about them all day:

"The year's at the spring,
And day's at the morn;
Morning's at seven;
The hillsides dew-pearled;
The lark's on the wing;
The snail's on the thorn;
God's in his heaven—
All's right with the world!"

"Ain't it beautiful?" breathed Mrs. Pepper. "Those last two lines I can remember:

"God's in his heaven—
All's right with the world!"

I feel just like that always."

"I'm sure you do," Mrs. Ashton answered. "I see Edwards has the runabout, so you must wear this cloak; and here's Mrs. Horn's box. Some day you must come again and bring her."

"I never can thank you for all you've done for me," Mrs. Pepper faltered. Then, standing on her highest tiptoe, she kissed Margaret Ashton's cheek.

With misty eyes, Mrs. Ashton turned back into the library. On the desk shone the daffodil before the baby's picture. Suddenly the mother dropped into the chair and with her head in her arms shed the tears that start life springing again in a cold heart. Presently she reached for a sheet of paper. She wrote rapidly:

Dear Martin, I need something young in this big house. Can't you spare me the girl who is longing to study music and let me educate her? And if she will be homesick alone, send me, too, the boy who wants to be a landscape architect. I'll take good care of them, and I need them.

Margaret.

Mrs. Pepper, wrapped in Mrs. Ashton's cloak, snuggled down into her corner and smiled

at the chauffeur; but his young face was reckless and hard. The sting Mrs. Ashton had planted had rankled into sullenness, and in that mood he had quarreled with pretty Susie Murphy. Their engagement was broken now, and torn into tatters was the vision of their home-keeping in Mrs. Ashton's lodge. He would throw up his position and go West and forget Susie. It was all ended.

"I'm obliged to you for taking me home," Mrs. Pepper said. "I hope it isn't using up too much of your time. I'd like you to have one of my flowers. Hasn't it been a lovely Easter?"

"I'm glad you think so," he said gruffly; but he picked up the daffodil, which Mrs. Pepper had laid in the crook of his arm, and stuck it in his buttonhole. Somehow it made him think of Susie's bright, laughing face.

"Don't it become you!" Mrs. Pepper exclaimed in delight. "I shouldn't wonder but there's some girl thinks you're just about right. You'll be good to her, too; you're that kind. You ain't married?"

"No, nor ever likely to be—now."

Mrs. Pepper laughed shrewdly. "Oh, you young folks! You've been quarreling with her, have you? Well, lovers' quarrels don't count except as excuses for making up. She's crying her eyes out now likely, while you look as glum as an owl. You go home to her and tell her it's Easter and there's only life and love in the world, and you're sorry you forgot it. She'll have her arms round your neck before you can say the word. Women are like that."

Edwards looked from the yellow flower in his buttonhole to the little lady with the blue eyes. Something hard and heavy in him suddenly turned over and sent bubbling up again all the hope and love and loyalty that were underneath. Yes, women were like that. He straightened at his wheel and laughed. It was easy now to explain the delay of the morning, and in telling his story the last bit of soreness melted.

"Thank you so much," Mrs. Pepper said, as she got down. "It's been such a lovely Easter!"

"And may you have plenty more," Edwards said, as he touched his cap and drove away as fast as the car could carry him to Susie.

Mrs. Pepper pattered up the steps and through the door of the Home. The matron stood in the hall. Mrs. Pepper passed her, smiling, and then turned and went back.

"I had a bunch of Easter daffies this morning," she said. "There's only this one left. I'd like you to have it. We appreciate all you do for us."

The matron's thin lips relaxed and her eyes looked a little less tired. "I'd almost forgot it was Easter," she said, as she took the flower and went on down to the basement. She had meant to have prunes for supper, but as she sniffed the blossom she decided it might be a good night for the best quince preserves.

Mrs. Pepper cautiously opened her door. She was not sure of Mrs. Horn's mood after being left alone so long.

"Well, you did make a day of it," was Mrs. Horn's welcome.

"And such a day!" exclaimed Mrs. Pepper. "Everyone was so good to me! What do you think I've got for you? Some roast duck and citron cake!"

"Humph!" grunted Mrs. Horn. "You do remember your friends, don't you?"

"Mrs. Ashton sent them to you. She was so good to me. Everyone was. It makes me feel bad to think I'm so useless in such a lovely world. Mrs. Ashton put a hundred dollars in the plate. What do you think of that? I sat right alongside of her and saw her do it."

"Where be all your flowers?" demanded Mrs. Horn. "I thought you was going to bring them home to look at all the week."

"I can look at yours," Mrs. Pepper answered. "One's just as good as a lot."

Mrs. Horn munched a piece of cake. "Good cake. Long time since I tasted any like that. I've been thinking about you to-day, Mis' Pepper. I suppose you won't get a new crown just for cheering up one ugly old woman like me, but at least you did do as much as that. I've been feeling to-day while I looked at that flower that maybe Easter does mean something. Maybe there's a God somewhere, after all, who cares that there was a resurrection."

"Flowers are a comfort," Mrs. Pepper answered. "They're like a resurrection themselves—all that beauty coming out of a little black seed. And I'm glad you found out how Easter feels again, Mrs. Horn; it warms you up so. Mrs. Ashton told me some poetry to-day that was just like Easter. I can remember two lines of it:

"God's in his heaven—
All's right with the world!"

"It sounds pretty!" grunted Mrs. Horn. "It's real comforting to me," sighed Mrs. Pepper happily, "for it makes me feel that, though God knows I can't do anything to help along, He can take care of things all right, and just spare me room to be happy in."

REUBEN'S PORTION

By Joslyn Gray

In Ten Chapters Chapter Eight

THE experiment tried that year with the seniors at the academy, although successful with a student like Reuben Cartwright, was not so well adapted to most of the class, and proved singularly unsuited to a pupil of the type of Mabel Graham. It was intended to introduce the student to research and original work, but in her case it served an entirely different purpose.

In mathematics the class worked out their own rules, principles and formulae. In their other courses the work consisted of lectures and recitations in the ratio of three lectures to every two recitations, with outside readings from history and reference books. The class were expected to take rough notes at the lectures, and later at home to transcribe them neatly into the notebooks, making each topic a subject of thought as they expanded it.

Of course the thoughtful Reuben delighted in the work. Mabel Graham liked it, too, but for another reason. Not only was her writing good, but she wrote remarkably fast. Provided with a fountain pen,—the only one in Farleigh except Mr. Phillips's,—she wrote the lectures directly in her book as they were delivered, almost word for word. And even so, her notebook was among the neatest in the class; but because she was compelled to write so rapidly, the words meant little or nothing to her. By glancing over the pages for ten or fifteen minutes before the class met, however, she could prepare herself for a perfect recitation. To the others Mabel seemed to be getting over her senior year—and toward the prize—by means of that royal road to learning that they had been told did not exist.

Consequently, there was more talk than ever about her in South Hollow and Farleigh; people invariably spoke of her as that fat Graham girl. When rumors began to circulate that Watson Graham had met with serious losses in his Western mining investments, people declared that Wat had started the stories himself to quiet the gossip about a rich man's daughter's going into a school where she did not belong, to carry away the prize from the children of hard-working people.

Mabel apparently did not mind the talk, which she must have known about; but she became aware automatically of her slipshod method of study by failing in a recitation one morning of the early winter. She had counted on looking over her notes in a fifteen-minute period that she had free, but when she reached school she found that she had left her book at home. She had not looked at it since she had taken down at the lecture the words that had been to her merely so many sounds; and it was strictly forbidden to borrow from any classmate. The hurt to her pride through her utter failure in class that morning was almost as great as her dismay at the thought of

getting zero for a mark when recitations were reckoned as three quarters and notes one quarter on the record of the month.

"You can see what she's after," Rusty remarked that night at home. "She doesn't care one mite for the study itself; it might as well be Choctaw. All she's after is marks."

"It's a perfect disgrace," said her father. "I'm glad that my daughter studies her lessons for the love of the learning."

Rusty laughed. "O father, it's not so bad as that! No one except Reuben is so perfect as that, but I certainly take some interest."

On Saturday of that week the boys and girls from the academy were skating on a pond near the road that led to the Mudge place. Late in the afternoon Rusty and Anna stood with a little group that had gathered about the bonfire at the edge of the pond. It was supper time for all of them, yet they lingered.

When Mabel Graham left, some one remarked that she wore her purple tam-o'-shanter as if it were a lamp mat. Everyone laughed except Reuben, who perhaps did not hear. He had skated twice with Mabel. Rusty knew that he had done so because no one else had asked her. She also knew, however, that he had skated several times with Anna because he wanted to. He had not ventured to ask Rusty to skate, and she knew that she would have refused him if he had. They were utterly estranged, and all without the semblance of a quarrel.

"I hope Mabel won't wear her purple tam when she walks up to take the prize out of Col. Wadsworth's hands at graduation," remarked Margaret Hatch.

Rusty, in a very becoming golden-brown tam-o'-shanter and a woolen jacket, made a face.

"It's a disgrace to the academy if she gets it!" she declared. "That girl's just as ignorant as she can be. She doesn't really know anything we've had this year. She's only got it in her notebook. Suppose anyone didn't know how to spell anything, but carried a dictionary round in their pocket—wouldn't you call them ignorant?"

The boys laughed. "Sure, Rusty!" they cried.

"Just suppose she should lose her precious notebook?" Rusty went on. "I know what I'd like to do. I'd like to hide it, and then where would she be? It would be only fair, you know, for she doesn't use it at all as we were told to do."

Later, when Mabel's notebook did disappear, everyone who had been in that group thought of Rusty's remarks—yet quite without suspicion. It seemed to them rather that the justice that Rusty had proclaimed had interfered.

The catastrophe fell just before the general review at the close of the winter term. Instead of written examinations, the senior class were

to have two weeks of oral review covering all the previous work of the year. They were to be very carefully marked in each recitation, and the results were to count equally with their monthly records toward the scholarship.

Mabel Graham was the one member in the class who most needed to "cram." The others had gained a good deal through the process of copying their notes, and to them review meant only review. To Mabel, on the contrary, it meant study of unfamiliar material. However, her notebook was the most complete in the class and her memory absolutely to be trusted when once it had grasped facts.

On the Thursday evening that preceded the fortnight of review Margaret Hatch gave a party, to which all of the class and several other young people were invited. It was not the custom at Farleigh to have parties on any other night than Friday; and in other circumstances the teachers and parents would have disapproved of a party on any night so near the examination period, but the circumstances were unique. Margaret's birthday fell on February 23, and since she remembered only two previous anniversaries no one had the heart to object to her celebrating this one.

When school closed that afternoon the building cleared with surprising speed. There had been three very cold nights and the pond was again frozen. Review or no review, no one intended to lose the last chance of the season for good skating.

Rusty and Mabel Graham were left alone in the schoolroom.

"Going skating, Mabel?" Rusty asked.

"No, I'm not."

"H'm! Going to cram, I suppose?"

"Oh, no, I can easily do what I need on Saturday!" replied Mabel loftily. "I don't believe I'll even take my book home. I want to go right home to try on my new evening gown for to-night. Ma thought as long as I was probably going to college I might as well have it new for Margaret's party. I told her you got one a year ago."

"I'm glad you're so sure of going to college," Rusty remarked.

"Well, of course if anything should happen, my pa would send me just the same."

"I hear your father's been losing money," said Rusty, knowing well that it was not her affair.

"My father can lose considerable money, Rusty Miller, and yet be rich in comparison with some folks. I guess when you see my dress to-night you'll make up your mind that pa isn't so very poor yet."

Rusty thought that she saw a curious light in Mabel's eyes as she asked, "Going to wear your yellow messaline to-night, Rusty?"

Rusty was about to quibble by saying that she had not had it made yet, when suddenly the explanation of Mabel's strange look came to her.

"I haven't got it," she said brusquely. "I took it back."

It had come to her that Mabel had bought that very silk and was to wear it that night. Taking up her books, she rushed from the room.

"Reuben coming to-night?" Mabel called out.

"I don't know."

"Ask your sister," Mabel advised her, and Rusty just caught the taunt as she banged the door behind her.

The thought of the yellow silk went with Rusty and spoiled the skating for her. She tried to steel herself to be able to see Mabel wearing it, but it was a struggle. She would far rather stay at home, she said to herself, but she would not do that. Mabel had a right to buy it, and Rusty was glad it was sold, only—at the thought of the soft color and gleaming folds her heart failed her. After all, she almost wished she had kept it. She could not have been any more unhappy than she had been all that year because of being estranged from Reuben.

It occurred to her that Reuben might have told Mabel about the silk, but she dismissed that thought as unworthy. Reuben would not do anything of that sort. He might be so attracted by a new friend as to desert an old one, but he would not be hateful like that.

As it chanced, Rusty was indeed fortunate in being forewarned against the shock of seeing the opal silk that evening. But it was not Mabel Graham who wore it. Mabel was resplendent in a stiff, pale-green taffeta with lace ruffles and knots of deep pink velvet. It was Anna that wore the yellow messaline.

Rusty got through that party somehow and went home, still raging within. Fortunately, everyone was in bed, and so she could take immediate refuge in her room.

Now she did not hesitate to accuse Reuben. He had told Anna of the beautiful silk—most likely he had urged her to get it. He thought it better suited to yellow hair than to red. He did not criticize Anna's spending the money. Oh, no! He had taken it for granted that it would be wicked for Rusty, but because Anna was so pretty there was no question of wrong or right.

Rusty had long since been completely reconciled to her sister, but now in her mind she accused her of deceitfulness. Why had Anna not said a word about the dress to anyone?

FORTUNATELY,
EVERYONE WAS
IN BED

Probably Reuben had told her not to, but that was no excuse. If she was ashamed to tell the folks at home about it, she should have been ashamed to wear it.

As a matter of fact, Reuben, who did not attend the party, and who saw Anna only in her cloak, had no idea what dress she wore, and probably would not have recognized the material in any event. Neither had Anna any sense of guilt. She had seen the silk one day when she went over to Wenham with Miss Penny to do some shopping, and had been quite as enthusiastic about it as Rusty herself. Reaching home that night, she had found the invitation to Margaret Hatch's leap-year party. The next morning she sought out her father. She found him in the basement of the grammar school.

"O pa, I'm invited to a party—Margaret Hatch's—and I want a new dress just awfully! I could make it up myself, if I only had the silk."

"Silk?" he repeated. "How much would it cost, Anna?"

"Thirteen fifty, pa."

That seemed a large sum to Seth Miller. But, after all, there had been nearly six years when he had not done anything for Anna, and she had been such a good girl since her return and was such a joy to all of them. She liked a good time even better than Rusty did, yet she had worked faithfully at Miss Penny's so that her sister might have more time for study. She was older than the girls of Rusty's class, yet she had agreed to enter the beginning class at the academy next fall, and was studying, under Reuben's tuition, to take the examinations. Truly, she deserved the dress.

By the strangest chance in the world, he happened to have exactly that amount to a penny put away—a secret fund known to no one except himself. Some time in the fall Rusty had handed him thirteen dollars and fifty cents, —to think of even the number of cents being exactly the same!—which had been refunded on some things she had bought at Wenham at the time they were moving into the new house; and he had purposely put it aside for some emergency. He had what little comforts he wanted, of course, but Rusty kept the purse strings rather tightly drawn, for all that, and he did not mind having a secret hoard.

Neither did he mind parting with it. He counted out the money to Anna, quite as delighted as she, kissed her and bade her not to tell. Anna hugged him ecstatically and declared that no one should know of the dress until she wore it to the party.

It was only at the last moment that Reuben had decided not to go. There was no fun for him in social affairs when he could not be with Rusty. So he took Anna to the door and left her there. On his way back he dropped in at the Millers'.

Mrs. Miller was upstairs with the boys, who were going to bed. Seth sat in his armchair, clad in a comfortable house jacket, with his feet, in thick woolen stockings, on a chair before him.

"Well, the skating's spoiled for this year," Reuben remarked. "Too bad, when there's Friday night and Saturday just ahead."

"What's the matter?" Seth inquired.

"It's snowing—beginning slow and steady, small flakes, like the real thing."

"You don't say!" murmured Miller comfortably. But an instant later he uttered an impatient "By George!"

"There! That's just my luck, Reuben," he went on to explain. "I went and opened a window in the big schoolroom at the academy, when I was sweeping, and never put it down. The snow'll be all over them stuffed animals within an hour. And me in my stocking feet. I ain't been out of my boots an hour."

"Sit still. Give me your keys and I'll run over and shut it," said Reuben. "It'll only take a minute, and I'll be right back."

Miller demurred, but Reuben insisted, found a lantern and was off. Returning in a short time, he finished his call and went home. There was no need to call for Anna, who was very popular; one of the boys would bring her home.

It snowed all that night and was still snowing when school began the next morning. But there was no talk at recess of the lost skating, or even of the party; and Rusty forgot all about the silk dress. For excitement was tense throughout the school, and there was only one subject on the minds and lips of all. Mabel Graham's notebook was missing!

She declared that she had put it carefully into her desk the last thing before she had left school yesterday. Some one must have removed it between that time and half past eight this morning, when she had looked for it in vain.

TO BE CONTINUED.

DRAWN BY F. B. MASTERS

PHIL SHOUTED TO JACK AND THE CAPTAIN TO MAKE FAST

CAR NO. 77,133

By H.I. Cleveland

SHINING in her new coat of red paint, car No. 77,133 stood coupled with a string of other newly painted freight cars in the yards of the construction shops. As she rolled away on her first long journey, seeking a load of seventy thousand pounds, the foreman, who was not much given as a rule to paying compliments, said heartily, "That's a whale." The enthusiastic cheers of the shopmen echoed his words.

In height and length, and in the width of her side doors, her measurements exceeded those of ordinary furniture cars. Honest materials and workmanship had gone into her construction. Her frame was steel, covered with the best-seasoned timber that Michigan could offer. Springs, brake beams, couplings and trucks had been selected with the keenest consideration for solidity. She was the pride of her builders.

From the start No. 77,133 had varied experiences. Up on the crest of the Raton range, midway between Colorado and New Mexico, a rail turned below her forward trucks. Loaded down to her limit with salt, No. 77,133 broke the coupling of the car ahead. Then the power of her size and load held every car behind until the wrecking crew put matters right again.

A little later in the Rockies she slid down from Hell Gate to Glenwood, and her weight gave to the squealing brakes of the runaway train a purchase on the flange that saved a dash into the rocks of the Frying Pan River.

One morning, after two years of service on the rail in the West, No. 77,133 was rolled on the deck of Algonquin One, a winter ferryboat lying in Milwaukee Harbor.

Algonquin One, breaker of ice between Milwaukee and Ludington, soused her prow in the harbor drift ice as the weight of the car struck her. No. 77,133 was loaded with nails—thirty-five tons of nails and their kegs. As it happened, only two other freight cars were to cross the lake that day—one with a light load of flour and the other filled with canned meats. The two cars were pygmies compared to the majestic frame of No. 77,133.

Capt. Suddy, on the lower deck of Algonquin One, looked anxiously at the towering size of No. 77,133. Algonquin One was fairly well ballasted, but the heavier her load the better she would ride the ice; and to-day, besides the enormous furniture car, there were only two other cars for extra weight.

"Lash her down hard!" he ordered. "Make the wheel clamps hold. Don't give that elephant a chance to start. She'd be a little safer," he remarked to the first mate, "if we had a bunch of cars ahead and behind her. Double lash her down, anyway. If she ever got started she wouldn't do a thing!"

After the first mate of Algonquin One had secured the car, he went over the lashings with two of the crew, Jack Smith and Phil Cheever. The first mate declared that the car lashings were strong enough for any blow. Jack and Phil did not agree with him, but when they said so the mate bluntly told them to mind their own business.

Early that season Jack and his comrade, Phil, both students at the Houghton School of Mines, had applied to Capt. Suddy for work. In the narrow cubby of his office in Ludington he had looked them over.

"Where d'ye hail from?"

"Upper peninsula, sir."

"Landlubbers. Ever ship before?"

"No, sir, and wouldn't ship now if we could

help it," Jack had answered. "We had to quit the books this term because of the way a dollar looked to us. We don't lose our standing at college, but we need work. Give us a chance, captain, and we'll prove we're worth our pay. All we want is a show."

Capt. Suddy had hesitated. He needed men—but these were boys, and the work of an ice breaker is brutally hard. However, noticing their wiriness and their alert carriage, and realizing that they knew what was ahead of them, he had ordered them to report for duty that afternoon. In the two months before No. 77,133 came into their lives, he had had ample chance to learn their worth as seamen.

Leaving the first mate still looking at the fastenings of the car, Jack and Phil went above.

"Those lashings won't hold if the ferry gets to pitching," Jack said to his chum. "That car needs a wire hawser. If there isn't a real cable on her, she'll break loose on the first duck of the ferry and turn a somersault."

"I've got bills to make out for the captain," said Phil, "and if you don't think I'd be butting in I'll speak about it. Wire cables beat rope lashings hollow."

"Go ahead and tell the old man."

As he made out the bills, Phil ventured to say to the captain: "Wouldn't wire cables hold that big freight car better than rope? There's a lot of wire in the junk hold."

But at that moment Capt. Suddy was anxiously studying the wind gauge and the barometer; he was much more perturbed over the state of the weather than over the fastenings of No. 77,133. He let the question go unheeded. Phil did not repeat it, and so the subject was dropped.

At noon the growling whistle of Algonquin One announced her departure. With the thermometer at zero she cleared the bar of the Milwaukee River. From the northeast a thirty-mile-an-hour wind beat on her nose. The air was filled with sleet, beneath which surged the water and floe ice of Lake Michigan.

The floe ice, sheet sliding upon sheet, ran twelve to fifteen feet deep. The Algonquin One could usually push it aside by the force of her powerful engines; but sometimes the ice breaker would have to climb the drift and break a passageway through by sheer weight. A gray pall that hung over the lake enshrouded the boat and effectually concealed whatever might be ahead. Above the screaming of the wind rose the wail of the foghorn and the cat-calls of the siren.

Half an hour after leaving her slip, Algonquin One met with her first serious rebuff. She rammed a solid field of drift ice and made no impression upon it. The impact was terrific. Capt. Suddy was thrown sprawling over the rail of his bridge, and the two pilots barely kept their footing by clinging to the wheel. Every stick of wood and rivet of steel in the ferryboat quivered as she bounded backward.

Struggling to his feet, Capt. Suddy leaped to his signal cords and speaking tubes. To the chief engineer he roared: "Back her up and then climb it! Hit it hard!"

Down another tube his voice bellowed:

"Send Smith and Cheever below to watch that furniture car! Those lashings may not hold. Tell 'em to whistle up if she gets loose. Send two or three helpers to the stokers—but—understand—have that car watched!"

Jack and Phil went below just as the ferryboat, under new headway, rammed the ice and then slid up on it. The ice gave under

her weight and the boat ducked downward; her propellers got a new purchase, and she shot up and ahead again. Under the strain of the wrenching, No. 77,133 smashed two of her wheel clamps and half of the lashings that held her.

The prow of the ferryboat rose again, the sea surged heavy beneath her, and in the struggle of steel and steam against ice and storm No. 77,133 got her freedom. She stood on the rails, waiting for the next lurch of the ferry to give her action.

"The hawsers, the wire cables!" Jack shouted to Phil. "Get help and haul 'em out!"

Running down beside the car, he reached a speaking tube.

"Big car loose!" he shouted up to the captain.

"Help needed for the cables in junk hold! Smith and Cheever on lower deck—car loose!"

The engines of the ferry stopped, but they could not check the wild swell of the lake and the increasing power of the wind. Such of the crew as were not in the stokehold came tumbling down to help Jack and Phil get hawsers round the free car, but fast as they moved they were not so quick as the beat of the storm on the ferryboat.

As Jack leaped forward with new clamps to block the wheels of No. 77,133, a swell lifted the great car off the rails. Lunging forward, she crashed into the lighter car of flour, and instantly the air was filled with white dust; then she rolled back, and the next instant the contents of the car of canned meats were flying in every direction. Another lunge carried the furniture car to starboard, snapping stanchions in the way. The deck opened in gaping wounds wherever she touched. A sudden reel of the boat to port brought the car back to the rails, which she twisted into fantastic shapes.

Dodging and ducking, Phil and his helpers hauled the wire cables from the hold, and Jack, keeping a wary eye on the car, shouted to them to wind a line round the trucks and to tie down to anything that would hold. There were plenty of holdfasts if the ferryboat and the car would keep still long enough for the men to make the anchoring wire secure; but at that moment No. 77,133 made another wild leap, the crew fled, and Jack and Phil were left alone with her. She smashed a stairway, pounded new holes in the deck, and threatened to carry away the larboard sidings and to plunge into the lake. If that should happen, she would inflict a wound that would leave the boat open to all the wash of the ice and waves.

"I'll lasso her, Jack!" shouted Phil. "I'll get her on the jump!"

His hands were bleeding from his handling of the rough cable, but as he took a flying leap to avoid a new lurch of the car he grinned at his comrade. Upper-deck supports were flying in every direction. The first mate, coming below, plunged off the broken stairway and fell directly into the pathway of the careening car. That tumble gave him a broken leg. Jack dodged in, got him by the shoulders and dragged him into a safer position. The car kept on its way. The storm was tossing Algonquin One about as if she were a feather.

"I'm going in under, Jack, on the forward trucks, when she settles down again," yelled Phil, "and lash her! You get the slack and wind up on that starboard post."

Capt. Suddy, having left the bridge in charge of the second mate, came down and swung through the gap where the stairway had been just as a new roll of the boat launched the car directly at him. But Phil, who saw the captain's peril, was quicker than the car. He caught the captain round the waist and the two rolled clear of the car as it charged into the laundry and the storage room. Another pitch of the boat brought No. 77,133 to the point from which she had started.

Her timbers were somewhat battered, but the steel of her frame held true and the weight of her cargo gave her the force of an avalanche on every move.

Some memory of baseball and football days at Houghton came back to Phil as he wriggled like an eel under the car, dragging the cable after him; watchful every second for a new tilt and roll, he wound it over and over about the forward trucks. The skin was off his hands, and the flesh stung as if fire had been put to it; but he made his double hitch, and shouted to Jack and the captain to make fast.

They were on the second turn of a double twist about a deck post of steel and wood, when a wave tossed the ferryboat high on its crest, and then dropped her deep into the churning waters. Phil got out from under the car just in time. The cable on the trucks held, but the deck post gave way as if it were cheese. No.

77,133 took another wild flight, smashed into a pile of barrels and crates on the starboard side of the deck, reversed and made for the stern.

Then she sagged to port and rolled between two supports of greater strength than any of those forward, which she had demolished. Seeing the advantage that those two braces offered, Phil plunged under the car and made new hitches with the cable. Jack and the captain took up the slack and made for the supports.

"If the boat'll not roll for a minute, captain," Jack cried, "we've got her!"

Wire cable is not easy to handle. It has a stiffness not known to rope, but once twisted into place it has a "bite" that no rope ever had. There had come a brief lull in the storm, and while it lasted Capt. Suddy and Jack made twist after twist of the cable round the supports. They had scarcely finished when the ferryboat lurched again. The car strained at her fastenings, but the braces held. Capt. Suddy leaped to the speaking tube.

"Give her full steam ahead!" he shouted to the engineer. "Climb everything!"

When he turned back to where the car had

heavily and permanently settled, Phil and Jack were making the last lashings on the rear trucks. Jack's clothes were torn to shreds, his hands were in as bad a condition as Phil's, and on his forehead was an ugly bruise.

No. 77,133 tugged at her bonds, but the cables held and the braces took the strain. Wreckage was all round her, but she had not touched the vitals of Algonquin One.

"We'll get those landlubbers above, down," said Capt. Suddy, "and have her lashed some more. There's plenty of cable, and we'll take no more chances. Say, where's the first mate?"

Jack picked the mate up and carried him to the ruin of the stairway. Phil followed and helped him lift the injured officer to the next deck. When the two boys came up themselves and stood in the full glare of the early lighted night lamp before the captain, he put out a hand to each.

"You needn't worry about Houghton any more," he said, "cause the company'll see you get back there as soon as we've butted into Ludington. You're Al on my log."

Forgetting his dread of the underground, Tom, with his torch in hand, dashed toward the opening that led into the adjoining cavern. The others followed him; but there they found only one patch of the onyx deposit, which Tom said would not be worth quarrying.

Returning to the outer room, they drilled more holes here and there; not once did they reach the bottom of the colored layer.

"What's it worth?" demanded Ellis, who was greatly excited. "Millions?"

"Hardly," Tom answered, with a laugh. "This stuff is so rare that it hasn't any fixed market price; but what I'm thinking of is the station contract. The railway people would be glad to get this marble at any price. What they want is magnificence, regardless of expense. Let's get out of here and talk it over."

It was raining a little as they made their way to the hermit's cave, which seemed very cosy to them that night. The boys were in the highest spirits, but Wilson looked uneasy.

"If this yere stuff is as valuable as you-all say, I reckon you'll have a gang of men a-blastin' up yere right soon."

"And turn you out of this cave?" said Tom, laughing. "Don't worry, Wilson. We'll give you a job here as watchman of the quarry."

"But whom does the land belong to?" asked Ellis suddenly.

It was a disconcerting question.

"I never thought of that!" Tom gasped.

"Never heard of nobody's claimin' it," said Wilson.

Tom hastily got out the big map on which they had carefully kept track of their course. The map showed that they were now on the slope of Deersfoot Mountain. The onyx cave was on the southern side of the mountain, about halfway to the top.

"I'm not sure," said Tom, "but I have a strong impression that this mountain forms part of the big Matthews estate, belonging to the coal operator, you know, who died several years ago."

"Then we're out of it!" said Ellis gloomily.

"No, for the estate is being gradually sold off. Brown & Beatty of Asheville are the trustees, and they offered father ten thousand acres last summer at eight dollars an acre. They said there was good timber there and perhaps stone or minerals, but they were tired of paying taxes on it, and thought it better to sell; but it was so far from the railway that dad didn't buy."

"I'll bet he would now!" Ellis cried. "Why, he could buy the whole side of the mountain for four or five thousand dollars. We'd blast out the mouth of that cave. It wouldn't take long to quarry out that onyx, and we could take it down to the railway on mule back if necessary."

"That's right," said Tom. "You and I and dad'll form a partnership, and there'll be a big plum in it for all of us. I believe I ought to start straight home and see about buying the land. The only trouble is, we haven't nearly got our collection of crystals yet. That's too good a contract to lose, and besides I promised them."

"If you boys is huntin' crystals," Wilson interposed, "I've got some yere. I've hunted crystals right smart myself. Take a look at 'em."

From under a heap of rubbish the outlaw unearthed an old sack of deerskin, from which he poured nearly a peck of shimmering stones of every imaginable color.

"Gracious!" Ellis ejaculated.

"Help yourselves. Take all you want. I reckon they ain't no good to me."

"Where on earth did you find all those?" said Tom, looking in amazement at the stones, which glittered in the yellow candlelight.

"All yereabouts. I uster hunt crystals down in Georgy, and sold a heap, but I never dared sell none yere."

Evidently Wilson was no mineralogist, for he had collected a good many pieces of bright quartz and pyrites of no value; but there were also many fine rock crystals in the lot, a great deal of agate and jasper, and several amethysts, one of which was the finest native stone that Tom had ever seen.

"Plenty to fill up the map," said Ellis.

"It saves our job," said Tom. "Wilson, we can't let you give us these stones, but we'll buy them from you, and pay as much as you'd get anywhere."

"Shucks! I don't want no money. Swap me some coffee and meat and I'll be satisfied."

In the end they persuaded Wilson to accept ten dollars and what provisions they could spare. In return they took about forty stones; but for the big amethyst Tom insisted on paying a separate price.

"I've dug right smart of sang, too," Wilson remarked, beginning to rummage in one corner

of the cave. "Come and see it." He had scraped away a pile of loose stones that concealed a natural hollow in the rock floor. The hole was filled to the brim with dried ginseng root.

"Why, you must have several hundred pounds!" exclaimed Tom.

"I reckon!" said Wilson indifferently. "You see, I hadn't nothin' else to do all these years but hunt crystals and dig sang, and so I jest naturally kept a-storin' of 'em up."

"Good dry ginseng like this is worth four or five dollars a pound anywhere, good as gold."

"Well, help yourselves, boys," said Wilson. "There's more'n I want."

"Nonsense!" cried Tom. "You'll be back at home in Georgia in a few weeks. My father will see about getting a pardon for you, and you'll need all the money you can raise."

The hermit had quite lost his sense of values, but he at last agreed to let the boys take the ginseng to Asheville, where they could get better prices for it than at a country store.

High hopes reigned in the cave that night. But when they turned in, Tom could not sleep. He was impatient to find out who owned the land and whether it was for sale; he feared that something would snatch the prize away from him at the last moment. In the morning he consulted Ellis.

"Hadn't we better make for the railway and get out?" Ellis suggested.

"We might manage it quicker if you stayed here," said Tom. "I could ride Peter down to the railway, go in to town, settle the business and be back here within a week. Probably I'd bring my father and a surveyor back with me."

"All right!" Ellis agreed. "I'll have a good time being a primitive savage with Wilson."

Tom was still a little shaky from his experience in the underground river, and he rested for one more day. Early the next morning he mounted Peter bareback and set out. The map showed the railway to be twenty-eight miles away in a bee line, and so Tom carried food for only one day; but the rough country bent the bee line into a zigzag, and the twenty-eight miles lengthened out to nearly forty. Peter was tiring, and Tom was stiff and sore when, late in the afternoon, he struck a wagon road that brought him into Crestville.

The village was on a small branch line of the railway. Tom left Peter with the local liveryman, got something to eat, and caught an east-bound train that set him down at the junction with the main line. There he had to wait until long after midnight for the Asheville train. Tom was tired, but he felt too dirty and ragged to take a sleeper berth; settling himself in a seat in the day coach, he fell asleep almost at once.

He reached Asheville about nine o'clock in the morning. As he left the train he noticed that the newsboys seemed to be doing a rushing business. He bought a morning paper—the first he had seen for nearly a month. His head reeled as he read the flaring headlines:

Heavy Fighting in Belgium. 20,000 Reported Slain. Panic in Paris. Fighting in North Sea.

Tom stood as if paralyzed while he ran his eye down the columns that told of great battles in France, of Belgian defeats, of German victories, of British warships in action, of blood and misery and panic everywhere.

In a daze Tom looked up, saw a man whom he knew standing near him, and held out the paper.

"What's all this, Mr. Mason? I've been back in the mountains a month. What's happened?"

"Why, the world's at war!"

"This country isn't involved?" asked Tom.

"Not yet. We may be; but it's hurting us about as bad as if we were. Cotton market's gone to pieces. The stock exchanges are all closed. The banks are calling all loans, and money is all tied up and locked. Paralyzed—that's what everything is. Why, the railway people were to build a new station this fall, to be the finest in the country, and they've called everything off till the war is over!"

Tom waited to hear no more. Running across the platform of the station, he leaped into one of the hacks and shouted an order to the driver. His mind was on fire with apprehension. On the building of that new railway station everything depended—his father's purchase of the Knoxville marble, the onyx, the crystals. Business had been bad all summer, and a winter of utter paralysis would be a blow that, so far as he could see, his father's business could scarcely survive.

Tom reached his father's office in the square and rushed into the inner room. Mr. Winfield was there, propped up with a heap of cushions and pillows in a long easy-chair; he looked wretchedly pale and ill.

"Why, Tom!" he exclaimed. "When did you get back?"

"What's the matter, dad? Not sick?" Tom cried, forgetting his worry for a moment in this new anxiety.

"My old enemy—inflammatory rheumatism. I managed to get down to the office to-day for the first time in two weeks. Did you get your outfit of crystals?"

"Oh, yes! But what's going on? The world seems to be turned upside down. What does it mean?"

"Well, Tom," said his father slowly, "as far as I am concerned, it means disaster."

TO BE CONTINUED.

THE CRYSTAL HUNTERS

By Frank Lillie Pollock

In Eight Chapters

Chapter Seven

WHEN Tom came to his senses he was lying on the deerskins in the hermit's cavern. The place was dimly lighted by two of Wilson's wax candles, and as Tom caught sight of the rocky walls and the roof he imagined that he was still imprisoned underground. He started up with a yell of fright.

"All right, old fellow!" said Ellis, who was bending over him. "You're all right now."

As Tom recognized the face of his cousin he sank back weakly.

"I thought—but how did you fellows get out?" he murmured.

"Didn't take us long, after you drapped through," said Wilson.

Ellis explained that Tom's mishap had really saved the rest of them. Wilson had seen that underground river before; once he had nearly fallen into it himself. When Tom went down through the hole, the hermit had at once guessed where they were.

They had realized that there was no use in trying to rescue Tom from within; but Wilson knew the spot where the river issued from the mountain, and, hastening to it, they had waited there in the gorge all night. They felt sure that his body would eventually be thrown out there, and they had hoped against hope that there would still be a spark of life in it.

Tom's brief account of his own adventure filled them with amazement; but the telling of it brought his recent experiences so vividly to his mind that he did not care to go into details just then.

"All you could say when we found you was 'cave onyx,'" said Ellis. "You kept muttering it. What did you mean?"

"Oh, yes! Cave onyx," answered Tom, with a start.

"Why, it may have been a dream, for my head wasn't very clear; but it seems to me that I remember seeing a wonderful deposit of cave onyx just inside the place where the river comes out. Can't we go and see?"

"Why, you couldn't stand on your feet!" said Ellis, laughing. "We'll see it as soon as you're fit again. But what is cave onyx?"

"The finest, richest sort of marble in America; also the most valuable. You'll see some pretty quick."

But it was a good many hours before Tom was able to stir. His night underground had left him in bad shape, and after swallowing a little broth he dozed off at once. Several times he started up from his dreams with a shriek; but at last he slept soundly and did not awake until a little before sunset.

He felt stiff and sore but refreshed, and his appetite was tremendous. Ellis had meanwhile brought up Peter and their outfit from camp, and they had a good meal of trout, quail, pork and corn bread, with some of the hermit's honey. The meal refreshed Tom greatly, and they prepared at once to visit the cave. It was growing dark, but day and night would be the same underground.

The outlet of the river was less than a quarter of a mile away, and they soon reached it. It was not without a shudder of repulsion that

Tom crept into the tangled entrance of the cave; but Ellis and Wilson were close behind him, and as the flare of their smoky torches lighted the rock chamber they all burst out into exclamations of astonishment and admiration.

A glittering reflection flashed from the walls and from the hanging stalactites. White and red and amber and yellow shone in the beautiful veins and the clouded streaks on one

"IT'S CAVE ONYX!" CRIED TOM. "IF THIS IS ONLY SOLID, THERE'S A FORTUNE HERE"

whole side of the cave, and nearly all the stalactites seemed to be of the same formation.

"It's cave onyx!" cried Tom. "If this is only solid, there's a fortune here."

Splashing through the water, they hurried round the cave and examined the rock at every point. Only one side of the chamber was composed entirely of onyx; the other side showed streaks of it, which were probably not worth quarrying.

"This stuff isn't properly onyx at all, nor yet quite a marble," said Tom, in answer to a question from his cousin. "It's only a deposit of calcium carbonate from the water that's been trickling down for centuries, and colored by metallic oxides. It's a kind of sediment on the limestone rock, and the important thing is to find out how deep it goes. Often these onyx deposits are only a thin shell."

Using the large blade of his knife, Tom dug into the beautiful soft stone; he made a hole more than two inches deep without coming to the bottom of the deposit.

"It's marketable, anyway!" he exclaimed. "If I only had a rock drill! But it's certainly thick enough to be worth quarrying, and it's very likely a foot deep or more. Yes, and I declare! There's another connecting cave, and it may be full of it, too."

*The dogwood whitens; sunlit
raindrops gleam,
And April comes, the maid
of violet eyes,
While budding alders bend
above the stream
Where, rattling clear, the
bold kingfisher flies.*

FACT AND COMMENT

VACATION time is as good as New Year's for making fresh resolutions.

Who scans the ground may find a Golden
Purse;
Who looks around will find a Universe.

"YESTERDAY," said the sage, "is dead; forget it. To-morrow does not exist; don't worry. To-day is here; use it."

EFFECTIVE weapons to use in the early part of the annual anti-fly warfare, so the Public Health Service says, are powdered hellebore sprinkled on places where the flies breed, and a one-per-cent solution of salicylic acid sweetened and left in shallow saucers where the flies will find it.

SECRETARY HOUSTON of the Department of Agriculture might have difficulty in telling in detail how he finds that the annual waste in foodstuffs in this country amounts to \$700,000,000, but the figures, stupendous though they appear, are probably too small. At this time, even though there may be no real shortage of food in the country as a whole, we nevertheless need to watch with unusual care both the family marketing and the kitchen.

IN one respect, at least, the United States is well prepared for war. A few years ago the American Radio Relay League was formed. Since that time nearly all the amateur operators in the country have come into it. Wireless trunk lines have been established, and messages can now be relayed from one coast to the other. Moreover, the government has found a way by which, through the use of an "exploring loop" and triangulation, it can quickly learn the position of any unknown wireless station that tries to send a message.

A WIDER use of schoolhouses has long been advocated as a plain matter of common sense and community efficiency, and the advocacy has brought about a change for the better in many places. Now the Boston Chamber of Commerce makes the sensible suggestion that state armories may well be opened to conventions, meetings of Boy Scouts and other gatherings the purpose of which is to serve the community. Strange how hard it is for us Americans to learn that we are really our own masters and can do as we please with our own!

NORTH CAROLINA is carrying the propaganda of disease prevention from the laboratory to the rural home by means of a motion-picture show on wheels. The outfit consists of a railway car fitted up for the purpose. A lecturer and an operator, under the direction of the state health department, give free entertainments in every community that can be reached. The campaign is intensive; that is, after an exhibition in a given county the car returns to the same community a week later, and still again two weeks later, with a complete change of programme. The whole object is to impress the public with lessons of hygiene and sanitation that would be learned slowly, if at all, from printed reports or bulletins.

THERE are heroes or heroines in all ranks of labor, but apparently there are more of them among the girls at the telephone switchboards than anywhere else except, perhaps, among wireless operators at sea. Miss Tessie McNamara, telephone girl in a New Jersey munitions factory, stuck to her post when buildings began to blow up round her, and was finally taken out of the wrecked building unconscious, after she had given her thirty-sixth call of warning. Admirers of courage and fidelity have given her a gold watch and a purse of money. Whether a dam gives way,

or a flood comes, or a fire breaks out, or a battle rages, the telephone girl, although not paid to risk her life, sticks to her post.

THE IRISH QUESTION

WILL the affairs of Ireland ever be peacefully settled? Perhaps—although no one to-day can tell how the feat is to be accomplished. The difficulty no longer lies in the unwillingness of England to grant home rule to those who desire it, but in the violent differences among the Irish people themselves as to the degree to which home rule shall be applied to the island.

The Nationalists insist that Ireland must be treated as a unit; the Ulstermen declare that they will never consent to be ruled from Dublin. The Nationalists angrily refused Mr. Lloyd George's offer to put home rule into immediate effect in all except the northeastern province of Ireland, and the people of that province, now as in 1914, seem ready to resort to civil war if home rule is forced upon them. The difference between the people of the two regions is religious as well as racial, and cleavages of a religious sort once established are the most hopeless of all.

The Nationalists have a real grievance, for their home-rule measure has actually passed Parliament, but has been suspended for nearly three years on account of the serious objections of the Ulstermen. But, on the other hand, would not the Nationalists show a fairer spirit if they permitted the exclusion of Ulster? They have naturally protested in the past against being coerced into submission to a form of government they disliked; why, then, insist on coercing Ulster into submission to a government it dislikes? We in America cannot of course fully understand the depth of partisan feeling that makes any genuine settlement of the Irish question so difficult, but we do know that that feeling exists, and we see with regret the dangers to which it leads. The deadlock strengthens the hands and inflames the passions of the extremists, whether they are Sinn Feiners or irreconcilable Ulstermen. It has already produced a situation out of which civil war seems almost certain to issue.

Fortunately, the Nationalist leaders are wise enough to offer no obstruction to the government's conduct of the war, but the problem is one of the chief anxieties of a ministry sorely tried already and none too certain of permanent Parliamentary support.

A SPECIAL SESSION

IN the expiring weeks of the Sixty-fourth Congress the President was emphatic in his determination not to call the new Congress together, but events made him change his decision and at the same time eliminated some of his objections to an extra session. Events forced him to call it together, first for April 16, and then for April 2.

When the Congress went out on March 4, it left things in such a condition that unless relief were given before July, when the next fiscal year begins, many of the government activities would cease for lack of money to carry them on. The great army appropriation bill, providing both money and preparation for possible war; the military academy appropriation; the sundry civil appropriation, important because of its wide scope, and the deficiency appropriation—bills that aggregate more than half a billion dollars—were left hanging. The failure of three of them might not have caused great trouble, if the mischief were repaired before July 1; but the deficiency appropriation bill covered the deficiencies of the present year, for which money is needed at once.

Financial reasons are not the only ones that should call Congress together. There is no knowing from day to day what exigency may make it not merely expedient but necessary to have the lawmaking power as well as the executive ready for instant coordinated action. It may be war, but also it may be peace. Whatever is to befall, the whole government should be at its post, waiting, watching, acting.

What is to be the temper of the new Congress? Patriotic, we may be sure; wise, not hasty or impulsive, mindful of the far-reaching consequences of its action, we hope. How far party spirit can be exorcised is a great question. Indications coming to the President that he would not encounter hostile or obstructive conduct doubtless had something to do with his change of mind. If we are to stand by the President—as we should do—Congress should be of one mind in all matters pertaining to

international politics. There is need of forbearance on both sides. Infinite harm might be done if extreme partisans should fail to exercise self-restraint. That is a duty that rests equally upon both parties. On the one hand, although the initiative belongs properly to the party in power, no bills should be brought forward as purely party measures, to be pressed to passage by caucus dictation. On the other hand, there should be no disposition on the part of the nominal opposition to oppose and block bills simply because they originated with leaders of the other party. The statesmen of every one of the countries at war have learned the lesson of political cooperation in the face of national danger. In this crisis division and discord at home will mean disaster.

"AND HE SAID —"

THERE came to The Companion the other day a little story for the Children's Page in which, within the space of about four hundred words of dialogue, the author used the words laughed, smiled, declared, nodded, admired, responded and beamed, all of them as substitutes for the simple verb "said." "I could not think of it," laughed Aunt Mary. "Yes, indeed!" nodded Alice. "Isn't it lovely!" admired Lucy. And so on, all the way through. Anything to avoid using the one word that should have been used.

Since women are by far the most numerous readers of fiction, perhaps their good taste and common sense may eventually heap ridicule enough on this silliest of literary fads to bury it. Unfortunately, women writers are among the worst offenders. Among them especially the habit of using a substitute for "said" seems to be growing. Perhaps it may be traced in part to the callow advice of a "literary" magazine that recently urged its young writers thus to avoid monotony in dialogue. The monotony may be there, but "said" is not the cause of it.

To what absurd lengths the habit can be carried appears in a story by a well-known writer in one of the popular magazines. A single installment of the tale contains thirty different words used in place of "said," among them wheezed, smiled, flushed, strangled, suffered, jumped, frowned, bridled, quenched, snapped, flamed, sliced, monotoned, and last, —oh, crowning glory of inventive genius!—sing-singed! All are literary misdemeanors, some are literary crimes, but sing-singed savors of the state prison.

Writers who find themselves inclined to indulge the habit should take a course of reading in the Letters of a Japanese Schoolboy. Mr. Hashimura Togo has the art to perfection. "How could it?" he illuminate; "What you mean?" I blorp; "I think cannot," he renig. In Togo the cultivated reader sees the humor and the satire of it.

There is also another course of reading that would benefit those who think "said" is commonplace and monotonous—a course that is, indeed, wholesome for all writers and a cure for many faults. Let them read the Bible. There are no mushy, meaningless substitutes there.

RUSSIA

RUSSIA has been a disappointment and a mystery in this war. The peace strength of its army in 1914 was twice as great as that of Germany, and the nominal war strength of the two empires was about the same. In both countries military service was universal and compulsory, and the population of European Russia, not including Poland, was twice that of Germany. Taking those facts only, Russia, had other things been equal, should have been able to overwhelm Germany.

But other things were not equal. Germany moves quickly, Russia moves slowly; German officers were highly trained, skillful, energetic; Russian officers were quite otherwise. In Germany loyalty was universal, whereas in Russia the government was in the hands of incompetent, reactionary, corrupt, half-hearted bureaucrats, all of whom, from the lowest to the very highest ranks,—even, as is generally believed, the royal family itself,—were under German influence. How the condition was borne so long, and how at last the people ended it, forms a great chapter in European history.

The revolution astounded everyone except the closest observers of Russian affairs, and not one of them sounded a note of alarm loud enough to give him any standing as a prophet. But who expected it is of no consequence. The important thing to know is what will be its effect. It seems to be generally believed that, so far as it may influence the conduct

and the issue of the war, it will impart vigor to the campaigns, will eliminate to a marked degree the sinister influences that have frustrated such honest efforts as have been put forth, will substitute a measure of honesty for the corruption that has been rife, and will relieve many of the anxieties that the successive Russian failures have caused the Entente Allies.

Although the revolution was, in a certain sense, a war measure, it was more than that. Its motives antedated the war, its consequences will outlast it. A dynasty that has ruled for three centuries and survived the assassination of several czars has at last come to an end. That is a political event of the first importance. The country that, more nearly than any other, maintained the ancient form of autocracy, throws off altogether the shackles of hereditary government and adopts the system of democracy.

It is an experiment—a hopeful attempt to thrust away the thousand hampering obstacles to the progress of a people. Every champion of individual liberty will wish it success; but its success may not be immediate. France did not succeed in similar efforts until the third trial. Spain made the experiment forty-four years ago, gave it up at the end of a year, and has never renewed the attempt. Spanish America has been making it for a century with indifferent success. China as a republic is still in the experimental stage. All these facts admonish us not to be too confident that the Russian people will never again wish for a czar; but whatever may happen in the immediate future or after the lapse of a few years, the vestiges of such a revulsion as has occurred in Russia can never be obliterated.

THE FALL OF BAGDAD

A FEW weeks ago we spoke of the collapse of Turkish military power in Palestine, and of the opportunity that offered to the British arms to strike a serious blow at the integrity of the Ottoman Empire. Now we have to record the complete defeat of the Turks in Mesopotamia and the capture of the ancient city of Bagdad by Gen. Maude's army. A great strategic campaign that will expel the

Turks from two thirds of their empire is no longer a mere possibility. The roads are open to a British advance from the south and a Russian advance from the north and east; if the two nations can find the men necessary for such a campaign, there is every reason to expect its success. Turkey has long been in a condition of economic prostration. Galvanized by German energy and supplied with German officers and ammunition, it has made a better stand in the field than anyone could have predicted; but the stimulation that Berlin applied so successfully has worn off, and the disease has reasserted itself. Turkey is in no condition to prolong the war; Britain and Russia can occupy as much of its territory as they have men to hold. That is of course the difficulty, for the demands of the European fronts are tremendous.

The fall of Bagdad is important for several reasons. It restores the prestige of the British arms in the Orient. It alters the "war map" greatly to the advantage of the Entente Powers. It puts into British hands the most important city of Asiatic Turkey, the terminus of the great German strategic railway; unless events in the western field of war offset it, it will make German control of the richest part of Turkey and the land route to India impossible. It strikes a blow at the leadership of Turkey among the Mohammedan states, and even at the very existence of the Ottoman Empire. The taking of Constantinople would not be more significant from that point of view, for Turkey is not a European but an Asiatic power. It could give up the straits and the ancient city of Constantine, and still remain a potentially rich and powerful state. But if it

loses control of Arabia, Mesopotamia, Armenia, Syria and perhaps of the Levant, what would there be left? Nothing but the Anatolian highlands, a meagre basis for the claims of the Sultan to imperial dignity or to the caliphate of Islam.

CURRENT EVENTS

CONGRESS.—The Senate adjourned on March 16; it took no action on the treaty with Colombia. Several hundred nominations were confirmed, among them those of Dr. Cary T. Grayson to be Medical Director of the Navy and ex-Congressman R. B. Stevens of New Hampshire to the shipping board.

THE RAILWAYS.—On March 16, at the President's request, the committee of railway officials and the chiefs of the four labor brotherhoods met Secretaries Lane and Wilson, Mr. Daniel Willard and Mr. Samuel Gompers, whom he had asked to act as mediators. Three days later it was announced that the threatened strike would not take place. In view of the critical situation of the country, the railway managers had agreed to concede the eight-hour day to the employees, and the men abandoned their demand for a higher rate of pay on overtime.—On March 19 the Supreme Court, by a vote of 5 to 4, sustained the constitutionality of the Adamson law. Justices Day, Van Devanter, Pitney and McReynolds dissented. The majority opinion, read by the Chief Justice, also held that the men employed in such essential public service as railway operation had not the right to strike in concert, and that some means must be found to prevent such action.

RELATIONS WITH GERMANY.—On March 18 it was announced that three American ships, City of Memphis, Illinois and Vigilancia, had been sunk unwarmed by German submarines in the war zone off the British Isles. Fifteen men, some of them American citizens, were killed when the Vigilancia was torpedoed. The news caused a sensation in Washington, where it was regarded as amounting to an act of war on the part of Germany. The President placed the sum of \$115,000,000, voted him by Congress, at the immediate disposal of the Navy Department, and preparations for war were hurried in all the navy yards. On March 21 the President called Congress to meet in special session on April 2 "to consider grave matters of national policy."

MEXICO.—Gen. Obregon has resigned the office of Secretary of War in President Carranza's Cabinet.—According to reports reaching El Paso, Gen. Villa had decisively defeated the government forces under Gen. Murguia at Rosario, and was in possession of the greater part of the State of Chihuahua.

FRANCE.—The Briand ministry, harassed by factional opposition in the Chamber of Deputies, resigned on March 17. Alexandre Ribot, Minister of Finance under M. Briand, is the new premier.

REVOLUTION IN RUSSIA.—The most startling event since the great war began is the revolution in Russia. That began when the Czar suspended the sittings of the Duma. The Duma, led by its President, Rodzianko, refused to disperse. Riots and strikes caused

PAUL MILUKOFF

by the scarcity of food disturbed Petrograd for several days, and when, on March 10, the soldiers were ordered to fire on a crowd of people in the Nevsky Prospekt, they refused to do so. Events moved rapidly after that. The leaders of the Duma put themselves at the head of the restless people, the regiments of soldiers in the garrison, one after the other, came over to the popular side, and after a few hours of sharp street fighting on March 12 the police and the few troops still loyal to the old régime were defeated and dispersed. A new government was formed with Prince Lvoff as Premier and Prof. Paul Milukoff as Foreign Minister, and all the generals in the field hastened to promise their support. In Moscow and other cities the revolution, which seems to have been carefully prepared in advance, moved with equal rapidity. A committee of the new government met the Czar at Pskov as he was returning from the front; on learning of the situation he promptly abdicated on behalf of himself and his son, the young Czarevitch. He went to his estates in the Crimea, but was later reported to be returning to Petrograd under arrest.

The Grand Duke Michael, the Czar's brother, also surrendered his claim to the throne, although it was reported that, if at a

later time the people desired it, he would be willing to act as a constitutional monarch.

The country acquiesced in the revolution with extraordinary placidity; it is evidently relieved to see the last of the corrupt, inefficient and treacherous bureaucracy that has hampered and frustrated all the activities of Russia during the war. Boris Stiirmer, a former prime minister who was known as a pro-German and as an advocate of a separate peace, and Protopopoff, the Minister of the Interior, are in prison. Except for a few members of the secret police and persons known or believed to be spies, no one was killed after the success of the revolution was assured.

The new government, which is virtually a committee of the Duma, declared a general amnesty for all political prisoners, promised home rule to Finland, called a constitutional assembly, which is to be elected by popular vote and which will decide upon the future form of government, and declared that it would devote itself to a determined and efficient conduct of the war against the Central Powers. The Allied governments and the United States directed their representatives to deal with the new government of Russia, although they had not on March 21 formally recognized it.

THE EUROPEAN WAR

(From March 15 to March 21)

The great German retirement in France was the event of the week. Although it was no doubt made necessary by the continual pressure of the British and French forces on the Arras-Soissons front, it was not the consequence of any concerted attack; it was carried out systematically and skillfully, and yielded very few guns or prisoners to the pursuing armies. It did surrender more than a thousand square miles of French territory and about two hundred towns and villages, including Bapaume, Péronne, Ham and Chauny. Many of the abandoned towns were blown up or set on fire, and the British and French moved forward in pursuit through a countryside that had been laid waste. As this record closed it appeared that the retirement was nearly at an end and that the new German line would be based on Cambrai, St. Quentin, La Fère and Laon.

The retirement will shorten the German line enough to release approximately one hundred and fifty thousand men. The movement was no doubt undertaken to delay and hamper the expected spring drive, since the Allies must now prepare new trench lines and new lines of communication to serve their present front, whereas the Germans are in carefully prepared positions. It is probable also that the Germans are getting together all the strength they can for a blow of their own, either against Russia or at some point on the western line; it is impossible to predict which.

Berlin announced that the retirement was made possible by the fact that the Germans had regained the mastery of the air, and gave an imposing list of the enemy airplanes shot down during the week.

Gen. Maude reported that his army was in possession of both banks of the Tigris for thirty miles above Bagdad, and that the Turks still retreated. The Russians took Van in Armenia, and drove the Turks in western Persia still nearer to the border.

There was fighting along the Macedonian front, favorable to the Allied forces on the whole. Artillery activity was reported from the Italian front.

Berlin announced that 368 merchant ships, of a tonnage of 781,500, had been sunk by submarines during February. That is 300,000 in excess of the tonnage that England admits having lost. Which count is correct we cannot tell. The weekly report from London spoke of 24 British ships sunk in seven days. On March 19 a German squadron of destroyers raided the Channel, shelled Ramsgate and sunk a British destroyer before they were driven off. Berlin reported that a French battleship had been sunk in the Mediterranean.

China has requested the Entente Powers to suspend the payment of Boxer indemnities and to consent to an increase of import duties. That was interpreted as a move in the direction of war with Germany.

A Zeppelin raid against London took place on March 16. One of the airships was brought down in France on its way back to Germany.

The great imperial conference, attended by representatives of the British colonies and dependencies, met at London on March 20 in consultation with the war cabinet. It is believed that the conference will also discuss the Irish question.

The news of the revolution in Russia was followed by a hurried conference at Vienna between the German Chancellor and the Austrian Emperor and his ministers. Just before leaving Berlin Bethmann Hollweg made a remarkable speech in the Prussian Diet, in which he warned the conservatives that the world could never return to the situation that existed before the war. He added that Germany, and especially Prussia, must consent to a political reorganization after the war is over—a reorganization by which the people shall have a more liberal franchise and a greater share of political power and responsibility.

Suppose All Could Use the HUDSON SUPER-SIX

Would Other Types Remain?

In the present conflict of types—Fours, Sixes and V-Types—it is well to consider what would happen if the Super-Six were free. Our patents confine it to the Hudson.

As it is now, numerous fine-car makers advocate other types. And tell you reasons for it.

Some still cling to Fours. Some urge Eights and Twelves. But the weight of opinion favors the small-bore Six.

What would come of this conflict—think you—were the Super-Six not patented.

excessive speed or power. We have simply minimized friction.

We have done—but done better—what every engineer has been aiming at for years. And for the same result—more speed and power, without added complications. Also multiplied endurance.

Endurance was the chief aim. It is friction that causes wear. We have so reduced it that we attain what is proved the greatest motor in the world. And certainly you want it.

These Are the Facts

The Super-Six last year won all the worth-while records. In a hundred hard-fought contests, against all types, it proved itself supreme.

As for the Light Six, in our final perfection, the Super-Six invention increased its efficiency by 80 per cent.

As for Eights and Twelves, our experience with motors of that type which we built made them seem to us, unnecessary.

And the Super-Six has made the Hudson the largest-selling front-rank car. Last year it out-sold any car with a price above \$1100.

The Vital Supremacy

One may say, "I don't care for speed, or great reserve power, or a marvelous hill-climber."

Then why added cylinders, or extra valves, or anything else to that end?

You do want superlative capacity, whether you use it or not. You certainly want it when it means no added size or cost. When it means simply ended friction.

That's the great point. The Super-Six motor is small and light and simple. We have not aimed at

What One Year Did

Mark how the Super-Six, in one year, sprang to the pinnacle place. There are now 30,000 running. This year brings nothing to rival it. So it is bound to gain multiplied prestige.

This year's bodies also give to Hudson leadership in style. The ablest artists and craftsmen gave their best to these models. Each is a study in motor car luxury. Each is a pattern type.

This year we add a great gasoline saver—shutters on the radiator—which by controlling the heat of the motor in part overcomes the disadvantage of the constantly falling quality of gasoline. We add a pneumatic engine primer. We add plaited upholstery.

Our patented carburetor—on Hudsons alone—is self-adjusting to every engine speed.

So Hudson supremacy does not lie in the Super-Six motor only.

When you buy a fine car—a car to keep—you are bound to want the Hudson. You want the car which outperforms and outshines other cars. If you want such a car this spring, we urge a prompt decision. Last year many buyers waited months for delivery.

HUDSON MOTOR CAR COMPANY, DETROIT, MICHIGAN

ALLELUIA!

By Nancy Byrd Turner

IT was dark in the land,
And the seal was set fast;
The faithful who watched
Were weary at last;
But the mountains grew gray
And their black shadows fled,
And at breaking of day
Christ rose from the dead.

The garden was still,
And the city was dim,
But the flowers and trees
Wakened softly for Him.
With no man to see,
When the east was faint red,
For you and for me
Christ rose from the dead.

That garden is dust
And that hillside is dumb,
But here is our trust
For the ages to come,—
That when darkness was gone,
As his promise had said,
In the beauty of dawn
Christ rose from the dead!

"JUST A MAN DRIVING A DRAY"

THAT is probably what you would say of him. Nevertheless, that gray-haired, middle-aged man, driving his dray, is a hero. He does not think so. He thinks he has merely done his duty.

Years ago he was one of twelve children—a happy, busy family living in the mountains several miles from the village. Then suddenly the scourge of tuberculosis fell upon them. That was before the proper treatment of the disease was understood. Nine brothers and sisters died, one after another. There were no trained nurses in the country districts then; the other members of the family had to do all the nursing. Through all that agonizing period the man who drives the dray was a veritable rock of defense. He saw one brother and sister after another sicken and fade away. He nursed them all. He gave what physical relief he could, and with his prayers he comforted and sustained the trembling souls settling forth for the unknown. All his youth was so spent.

At last only his father and mother, two brothers and himself were left. One of the brothers married and moved away. The other was killed by a train. The poor old mother died. Then came the last fierce trial. The father fell ill with cancer. His devoted son set himself to face the long terrible months of nursing, although he himself was now stricken with tuberculosis. His one prayer was that his strength would not fail while his father needed him. The son's prayer was granted; his strength held out until his father's death. After that he cared little what happened to himself. He went, nevertheless, to a hospital, and there, under modern treatment, his disease was arrested.

Almost his whole life has been passed in caring for the sick. He has never been free to follow his own desires, to find congenial work, to make money, to see the world, or to marry. But he is never bitter; he thinks he has done only his duty as a son, a brother and a Christian. Perhaps he is right, but how many of us who call ourselves Christians are doing ours as simply, as nobly, as devotedly?

A FAILURE AT THIRTY

ARE you not often discouraged?" the man who had failed asked the busy grocer. "You have customers who complain and bills you cannot collect. You must be wholly discouraged at times."

"Discouraged!" exclaimed the grocer. "Why, man, I hardly know what you mean. Oh, you refer to the Torreys who left town with their bills unpaid. But, listen! I have the trade of the three new families on Linden Avenue, and they pay cash. Just look at my shelves—every article pure! I stand here and gaze about my store sometimes as my wife does at her tulip bed in the spring. Oh, this is a great business for a live man, a great —"

But the man who had failed had turned to a farmer who was waiting for his order to be filled. "Am I ever discouraged?" repeated the broad-shouldered young man. "Why, I'm so busy planting and harvesting that I haven't any time to think of myself. Come out to Sunnymeade some day and I'll show you my new barn—the finest in the county. I tell you it's —"

But the man who had failed was passing through the doorway. Surely his physician, a man of many years, would understand.

"Doctor," he began, as he entered the sunny office, "Isn't your life very hard at times? When patients refuse to follow your instructions, aren't you sorely discouraged?"

"Discouraged!" cried the physician. "That is a word I haven't used for years. I am a busy man. Look at those books on spinal diseases that the expressman brought this morning. Mrs. Trueman expects me to cure little Ruth."

"But don't your patients weary you with their endless recital of symptoms, real and imagined?" "Weary me!" exclaimed the gray-haired man. "How could I help my patients if I did not understand them? No, my friend, you are not going now. Tell me what the trouble is with you."

The man who had failed met the searching eyes of his physician and returned to his chair. He outlined briefly and bitterly his failure in every work that he had undertaken since his graduation from college.

"What did you want most to do when you were a boy?" asked his friend.

"To sell things!" replied the young man almost fiercely. "To stand behind a counter. But my parents were ambitious. They sent me to college. It was a great mistake. I had almost forgotten my boyish plans until I was in a grocery this morning. But I can't —"

"Can't!" cried the physician. "Can't sell flour or hats or boots because you have received a degree! At forty, even, you could start on the lowest rung of the ladder and become a successful business man—if you love the work. The profession or the business a man enjoys and is fitted for may be compared to his children. At times they may cause him great anxiety, but he works for them tirelessly;

however full of childish pranks they may be, he looks forward hopefully to their future, and never loses his confidence of their success at last."

At thirty the man who had failed three times went forth to seek success. In a large department store he used his education and his knowledge of the world in selling men's furnishings. He had no time for discouragement, for in his spare moments he was acquainting himself with all phases of his work. At forty he held a position of trust and importance in the firm.

"Don't you often get discouraged?" a young man with troubled eyes asked him one day.

"Discouraged!" replied the man who had become a success at forty. "Never! I am trying to do a man's work. Tell me your story. I think I can help you."

TWO BRAVE CHILDREN

A True Story

THE warm September sun shed its soft light on field and forest and rippling water when Doreen Ashburnham and Tony Farrar ran down the steps of their home at the head of Cowichan Lake. The children had received permission from their mothers to go for a gallop. Their pony was feeding in a field about three quarters of a mile away, but to catch him was an easy task.

A few years before, Lawrence Ashburnham, with his wife and little daughter, had left England to make a new home on Vancouver Island, in British Columbia. A year later, Mrs. Farrar, a widowed friend, and her little son had come to live with them. The children soon became constant companions, and now, when Doreen was eleven and Anthony eight, they spent the long summer days out of doors playing together.

The harvest was over and Mr. Ashburnham and his farm hand had gone to town. The nearest neighbor on their side of the lake was five miles away. Yet no thought of danger from the dark forest that lay beyond the fields crossed the minds of the children. The giant firs were their friends. The waves of the lake murmured softly as they reached the shore. The meadow lark's song came sweet and clear across the fields. The whirr of the wings of grouse starting up from the undergrowth, the chatter of the squirrels and the scolding of the blue jay were sounds that caught their quick ears.

They had almost reached the gate of the field when Doreen suddenly caught Tony's arm and with a swift motion placed herself in front of him. There, only a few yards away, a big panther crouched among the brown, withered ferns. Frightened at the unexpected and most unusual sight, the children turned to run back to the house. They were too late. With a bound the huge creature struck Doreen and threw her to the ground. As quick as a flash Tony raised the bridle he carried and with all his might struck the beast again and again. At that the growling panther turned and slashed the boy's head with its strong claws.

"Run! Run, Doreen!" cried the boy as he fell. But Doreen did not run. Springing from the ground, she grappled with the panther and, using all the strength of her young arms, dragged him from the prostrate child. In the struggle, she pushed her fingers into the beast's eye. With a howl of pain, the panther turned and ran toward the wood.

Doreen instantly caught up the bleeding Tony and half carried, half supported him until she neared the house and was able to summon help.

Both mothers were terrified at the sight of their children, for they knew well the danger of blood poisoning from such wounds. Leaving Mrs. Farrar, who fortunately was a nurse, to care for the children, Mrs. Ashburnham rowed two miles across the lake to the home of the nearest doctor. When the physician arrived he immediately wrapped little Tony up and started for the nearest hospital. Not until he had gone did Doreen yield to the faintness that had for some time almost overcome her. She grew feverish, and the next day she, too, was brought to the hospital.

A neighbor who had learned the story took his dog and gun and went in search of the cougar. He found it near the spot where the strange conflict had taken place, and with a well-aimed shot killed it. An examination of the dead body showed that the animal was blind in one eye and that the other had been injured before Doreen had hurt it. The wild creatures upon which the panther preys could easily elude it, and, desperate with hunger, it sought the open and attacked the children.

Skillful treatment and good nursing soon brought about complete recovery, and the two little friends returned to their home.

Doreen's grandfather is a distinguished British officer, and her ancestors, centuries ago, helped to fight the Danes in England; but no soldier of the present day or warrior of the past was braver than the little British Columbia maiden who would have given her life to save her playmate from death. Tony is the grandson of an eminent Scottish doctor, who may well be proud of him.

A FACTORY THAT EMPLOYS SPIDERS

IN a large English factory that produces surveying instruments, spiders are probably the most indispensable workmen. It is their duty to spin the delicate thread used for the cross hairs that mark the exact centre of the object lens in the surveyor's telescope.

Spider web is the only suitable material yet discovered for the cross hairs of surveying instruments. Although this fibre is almost invisible to the naked eye, the powerful lenses of the telescope magnify it to the size of a man's thumb. Human hair when magnified in the same way has the apparent dimensions of a rough-hewn lamp-post. Moreover, human hair is transparent and cross hairs must be opaque.

The spiders produce during a two-month's spinning season thousands of yards of web, which is wound upon metal frames and stored away until needed. A spider "at work" dangles in the air by its invisible thread, the upper end of which is attached to a metal wire frame whirled in the hands of a girl. The girl first places the spider on her hand until the protruding end of the thread has become attached. When the spider attempts to leap to the ground she quickly attaches the thread to the centre of the whirling frame, and as the spider pays out its web she wraps it round the frame. At one time she removes from a spider several hundred feet of thread.

The spiders are kept in a large room under the supervision of three girls and a forewoman. When the little workmen are not spinning, they live in a large wooden cage. Flies are their chief article of diet. During the winter months the spider colony usually dies, and an entirely new corps of workmen

must be recruited. Not every spider will do—only large fat fellows that spin a tough, round thread are suitable.

The girls who have charge of the spiders are not in the least afraid of them. On the contrary, they regard them as pets, can tell them apart, and often call them by nicknames that humorously describe their appearance or their peculiar habits of work.

THE LEANING TOWERS OF BOLOGNA

ITALY is a land of many leaning towers, among which the Tower of Pisa and the fallen campanile at Venice are the best known. The strangest of the leaning towers, however, are the Torre Asinelli and the Torre Garisenda in Bologna, which were erected in 1109 and 1110 A. D. The builders intended them for fortified homes, of which Bologna at one time possessed as many as two hundred. The gloomy, smooth-walled brick towers standing side by side make a strange impression upon the person who looks up at them

BOLOGNA'S LEANING TOWERS

from the ground. Dante, in his *Inferno*, compared the giant Antæus, who was bending toward him, to the Torre Garisenda "when a cloud passes over it."

The Torre Asinelli is three hundred and twenty feet high and contains a rough staircase of four hundred and forty-seven steps. From the summit, which is four feet out of plumb with the base, you have a fine view of the city. The slant is unintentional, and was probably caused by the sinking of the foundations. Torre Garisenda is one hundred and sixty-three feet high—sixteen feet lower than the Leaning Tower of Pisa,—and it is ten feet out of plumb—only three feet less than the Tower of Pisa.

When Ottone Garisenda began to build in 1110 A. D., he apparently wanted his house to surpass his neighbor Asinelli's in oddity; and so he intentionally made his tower out of the perpendicular. He found it impossible, however, to complete the tower at that angle, and had to cease work on it before it attained the height of its companion.

HARBORING A TRAMP

SO Charlie puts you off when you ask him to do odd jobs round the house?" said Mrs. Dill to her daughter-in-law. "Well, I'm not surprised. He gets that straight enough from his father. Why don't you tell him that, if he doesn't do better, you'll be harboring a tramp some day, just the same as his mother did once? He'll know what you mean."

"I was all out of patience that morning," Mother Dill continued. "There were things in the garden and about the house to be done, and I begged Pa to give me a few hours. But he had so many irons in the fire that he simply couldn't stop to potter at home."

"He had scarcely got out of sight when a tramp appeared at the door. He had the usual story—out of money and out of work; and could I give him something to eat."

"Well," says I, "there's one thing I am not out of, and that is work. I can give you some of that first, and afterwards a breakfast."

"I expected him to mutter something and march off. But he didn't. He said, 'All right, mum!' And when I came to get a second look at him, I thought he had a much better face than most of his kind. So I trusted him for his breakfast, and after he had eaten a good meal,—and he had a hearty appetite, I can tell you,—we went at the garden."

"I don't know when I had so enjoyed myself. The man knew how to take orders, and he was real sociable, too, and told me the story of his life, not sparing himself in the least. He said that he was brought up well, and that he was tired of the life he had been leading and wanted to go back to his home."

"It was noon before I knew it, and of course I wouldn't send him off without his dinner. Then while I was talking with him at dinner I found that he was handy with tools; so I had him make over the grapevine trellis and mend the back steps and putty up some of the windows and put up some shelves in one of the closets."

"Along toward night he said he guessed he would have to be moving; so I put him up a lunch and paid him fifty cents, and told him always to think of me as a friend."

"He hadn't much more than got out of the yard when Pa drove in. I couldn't wait for him to unharness before showing him how much a man could accomplish when he was willing to listen to reason. Pa sniffed a little, but he couldn't find a word of fault to say until I took him up to the clothes closet to see the new shelves. Then he

made a dive for the pocket of a vest of his that hung there and roared out:

"Did you leave that fellow here alone?"

"Only for a minute," says I, kind of scared.

"That's what comes from harboring a tramp," says Pa. "My wallet is gone, and your day's work has cost me about forty dollars."

"My heart was right in my mouth, but I kept a stiff upper lip. 'Well,' says I, 'perhaps if you'd spend a little time fixing things up in the beginning, it would save you money in the end.'

"He made no answer, but said he'd start right off after the fellow, and maybe catch him and jail him. Among Pa's irons in the fire was being deputy sheriff. I went along to identify. The man hadn't much of a start, and we soon caught sight of him hurrying along through a piece of woods."

"Hi, there!" Pa yelled, and the tramp stopped right in his tracks, waiting for us to come up. As Pa jumped out of the wagon he clapped his hand into his inside pocket, and the look on his face fairly scared me. Then he walked right up to the poor fellow and laid his hand on his shoulder."

"You the chap that worked for my wife to-day?" says Pa.

"Yes, sir," says the tramp, taking off his cap to me as polite as you please.

"Paid you fifty cents, did she?" says Pa.

"Yes, sir," says he.

"Well," says Pa, "that was a ridiculous price for what you did; here's a two-dollar bill. And see here," says Pa, "if you are in earnest about wanting to work, come back to my house in the morning and I'll try to find you a job."

"Then, after a few more words, he got into the wagon and we turned round."

"Why didn't you arrest that man for stealing?" says I when we were out of earshot.

"Well," says he, "I know a thief when I see him, and he isn't one."

"But I wasn't going to be put off by any such palaver as that."

"Where did you get that two dollars you paid him?" says I. "Out of the wallet that you missed?"

"Then Pa owned up, although he hated to. He had felt that wallet in his vest pocket just as he jumped out of the wagon. He'd been carrying it all day, supposing he had left it at home."

"Well, the man—Duggan, his name was—did come round the next morning, and got his job. He kept at it, steady as a mill, too, until he had saved up money enough to go back home. So my harboring a tramp turned out pretty well that time, although I never have tried it since. For one thing, I have never seen another tramp that resembled Duggan; and then, Pa is a grain better than he used to be about jobbing round home."

HOLLAND SLOWLY SINKING

IF the land of Holland continues to sink, there is danger that the subsidence will become so great that, in spite of the progress of engineering science, it will be impossible to continue the ceaseless struggle with the waters. That is the view which Prof. Molengraaff of the Polytechnic College of Delft recently expressed before the Geological Mining Society.

A large part of the Netherlands, particularly the western and northwestern provinces, lies below the level of the sea, which is kept from overflowing hundreds of square miles of land by the natural barrier of the long line of sand dunes that fringe the coast, reinforced at two or three points by artificial means. The level of the rivers and many of the canals in such regions is likewise higher than the surrounding country, and the nation has to maintain dikes and embankments at great pains and corresponding expense.

"If," declares Prof. Molengraaff, "the total expenditure should exceed the total income, then the common sense of the Dutch people would lead them to withdraw to higher regions."

Opinions differ on the question of whether the ground is still sinking, and what influences are responsible for such a phenomenon. Some experts believe that the phenomena observed are a consequence of certain movements of the sea level.

Mr. J. C. Ramaer is convinced from the results of water-gauge observations that the land of Holland has subsided noticeably, and so has that of the bordering countries and the greater part of the British Isles. He concludes from the entire list of such observations that there has been an average subsidence at the coast line of about eleven inches in each century. Farther inland the subsidence diminishes to perhaps five and one-half inches.

SHE WAS SHOPPING

ALADY had been sitting in a furniture shop for nearly two hours inspecting the stock of linoleums, says the Chicago Journal. Roll after roll the perspiring assistant brought out, but still she seemed dissatisfied. From her dress he judged her to be a person of wealth, and thought it likely that she would have a good order to give. When at last he had shown her the last roll, he paused in despair.

"I'm very sorry, madam," he said apologetically, "but if you could wait I could get some more pieces from the factory. Can you call again?"

The prospective customer gathered her belongings together and rose from the chair.

"Yes, do," she said, with a gracious smile, "and ask them to send you some with very small designs, suitable for putting in the bottom of a canary's cage."

NOT AN ACORN

WHEN James A. Garfield was president of Hiram College, says the Christian Register, a man brought up his son to be entered as a student. He wanted the boy to take a course shorter than the regular one.

"My son can never take all those studies," said the father. "He wants to get through more quickly. Can't you arrange it for him?"

"Oh, yes," said Mr. Garfield. "He can take a short course; it all depends on what you want to make of him. When God wants to make an oak He takes a hundred years, but He takes only two months to make a squash."

THE PENALTY OF LARGENESS

THE three-hundred-pound man, of whom Harper's Magazine tells the following story, stood gazing longingly at the attractive goods displayed in a haberdasher's window for a mark-down sale. A friend stopped to inquire if he was thinking of buying shirts or pyjamas.

"Gosh, no!" replied the fat man. "Nothing fits me ready-made except a handkerchief."

THE CHILDREN'S

An Easter Adventure

BY EULETA WADSWORTH

EASTER morning in Yellowstone Park was a real spring day in spite of the great white carpet of snow that was still spread over everything; and Brownie Bruin, who was enjoying the warm sunshine, stretched himself and blinked his eyes at his brother.

"I'm hungry," he said. "I think I'll go and hunt some breakfast."

"You'd better stay right here," replied Bobby. "You'll be getting into more trouble. Mother is out hunting now; she'll find something for us. Besides, she told us not to go away."

"But mother won't find the kind of breakfast I want. I'm egg hungry. I think I'll go up to the hotel and look in the hens' nests."

"How can you think of such a thing?" cried Bobby, jumping up on his hind legs and walking up to his brother in great excitement. "Didn't the keeper's dog chase you up a tree? And didn't the keeper's wife shut you up in the shed until her husband came and put a big chain round your neck and tied you up?"

"Oh, what's the use of getting mad, Bob? The dog didn't get me, and I broke the chain and got away."

"Yes, and maybe you'll have to wear that piece of chain round your neck all the rest of your life."

"Well, it doesn't hurt; and while I was tied up, the keeper's little girl used to throw lumps of sugar to me."

"But perhaps next time you couldn't break the chain, and you'd have to stay tied up all ways," argued Bobby in a shrill voice, filled with fear at Brownie's recklessness.

At that, Brownie shut his mouth tight and would not reply to his brother's arguments. And presently he turned away and padded off through the woods toward the big hotel.

He had gone there many times the summer before, and the people had fed him sugar. So the first thing he had done two weeks ago, when Mother Bruin and Bobby and he came out of their cave under the rocks after their long winter sleep, was to go to the hotel, hoping to be fed with sugar again. But he found the people all gone, and the windows covered with boards; and the keeper's dog had chased him and frightened him terribly. Then, only a few days after that, he went again; and while he was in the shed, smelling about for apples, the keeper's wife locked the door and made him a prisoner. Still, he did not feel very much afraid now as he trotted along. He was thinking of the delicious breakfast he should have if he found some eggs—and if the dog did not find him!

"My!" he said to himself, licking his chops. "Won't Bob be envious when I tell him about those eggs? Eggs! How his mouth will water! If only he wasn't such a coward!"

Jack-in-the-Pulpit's Sermon

BY JOHN CLAIR MINOT

All of an Easter morning,
Jack-in-the-pulpit cried,
"Gather, oh, gather, and listen,
From all of the countryside!
Hither, my congregation!
Hither, ye flowerets gay!
Hither, ye bouncing bunnies!
Listen to what I say!"

Over the hills they hurried,
Out of the field and wood,
Bunnies and blooms of April,
Whither the preacher stood.
There were the yellow jonquils;
There were the pansies blue;
There were the stately lilies;
There were the tulips, too.

Then to his congregation
Jack-in-the-pulpit said,
"Lo, it is Easter morning!
Lift up every head!
Tell to the world your gladness!
Show it the while ye sing
Songs of the vanquished winter,
Victory songs of spring!"

"Lo, it is Easter morning!
Go to the world, I pray,
Bearing the glorious message
Born of our Easter Day;
Tell how ye lay imprisoned
Deep in the mould and the night!
Tell how ye burst in beauty
Into the warmth and the light!"

So on an Easter morning,
Over the hills and afar,
All of the flowers of April
Carry wherever they are
Messages fair and fragrant—
Do you not get them, pray?
Telling the world the meaning
Flooding our Easter Day.

Whispers the yellow jonquil,
Whispers the pansy blue,
Whispers the stately lily,
Whispers the tulip, too:
"Long did we lie imprisoned
Deep in the mould and the night;
Then we burst in beauty
Into the warmth and the light!"

carefully, stopping every few steps to look and listen. He did not want to get caught again.

He had reached the rear of the shed in safety and was listening again before venturing farther, when the back door of the hotel opened and the keeper's little girl came out.

"Mother!" she called back into the kitchen. "I'm going to set my Easter eggs outside in the snow bank for a few minutes. May I?"

"All right," Brownie heard the mother

in a few minutes. So, with his heart pounding against his ribs as it did when the dog chased him, he made a dash for the pan.

The moment he saw the eggs he stopped short in amazement. Such eggs! Never in his life had he seen anything like them. Some were bright green like the grass in summer, and some bright blue like the blue jay's wings, and some bright red like the sweet berries he and Bobby had found before the snow came. He just stood and stared at them until he remembered that the little girl would be coming to take them inside almost any moment. Then he took a step forward and thrust his nose into the pan and seized a red one, because it was the color of the berries he liked so well; but instantly he dropped it and, letting out a yelp of pain, ran as fast as his legs would take him into the brush.

Swinging his head from side to side, he ran faster and faster for home. Every few minutes he would stick his tongue out first on one side of his mouth and then on the other, and once he stopped and licked the cold snow. All the time he was whimpering and wishing his mother would happen along. When he reached home, his mother and Bobby were just starting off. He could see them a considerable distance away; so he began to follow them. He could not catch up with them, and he could not call to them to wait, he was in such pain; but he managed to keep them in sight, and after a while they stopped by a hollow tree and looked round.

"What's the matter?" called Mother Bruin, when she saw him with his tongue hanging out of his mouth.

"Oh, I don't know!" wailed Brownie. "It was those Easter eggs."

Brownie went up to his mother and stuck out his smarting tongue.

"Why, goodness me!" cried Mother Bruin. "You have a great blister on your tongue. Were you trying to eat boiled eggs?"

"Oh, I don't know!" wailed Brownie afresh. "Oh! oh! oh!"

"Well," said Mother Bruin, licking the tears from his face, "it's too bad, but, after all, you deserve it because you didn't mind. Come, now, and forget about the blister. I've found a honey tree."

But Brownie could not eat even his favorite honey. He sat by, whimpering and occasionally holding his tongue against the cooling snow, while Mother Bruin and Bobby enjoyed the greatest feast known to a bear family.

Phoebe's Namesakes

BY MARTHA BURR BANKS

"PHEBE! Phoebe!" called little girl Phoebe, imitating little bird phoebe on the clothes wire above her head. "I've a namesake, Aunt Alice, a namesake that is a little bird!"

"You have more than one in the bird world, dear," returned Aunt Alice.

"Why, who are the others?" asked Phoebe. "See if you can search them out by yourself," said Aunt Alice.

One morning on her way to school Phoebe caught a sound that made her stop and listen.

Yes, there it came again! A crisp, gentle little cry of "Phoebe! Phoebe!"

"That's not Phoebe Gray!" she thought excitedly. "It must be one of my other namesakes. Oh, oh, there it is! Why, it's a chickadee! That's not the chickadees' song. I thought they were all gone, anyway."

Phoebe could hardly wait until the close of school to tell Aunt Alice of her discovery.

"Chickadees do have a phoebe note in spring," said Aunt Alice, "so now you have two of your friends. You should hear your third namesake whistle, 'Pewit phoebe!' soon, too."

"I never heard that song," said Phoebe. "I don't believe I know the bird that sings it."

"Oh, yes, you do," merrily assured Aunt Alice. "You saw one the other day."

Phoebe went about the woods and fields chanting softly to herself, "Pe-wit phoebe! Pe-wit phoebe!" and at last one day she recognized an answer.

"I've got it! I've got it!" she ran shouting to Aunt Alice. "It's the meadow lark. I always thought it said 'Spring o' the year,' though."

"You can make it say either," Aunt Alice replied.

A few days later Phoebe and Aunt Alice were walking along the roadside together. Fifteen or twenty goldfinches were warbling and whisking about overhead.

"Aren't they pretty?" cried Phoebe. "But, Aunt Alice, did you hear that?"

"A little note that sounds like a faint 'phoebe'?" said Aunt Alice. "Yes, it certainly does, though usually the goldfinches' song is a tinkle or a jingle of shells, and in the fall it is more like 'Chibec, chibec!' all day long."

"Well, I've found four namesakes, anyway!" cried Phoebe. "That's a good many for one little girl, isn't it?"

An Easter Race

BY HARRIET SUTHERLAND

"Ho, ho!" cried Bobbie on Easter Day. "There are two bunnies beside the way."

"I fear," said Bessie, "that they will try to get the eggs we were sent to buy."

"Well, well!" said Bobbie, "if that's the case, we'll turn about and give them a race;

"And if we win when the race is through, we'll keep the eggs and the bunnies, too!"

DRAWN BY KATHARINE A. MALLETT

By this time the hotel was in sight, and Brownie slipped through the thick underbrush to the side of the poultry house, where he could not be seen from the rooms in the big building occupied by the keeper's family. He edged his way cautiously round to the door and, after looking about and listening, slipped inside. All the way round the row of nests he went, nosing in each one for eggs; but to his disappointment he found every nest empty. Then he decided that he would see whether there were any apples left in the shed where he had once been trapped. That was near the rooms where the family and the dog lived; so Brownie made his way there slowly and

answer. And then the little girl went back into the hotel kitchen again and shut the door.

Brownie shook all over with excitement. Eggs! Easter eggs! He had never heard of Easter eggs, but he knew that they must be good. All eggs were good. He had never tasted any kind of egg that was not delicious. Next to honey, he liked eggs better than anything, better even than sugar. After the door had closed and everything was quiet again, he ventured round the corner of the shed, and saw a pan on the ground in the snow by the side of the door. The eggs must be in that, he thought. He knew he would have to hurry if he wanted them, for the little girl would be coming out

NATURE & SCIENCE

THE ORIGINS OF LIMESTONE.—It is a commonplace of geology that many rocks were built up from the remains of plants or animals. Thus great beds of limestone were formed from shells or corals, the remains of which are still distinctly visible in the rock. Pure limestone consists of carbonate of lime, but there are magnesian limestones, phosphatic limestones, siliceous limestones, and other kinds. The shells or skeletons of the organisms of which they were formed were mostly carbonate of lime, but some of them were magnesian, phosphatic or siliceous. The problem of determining how much material each group of organisms contributed to the marine sediments from which the rocks were formed is interesting and important, and has been carefully studied in the laboratory of the United States Geological Survey, where members of the staff have made hundreds of chemical analyses of shells or skeletons of marine invertebrates, including the calcareous algae, the specimens comprising forms ranging from almost microscopic Foraminifera up to large crustaceans. The molluscan shells and the corals were found to consist of carbonate of lime that contains only trifling impurities, and some groups of organisms that made smaller contributions to the sediments consist largely of the same material. From those creatures, then, come the ordinary limestones. The Foraminifera, the beautiful corals known as sea fans, the echinoderms—which include the crinoids, sea urchins and starfishes—are all rich in carbonate of magnesia, and from them come the magnesian limestones and the dolomites. Phosphatic limestones or phosphatic rocks owe their phosphates in great part to brachiopods, annelids and crustaceans. Vertebrate skeletons, such as those of fishes, are also highly phosphatic, and have added their phosphates to the sediments. Thus we now know with reasonable accuracy the part that each group of organisms has played in building up marine limestones.

A UNIQUE MARKET.—The first market for the sale of horseflesh in New York City, and probably in the United States, has just been opened, and if it is successful the city is to have other establishments for the same purpose. The new market is subject to the regulations of the department of health, and in order that there may be no deception it will sell nothing except horse meat. Veterinarians of the department of health supervise the slaughterhouses and take every precaution to safeguard the consumer. Dr. W. Horace Hoskins, dean of the New York State Veterinary College, has written the following letter to the department of health of New York City in regard to the new venture: "I am much interested, and quite approve of the action of your department in permitting the opening of establishments for the sale of horse meat. So clean an animal, so free from tuberculosis and many other serious lesions common to our flesh-producing animals, and the continually soaring high prices of animal foods make it extremely desirable that opportunities be afforded to obtain cheaper meats. The long prejudice held by so many people against horse meat I trust will soon be eliminated."

A CONDOR'S QUILL.—Few women who wear the quill of a condor in their hats are aware that they are helping to exterminate a magnificent and useful bird. When Mr. Frank M. Chapman was in South America he met a man who had hunted condors for years in the Argentine Andes. Some he shot, some he trapped in nets, others he bought. According to his estimate, he had killed sixteen thousand birds. As a result of such unremitting pursuit, the condor is now comparatively rare in an area more than two thousand miles long, and further killing may exterminate it in western Argentina. Only the feathers of the wings and of the tail, says Mr. Chapman in Bird Lore, have a commercial value. A condor usually has eighty-four of them. Before the war the marketable feathers of a condor sold in Paris for twenty dollars. Now the hunters can get only half that amount; and since our Federal law prohibits the importation of condors' feathers, as well as those of other wild birds, the market is virtually closed. It is to be hoped that other nations will follow the example of the United States in forbidding the traffic.

NETTING A CONDOR IN THE ANDES

TIN, THE INDISPENSABLE.—Nickel and tin are the only important metals that have not been found in paying quantities among our mineral resources, although the fact that we are the largest consumers of tin plate in the world has stimulated the search. Tin ore in small quantities has been found in several places in the United States, but most of what we use comes from Cornwall in England, Banka in the East Indies and Malacca in southern Asia. It is a metal that has played an important part in the history of the world. Combined with copper to make bronze, it was doubtless the first metal that man converted to his use. Weapons, tools and utensils made of bronze were used during a long period before iron and steel came into use. The United States now uses in the manufacture of tin cans as much tin plate as all other countries together use for all purposes. There is no substitute for tin. Price has little effect on consumption, which is not true of other metals. If tin cost fifteen cents a pound, we should perhaps put a thicker coating on our plates and make better solder and Babbitt metal; but if it were a dollar a pound, we should still have to use it for nearly every one of the purposes for which it is now employed. The lack of tin is one of the few things that keep the United States from being self-sufficient. If we were suddenly deprived of our supply of tin and solder, we should soon have serious sanitary troubles. Tin is the only metal that sells to-day at less than the average price of two years before the war. Other metals are selling at prices from fifty-two to one hundred and eighty per cent higher, but tin is ten per cent lower. After the war there will probably be a decided advance.

Fun for the Family!

Family pleasure, health, pride, and purse are all served by

Red Wing Wheels

To the business man—the housewife—the boy and the girl—a Red Wing means fresh air, exercise, pleasure and health. And enough money saved by its use each year to more than pay for the wheel.

This year ride a Red Wing—the wheel that leads and lasts. Eight handsome models to choose from.

Three Hand Bags In One

Simple Strong Serviceable

THIS Hand Bag is really one of the most useful articles for ladies ever offered our subscribers. It consists of a strong and serviceable Shopping Bag, 10x16 inches (A), which when folded once across the centre shortens its length to 9 inches (B), and an additional fold reduces the length to only 6 inches (C). The advantage of carrying a Hand Bag of this character is obvious. First, there is the small Hand Bag with inside pocket for change, railway tickets, letters to post, samples of dress goods, etc. Suppose, however, you are on a shopping tour and have made a number of purchases? To carry these small parcels in your arms is tiresome, and besides you are liable to lose one or more.

Convenience of the Bag The convenience of having the Hand Bag here offered is realized by simply enlarging it to the length desired for the safe repose of your purchases. It combines a Purse, Hand Bag and Shopping Bag all in one, at the same cost of the ordinary bag. No more weary arms, aching

with the weight of multiplicity of small bundles. No more frantic searching to see if you have dropped a package along the way.

The Hand Bag is made of black pantosote, pebbled grain finish, and is very durable. It has a covered metal frame, wrist strap, inside change pocket, and is cloth lined throughout.

HOW TO OBTAIN THIS TRIPPLICATE HAND BAG

Send us one NEW subscription (not your own) for The Youth's Companion, with forty cents extra, and we will present you with this most practical Triplicate Hand Bag, sending it to you postpaid. The Bag is sold for \$1.50.

NOTE: The Bag is offered only to present Companion subscribers to pay them for introducing the paper into homes where it has not been taken the past year.

GET OUR BIG PREMIUM LIST. Write to-day for our big Illustrated Premium List, which describes hundreds of worth-while Premiums given for introducing The Youth's Companion into new homes. It will be sent free to any Companion subscriber.

AN ARCTIC RESCUE

WHEN the Karluk, the chief vessel of the Canadian Arctic Expedition, which set out in June, 1913, became imprisoned by ice near Point Barrow, Alaska, Vilhjalmur Stefansson, the commander of the party, went ashore with five companions to hunt caribou. He never saw his ship again, for soon after he left her a furious northeast gale sprang up and carried her westward.

Near Wrangel Island, which lies north of Siberia, the ship succumbed to the tremendous pressure of the ice, and sank. Eight of the Karluk's company were lost in trying to reach land; but seventeen survivors under Capt. Bartlett succeeded in reaching Wrangel Island, and on that uninhabited spot established a camp. From there, Capt. Bartlett, accompanied by one Eskimo, made the terribly difficult journey of eighty miles to the mainland of Siberia. He then went to Alaska, and reported the fate of the Karluk.

Meanwhile, Mr. Burt M. McConnell, the meteorologist of the expedition, who had left the Karluk with Stefansson, had made his way to Nome, Alaska. Here he joined Olaf Swenson, who had determined to go to the rescue in his little schooner, King and Winge. Almost eight months after the Karluk sank they sailed from Nome, and after encountering the usual difficulties of arctic navigation, successfully drew within sight of the cliffs and beach of Wrangel Island. Mr. McConnell tells the story of the rescue in Harper's Magazine:

The lookout in the crow's nest sighted a tent when we were within two miles of shore, and as we came nearer, under full speed, we could see a flagpole and a cross. Suddenly a man emerged from the tent on his hands and knees. He did not show any signs of joy. He did not wave his arms and shout when he sighted the ship; he merely rose and stood rigidly beside the tent, gazing at us as if dazed. More than once he brushed his hands across his eyes, as if he could not believe that the King and Winge was a real ship come to rescue him.

Our first fear was that the entire party, with the exception of the one man we saw, had perished, but that gloomy possibility was dispelled presently by the appearance of two other men. None of the trio made any demonstration. Aboard ship, even the Eskimos were intensely excited. The umiak was launched, and when it was within a hundred yards of the beach the man whom we had first seen started toward us, taking a rifle from its case. Our natives became greatly frightened. They pointed to their foreheads and muttered, "That man long time not much eat! Him crazy—all same fox."

We landed on the beach and advanced toward this strange individual. His shaggy, matted hair streamed down over his eyes in wild disorder. His grimy face was streaked and furrowed with lines and wrinkles. I recognized him only by his voice when he spoke to Swenson. It was Munro.

"I don't know who you are, but I'm mighty glad to see you all," were his first words.

An instant later he recognized me, and asked in astonishment, "How did you get here?"

Other questions were rapidly asked and answered, and then, "Have you a doctor aboard?" Munro demanded.

"You don't need a doctor," Swenson assured him. "What you need is a cook. We will go aboard and have breakfast."

Maurer then came up, weak and emaciated. I did not recognize him until Munro spoke his name. He smiled in recognition, but was so visibly affected that I refrained from questioning him. Templeman next appeared. He was gaunt and very pale, and seemed on the verge of a nervous breakdown; so we talked of general topics and asked no questions about their experiences.

Aboard the schooner, the rescued men had a sumptuous breakfast, but an hour afterwards they were hungry again.

"Mr. Swenson, I want to ask a great favor of you," Munro finally gained courage to say. "For several months I have been dreaming of eating a whole can of condensed milk with a spoon."

Three cans were immediately brought forth, as both Maurer and Templeman confessed to a similar craving. And they ate that condensed milk as if it were ice cream.

At another camp forty miles away the King and Winge rescued nine other survivors. Three had died after reaching the island.

ONE OF THE HEROES

WRITING from Paris, a United Press correspondent tells about the heroic exploit of a young French soldier, Marcel Marco, who, now lying in a Paris hospital, wounded in many places and severely burned, has been the recipient of the French War Medal, conferred only for some signal act of bravery.

When the war broke out, writes the correspondent, Marcel was a stripling, slender as a girl, with beardless face, eyes large and black, and hands white as a woman's. At Verdun one day he gladly faced almost certain death. He emerged with a body like a sieve, a leg broken above the knee and a shattered hand.

A few hours before the French evacuated one of the hills in front of Verdun the commandant of a battalion picked the young man for a dangerous mission. The French planned to steal away from the hill silently during the night. Marcel was to stay behind, conceal himself and take special note of the emplacement of artillery when the Germans arrived. Then when night came he was to fire off a colored light, so that the French could get the range of the German battery and destroy it.

Marcel hid in a hollow tree. Through a knot hole he watched the arrival of the Germans and the placing of the artillery. At nightfall he crept out, set off a yellow light and dodged back into the tree.

Soon he heard loud shouts all about him as the Germans searched the woods. Then he heard a crackling. They had set the woods on fire to burn him out, as one does a rabbit. He gave himself up for lost.

Another sound crashed in his ear. The French were blazing away in response to his signal. The smoke was hurting his eyes. He hoped a shell would end his existence before the flames reached the tree. Then there was an ear-splitting bang and the tree fell into a thousand pieces.

When he regained consciousness he was in a farmhouse. His light had enabled the French to destroy the German battery and to recapture the position. They told Marcel that they had found him unconscious in the burning wood, with the flames licking his legs.

Steady

Those Nerves!

If it's caffeine—the drug in coffee—that's causing shaky nerves, the remedy is perfectly plain—

How Can I Earn Some Money?

What shall I do to earn the money so necessary to the welfare and happiness of my family?

This is a question thousands of women are asking themselves every day. They need more money—to meet the increased cost of living—to pay off a mortgage or buy a home—to educate their children—to pay doctors' bills—there are many reasons why. Many of them have been helped in this problem and now have money to spend and permanent assured incomes by becoming our representatives and selling our

World's Star Hosiery and Klean-Knit Underwear

to their friends and neighbors. As we have shown them, we can show you a fine independent way to have more money to spend. We have helped more than 12,000 women.

They are now enjoying large and prosperous businesses with constantly increasing sales. With our help their incomes are growing larger every day. You can do the same as they have done. Sell World's Star Hosiery and Klean-Knit Underwear in your home town. No previous experience is necessary. Our advertising makes sales easy—the quality holds the trade. Write today. We give you protected territory and prompt deliveries. We have been in business here for twenty-two years.

Beat off Winter at the windows

The securely warm, happy hours that children spend with pets and books on shut-in days become the lasting memories of home and childhood. Within the house that has a cozy, healthful atmosphere brought about by the all-pervading warmth of radiator heating, the children have full opportunity to gain their natural, sturdy growth.

AMERICAN & IDEAL RADIATORS & BOILERS

With greater output (sales in 1916 were the largest in our history), we are able to put the price within reach of all. No one in the world offers equal value in heating devices!

This ideal heating outfit is the only building equipment that stays worth all you pay for it, and in fifty years of use repeatedly repays its original cost through fuel savings. Can you possibly invest money better or more safely than this?

IDEAL Boilers and AMERICAN Radiators supply the heat that costs the least because they make every pound of fuel yield the full volume of heat. They silently and steadily meet the sudden weather changes, warming all rooms, halls, and basements alike. They protect the family health with cleanly warmth—no ash-dust, soot, or coal-gases reach the living rooms—which saves much wear on furnishings and decorations.

Get the heat that costs the least!

They are absolutely safe. They have every improvement—designed by experts in our factories in America and abroad. They bring quicker buyer or tenant for your building, or secure a larger loan. You always get back the full price paid for them. They cost less or no more than ordinary types, yet are fully guaranteed.

Made in sizes for flats, stores, schools, churches, public buildings, farms and city homes, old and new. Don't wait until you build. Write us for "Ideal Heating" catalog (free). Put us under no obligation to buy. Now is the time to buy.

\$175 permanent Cleaner

Ask for catalog of ARCO WAND Vacuum Cleaner. First genuinely practical Cleaner on market; is connected by iron suction pipe to all floors; and will last as long as your building.

AMERICAN RADIATOR COMPANY

Showrooms and Warehouses in all large cities
Write Department 30
816-822 S. Michigan Ave. Chicago

THE YOUTH'S COMPANION is an illustrated weekly paper for all the family. Its subscription price is \$2.00 a year, in advance, including postage prepaid to any address in the United States, \$2.25 to Canada, and \$3.00 to foreign countries. Entered at the Post Office, Boston, Mass., as second-class matter.

New Subscriptions may begin at any time during the year.

Money for Renewals should be sent by subscribers directly to this office. We do not request Agents to collect money for renewals. Payment to strangers is made at the risk of the subscriber.

Payment for The Companion, when sent by mail, should be by Post Office Money Order or Express Money Order. When neither of these can be procured, send the money in a Registered Letter. Silver sent through the mail is at the sender's risk. It is liable to be stolen or to wear a hole through the envelope.

Renewals. Three weeks after the receipt of money by us, the date after the address on your paper, which shows when the subscription expires, will be changed.

Always give the name of the Post Office to which your paper is sent. Your name cannot be found on our books unless this is done.

Letters should be addressed and orders made payable to

PERRY MASON COMPANY,
The Youth's Companion,
Commonwealth Ave. and St. Paul St., Boston, Mass.

CHRONIC RHEUMATISM

A NUMBER of the conditions that affect the joints, especially of persons in middle and advancing life, are variously called chronic gout, arthritis deformans and chronic rheumatism. Even physicians do not always distinguish clearly between these different diseases, for their symptoms are very much alike. We have spoken before of chronic gout and arthritis deformans, and here we shall describe briefly the chronic form of rheumatism.

That condition sometimes follows an attack of the acute form, called rheumatic fever, but more often it exists as a chronic disease from the start. Although acute rheumatism may occur at any age, it is more common in adolescence or in early adult life; chronic rheumatism is essentially a disease of later life. It often attacks sailors and outdoor laborers, who apparently bring on the malady by exposing themselves to cold and wet or by overworking or failing to eat nourishing food.

When it occurs as an independent disease, and does not follow an acute attack, the beginning is usually gradual. The joints become somewhat stiff and painful, and gradually increase in size as a result of the effusion of fluid. The trouble is confined almost entirely to the joints, there is seldom any fever, the appetite is good—sometimes too good—and the patient feels well.

After a longer or shorter time the local symptoms subside and the joints return nearly to their normal size; but they are not as good as before—a little stiffness remains, and there are occasional twinges of pain. The stiffness and pain are worse in cold and damp weather, and the sufferer becomes a living barometer, able to foretell storms with greater certainty than the government forecaster. After a time the trouble returns, the joints stiffen and swell again, and after the attack subsides the disability increases.

So it goes on until little by little the patient becomes a chronic invalid and more or less crippled. The smaller joints—knees, elbows, wrists and fingers—suffer the most, and in addition to the stiffness and swelling there are often little pea-shaped enlargements on the finger joints that increase the deformity.

Treatment of chronic rheumatism is very unsatisfactory; no actual cure is known, and the most that can be done is to relieve the pain and stiffness during the attacks and try to prevent or delay their recurrence. Unless the pain is so bad as to call for an anodyne, much comfort can be obtained by rubbing and massage and the application of a hot-water bag to the joints. For constitutional treatment, in addition to internal antirheumatic remedies, benefit sometimes comes from a sojourn at a mineral-spring resort. The patient should have a simple, nourishing diet and should avoid exposure in cold and damp weather.

AUNT RHODA'S JOURNEY

THE second day after Cousin Graham's arrival Muriel felt as if she had known him all her life. Cousin Graham was famous among scientific men, but it was as easy to talk with him as if he were your "chum." Muriel was sure that he would understand what Aunt Rhoda never could: all her longing to do something worth while and be something worth being—really to live, as Muriel had cried to herself uncounted times.

She said as much to Cousin Graham after dinner one evening, when Aunt Rhoda had "run in" to a neighbor's. Aunt Rhoda, although she had lived in the city for fifteen years, lived "just as if she were in the country," Muriel declared. She never made calls, except upon the minister's wife; anywhere else she "ran in."

"I don't see," Muriel said, hesitating a little over her words, "how Aunt Rhoda stands it, living the way she does."

Cousin Graham looked up with quick interest. "You mean here in the city—when she has a country heart? You're a shrewd young woman, upon my word! How did you ever guess it? And isn't it bully—the pluck of her?"

For a famous biologist Cousin Graham had, for common use, a very informal vocabulary. Muriel had observed that before, but just now she was too puzzled by his misunderstanding to notice.

"No, I didn't mean that exactly. I meant just not doing anything with her life."

Cousin Graham's keen eyes had a look now that made Muriel a little uncomfortable.

"Not doing anything!" he echoed. "Why—" He broke off abruptly. "Ever go to market with her?" he asked.

"Yes, sometimes," Muriel answered.

"I did, once. I've never forgotten it. I've been over the world, but the most valuable trip I ever took was that one to market with Aunt Rhoda."

"What do you mean?" Muriel asked in perplexity. "What happened?"

"Everything. Folklore, history, evolution, miracle."

Cousin Graham smiled rather teasingly, but when he saw the utter bewilderment in Muriel's face his voice changed.

"I mean it, little girl. To most people, market

workers are persons of another world. Aunt Rhoda made their world hers. She had a long talk with an Italian fruit dealer; she knew every one of his children. She told me bits of their history afterwards and laughed over the way they were picking up American slang. There was an old country-woman outside—she knew from what parts of her little place different flowers came. She had a bit of a treat for an old negro and a special word for a boy at one of the stands. He had been in the juvenile court a couple of years before; heaven only knows how Aunt Rhoda got hold of him! There was more real living—more faith and hope and love and courage—in Aunt Rhoda's marketing than most of us get into a year!"

The room was very still. Cousin Graham smiled—a warm, friendly smile.

"Be sure you get your values right, little cousin," he said.

CAPT. GYP

A BRITISH soldier stationed at one of the hospitals in France tells of a pleasing incident in which a dog played the main part.

We have had an unusual patient, he writes. A little white terrier came trotting in with rather a nasty gash in his side. He went straight into the receiving room and virtually asked to have his wound dressed. An officer dressed it and sent him off. He returned twice at different times during the day to have the dressing changed. He turned up the next morning, and, for a joke, a sergeant made out a proper sick report and sent it along with the sick reports of the chaps who had reported for treatment that morning.

In due course the medical officer came to this report and called out, "Trooper Gyp, Eighth D. L. I."—the heading that the sergeant had put on the report. The initials in this instance stood for "Doggy's Light Infantry."

Of course there was no answer. The medical officer glanced round at the sick chaps waiting for attention, and again called out, "Which of you is Trooper Gyp?"

Just then the sergeant entered and explained matters. The medical officer took the joke in good part, dressed the dog's wound and entered him in proper fashion: "Shell wound in side; admitted into hospital."

Gyp has now taken up his quarters in the park store, and nothing can persuade him to move. He goes out for a stroll every morning but always returns. He has, however, been promoted, and is now Capt. Gyp, Eighth D. L. I.

THE CAUTIOUS ELEPHANT

A NCIENT chronicles tell us that the Romans sometimes tested their military bridges by sending an elephant out on them and then watching to see whether the cautious beast would cross. The author of From Jungle to Zoo, in explaining the difficulties of transporting wild animals by rail, gives a more modern example of the elephant's cautiousness.

The keepers generally place a heavy platform from the door of the truck to the ground, but few elephants will venture on it. In one case the men sent in a trained elephant first in the hope that the newly captured elephant would follow. The new elephant stopped dead, however, threw up his trunk and made it evident that he would go no farther.

They offered him all kinds of food and addressed him with encouraging words; they led the trained elephant out and then in again with a rush, in the hope that the other would follow in the excitement of the moment. But it all had no effect whatever; there the balking one stood, waving his trunk and glancing from left to right and from right to left with his little crafty eyes.

At last, after two hours of hard work, when the men were exhausted and streaming with perspiration, the elephant suddenly lowered his trunk, seized the inclined platform and threw it away. Then lifting up first one huge foot and then another, he walked quietly into the truck and settled down at once to a good meal.

"FACILIS DESCENSUS"

A GENTLEMAN of large means and atheistic beliefs, says the Scottish American, built a handsome mausoleum for himself in the parish churchyard. It was a massive piece of masonry, and presented an aspect of considerable strength.

One day the gentleman met one of the church elders coming out of the churchyard.

"Weel," said the owner of the mausoleum, with an air of pride, "ye've been up seein' that erection o' mine?"

"Deed I hae," replied the elder.

"It'll tak a man a' his time tae rise oot o' yon on the day o' judgment," said the atheist, mockingly.

"My mon," said the elder, "dinna bother yer head about that. When that day comes, they'll juist tak the bottom oot o' yer concern and let ye slide doon."

TOMMY, ETYMOLOGIST

POPULAR etymology, says the Manchester Guardian, is always more interesting than the learned explanations of philologists. For example, take the barrack-room derivation of the word "canteen." It is of no use trying to convince Tommy Atkins that it comes from the Italian *cantina*, a small cellar. He has his own derivation, which he finds quite satisfactory. "Canteen" is simply "tin can" said backward.

To justify his theory he merely invites you to look round. Certainly, tin enters largely into the utensils and furnishings of the average canteen. The drinking vessels are tin and, in many cases, the tables also are covered with block tin. No wonder Tommy holds that the word has some connection with the metal that is so much in evidence!

HIS CHRISTIAN NAME

THE primary teacher had taken great pains to explain the distinction between surnames and Christian names, after which she called on the children to give examples of each kind from their own names and those of other members of their families.

When Jennie was asked to tell in one statement the surname and the Christian name of her father, she responded, after a little hesitation, "My father's surname is Johnson, and his Christian name is a Methodist."

Delivered to You Free

The New Electric Lighted RANGER Motorbike Model

We have placed a Special Deposit of \$5000 in the great First National Bank of Chicago to guarantee to you the faithful performance of the unusual trial agreement.

Choose from 44 styles, colors, and sizes in the famous "RANGER" line of bicycles. All are pictured in natural colors in our new 1917 catalog. There are many other models also—in fact the most complete line of bicycles in the world, all at FACTORY PRICES, from \$15.75, \$16.95, up. There is a Mead bicycle to suit the taste of every rider—electric lighted Motorbike models, Racers, Juniors for children; Ladies' models too—all at prices made possible only by our Factory-direct-to-Rider selling policy.

30 Days Free Trial We will send the "RANGER" bicycle you select, FREIGHT CHARGES FULLY PREPAID TO YOUR TOWN, for thirty days free trial—actual riding test. We pay return charges if you decide not to keep it, and make no charge for wear and tear during trial. We make no effort to influence your decision. The trial is all at our expense.

Factory-to-Rider Back of your "RANGER"—if you decide to keep it—is the oldest and most successful bicycle concern in the world, with a Service department that cares for the parts and repair needs of more than a million riders. With every "RANGER" we ship goes a Certificate of Guarantee for Five Years.

Parts & Repair Lamps, Horns, ready-to-use front and rear wheels, Inner Tubes, Tool Kits, etc., etc. Repair parts for all bicycles and coaster-brakes, all accurately pictured and described in the sundry pages of the big new Ranger Catalog. All the latest imported and American novelties in equipment and attachments at TIRES prices so low they will astonish you.

Rider Agents everywhere to ride and exhibit "RANGER" bicycles. Select the model you prefer and, while you ride and enjoy it, make money by booking the orders of your neighbors.

Send No Money but write today for this new 1917 catalog, also full particulars of the great new offer to send, all charges prepaid, the "RANGER" bicycle you select for 30 Days Free Trial. You cannot afford to buy a bicycle, tires or sundries without first learning what we offer.

MEAD CYCLE COMPANY

"Swift's Premium" Hams and Bacon

The National Breakfast Fruit

A Thousand Million Sunkist Oranges

Consider that figure a moment! The American public consumed last year more than one billion Sunkist Oranges. Thus a healthful benefit, affecting millions of people, has been distributed broadcast under the name "Sunkist."

Eight thousand California growers, in a great co-operative, non-profit organization, for years have produced vast supplies of these *uniformly good oranges*; and, through truthful advertising, have told men and women about them.

These two facts together, probably more than any other influence, have widened the scope of this natural good.

Miss Alice Bradley's Recipes

An illustrated book containing 200 Orange and Lemon recipes by Miss Bradley, Principal of Miss Farmer's School of Cookery, Boston, Mass., sent without charge to housewives who answer this advertisement. Send for copy now, giving your dealer's name and address.

Sunkist "Oranges for Health"

Uniformly Good Oranges

Sunkist Oranges—practically seedless—are sold by all first-class dealers in varying sizes at varying prices, so all families can afford them. They cost no more than ordinary kinds. Buy them in clean, crisp, tissue wrappers and look for the name "Sunkist." (606)

Raynster

Reg. U. S. Pat. Off.

Look for this Label on Your Coat

Reg. U. S. Pat. Off.

What's a fellow, or a girl either, want with an umbrella just for a few clouds or a little rain? Slip on your Raynster and be off—snug as a bug in a rug.

Raynsters for boys and girls are made like those for big folks—stylish and strong. No chance of being scolded 'cause your clothes are wet or damp. These storm coats are made for active fellows. They give you room to throw or run; to skip or skate.

Even rainy days are play days—with a Raynster.

Tell mother and father about these storm coats. Tell them they're made for everybody, big and little—many kinds at many prices.

Get a Raynster now, or ask for one for your next birthday.

These coats are made by the largest rubber manufacturer in the world—so be sure you see the label marked "Raynster" on your coat.

United States Rubber Company
Clothing Division, New York

SAXON "SIX"

A Car In Which the Unusual Seems the Usual

In every phase of Saxon "Six" performance you'll find that its *average* would be noteworthy and unusual if established by another.

It is true, too, in regard to its speed, its power, its quietness of operation, and its smoothness of power-flow.

Only recently in a test a certain well-known car of less than six cylinders showed 1512.72 power impulses per minute at a speed of 20 miles per hour.

Under the same conditions Saxon "Six" showed 2993.925 impulses per minute at equal speed.

Simply told there is the story—Saxon "Six" developed nearly 98% more impulses per minute at that speed.

Consequently each impulse was far less severe on all moving parts at any given time, practically all vibration was eliminated, and nearly absolute continuity of power-flow was obtained.

In terms of acceleration it means that this car of fewer cylinders will pick-up from a stand 22% slower than Saxon "Six."

And it means, further, that as compared to this less cylinder motor, Saxon "Six" will develop far greater pulling power with no noticeable difference in smoothness.

Saxon "Six" is \$865; "Six" Sedan, \$1250; "Four" Roadster, \$495; f. o. b. Detroit. Canadian prices: "Six" Touring Car, \$1175; "Six" Sedan, \$1675; "Four" Roadster, \$665. Price of special export models: "Six," \$915; "Four," \$495; f. o. b. Detroit.

THE YOUTH'S COMPANION

THE BEST OF AMERICAN LIFE

IN FICTION FACT AND COMMENT

PUBLISHED EVERY THURSDAY IN THE YEAR

Copyright, 1917, by Perry Mason Company, Boston, Mass.

TWO DOLLARS A YEAR · FIVE CENTS A COPY

"If Rusty Miller has hidden Mabel's notebook," said Mr. Phillips to himself, "she shall have zero in all her studies till she brings it back. She's too old for such mischief. She ought to be well shaken and stood in a corner for a baby trick like that—if she did it."

Thus thought the master of the academy while he, and everyone else except Mabel Graham, believed that some one had hidden the book as a joke. But as the morning passed and the book did not reappear, the school began to realize that the affair was serious. The master exonerated Rusty completely in his mind—she might have been guilty of playing a practical joke, but she would not have deliberately taken the book.

Just before the close of school Mr. Phillips addressed the students on the subject of the missing book. After the members of the lower classes had raised their hands to indicate that they knew nothing about it, he dismissed them; the graduating class he detained. Taking the members one by one into a small classroom, he questioned them carefully before he sent them home.

He began with Mabel Graham. By nature she was very slow to anger, but now she had worked herself into violent wrath. In the baldest and ugliest terms she accused Rusty Miller of getting access to the schoolroom by means of her father's keys, stealing the book and burning it in the furnace.

Mr. Phillips could hardly keep his patience. He realized, however, that Mabel's provocation was great, and knew that no girl in the school came from a home where there were fewer ideals.

"Now, Mabel," he said seriously, "we must keep to facts. I am more than sorry for you, and am just as anxious as you are to recover the book, or, if that is impossible, to investigate the circumstances of its disappearance; but random accusations do not help us. Now, have you any basis whatever for accusing Rusty Miller?"

"She's afraid I'm going to get the prize," said Mabel, sobbing.

"So, I dare say," said the principal, "is everyone else in the class."

"Well, she was here in the schoolhouse with me last night after everyone else was gone. I told her distinctly I wasn't going to take my book home on account of the party, and she saw me put it into my desk."

"And who left the room first?"

"Rusty did; but of course she could come back any time. She could take her father's keys without his knowing it."

"And just what did you do with your book? Do your best to remember accurately."

"Put it in my desk—right on top. I had it out, because I usually take it home. So when I put it back Rusty was the only one who knew, because all the others had gone skating. I hope you'll expel her, Mr. Phillips." Again Mabel burst into tears.

"I shall certainly do nothing of the kind unless there's much stronger evidence than there is at present, Mabel," declared Mr. Phillips. "And now I want you to leave this entirely in my hands. Reserve your judgment if you can. If you cannot, keep it to yourself. So long as you are in the building or on the school grounds, I forbid you to accuse anyone. And when you are outside my jurisdiction, I ask you as a friend, Mabel, to do the same."

Each of the other girls and boys denied knowing anything of the whereabouts of the book. Margaret Hatch told Mr. Phillips in confidence that Rusty had said one day on the pond that she would like to hide Mabel's book.

"I'm afraid Mabel Graham will get hold of that," she explained. "You know, like all of us, of course, that it would really only make it the surer that Rusty would never do it."

"Of course, Margaret," said Mr. Phillips,

"AND MIND YOU, MR. PHILLIPS, I'LL GET THE LAW ON THAT GIRL IF YOU DON'T PUNISH HER!"

DRAWN BY CHADE EMERSON

REUBEN'S PORTION

By Joslyn Gray Chapter Nine
In Ten Chapters

"and you did just right to tell me of it. Dear me, what a tangle!"

Rusty was the next to be questioned. Mr. Phillips explained that, because her father was janitor, he had to question her even more closely than the others. Rusty, who had no idea that Mabel suspected her, understood perfectly, and answered every question quietly, directly and quite convincingly. Mr. Phillips promptly dismissed her.

And yet some one must have done it, and only Reuben remained. It seemed a farce to question Reuben; but so had it seemed, for that matter, to question the others. Even Mabel Graham could not be suspected of any duplicity. She was obviously sincere.

Like the others, Reuben knew nothing at all about the disappearance of the book. Unlike them, however, he expressed sympathy for Mabel, and in view of the fact that examinations were to begin on Monday offered Mr. Phillips his notebook to lend to her.

Mr. Phillips agreed reluctantly and Reuben brought it. His notes were neatly kept, and were a real record of thought and study, worthy of a junior in college, the master said to himself. Reuben ought to keep it himself in order to review some of the work; he knew the matter essentially, but would of course run the risk

of missing certain fine points and thus lowering his record. On the other hand, Mabel certainly needed it more. She had lost her all with her book, and Mr. Phillips agreed to deliver it to her that night.

Somewhat cheered by the boy's thoughtfulness, Mr. Phillips left the schoolhouse before dark. On the way out he spoke to the janitor and assured himself that he knew nothing about the mystery. Then he made directly for the Mudgetts' house.

He liked the walk, for the road lay past the pond where the children had skated the day before, through a pretty hollow and up a hill with the coverlet of new-fallen snow glimmering softly over all. He found that Mabel had returned to her home in Wenham. Excusing himself from discussing the matter with Mrs. Mudge, whom he could hardly put off, he hastened back to the Hollow, got out his sleigh and started for Wenham.

Twilight lingered over the snow-clad earth when he reached the Graham house—the largest and the most expensive in the county. Mabel came to the door. She seemed in even a more excited frame of mind than she had been in at school and ungraciously refused the proffered loan of Reuben's book.

"My father says you—" she began, when

Wat Graham himself came blustering to the door.

"What I want to know is," he shouted, "whether you ain't goin' to punish that upstart girl that stole my Mabel's book! See here, Mr. Phillips, I want to know whether you're going to expel her out of the academy?"

"I shall certainly do no such thing," said Mr. Phillips. "Your daughter has no evidence whatever upon which to base her unkind and preposterous accusation. I forbade her to repeat it on the school grounds and asked her as a friend not to do so elsewhere. I am sorry, Mabel, that you have so little regard for a request from me."

"Of course Mabel come straight to her father when she can't get her rights no other way!" shouted Graham. "And mind you, Mr. Phillips, I'll get the law on that girl if you don't punish her!"

He disappeared into the room beyond and slammed the door fiercely behind him. Again the master offered Mabel Reuben's notebook.

"You had better take it," he advised. "I shall have to hold you accountable for the review of the next two weeks. If you refuse the loan of this book, I can make no allowance whatever."

"But I want my own!" wailed Mabel; and although he was indignant and disgusted, Mr. Phillips could not help feeling sorry for her. It had warmed his heart to witness all through the year how solemnly and proudly the senior class had accepted and borne the responsibility of those wonderful notebooks and all they implied; and his heart ached now in sympathy for the unattractive, disagreeable girl before him.

Again she refused, and that night on his way home Mr. Phillips returned the book to Reuben. Mabel was absent on Monday, but returned to school on Tuesday; she failed in all her recitations for that day and the rest of the week, and carried herself with an injured, resentful air that would have seemed comic had not the situation been really so serious.

Meanwhile, Reuben and Rusty were still ignorant of Mabel's accusation. Although it was generally known throughout the school,—and as generally scouted,—and although Mabel's father blustered about it all over Wenham, threatening to "get the law" on the malefactor, no word came either to Reuben or to Rusty.

Nevertheless, Seth Miller was secretly troubled by something that he thought might be connected with the disappearance of the book. A week after the day

of the party he took Rusty aside and confessed to her that he had given his keys into Reuben's hands on the night when the book was supposed to have been stolen. Although Rusty was aghast, she tried to make light of the matter; however, she begged her father to say nothing about it to anyone else. As the full meaning of her father's words came over her, all the ill feeling that she had had against Reuben disappeared.

Of course, was her immediate thought, he had taken the notebook! He had done it for her sake. She might have known. She remembered now that she had said that day at the pond that she should like to hide it. Plainly, Reuben had heard her and had thought that she meant it.

All through the year Rusty had known secretly that Reuben had felt as badly as she about their estrangement. Now that her resentment had disappeared, and she realized that she had been hasty, unfair, ungrateful, she felt that that very estrangement must have influenced Reuben to do this thing. She remembered the two fires, by both of which her family had benefited.

What to do Rusty knew not. She wrestled long over the problem without seeing any light. The only thing she could do was to keep his act from being discovered, without

letting Reuben know that she was trying to shield him. Perhaps by letting herself be suspected she could prevent any hint of suspicion from approaching him.

At recess on Friday morning she went to Mr. Phillips.

"Mr. Phillips, I want to take back what I told you the other day," she said gravely. "I—I am very wretched, and I want to say that I do know something about the book, and—I said once I'd like to hide it."

"Rusty, you don't know where Mabel's book is?" cried Mr. Phillips.

"I—can't tell," returned Rusty.

"Now, Rusty Miller, what have you on your mind?" Mr. Phillips exclaimed. "You didn't have a thing to do with the matter—you know that as well as I do. Apparently you think some one has made way with it, and you'd like me to believe you guilty in order to shield that person. May I tell the school that you have said you are responsible?"

"Oh, no!" cried Rusty, aghast.

He laughed grimly. "Now, Rusty," he said seriously, "suppose you tell me what is in your mind? I feel so sure that you are mistaken. I know your friends pretty well, Rusty, and I don't believe that any one whom you care enough for to try to shield in this way needs protection. You certainly are on a false track. Now, can't you confide in me?"

Rusty shook her head sadly. Of course no one would understand. Mr. Phillips would think it monstrous that she should suspect Reuben of committing such an act. He could never understand, as she understood, that Reuben could do wrong rightly, even nobly.

So, refusing to say anything more, she went back to her seat—thoroughly discouraged because she had accomplished nothing. And from now on she should be in constant dread that some one else would learn that Reuben had entered the academy that night.

At recess that morning Reuben learned for the first time that Mabel suspected Rusty of having taken the notebook. Mabel Graham was taking her continual failures more and more to heart, and Reuben again offered her his book for the week-end. Mabel accepted it,—rather as if she were conferring a favor,—and then went on to bewail her loss, as she constantly did when she could get a hearing. She made no direct accusations to Reuben, but she did let fall one or two dark hints, and suddenly Reuben understood. She thought that Rusty had done it! He was so filled with consternation that he lost her next words. Then he caught something about a light having been seen shining from the window of the big schoolroom on the night that the book was taken; but it was not until later that that light was a light to him.

At first he was merely troubled because Mabel suspected Rusty. But as he went home that noon, the thought suddenly struck him that Rusty had indeed stolen the book—not for herself, but for him. She had done it that he might have the scholarship. He had worked hard this year, and Rusty must have thought that it was all for the scholarship—that that was his heart's desire. And all the more because he wearied her and because he was old and poky, would warm-hearted Rusty be sorry for him and wish him to have what he most wanted. It was like her not to consider anything else—not even poor Mabel's rights—and to do this wrong, quixotic deed for him.

At that moment the recollection of the light seen shining from the academy window flashed as a light on his path. He saw Mr. Phillips ahead and ran to catch up with him.

"O Mr. Phillips, I'm afraid I gave you a wrong impression when I talked with you a week ago!" he said breathlessly. "I want to tell you—well, a light was seen in the academy the night that Mabel's book disappeared. I want to tell you that I got into the academy and into the big room that night. The light was from the lantern I carried."

Mr. Phillips could scarcely credit his ears.

"Reuben, do you mean to tell me that you were in the schoolroom that night?" he asked.

"I was, Mr. Phillips," Reuben insisted, but his honest brown eyes bore witness that he was not the thief. To the master, it was as if his big, faithful shepherd dog had looked up—with much the same liquid brown eyes—and confessed to eating the neighbor's baby.

Mr. Phillips drew a deep sigh. "Do you know, Reuben," he said, "this is getting to be more than I can stand. Now you are trying to shield some one. See here, you're more mature than the others! I can talk to you as if you were a man. You know perfectly well that I'm not the schoolmaster in this instance—I'm just one among you all. Suppose you tell me

what you know, Reuben, and let us work together, you and I, to straighten it out?"

It was terribly hard for Reuben to resist; it was truly the appeal of brother to brother, friend to friend. But the boy knew that he had to seem stiff and stubborn and unappreciative of what really went straight to his heart; for even Mr. Phillips could not understand that impulsive Rusty could do wrong rightly, generously, even nobly. Reuben felt that he must save her from the consequences.

FRITZ AND HIS "YAGER"

By Charles Askins

A REGIMENT of Illinois Volunteers under the command of Col.

Newby, which were making the journey from Fort Leavenworth, Kansas, to Santa Fe, New Mexico, to take part in the Mexican War, were encamped on the South Canadian River in the panhandle of Texas. At the end of a hard day's march through deep, dry sand, the tired command had halted on the north bank of the stream. The guide had earnestly advised the

Before school closed, Mr. Phillips again addressed the pupils on the subject of the missing book. He asked the aid of every student in school in solving the mystery. And he concluded by saying that in case the mystery were not solved,—unless the book were found or its fate discovered,—he should refuse to allow the prize to be awarded at the end of the year. He should request Col. Wadsworth to withdraw his generous offer.

TO BE CONTINUED.

DRAWINGS BY GEORGE VARIAN

THE SIGHT OF RED SIMON CHARGING WAS TOO MUCH FOR THE SOLDIERS, AND THEY WENT WHOOPING DOWN THE HILL

commanding officer to cross that night, since the river might rise very quickly. The officer, however, had not believed that such extreme caution was necessary, for the Canadian had appeared a mere bed of dry white sand half a mile wide; but at daylight the next morning the treacherous river had been fifteen feet deep with a current as swift as a mountain stream.

Now, after a week of very monotonous camp life, the soldiers were beginning to grumble at the delay; they were eager to get on into Mexico before the war was over. However, they knew that it would be foolhardy to try to cross the river in its present condition, and they would probably not have become impatient if they had been allowed to hunt. They wanted the excitement, and they also wanted a supply of fresh meat. Day after day for the last three weeks hardly an hour had passed when some kind of game had not been in sight. Prairie chickens had boomed up from beside the trail, the keonk! and gobble of wild turkeys had wakened the sleepers at daybreak, deer had drifted out of the wooded cañons in droves, antelopes had gazed curiously at the slow-moving train from a thousand ridges, and on the Little Arkansas they had had to halt for half a day to let a herd of migrating buffaloes pass.

From the beginning, orders had been strict that no gun was to be fired either in camp or on the march without permission from the commanding officer; and, with the exception of a few scouts who skirted the train in order to guard against surprise attacks from the Indians, no detached parties were allowed to leave the main body. The dangerous activity of the plains Indians made such strict discipline necessary. Not a command had yet traveled the Santa Fe trail without a brush or two with Indians, and here and there little mounds of stone showed where white men had been buried—buried deep so that the wolves could not dig them up. Although Col. Newby's regiment had seen no Indians,—except the friendly Osages,—the commander well knew that the red men were constantly dogging the train.

When, after a week in camp by the Canadian,

miles to the north, Lieut. Lucky of Company H succeeded in getting permission for a dozen of his men to go buffalo hunting under command of Sergt. Houston. The gray-haired lieutenant smiled as he saw his men stepping briskly away, musket on shoulder, with high anticipations as to the number of bison they would kill.

The old relics of the War of 1812 that the

volunteers carried were not precisely the weapons that experienced buffalo hunters would have chosen. They were flintlocks, smooth-bored like a shotgun, and the charge consisted of a round ball and three buckshot; a bullet fired from such a gun would fall a foot in a hundred yards. The soldiers to a man knew how to handle a rifle, but with one of those war muskets the most expert shot could hardly have been sure of hitting his mark at a distance of more than a hundred yards. Even if the hunter got close enough to hit a buffalo, it was doubtful whether one shot from the ancient weapon would kill.

One man of the detail had a different sort of gun, Fritz Wagner, the wagon master, who had been ordered to accompany the hunters on his saddle mule, Wilhelm, to help carry in the meat. Fritz had a gun the like of which few of the soldiers had ever seen before. It was a German "yager"; compared with a Kentucky rifle, it was short in the barrel, but it had a bore that looked an inch across, and it took a bullet as heavy as three musket balls. The gun, which weighed perhaps fourteen pounds, was much too heavy for military purposes; but it was well rifled, correctly

sighted, had a set, or hair, trigger, and a nipple for percussion caps instead of a flintlock. Fritz declared that with his big gun he could kill a man at a range of half a mile or more; but his comrades, never having seen him perform the feat, were skeptical. They admitted, however, that the "Dutch blunderbuss" made a noise like a cannon and might carry as far.

Although the men considered Fritz as a "furriner," and hence not entitled to the same consideration that a free-born American deserved, they regarded him as a capable train master and a general good fellow. His one enemy was Private Simons, a quarrelsome, refractory man, who had once made the mistake of thinking that he would ride in one of the "Dutchman's" wagons, whether or no. Officers had interfered in the interest of peace and discipline, but Red Simons still bore his grudge against Fritz, and he did not try again to ride in one of the wagons without permission.

Fritz's best friend was the Scotch sergeant, Neal Houston. The bond between them was, perhaps, the fact that the German had served five years in the Prussian army, and that Neal had for double that length of time belonged to the Gordon Highlanders. Neal himself was not a volunteer, but a regular of the United States Army, who had been assigned to duty with the state troops to help whip the raw recruits into shape. Fritz, too, was a veteran; of many trips across the plains, with a wide experience in Indian warfare. Both despaired of ever being able to make real soldiers out of the skylarking volunteers, although Neal declared that the rascals would fight if it came to a pinch.

An hour after leaving camp the detail of hunters were lying on top of a high hill, surveying a great herd of buffaloes in the valley below. The grazing ground, a mile or more wide and as level as a floor, was entirely hemmed in by high hills.

The hunters had come upon the buffaloes from the south, but since the wind was from that direction, Neal had ordered the men to make a detour to the west, in order to approach

the wary animals against the wind. Although the hunters had proceeded very cautiously, something made the buffaloes suspicious, for when the men reached the edge of the westerly hills the herd had moved well out into the valley toward the opposite side. They were not feeding as contentedly as they had been; a number of bulls had drawn together and with raised heads were staring steadily to the west. Doubtless while the hunters were winding their way through the cañons some treacherous, eddying current of air had carried a warning to the buffaloes.

Sergt. Houston's lean face wore a puzzled frown. The bison were quite out of musket range, and it seemed impossible to stalk a yard closer to them. As leader of the party, it rested with him to devise a plan of action, and he could recollect no military tactics that exactly covered the case. Of all the party Fritz was the only one who had ever killed a buffalo, and he had been left well behind in a depression with his mule. While the sergeant pondered the matter, his poorly disciplined force was ready with all kinds of suggestions.

"Let's fire a volley, sergeant, all of us at once—we're just bound to splatter 'em up some."

"Too far," Tim Ables declared. "Thar's no force left in a musket ball after sich a flight; must be six hundred yards—bullets be like so many peas drappin' on a bufler's back—switch his tail and off he'd go."

"It wouldn't s'prise me any if we couldn't overtake them clumsy critters in a straight race," ventured Long John Talbot, who considered himself as something of a runner.

"I crep' up on many a flock of geese like that," remarked Uncle Bobby Russell. "I 'spect if we got down on our stomachs and kep' our heads down and crawled mighty slow, we might git to 'em."

"Silence in the ranks!" ordered Sergt. Houston. "I misdooht the campaign is goin' to be a failure. The trouble is we hae nae cavalry, neither artill'ry. A twelve-pounder, now, would create havoc among 'em, or a coomp'ny of mounted men might detain 'em until the infantry could come up."

"Why not use the Dutch artill'ry and the Prussian cavalry back there?" asked Red Simon. "Accordin' to Fritz, he can hit a bull's-eye every time at a half a mile, and his mule can run close to a mile a minute."

"Some sense in what ye say, Simon, though I doobt if it was so meant. I hae no authority to order Fritz into a buffalo chase; it might mean the death of his mule this hot day. I must consult him. Go back and send him up here. Stay there and keep the beast quiet."

"Fritz can't be cavalry and artill'ry both at once. I'm goin' to mount the mule and get a runnin' shot at close quarters. He can't hit the broadside of a church from here, and we need one buffalo anyhow."

"Obey orders or I'll report ye to the colonel—if I don't take matters into me own hands. Av coorse ye should hae been a major general, Simon, but ye are only a private now, and I am your commanding officer. Send up Fritz."

With a defiant look on his face, Red Simon shouldered his musket and disappeared over the ridge. Presently Fritz came up with his "yager."

"Take a look at the animals, Fritz. They must hae winded us, and we can come no closer without stampeding the herd. The distance is six hundred yards, more or less. Think your big piece will carry over the range?"

"It is not so certain, sergeant, without a sighting shot to give me the range. Maybe I can kill. I will try for the bull nearest. If the bullet goes over his back, some other of the boonch should be in the way. At sefen hoon-dert yards I set the sight. Ha! What happens to Wilhelm?"

The clump! clump! clump! of the mule's hoofs came to them distinctly from the north.

"He's making off with your mule, Fritz! The villain! For this he'll get a lesson to remember his lifetime. Shoot, Fritz, before the herd sees him."

Fritz took from beneath his jacket a pair of sticks a few inches long, riveted together like shears. These he stuck into the ground so that they formed a fork as a rest for his heavy gun. Now the keen-eyed German adjusted his sight, placed the muzzle of his "yager" in the rest, and lay down prone. The group of buffaloes had quieted, and some of them were beginning to graze, but the bull that Fritz had selected seemed to be on guard.

The great rifle roared like a cannon; a cloud of smoke obscured everything in front, and the heavy report, rolling across the valley, rebounded in many an echo from the high hills on the far side. The frightened buffaloes started to flee, then, unable to find the source of danger, stopped and milled about. Throughout the length of the valley the herd had stopped grazing; they were waiting for a leader to start the stampede.

The buffalo bull at which Fritz had fired stood for half a minute without moving; then he turned and trotted stiffly away up the valley.

"You hit him!" Sergt. Neal declared. "I heard the ball strike. Watch him!"

The bull trotted slowly until he came to what appeared to be a buffalo wallow; there he lay down or fell. The other bison had

AT THE TREMENDOUS BOOM OF THE BIG GUN THE PONY WENT ROLLING HEELS OVER HEAD

started to retreat with the stricken bull, but they now halted, and some of the bulls began to bellow loudly.

"Dead as a mack'el!" shouted young Bill Drew. "Load up, Fritz, and down another before they get away. Too late! There comes Simon and the mule!"

It was true. Red Simon and his mount appeared from behind the shoulder of a ridge that jutted out into the valley; he was heading for the buffaloes at full speed.

The sight of Red Simon charging was too much for the soldiers, and they went whooping down the hill, followed by Sergt. Houston, with Fritz, who had been reloading his "yager," bringing up the rear.

Wilhelm was surprisingly fast for a mule, and before the men had covered fifty rods he and his rider were among the buffaloes. Red Simon fired at a bull; but the creature, instead of falling to the ground, wheeled and charged. With his gun empty, Simon could only whip his mule into a hasty retreat. At last Wilhelm began to draw away from his pursuer; the bull stopped, shook his head angrily and, turning, followed after his mates. Simon again took up the chase, and fired one of Fritz's cavalry pistols at the beast; but the only effect was to cause the bull to charge again.

By this time the men were coming within range, but because of the danger of hitting Simon or the mule they could not fire.

"Pull out, Simon!" shouted Sergt. Houston. "Give the boys a chance!"

If Simon heard the order he paid no attention to it, for he was presently hard after the bull again, still directly between the men and the mark. He discharged the other pistol at the buffalo's very flank, and this time the hunter did not escape so easily. As he wheeled and swung in a circle to avoid the lowered horns of the enraged beast, the mule, breaking through into a badger hole, went down and tossed his rider far over his head. A rattling volley from the infantry did not check the bull's charge; but when the creature was almost on top of the man, the "yager" boomed, and the animal went down. Red Simon rose, picked up his gun and, grasping Wilhelm's rein, kicked the mule until the poor beast struggled to his feet; then he climbed into the saddle and, pounding Wilhelm into greater effort with the butt of his gun, rode off after the fleeing herd. The man seemed in a frenzy, for he paid not the slightest heed to Sergt. Houston's emphatic orders to halt.

The men now gathered round the fallen bull, each of them certain that his bullet must have produced a fatal wound; but they all acknowledged that the broken neck had been caused by the big bullet of the "yager."

Sergt. Houston stood watching the obstreperous trooper until man and mule, still in full chase of the buffaloes, passed out of sight over a ridge to the north.

"My good mule," said Fritz sorrowfully, as he came up. "Simon'll run poor old Wilhelm to death. It's a pity that feller didn't break his neck, now."

"A hundred such men would ruin an army," declared the sergeant indignantly. "The only cure for a man like that is a fight where the bullets are flying thick enough to scare him. There was a man like that in an hour." Ellis and Wilson

Skilled hands quickly skinned the game and cut up the meat ready for carrying to camp. There was more than a thousand pounds of good buffalo beef—far more than they could take into camp even if the mule, when it got back, was in good enough shape to take a load. Capt. Cunningham of the commissary department had partly promised to send a wagon if he heard firing, and the men were now on the lookout for the team as well as for Simon, who had been gone three quarters of an hour.

"The scoundrel!" muttered Neal uneasily. "The next thing I'll be hauled up before the 'old man' for not taking care of him."

"Look, sergeant, there he comes! No! It's a horse!"

To the north, nearly half a mile away, a single horseman had ridden to the top of the ridge, and there, outlined against the evening sky, had halted; sitting his mount motionless, he looked down upon the detail of soldiers.

Fritz took a small telescope from its case, glanced through it and handed it to Sergt. Houston. After examining the lone horseman for an instant, the officer turned to his men.

"That's an Indian. I think he's a Cheyenne, but he is not in war paint—most likely one of a hunting party out after buffalo. See him signal! Look to your guns, men! More Indians there!"

One by one the Indians ranged themselves alongside the first horseman, thirty, all told, sitting as stiffly erect as United States cavalrymen, with their ponies in perfect alignment. "Get into that buffalo waller!" Neal ordered sharply. "Take your bayonets and dig a trench all the way round the rim of it. Pile this meat in front of you for a breastwork. Dig yourselves in. They've cooed us and may charge, but they have nothing except bows and arrows, and we can stand 'em off."

Hardly had the hunters got well to work when the Indians came a long whoop and came charging down helter-skelter. They did not swerve until they were three or four hundred yards from the soldiers; then they turned and circled round and round them, well out of musket range. They had strung out in single file, with about thirty or forty yards between warriors; although riding at full speed, every red man sat boldly upright in his saddle. The soldiers dropped their bayonets and seized their muskets.

"Niver mind grabbing your guns!" snapped the sergeant. "They can't touch us with an arrow at that distance. I'll tell you when to shoot. Dig yourselves in—every man in his own hole."

Three times the red riders encircled the soldiers, gradually drawing in closer. When they were within two hundred yards, the bucks swung to the far side of their ponies, and sent an occasional arrow at the white men. Most of the arrows flew wild, but one or two landed in the buffalo

hole. One arrow stuck upright in a piece of beef directly in front of Ables, and its feathered end beat slowly back and forth for a few seconds. John Talbot thrust up his foot and shook it derisively at the Indians as an arrow passed close over him.

"Better keep your long shanks under ye, John," Ables said. "Fore ye know it one of them spikes will pin 'em to the ground."

"Get down, all of you!" came the crisp command from the sergeant. "Remember, not a shot until I gie the word! I will call the name of the man who is to fire. On your lives, now, not a man pulls trigger until his name is called. If they can induce us to empty all our guns at once, they'll charge and finish us. No shooting is to be done until they are within a hundred yards, except by Fritz. When you do shoot, aim at the horse's neck and don't miss."

Neal had guessed right; the Indians, trying to tempt the soldiers to waste their shots, soon began to taunt them. Some of the bucks sat bolt upright and, waving their arms, reviled their foes; now and then one of the red men stood erect on the back of his pony. The sharp Indian yelp came continually from all sides. The circle suddenly narrowed; the red riders swung to the far side of their ponies, and the arrows came thicker and were more accurately aimed.

Fritz and Neal lay side by side. "Getting too hot, Fritz. Won't do to let this go too far. Soome one will get hit, and the boys will all cut loose in a volley in spite of me. We don't want to kill any of 'em, Fritz, unless we have to, for they'll try hard to get even then. See that big black devil sitting up! Shoot for the pony's shoulder, lad, and maybe it will be a lesson to the gang."

At the tremendous boom of the big gun the pony went rolling heels over head like a

stricken rabbit. After a wild tumble, the buck sprang to his feet, caught the horse of a passing comrade and swung up behind. A startled yell in which there was a note of fright came from a score of red riders. Either from hearsay or experience all of them knew something of the white man's cannon, and they must have thought that this thunder gun, with its instantaneously fatal missile, was nothing short of a piece of field artillery. At some signal from their leader they broke away in the direction of the ridge on which they had first appeared. When they reached it they halted and held a consultation.

It was now the soldiers' turn to cheer, and they did so vigorously, springing to their feet and waving their caps.

"I only wish Sergt. Houston had let me fire jist one shot!" exclaimed young Bill Drew. "I bet there'd 'a' been one Indian less."

"Huh!" commented Uncle Bobby Russell dryly. "You had your head tucked down so low you couldn't have aimed at nothing but the moon."

"Good shot, Fritz!" cried the sergeant. "That big piece put more fear into the scamps than killing half a dozen of them with a musket would have done. Now, if the wagon from camp don't come up without an escort, or if they don't run afoul of that fool Simon, we're done with 'em. Hello! What's that? Give me the glass."

Two riders had come up from behind the ridge and had joined the Indians, and one of them was surely mounted on a mule.

"Poor lad! He'll pay for his foolishness now. It's Simon. Our best regiment of cavalry couldn't save him. That last buck is leading your mule by the rein, Fritz, and Simon is tied fast to the saddle. Now, watch the beggars parade."

With Simon and his captor standing in the centre of the ring, the warriors, shouting their war cries, began to gallop and prance about in a short circle.

A dismayed silence fell on the men who had cheered exultantly a few minutes before. Any of them would cheerfully have faced a soldier's death, but torture at the hands of savages was a different thing.

"I take a shot, Neal, if I may—at the buck holding my mule. I might hit him. Wilhelm gets loose, he come straight to the sound of my gun—he always does that when he's loose. Maybe I miss—it's a chance."

"Yes, yes! Aim your straightest, Fritz. It may mean Simon's death instantly, but that be better than torture."

The Cheyennes had once more halted and lined up behind their captive. The pony of the Indian who held Wilhelm stood broadside. Coolly but quickly Fritz settled the muzzle of his great gun on the earth piled in front of him. The men held their breath while he cocked the "yager" and set the hair trigger with a click that rang loud in the

THEY SENT A FEW ARROWS AFTER THE SPEEDING MULE AND THE HELPLESS RIDER

stillness. He took a short, steady aim, and then the big gun belched forth fire that could be seen in the waning light. A shade of a second, and the Indian's horse at which Fritz had aimed dropped to its knees and rolled on its side.

At once there was a confused movement among the Indians. One animal separated itself from the others and galloped straight for the buffalo hunters. Wilhelm it was, coming at his best pace to his master's gun. Superstitious fear must have settled on the Indians—the great gun was "bad medicine," aimed by the evil spirit. They sent a few arrows after the speeding mule and the helpless rider; then, plying the quirt, they turned, passed over the ridge and were never seen again.

The mule charged up to the buffalo hunters and stood panting from his race. An arrow

stuck from his hip, a second was embedded in the saddle, and a third had been driven clear through Simon's lower leg. When his comrades had cut the rawhide thongs that bound him and had bandaged his bleeding leg, Simon turned to Neal.

"Sergt. Houston, I'll mind you next time," he said. "I've learned a lesson, and I'm terrible glad to be back. Give me your hand, Fritz. You're a better shot and a better comrade than I can ever hope to be."

"Ja, ja, but wait till I git the stick out of Wilhelm. He ain't hurt mooch, but he might keeck me if I tickle him."

"Here comes the big, four-mule-team wagon and about forty of the boys!" called Uncle Bobby Russell. "Now, let's hustle into camp and cook a buffalo hump. I'm hungry."

not an animal. "But Marie, the poor soul, had her wedding dress in that burro."

For years little Marie had toiled over lovely things for other people to wear, while her own clothes were of cheap cotton and coarse wool stuff. Only once in her lifetime had she expected to be beautifully dressed. A hundred times she had described to Dorothy the beauty of her wedding gown. She had bought material that was pretty enough for a princess. And the embroidery! Months she had worked on that at night—sometimes until nearly morning. It was the most beautiful thing that she had ever made. And now—

Her needle-scarred hand twitched convulsively.

"Min are born sinseless!" declared Mrs. O'Rafferty. "Them neighbor min wint in to save the furniture, and they looked in Marie's burro and says, 'Nothin' here but lace and stuff they can do without aisy! Save the ice chest; it's got a meal's victuals in it.' The stoopids!"

Dorothy smiled a little as she stood by the window, but only faintly, for a thought had come to her of which she was afraid. "I couldn't do that!" she said to herself.

After a moment she turned to look at Marie. In the French girl's hand was a scorched bit of fine lawn, embroidered with little flowers. "She ran right into the fire," Mrs. O'Rafferty explained; "but them min was right after her. This is all she saved of her dress."

Dorothy went to the table, stood a moment thinking what to say, and then dropped on her knees and laid one arm round the other girl.

"Marie, I have a white dress—you know just what it's like. I'm going to —"

"Well, he said Ralph might be heard from yet—in Shanghai or some such place —"

Dorothy slipped into her room and shut the door—tight. To hear anything said against Ralph was what hurt her most of all. And twice that day she had had to listen to *this*! Was this what people had been whispering all the weeks before they knew that he had been drowned?

She felt that she could not go on. Sitting down on her bed, she twisted her fingers together. And then suddenly she remembered.

"Marie is perfectly happy to have that white dress of mine!" she said aloud. That was something to think about. It helped her as nothing else had all this time.

After a while she rose and went to the window, from which she could see the even ripples of the bay. The water changed to lilac; then—for it was evening—to a radiant gray. It made Dorothy think of Honolulu—where Ralph had had an appointment to begin work in August, and where she had expected to be this summer. The whole thing seemed suddenly unreal, as if she had only read about it in a book. Yet it was true. There remained of her wedding gown only a faint smell of violets in an empty chest.

The next day went by, and the next, and it was Marie's wedding day. Dorothy went to the wedding, and saw Marie, slim and very pretty in her wedding gown, with the new ring looking huge on her worn left hand.

Dorothy had not felt so peaceful since Ralph was lost. She knew now what to do when everything is swept away. If you can get a little share in some one else's joy, you begin to be yourself again. When she reached home, she was singing softly to herself.

As she entered the door the Irish girl called to her, "Ah, while nobody was home, something came from over the sea!"

Dorothy guessed that it was the wedding gift that Ralph's sister, who was a missionary in China, had started overseas before it was known that there would be no wedding.

"I know," she said. "It's my Chinese embroideries."

"Thin they came by cablegram."

Dorothy's heart quickened foolishly. For a year after they became engaged Ralph had been at work on the other side of the world, and the only cablegrams that she ever saw had come from him. So just for a minute —

She knew that it could not possibly be! The very best detectives had worked for weeks in search of Ralph, and then had sent in the final verdict that he must certainly have been swept out to sea and drowned in the storm. Dozens of persons had been drowned in that storm who were never found.

While she stood waiting for the cablegram, Dorothy heard her aunt and uncle come in—with Eliza. Then Katy brought the envelope, and she tore it open with hands that trembled foolishly.

"From Ralph's sister, of course," said her uncle.

Of course! Why had she not thought of that? The writing blurred before Dorothy's eyes. Then she thought that she ought to read it aloud. "She's at Shanghai," she explained. "It—seems to be code. I can't make it out. She says 'Shanghai Arrive Axola' —"

Her aunt came and looked over her shoulder, and screamed, "Why, it is signed 'Ralph,' not 'Reba'! It is from him!"

"That can't be!" Uncle Carey snatched the message, glanced at it, and said in a queer tone, "But it is!"

No one spoke until Uncle Carey said:

"He does not say 'Shanghai,' though, but 'shanghai'd.' Listen! 'Shanghai'd. Arrive Axola. Ralph.' He means that he will arrive on the steamer Axola. He was shanghai'd at that rascally boarding house—carried aboard some tramp steamer. And he an American—the daring of them!"

They began now to realize what had happened. When they had known the facts half an hour, they could see that it was most natural for Ralph to have been shanghai'd—anyone might have guessed. Then Uncle Carey recollected that since Ralph's disappearance the Frenchman had closed his boarding house and had gone away.

"So it's plain," he resumed, "Ralph had a row with them that night; and they had to ship him off to keep him quiet until they could make themselves scarce—the shanghaiers! As for Ralph, he's got no prudence; he was always rash."

Here Ralph's employers rang up to say that they had heard from him, and that they wanted him to leave for Honolulu as soon as possible after reaching America. And Eliza began to feel much distressed that Dorothy had parted with her wedding gown.

"Never mind," said Dorothy. And then—it was strange that she could think about it now in all the excitement—she remembered something very pleasant. "I'm glad Marie had that gown of mine!"

It was a cool sunny afternoon, and the birds abroad. Suddenly a

"SHANGHAI ARRIVE AXOLA"

By Marianne Gauss

WHEN a thing has happened, it always seems as if we might have foreseen it. And Dorothy thought that she should have known from the first that she should never wear her wedding gown.

As she opened the chest to get the "something borrowed" that she was to have carried,—a lace handkerchief of Cousin Eliza's,—she saw the white dress lying there, long and smooth, with its empty sleeves folded over the embroidery that would never be crumpled. She caught the faint smell of violets, and that made her remember all the little things that she and Ralph had planned to do that summer in Honolulu. She hurriedly closed the lid and turned the key.

She should always have the dress. She could not wear it, she could not burn it, she could never, never give it away.

She opened the door to leave the room, then stood still for a few seconds, as she remembered the moment, weeks before, when Uncle Carey had entered her room by this door, had closed it behind him and said, "Dorothy, can you be brave?"

She had begun very bravely. The day after giving up hope she had telephoned the school board and asked them to reconsider her resignation and to let her have her old room in September; but it had been easier at first than it was now, for now she felt all the time that she had nothing to do. There was work about the house, and she had always helped in vacation; but she could not bear the old round of duties. They hurt as walking does when you are bruised all over.

Downstairs Cousin Eliza was saying, "I suppose Dorothy will never be comforted."

"You're very much mistaken; of course she's going to be happy again!" Aunt Margaret answered sharply.

Aunt Margaret had always been brave. When her baby died, she had made all its little embroidered dresses into clothes for her sister's child. Dorothy had not understood how she could do that.

"Now, tell me all about the dreadful time."

Cousin Eliza, whose lack of tact was traditional in the family, was eager to know the details of the story, of which so far she knew only the bare facts.

"The evening of the storm Ralph didn't come," Aunt Margaret began, "and Dorothy wondered why; but there seemed to be no reason to worry."

"Oh, I should think you'd have thought right away he was drowned in that gale!" remarked Eliza.

"Yes, when a thing has happened, it seems as if you might have known; but we didn't. Just before midnight his landlady telephoned to know whether we'd seen him. He had started to go to that Water Street sailors' boarding house to collect some wages that were owed to a Chinaman—one of those round the mission where he taught on Sundays. He was always helping some one. The landlady was worried when he didn't come back, because those boarding houses are rather rowdy places, you know."

"Well, your uncle went right down to Water Street in the storm; but all the Frenchman who keeps the place would say was that Ralph and his Chinaman had come in and had got their money."

"At last your uncle found a man who knew a little more: he had seen Ralph and the 'Chink'—as he called him—start in a small boat to go out to a ship where the 'Chink' wanted a job as a cook. And of course in that storm only one thing could have happened. You see how it came to us—little by little. We didn't positively know he had been drowned until weeks afterwards. We kept hoping."

Just then Dorothy came in. "Here's your point-lace handkerchief, Eliza," she said.

"Of course you'd think you might hear of him some time," Eliza went on, when she had greeted Dorothy. "There was a boy in Oceanola; everyone thought he was drowned,

but they finally caught him in a city in China. He was short in his accounts as a collector and had run away."

The color left Dorothy's face. "I don't think anyone who knew Ralph suspected that he had run away."

Aunt Margaret broke in abruptly: "Dorothy, aren't you going to see Marie? You'll excuse her, Eliza? You see, Marie was burned out this forenoon, and Dorothy promised to go and see if we could do anything."

"Marie?" repeated Eliza, whose mind could

"SHE'S AT SHANGHAI," SHE EXPLAINED. "IT—SEEMS TO BE CODE I CAN'T MAKE IT OUT"

not be diverted. "That's the girl who embroidered Dorothy's wedding gown!"

Dorothy was glad to get away. On her way to Water Street she passed the schoolhouse. She knew how her room looked inside—dark, with lowered blinds, all in order for the new teacher who was to have come into it. She recalled to mind the last day of school—how the others had gathered about her, and had tried to make her confess that she was not coming back. And she knew how she should feel when she unlocked her door in September.

Beyond the schoolhouse was a hill from which she could see the bay. In the afternoon sun the fog was lifting; spots of bright indigo blue showed through it. It seemed strange that the bay could ever have raged and crushed little boats like walnuts or flung them out to sea.

Next, Dorothy turned into a street from which she could see the fish wharves in the distance and the top of the sailors' boarding house. Presently she came to the black shell of the house where Marie had lived, and beyond it to the O'Raffertys', who had taken in the French family. When Dorothy entered the front room, she found the eight O'Rafferty children standing about the table, wondering at Marie. The little dressmaker's head was down on the oilcloth and her thin shoulders shook from sobbing. Her older brother was talking to her in French, and the boy, Louis, was looking on helplessly.

"They saved all their stuff but one burro," Mrs. Rafferty referred to a chest of drawers,

Marie gave a little cry. But no, that was too much! She would not accept!

Dorothy had not taught school for two years without result. When she had made up her mind, other people did as she said. She could not issue commands to Louis, for she could not speak French; but she said firmly to Marie:

"Tell Louis to go straight to our house,—I'll give him a note,—and get my dress from auntie. I'll stay till he comes back and shorten it for you."

While Louis was gone for the dress, Dorothy began to be frightened by what she had done—afraid that it would hurt too much.

But it did not. With all the female part of the O'Rafferty household crowding into the nine-by-twelve bedroom to look on,—knocking her shoulder, shaking the pins from her mouth,—she could not think about her own sorrows. And there was Marie, too, standing up straight and joyful, although her eyes were swollen.

But when the dress was finished, Dorothy suddenly felt that she must get away and cry. So she ran home, and when she reached there slipped softly upstairs. Eliza was just coming from the guest room.

"That was an odd boy you sent for the gown, Dorothy. I don't know French, but he managed to talk to me—about Ralph!"

Dorothy flinched. "Yes, he knew Ralph. He used to work at the sailors' boarding house, and Ralph got him a different job—because it wasn't a fit place for a boy."

Marie gave a little cry. But no, that was too much! She would not accept!

Dorothy had not taught school for two years without result. When she had made up her mind, other people did as she said. She could not issue commands to Louis, for she could not speak French; but she said firmly to Marie:

Dorothy flinched. "Yes, he knew Ralph. He used to work at the sailors' boarding house, and Ralph got him a different job—because it wasn't a fit place for a boy."

"YES, the plans for the station are all off," said Mr. Winfield. "The railway people say they hope to go ahead in six months, but I think myself that it'll be nearer twelve."

"Oh, then it's only a matter of our sitting tight and waiting a year," said Tom.

"No. I can't hold my option on that Knoxville marble for a year. I couldn't raise the amount if my life depended upon it. The banks won't lend a cent on any sort of security. Tom, what are you grinning at?"

"Because I've turned up at just the right moment. Cheer up, dad. Let the Knoxville option go. I've got something better."

"What do you mean?" asked Mr. Winfield.

"What do you say to a whole caveful of onyx marble—the finest you ever saw? It can be used for the station instead of the Knoxville stuff, and we'll get twice the price."

"Cave onyx is beautiful, but mighty deceptive. I wouldn't buy a foot of it without inspecting it myself, and then I might get fooled."

"But I went over this carefully, and I reckon I know something about rocks. There must be twenty thousand feet of it. I found it by —"

He checked himself, for he had just thought that his father was too ill to hear the harrowing account of his experience in the cave. Turning to a huge wall map of the state, penciled and marked all over with the locations of quarries, large estates and other data, he studied it carefully. The Matthews estate included only part of Deersfoot Mountain. The line ran north and south across its long crest.

"I'm pretty sure that it lies in the Matthews estate," he went on eagerly. "Brown & Beatty offered to sell us some of it last year, you know. We could buy all we need of it for three or four thousand, I should think. It would be no fraud, for Brown told us frankly that we could take our chance of finding anything valuable on it."

Mr. Winfield shook his head despondently. "I couldn't raise the money, Tom. If I could, I shouldn't feel right in gambling on such a thing."

"I'm going to telephone Brown & Beatty, anyway," Tom declared, and went into the outer office.

When he joined his father again, Tom looked uneasy. "They'll still sell," he said. "But they're negotiating with a big Northern lumber dealer; he's back there looking it over now. I'm afraid he'll stumble on my cave. I think we ought to buy at once."

"I can't do it, Tom," returned his father impatiently. "The deposit may be nearly worthless; and even if it isn't, it would have to be quarried, and the bank won't finance any sort of undertaking for me now. I'll have to let the station job go. I owe money everywhere, and can't collect a cent of what's due me."

"But you needn't lose the station job, father," Tom urged. "That cave marble —"

"Say no more about it! I can't think of it, and I've got enough worries without that."

Tom had never seen his father in such depression. Mr. Winfield was obviously unable to plan new investments, and Tom said no more about the onyx, although he was almost sick himself with disappointment.

"I suppose the railway will go on with their map just the same. They'll take my crystals!" he said at last.

"Oh, yes! Did you get all you needed?"

"Yes, but we shouldn't have got them except for a queer character we met in the mountains," said Tom.

Mr. Winfield remembered reading about Wilson's escape. "That guard wasn't killed; he was all right again in a couple of weeks. I think your wild man can come out to civilization whenever he likes, so long as he stays away from Georgia. I think we can easily get a pardon for him, since he helped you out."

Tom did not broach the subject of the cave onyx again, but in spite of what his father had said he felt sure that if he brought in some good samples of marble to the bank he could get a loan.

But he was desperately impatient to get back to the mountains, for he wanted to make certain that the cave was really on the Matthews estate; and with the Northern lumberman thinking of buying the property there was every need to make haste. So next day he took the train west.

He found Peter safe at Crestville. Deersfoot Mountain was not so easy a mark to hit as the railway had been on the journey out. He lost his directions, and had to camp one night in the woods; indeed, he did not reach the mountain until the next afternoon.

But his wanderings resulted in an important discovery. Near the foot of the mountain he came upon a clearing, in the centre of which stood a surveyor's corner post, with the letter "M" painted on each of the squared sides. There was no doubt now that he was on the Matthews property.

Ellis and Wilson gave him a joyful welcome:

"TOO LATE, WINFIELD," SAID MR. BEATTY. "WE'VE JUST CLOSED THE DEAL WITH THIS GENTLEMAN HERE"

THE CRYSTAL HUNTERS

By Frank Lillie Pollock

In Eight Chapters

Chapter Eight

"There's sholy been some fellers a-scoutin' round yere," Wilson remarked.

"Yes, I went down to their camp!" Ellis cried. "Told them I was on a hunting trip. There's a big fellow who talks like a Northern man. He has a guide with him, and he told me they were looking over the timber."

"I reckon so!" said Tom angrily. "I know who they are."

And he told them what he had learned in Asheville—of the great war, of his disappointment, and of the crisis in his father's business. The news of the war made little impression on Wilson's mind, but Ellis was highly excited, and asked innumerable questions.

"We've got to get ahead of the lumberman," Tom said. "I know we're on the Matthews estate now. All I want is to look over that cave again, get some samples and start back."

Although he was desperately tired, he and Ellis went to the cave that very afternoon. They dug out several large pieces of onyx and Tom closely examined the deposit.

"I'm sure it's a good thing!" he declared, as they went back. "Somehow, we've simply got to raise the money. We'd need all of a thousand in cash to pay down."

As they entered the cave and found Wilson lighting a fire, Ellis gave a wild shout.

"I know where you can borrow it!" he cried. "There's the man who'll lend it to us!" He pointed at the astonished hermit. "Hasn't he got hundreds of pounds of ginseng here? Isn't that good for cash?"

"Hurrah! So it is! It's as good as gold. Will you lend it to us, Wilson? I'll pay you eight per cent, and give it back within a year."

"Sure you kin have it, boys. I don't rightly understand what you-all want with it, but you're shorely welcome."

"Let's see how much you have!"

They hastened to dig out the dried root, and agreed that there could not be much less than two hundred pounds.

"Good for eight hundred dollars anyway!" cried Tom triumphantly. "Wilson, you've saved us—and we'll save you. Father says you're safe in coming out whenever you like, and he's going to get a pardon for you."

"Thank 'e!" said the outlaw hesitatingly. "I'll be powerful glad to feel safe again. But I've been a-thinkin'. I ain't married, nor I ain't got no near kinsfolks, and I ain't fit to live down in the settlements now. If I had a gun and some shells and some coffee and meat and co'n bread, I reckon I'd rather just go on livin' in this yere cave."

"All right," said Tom, laughing. "We'll bring you up whatever you need, and you can guard the quarry."

"But let's pack up this ginseng and get back to town with it!" cried Ellis.

They rolled the precious roots in blankets and tied the bundles with strips of deer hide. In spite of Tom's weariness they planned to set out the next morning.

But when morning came rain was falling in torrents. To get the ginseng wet would lessen its value, and so, fuming with anxiety, they waited all day, while the rain fell in an endless downpour. On the following morning it

was still raining, although not so heavily. Unable to curb their impatience any

longer, they tied the ginseng in a huge bundle, with the tent rolled round it to keep off the wet, and set out. They left all their outfit with Wilson, and took only some provisions, the ginseng, the crystals and the samples of onyx.

After a long, wet tramp they arrived at Crestville on the evening of the second day just in time to catch the night train. They left Peter once more at the livery stable and sent the ginseng by express to Asheville.

When they reached Asheville in the morning, their muscles ached and they felt stiff all over; in their muddy, travel-worn clothing they looked very much disheveled. They stopped at the station lunch room for a cup of coffee. As they were drinking it, Ellis suddenly clutched Tom's arm and pointed at a tall, brown-faced man who, with a suit case in his hand, was striding across the platform.

"That's the man I saw in the woods! He must have come up on this same train."

The boys looked after him hopelessly as he got into a hack and drove away. Undoubtedly, they both thought, he had come back to close the deal for the land.

"But he won't go straight to Brown & Beatty's," Tom said, after a minute. "He'll go to his hotel to wash up. We can sell this ginseng in an hour, and we may beat him yet."

Leaving the ginseng in the express office, the boys drove to the warehouse of a wholesale dealer who, as Tom knew, usually bought ginseng in any quantity.

"I have about two hundred pounds of dry ginseng root," said Tom, as they entered the dealer's office. "What are you paying?"

"We're not buying at all."

The man's words fell on the boys like a thunderbolt.

"All our export trade is disorganized," the dealer explained. "We don't care to stock up much on anything just now. I might take ten pounds or so, at three dollars and a half."

They hurried out, and Tom immediately ran to a telephone, called up Chattanooga, and got into communication with the principal ginseng dealers there. Afterwards he tried Knoxville.

It was the same story everywhere. Not one of the dealers would consider buying a large amount of ginseng. After spending an hour or more at the telephone, Tom came out of the booth looking miserably downcast.

"The bottom's fallen out of everything, it seems to me," he said. "I never dreamed that we couldn't sell the ginseng."

"Let's go round to Brown & Beatty's office and see whether we can't make some compromise with them," Ellis suggested.

Hopeless as the plan seemed, they went, for the mere sake of doing something. As the boys entered the office, they saw three men—Mr. Brown and Mr. Beatty, and the man whom they had seen at the station.

"That Matthews estate land on Deersfoot Mountain—is it still for sale?" Tom faltered.

"Too late, Winfield," said Mr. Beatty. "We've just closed the deal with this gentleman here."

He indicated the lumberman, who looked at

the boys with interest, and then, recognizing Ellis, nodded.

"I understand you want it chiefly for the timber, sir," Tom said to the stranger.

"Would you sell the mineral rights?"

"What minerals? Iron? Coal?"

"No, I mean the quarrying rights only."

"Oh! I'd want to keep any metals for myself, but I don't know anything about stone or marble quarries. Yes, I'd sell the quarry rights—not mining—for, say, a thousand dollars, and five per cent of the output annually."

"Will you give us time to pay the thousand?" Tom inquired.

"No, I must have cash. And I can leave the offer open only four hours; I'm taking the two-o'clock train for Washington. Until then you'll find me at the hotel."

"I'll find you," said Tom.

"How can we possibly raise a thousand dollars?" Ellis asked as they went out.

"The bank!"

He knew the president of the national bank where his father always did business, and in spite of his disheveled appearance he had no trouble in gaining admittance to his office. Tom showed him the samples of onyx, described briefly his prospects, and told him of his need of aid.

"I'd like to oblige you, Tom," said the president, "but I can't do it. The directors have voted against any loans at present. I couldn't even do anything for your father."

Tom's face was pale when he joined Ellis, who was anxiously waiting outside.

"No use!" he said between set teeth.

They had walked on a few paces, when Tom suddenly stopped short. "It's the last chance! Wait at the bank. I'll be back directly."

Boarding a trolley car, he rode to the station and ordered his ginseng driven to a warehouse; there he deposited it, and with a receipt for it in his pocket returned to the bank.

"I've simply got to have that thousand dollars, sir," he said, when, pale with excitement, he stood in the president's office again. "Ellis and I have nearly two hundred dollars on deposit here between us. Here's the warehouse receipt for one hundred and ninety pounds of first-class ginseng; that's worth easily eight hundred dollars normally. Then I have a hundred or so crystals here, which I've contracted to deliver to the railway for five hundred dollars. All this ought to be security enough for a loan of eight hundred dollars."

"Tom," said the president, "the bank can't lend you any money. I've got to do what the board has ordered. But," he added, "you've got pluck and nerve, and I'll lend you the eight hundred dollars out of my own pocket, on your note, if you like. Well, you can leave me that warehouse receipt."

An hour later the papers had been made out, transferring the quarry rights on the Matthews estate land on Deersfoot Mountain to Tom Winfield and Ellis York jointly; and the boys had handed to the lumberman a certified check for a thousand dollars. Then Tom hurried to his father's office. He found the stenographer at the telephone when he arrived.

"Your father was just asking for you," she said. "He's on the line now."

"Is that you, Tom?" came Mr. Winfield's voice. "How did you find that marble deposit at a second look? I've been thinking since you left that if you really were sure of it I might consider trying to buy it, after all."

"Can't do it, dad!" returned Tom, with an irrepressible laugh. "I've bought it myself!"

The beautiful gold and crystal map of the great railway system attracted much admiration at the Panama-Pacific Exposition, and is now the principal decoration of the main waiting room in the splendid terminal station of the road. But the chief glory of the building is the four great pillars in the vestibule and the fine stairway, faced with rich onyx marble. All of that stone came out of Tom's cave, besides a considerable quantity that was shipped North to be used in manufacturing clocks and mantels.

The net profits from the onyx cave amounted to more than six thousand dollars, which Ellis, Tom and his father, who managed the quarrying of the stone, divided. Tom and Ellis immediately reinvested their shares in the Winfield quarries, where they both expect to take an active place as partners within a few years. Meanwhile, they are learning the business and drawing dividends.

Wilson clung to his mountain cave until after the last piece of marble was taken out of the onyx cave. Even then, although a pardon had been granted him, he refused to move down to civilization. Mr. Winfield offered him a job in the quarries, and at last the hermit yielded. He still lives alone in a little cabin by the quarries, but at regular intervals he vanishes; after two or three weeks he comes back, brown, refreshed and apologetic, with a haunch of venison, a sack of ginseng or a few rock crystals. He has been back to his cave.

FACT AND COMMENT

BE not like the anchor, which, although long at sea, never learns to swim.

An April Rain that wakes the Fruitful Mould
Is richer than the Ocean's Breadth in Gold.

CHARACTER, always fluid, flows to the pull of experience as tidal water flows to the pull of the moon.

A SUBSCRIBER for The Companion writes hastily to say that "Rush & Doolittle" is a harmless firm in comparison with "Chase & Kilpatrick."

THE children of Washington, District of Columbia, recently gave two thousand dollars for the use of the school playgrounds of the city. How did they get the money? Very simply. During the fall term of school they collected old newspapers at their homes and in public places. In all they gathered one hundred and fifty tons of them.

WISCONSIN is the first state to use the aeroplane as an agency in fighting forest fires. For the past two years it has employed an aviator for that purpose. From a height of fifteen hundred feet a man can detect in clear weather the beginnings of a forest fire sixty miles away. Aeroplanes may yet replace the observation towers in our forest regions.

GERMANY is looking to the completion in 1925 of a canal between the Main and the Danube, by which large cargo vessels can pass from the North Sea to the Black Sea. The Reichstag was asked the other day to vote \$132,000,000 to carry on the work. It is an enormous undertaking, for the canal will be four hundred and forty miles long; but its military and commercial importance to Germany can easily be understood.

THE bird census, begun in 1914 and taken every spring since then, has brought out many interesting things about the bird population. A recent bulletin on the results obtained in 1915 says that the densest bird population was found on a private estate near Washington, where a hundred and thirty-five pairs were nesting on five acres; and the most varied population was in a park near Indianapolis, where sixty-two species were found on forty-four acres.

WEST POINT and a subsequent life of service in the army appeal to many young men who have passed the age limit for admission to the Military Academy. How many such know that the way is still open to them? Under existing legislation any man between the ages of twenty-one and twenty-seven who is morally and physically sound and who can pass such a mental examination as any college graduate should be able to pass can get a commission as a second lieutenant in the regular army. Brig. Gen. Henry P. McCain, adjutant general, Washington, D. C., will give any applicant the particulars.

SMALL wonder that distribution is recognized as one of the biggest problems in the matter of food prices! A Canadian instance makes it plain. A short time ago a merchant in Belleville, Ontario, sold some whitefish that had been caught at Bath, forty miles away. Between the time when the fish were caught and the time when they were sold, they traveled from Bath to Kingston, thence across Lake Ontario in bond to a public refrigerator at Cape Vincent, New York, thence back to Kingston, thence to a wholesale dealer in Toronto, and thence to the Belleville retailer—a journey of four hundred miles to reach a point forty miles away. Meanwhile the price had increased from seven cents to eighteen cents a pound.

THE tactics by which the opposing Senators defeated the armed neutrality bill has again put the word "filibuster" into everyone's mouth. Most people know what it means, but few have any notion of its long and interesting history. First came the Dutch *rrijbutter*, which is our word "freebooter." Then, by mispronunciation or some other kind of corruption, came the French form, *libustier*, which was used even in English

until about 1850, when the present form came in. Meantime "freebooter" had found its way into the language more directly from the German. Both words meant originally one who takes plunder, or booty, by force—in other words, a pirate. Nevertheless, it is always well to discriminate, as the young man did who was asked if his fiancée's father was not "a regular old pirate," and replied somewhat sadly, "No, but he is a free booter."

CHINA AND THE ENTENTE

A GOOD many readers of The Companion must have rubbed their eyes when they read that China alone of all the neutral powers had followed the lead of the United States and broken off all relations with Germany. What, they must have asked, were the causes that urged this clumsy, patient, pacific giant among nations into an action so unexpected?

China, it is true, has not suffered much from the war, or from the submarine policy of the Germans, but it has a score to settle with Germany and something to gain by closer relations with the United States and with the Entente nations. The Chinese statesmen have not forgotten that the Kaiser told his soldiers to emulate the mercilessness of the Huns when they entered China with the Boxer expedition, and they remember that Germany used the killing of two missionaries as an excuse for seizing control of the rich province of Shantung. Frightfulness is not a sure weapon even against so meek a people as the Chinese. Moreover, China would naturally be glad to support this country in any international policy—for its leaders believe that the United States is the only disinterested friend that China has in the world.

The Entente Powers would no doubt like to have China go further and declare war against Germany. There are rich coal and iron mines in China, which under war conditions could be made valuable sources of supply for the Allies; it has several well-equipped arsenals and unlimited resources in men that might be made useful in the field of labor if not in actual fighting. More than a hundred thousand Chinese are already at work as laborers in France and Russia, and have of course released an equal number of soldiers for the front.

By way of payment for active support on the part of China the Entente could offer to remit a part or all of the unpaid Boxer indemnity and so to readjust the Chinese tariff system as to put the republic, from a financial point of view, securely on its feet. So far Li Yuan-hung and his advisers have not taken the final step. If they do decide to enter the war, it may be because they think it best to put their country into the hands of the entire Entente rather than to run the risk of its falling wholly into the hands of Japan. That clever nation has vastly improved its position in the East as a result of the war and would be glad to take over the administration of China without any assistance whatever. But the Chinese statesmen do not want that to come to pass; the question is whether they are shrewd enough to prevent it, and to get for the republic the foreign support it needs without paying so exorbitant a price as the political independence of the nation.

"SHAKAR"

THE reader probably does not know what "shakar" means. It is a Persian word that some Englishman of the fourteenth century who was ignorant of the language misspelled as "sugar"—and sugar it has remained.

When you read that the United States consumes every year four and a half million tons of sugar, do you realize that sugar was not known at all to the ancients? They had only honey for sweetening. There is no Greek and no Latin word for "sugar," for a very good reason. The Latin word *saccharon*, used by Pliny in the first century of our era, meant only the sweet juice of a certain kind of bamboo. From it we have made our adjective "saccharine," to signify sweet.

The earliest fact known about sugar is that it was extracted in India and afterwards in China in the seventh century. Later the Arabs took up the industry and carried sugar to the Mediterranean countries. So far as is known, the first shipment to Great Britain was in 1319, when a small quantity was landed in London. As late as the year 1700 the entire annual consumption of sugar in England was only ten thousand tons—less than one day's supply for this country at the present time. So, unknown for thousands of years, then first

a luxury of the rich, sugar has become a prime necessary of life even for the poorest, and one of the most important foods of the world.

H. C. OF L.

IN these days no householder needs any translation for the term H. C. of L. He or she may not know that from 1900 to 1914 the cost of living in the United States increased forty-six per cent, or that since the outbreak of the European war it has increased some twenty-nine per cent, but, unless he belongs to the large class whose wages have considerably increased or to the small class whose profits have become greater, he does know that his income can no longer maintain him as it used to do. The families thus crushed between the upper millstone of higher prices and the nether millstone of a small fixed income are those who receive from twelve hundred dollars to three thousand dollars a year; it is estimated that they constitute one third of the population of the country.

Fortunately, the members of the group have intelligence and organizing ability, and if they devote systematic and persistent effort to the economies of purchasing they should be able to get a measure of relief; but they will obtain the result, not by vague clamor against real or imaginary oppressors, but by work.

One way to effect economies in buying is to establish a family budget. In the season when our New Year's resolutions have not yet weakened, budget making is a favorite indoor sport; it is a severe criticism on our way of life that we have not learned to take the occupation seriously. Of course, no budget can hope to succeed that does not provide for recreation as a necessary of life. If the theoretical schedules of purely rational expenditures that we have put together have not the strength to withstand the actual pressure of living, the reason may well be that we have neglected to provide them with that safety valve.

In families whose incomes range between the figures given, it is estimated that from twenty-five per cent to thirty per cent of the income goes for food. Household conditions generally prevent the purchase of food supplies in large quantities, and so for the individual purchaser the problem becomes one of buying as cheaply in small quantities at short intervals as he could buy in large quantities only three or four times a year. Coöperative stores, of course, achieve that end admirably, and it is matter for wonder that a device that has succeeded so well in Europe has not found greater favor here. In the absence of such stores, if twenty or more neighbors join forces, their purchasing committee can buy many articles—crates of eggs, barrels of potatoes and apples, canned goods and dry groceries—on exceedingly advantageous terms.

Economies in purchasing cannot be effected without expending time and thought. The day is past when the housewife can afford to telephone to the market to send her up a pound of steak for dinner.

INCREASE YOUR PRODUCTION

IN all the theatre of war the consequences and the lesson of the fact that war is waste have forced themselves on the governments. The world will some day learn the full details of the superhuman efforts of Germany to supply itself with the materials of which it has an insufficient store and a limited production. How to get the most food from the soil, how to eke out short supplies of copper, rubber and other articles, or to find substitutes for them by inventive genius, have been pressing problems. Great Britain faces a shortage in many classes of goods, fears a more serious shortage in the future, and considers plans both to get more and to economize in the use of stocks on hand.

All the present and impending deficiencies and all the measures taken to make them good concern the immediate future—the period during which the war may last. But he is shortsighted who does not perceive that the condition that those countries face will be world-wide, that it will affect the markets for all articles in universal demand, and that it will continue for years after peace is restored. If that is so, the lesson by which those countries have learned to control their present action is one for every American to learn for himself.

Agriculture is the greatest of all industries. Suppose the war were to end this week, what would be the food situation of the world? In ordinary times there are ample stocks on hand in every country—at least in the countries that produce a surplus. It may be doubted whether

the surplus now available of grain, of meat, of vegetables, of fruit, is one half the usual surplus in the month of April, and yet the current consumption is above the average. The margin between abundance and starvation is steadily growing smaller. Not this year only, but for many years, until the deficiency throughout the world is made up, the demand for agricultural products will be great. American farmers will make no mistake if they press production to the limit upon every acre that they own.

That is but one illustration of conditions that extend to almost every article of merchandise. Space forbids us to examine them in detail. We can only hint at the conditions in a few industries. Man's chief wants are food, clothing and shelter. He already feels a pinch in the matter of food. As to clothing, in the last three years the textile mills of Europe have either been shut down or have been making cloth for soldiers' uniforms. Meanwhile all over the world clothing has been wearing out without being replaced. It will take all the cotton and all the wool and all the spindles and looms of the world a long time to restore the condition that existed in the spring of 1914.

Consider, too, what a tremendous demand there is for steel in a thousand forms—how many million tons of shipping must be built to replace that destroyed by submarines! The result of the complete interruption of foreign trade in everything except war material and provisions will appear as soon as peace is restored. Copper is a leading article of American production. Germany is to-day bare both of the metal and of the goods manufactured from it. Leather and rubber will be in active request, and those who manufacture them into shoes or other articles will be compelled to work overtime to meet the demand.

That is not an unduly optimistic view to take of the future. It merely notes a situation that exists and that is growing more acute every day, and suggests the only possible remedy. If there are those who say that the remedy cannot be applied because the world, and particularly the present belligerents, will be too poor to apply it, we shall try to answer them next week.

PROTECTING THE RIGHTS OF THE PUBLIC

MONDAY, March 19, was the climax of a drama in the railway world that will long be memorable in the history of transportation in this country. On that day the railway managers and the unions under the pressure of patriotic necessity made peace. On the same day the Supreme Court by a vote of five to four declared the Adamson law to be constitutional. The events of the drama the American people have watched with absorbed and painful interest; the decision of the court, although less exciting, is fully as significant and far-reaching.

The question that concerned the court was whether Congress had the power to act as it did in order to prevent the threatened strike of last summer. It decides that it did have that power. The business of common carriers by rail is a public business, and the public interest requires "an uninterrupted flow of interstate commerce." If the destruction of that public right is threatened, Congress is justified in acting to protect it.

The court decides, too, that Congress was also within its right as to the way in which it acted. Its business was to settle the dispute that threatened to tie up traffic. It could do it either by fixing the hours of labor or by fixing wages.

The consequences of the decision are exceedingly important. In the first place, the Supreme Court affirms the right of Congress to make use of compulsory arbitration in a railway controversy. In the second place, the decision makes the regulating power of Congress apply not only to those who own and operate the railways but also to the employees. In the opinion of the court the rights of employees "are necessarily subject to limitation when employment is accepted in a business charged with public interest."

That interpretation disposes of the argument that compulsory arbitration, or compulsory investigation before a strike, is unconstitutional because it imposes "involuntary servitude" on the workman. When the matter of legislation on the subject comes up, as it is sure to do, Congress will have to concern itself only with the questions whether such legislation is wise and what form it shall take.

Hitherto in bargains between capital and labor in the railway world labor has had an advantage, in that the men could strike,

whereas capital, being obliged to maintain service, had its hands tied. That disparity is now in the way of being removed.

It is too much to expect that railway strikes in the United States can be wholly prevented, —no country has as yet been able to accomplish that end,—but it is not unreasonable to hope that in the future the rights of the public will be much better protected than they ever have been before.

CURRENT EVENTS

PREPARATIONS FOR WAR.—The President issued orders authorizing the increase of the enlisted personnel of the navy and of the marine corps to the full war strength. Regiments of the National Guard, numbering fifty thousand men, were also ordered to mobilize immediately. —On March 24 the Council of National Defense met at Washington and began to consider plans for military, industrial and financial cooperation. Among other evidences of patriotic feeling was the offer of a million pounds of copper to the government at a price virtually one half what the metal now brings in the market.

RELATIONS WITH GERMANY.—The American oil steamship Healdton was torpedoed without warning off Terschelling, Holland, on March 21. Twenty-one of the crew were lost; several of them were American citizens. The Healdton, which was bound to a neutral port in Holland, was not in the German "barred zone," and was in waters that never have been declared subject to submarine activities. —The State Department of the United States refused the request of Germany to "modernize" and extend the Prusso-American treaties of 1799 and 1828. In his note Mr. Lansing declined to accept the interpretation of the existing treaties that Germany proposed, and added that this country was not inclined to enter upon any additional engagements with a government that had by its treatment of American ships and American citizens violated grossly existing treaty obligations. —Convinced that our representatives can be of no further service in Belgium, "owing to the German government's disregard of its written undertakings," President Wilson on March 24 directed Minister Whitlock and all consular officers to leave that country. The American members of the Commission for Relief in Belgium will also leave the country, and the work will be taken over by Dutch citizens. —It was reported that Germany would not permit the Americans to leave Belgium for a month, in order to prevent military information from leaking out. —On March 26 it was announced that Germany had finally decided to permit the four American consuls, who were held up in Munich, to go to their new posts in Turkey. —Seven hundred German sailors from the interned cruisers Kronprinz Wilhelm and Prinz Eitel Friedrich were transferred from their ships in Philadelphia to military reservations in Georgia.

CUBA.—Our State Department obliged the Cuban revolutionary junta in New York to disband, and reaffirmed its determination not to intervene in the island, except to help the constitutional government to restore order.

GREAT BRITAIN.—The British government announced that it was making another attempt to reach a settlement of the vexed Irish question. It is believed that a commission, including several colonial representatives, will be appointed to conduct the negotiations. The government also introduced a bill extending the life of the present Parliament, which would normally expire in April. —Parliament voted by a large majority its approval of the franchise reform legislation suggested by the Speaker's conference committee; it provides for the extension of the suffrage to women.

THE RUSSIAN REVOLUTION.—The United States government formally recognized the new Russian government on March 22, and the other Entente governments followed our example. —The Czar and Czarina were reported under strict confinement at Tsarskoe Selo; some two hundred other persons, who were officially connected with the old régime, are also imprisoned there. —Grand Duke Nicholas has resigned his post as commander in chief of the Russian armies and will probably retire to the Crimea. Gen. Alexieff is acting as commander in chief. —It was announced at Petrograd that women were to be permitted to vote for members of the new Constituent Assembly. —There was some uneasiness in Russia lest the events of the past fortnight should lead to relaxation in the discipline of the army, and the Socialist press, relieved from its long suppression, began to demand a policy of peace on the part of the new government. The indications were, however, that the Duma's Cabinet had the general support of both army and people.

THE EUROPEAN WAR

(From March 22 to March 28)

The week passed in attempts by both French and British to shake the hold of the Germans on their new line of defense. They did make dents in it here and there, and the French were especially successful between St. Quentin and La Fere. They took two of the forts that defend La Fere, and pushed so close to the town that the Germans resorted to flooding the surrounding country from the river Oise. They also established themselves firmly on the Essigny plateau overlooking St. Quentin. Farther south they gained a foothold on the right bank of the Ailette River, and attacked the important plateau of St. Gobain, and were reported to be attacking with some success at Vailly, the point where the new line meets the old one, east of Soissons.

The British advanced more slowly and were not yet in a position to support the French in bringing pressure on St. Quentin. They occupied the important railway point of Roisel on March 23. When this record closed the German line was seriously threatened nowhere except near La Fere.

The French government charged all its representatives in neutral countries to enter a solemn protest against the systematic devastation of public monuments, artistic and historical, the violence against persons and the destruction of every form of private property that characterized the German retirement; it asserted that almost all of this devastation was without the slightest warrant of military necessity, and in violation of every recognized law of warfare.

Reports came from Petrograd to the effect that heavy German reinforcements were arriving at the northern front in Courland and Lithuania, and an early attempt to break through the Russian line and march on the capital was expected. At the same time there

UNDERWOOD & UNDERWOOD

"NISSEN HUTS"—SEMICYLINDRICAL HOUSES OF CORRUGATED IRON FOR BRITISH SOLDIERS AT THE FRONT

were rumors that Germany was about to try to make a separate peace with Russia.

In Persia the Russian forces, moving westward toward Bagdad, occupied Kalachahin and threatened the border town of Khanakin. Farther north the Russian right wing drove their opponents across the border in the direction of Mosul. It was reported from Bern that Field Marshal von Mackensen had gone to Constantinople to undertake the reorganization of the Turkish armies.

There were local engagements in the Macedonian, Russian, Roumanian, Berezian and Italian fronts, but none of any particular significance, although Rome believes there were indications of an early Austrian offensive.

Berlin announced the return to port of the raider Möwe, after sinking twenty-six ships in the Atlantic Ocean. It bore with it a number of prisoners taken from the vessels that were destroyed. At least fifty of them are said to be Americans—muleteers who were on the British ship Esmeralda.

The German government has added the waters of the Arctic Sea north of Scandinavia and Russia to the "barred zone" in which no traffic whatever will be safe from submarine attack. The British government has added to the "dangerous area" certain waters near the coast of Holland and Denmark, which have hitherto been open to all shipping.

The Dutch government rejected the offer of the German government to pay an indemnity for the sailors killed when the seven Dutch grain ships were sunk by German submarines, and to rent certain German ships to the owners of the destroyed vessels.

It is still uncertain whether Holland will permit armed merchant ships, either British or American, to enter the Dutch ports; so far it has refused to do so.

Circumstantial reports from The Hague declared that the German Emperor was seriously ill from a nervous breakdown and that he was taking the cure at Homburg.

There were further indications of the increasing difficulty of the food supply both in Germany and England. The bread ration in Germany was reduced by one fourth, and Lord Devonport, the British food controller, announced that compulsory rationing would be necessary unless further private economies were practiced.

Berlin announced that seventy-six vessels had been sunk by submarines within a week, half of them fishing boats. The British report for the week admitted the loss of thirty-five British ships, including ten fishing craft. Among the ships sunk without warning was the British hospital ship Asturias.

\$1150 F. o. b. Racine

Mitchell Junior—a 40 h. p. Six 120-inch Wheelbase

\$1460 F. o. b. Racine

7-Passenger—48 Horsepower 127-inch Wheelbase

Mitchell
SIXES

The Extra Features

You will find in the Mitchell 31 features which nearly all cars omit. On this year's output they will cost us about \$4,000,000.

They are paid for by factory savings, due to John W. Bate. He has spent millions of dollars

and years of time to minimize our factory cost.

He built and equipped this mammoth plant to build this one type economically. For less than anyone else could build it. The results show in these extra values, which we ask you to see.

The Extra Beauty

This year we occupy our new body plant. By applying Mr. Bate's methods it affords another big saving. Out of that saving we add 24 per cent to the cost of finish, upholstery and trimming.

See the new, enduring finish that results.

See the extra-grade leather, the deep cushion springs, the light in the tonneau, the locked compartment, etc.

See the new-style bodies, each a Mitchell creation. Our experts examined 257 models before designing these.

The Extra Strength

In the past three years we have doubled our margins of safety. The present Mitchell standard is 100 per cent over-strength in every vital part.

Over 440 parts are built of toughened steel. All safety parts are vastly oversize. We use a wealth of Chrome-Vanadium steel.

The result, we believe, is a lifetime car. We have proved that Mitchells can run over 200,000 miles.

Go see the results. See them in Mitchell Junior — our amazing \$1150 Six. See them in the larger Mitchell, combining every known attraction. You will find no values like them in fine cars.

TWO SIZES

Mitchell — a 7-passenger Six with 127-inch wheelbase and a highly-developed 48-horsepower motor. 31 extra features.

Price \$1460, f. o. b. Racine.

Mitchell Junior — a 5-passenger Six with 120-inch wheelbase and a 40-horsepower motor. 26 extra features.

Price \$1150, f. o. b. Racine.

Also six styles of enclosed and convertible bodies. Also new Club Roadster.

MITCHELL MOTORS COMPANY, Inc.

Racine, Wis., U. S. A.

EVERY BROOK RUNS BLUE AGAIN

By Mary Carolyn Davies

OH, yellow are the waters when spring pours in!
And swollen are the small brooks, and loud's their cry;
And little rapids form and foam, and tear the tree roots from their home;
But every brook runs blue again when spring's gone by!

Then ripples on the stones make a gentle din,
And flowers are on the river banks and grasses high.
The shimmer sky is overhead as smooth as is the river bed.
Oh, every brook runs blue again when spring's gone by!

The brook your heart is turbulent and fierce with pain,
Like broken trees your hopes upon its rapids lie;
The angry floods of grief lay bare your spirit's fields and meadows fair;
But—every brook runs blue again when spring's gone by!

TESTS

THE girl wasted no time. She was so intent upon her purpose that she scarcely acknowledged the minister's greeting. Her eyes, hard but honest, met his with bitter challenge.

"I have come to tell you that it hasn't come true," she declared. "Not one bit of it all has come true."

"What was it you expected to 'come true'?" Dr. Field asked.

"Why, the things that the Bible promises—love, joy, peace. You told me yourself: you preach about them all the time. And I'm not loving—I'm *hard*. I don't really love a soul except Bennie, and I've always loved him. And peace and joy! I don't believe in smoothing things over or calling things by wrong names. I'm just as unhappy as I ever was in all my life."

"You expected love and peace and joy to fall down upon you overnight, didn't you?" the minister asked, with a smile that was full of tenderness.

"Oh, not that! I'm not unreasonable. But I expected something. Didn't I have a right to, when I was giving up a life dream?"

"Because it seemed to you right?"

"Yes, because it seemed to me right."

"Is it any less right now than when you decided?"

"Why—no," the girl replied, uncertainly. "No, of course not!" she added, firmly. "Only when I decided partly because I was a Christian—or thought I was—it seemed as if I ought to get at least *quiet* out of it."

Reaching across the study table, the minister picked up his worn Bible and began to turn the pages with sure fingers.

"Will you read that, Rachel?" he asked.

The girl read it slowly:

"Until the time that his word came, the word of the Lord tried him."

She lifted a puzzled glance from the page; she did not catch the message.

The minister repeated the lines.

"Tried him, Rachel. Not comforted him or cheered him, but tested him. A thirteen-year test. Thirteen years when it seemed as if God had forgotten him. And He had never forgotten for one moment. Every day of those thirteen years He was training Joseph, his servant, trying him by test after test. You know the end."

"Did you ever know of a bank putting an untried man in as cashier? It watches and trains and tests him for years before it trusts him with the handling of money. Do you remember Edison's six thousand tests before he could make a phonograph reproduce a certain sound? The slow training, the discipline, the tests, always come, child, before the great rewards arrive. But if you persevere, you will win in the end. God never fails the soul that seeks Him. Only be sure that you are seeking Him—and not happiness."

The girl rose. "I'll take it home to think over," she promised. "I think I begin to see—a little."

THE UGLY STREET

I THINK what I really mind most isn't having less money or less leisure or less gaiety or more work," said Emily, slowly. "We never belonged to the 'idle rich,' you know. The change isn't overwhelming. What I mind most are the windows—the ugly street. I've hidden all I could with the ferns and ivy; but look out."

"Well?" said Charlotte, having looked. "I don't see anything so very awful, Em."

"Nothing awful," assented Emily, "but nothing—not a thing!—that's beautiful or graceful or pretty or inspiring or refreshing. I can't get used to it—the dim and dingy houses and the dim and dingy people tramping by in swarms to their work somewhere beyond in factories and shops. At home, you know, our street was a green tunnel of elms running right down to the river, and the hills on the other side loomed up like mountains at sunset. I miss it so! Greenness and quiet and a glimpse of wide landscapes."

"I know," said Charlotte, softly. "I'm from the country, too."

"It seems almost too ugly to bear, sometimes. It seems as if I simply *must*, if I'm to keep my nerves in hand, have something different—something big and inspiring and impressive—landscape or seascape."

"Or soul-escape," said Charlotte.

"Now, what do you mean by that?" inquired Emily. "That's one of your queer, incomprehensible ideas—and I'd just been thinking that for once your feet were on solid earth and your head wasn't in the clouds!"

"It isn't incomprehensible and it isn't mine. It belongs to one of the great Russians, whose name I never can pronounce. But when he first came to live in the city he spent hours at his window watching the people go by—the dim and dingy people of a squalid quarter."

"It was a great thing, a wonderful thing, a thing to choke the breath and clutch the heart," he wrote, 'this thing of living for the first time on the brink of a river of souls!'

"A river of souls!" echoed Emily, and her face lighted responsively. "What a singing phrase! Oh,

and more than that—ever so much more! Why, that's what every street is, isn't it?"

"Even the dimmest and dingiest and commonest," agreed Charlotte; "but it takes the commonness and dinginess out to think of them so. At least, for me."

"For me, too, I think," said Emily, as they stood at the window together looking out. Somewhere a whistle blew, and crowds, returning from the day's work, began to stream along the ill-kept sidewalks. Somehow the scene that had been daily under her eyes looked new and different. She repeated softly, in a voice of wonder touched with awe, "A river of souls!"

A DIAMOND ROBBERY IN CAIRO

THE principal street of Cairo is the Muski, on the left side of which, as you go from the Ezbekia square, there used to be several very handsome jewelers' stores. The second of these belonged to Rochmaan Brothers, who dealt specially in diamonds.

One winter a pasha, one of the richest in the country, sent word to Rochmaan Brothers that he wished to select some diamonds for a present to his son's bride. To allow the pasha to make a good selection these jewelers had in readiness a supply of precious stones worth several hundred thousand dollars. Before making his purchase, however, the pasha was obliged to go to Suez, and arranged to have the jewels kept ready for his return.

The store consisted of a single apartment surrounded by massive walls. It had only one door, which opened on the street. Door and windows were well guarded by descending shutters of iron plates, and when the store was closed, a watchman lay outside the door in the open air. This took place not only at night but also for an hour at noon, when the proprietors went to their midday meals.

One day the elder brother returned from his breakfast earlier than usual, and when the Nubian watchman had drawn up the iron shutters, entered the store. At first he noticed nothing unusual, but as he seated himself at his desk he suddenly saw that the door of the jewel case had been violently opened. He rushed to it, and one glance convinced him that a small casket containing the diamonds for the pasha, with some other packages of jewels and some of the most valuable ornaments in the window, had disappeared.

The walls of the shop were uninjured. The Nubian, an old, trustworthy servant of the house, had neither heard nor seen anything. Suddenly, however, the jeweler discovered that two of the stone flags under his feet were loose. He had them raised hurriedly and found a great, dark hole in the ground. By this time the police had arrived and surrounded the house, and now they proceeded to investigate.

At first no one would venture into the subterranean passage, but at last an Arab was found who for thirty dollars undertook to make the search.

Provided with a light and weapons he went down, and the people waited anxiously for his return. Time passed and he did not come. They were indulging in all sorts of suppositions as to what had become of him, when suddenly he made his appearance at the street door. He had followed the passage through many windings until he came out aboveground in a shed.

The police now remembered that three months before some Greeks and Italians had hired this shed and kept a coffeehouse there. Although there were few customers, the establishment received a large number of casks, which were soon sent away again to other places.

The coffeehouse was, of course, only a pretense. The rogues had worked all night at their subterranean passage, and sent away the earth they dug out in the casks. Engineers who examined the mine were astonished at the straightness and accuracy with which it was made.

The elder of the Rochmaan Brothers remembered that a few days before the robbery a well-dressed gentleman had come in to buy a watch, and had left his cane fall two or three times on the floor—doubtless a signal to the workmen below to indicate which of the stone flags to undermine.

On reckoning up their losses, the Rochmaan Brothers found that they amounted to nearly one hundred and forty thousand dollars. They sought an audience with the khedive, and received at least the comfort of a promise that every effort should be made to find the thieves.

Two months passed, and everyone supposed that the robbers were now safely enjoying the rich booty they had secured; but police agents were on the lookout in all the principal cities, and at last news came from Trieste, first that one robber had been arrested, then that five had been captured.

In January three Greeks had arrived in Trieste and taken lodgings at an Italian tailor's in the neighborhood of the fish market. This tailor, who had heard of the robbery in Cairo, happened to see one of them enter a jeweler's store. His suspicions were roused, and he gave information to the police. That led to the arrest of the Greeks, and in a leather girdle worn by one of them the police found numbers of large and small diamonds, nearly a fourth of the stolen treasure.

An Italian was also arrested in Alexandria, and when confronted with the Greeks confessed his guilt. The fifth man was taken in Suez, on a steamer about to start for Bombay. He also had diamonds about him to the value of many thousand dollars. Thus the police succeeded in recovering three quarters of the booty.

SAUL WEATHERBEE'S WARNING

IT happened in 1790, back among the hills of New Hampshire. Saul Weatherbee was long, lank and slow. His nose was a huge beak with a thin, high bridge that stuck up between two little, pale-blue eyes that always seemed heavy with sleep. His neck was long and thin, with an enormous Adam's apple. His retiring chin was half hidden by a straggling beard of the texture and color of a dun cow's tail.

Saul was slow of wit and slower of speech; he drawled his words so slowly that his neighbors had acquired the habit of trying to finish his sentences for him. It was maddening to the quick-witted, quick-spoken hill people to have to wait for Saul to complete one of his remarks.

One day Saul and Joe Fassett had been hunting stray sheep from early morning until late afternoon, and the sun was hot. They found a little, babbling, gurgling brook that made its way among the hills to the river. Joe was thirsty, and lay down to take his drink from the lip of a tiny waterfall.

Joe fully appreciated the fact that water never tastes so good as it does when taken in that way; therefore he drank in a comfortable and leisurely manner. He was engaged in sipping for the third time when he heard Saul speaking. Half listening,

half indifferent, he went on with his enjoyment of the cool draft, while Saul drawled and dragged out a sentence.

"Wal, now, Joseph," he said, in his very slowest manner, "ef yeou knowed what I know, yeou wouldn't lay there a-drinkin'."

Joe heard the words, but they had been coming at such long intervals that he had to turn them over in his mind before he got the meaning. When he did form them into a sentence again, he lifted his head to ask Saul what he was driving at, and looked squarely into the baleful, glittering eyes of a rattlesnake coiled upon a rock within two feet of his face. Saul described Joe's movement to the villagers later.

"Wal, sirs," he drawled, "Joe give that rattler one look, and then he riz straight up like a bag of gunpowder had blowed up under his bellyband and he lit six foot to one side. And fer some reason he seemed real put out with me—I dunno why."

A MODEST YOUTH

The War Lecturer—These are not my own figures, ladies and gentlemen. They are the figures of a man who knows what he is talking about.

—Fred Buchanan in London Opinion.

A FORGETFUL GENIUS

THE fables of La Fontaine may be more edifying, but they can scarcely be more diverting, than some of the tales of their author's absent-mindedness, which are not fables but fact. He succeeded in forgetting the two greatest things in life—birth and death.

When his son was born and a friend inquired a few days later for the infant's health, he had forgotten his existence, and realized nothing more than that his wife was sick and inconveniently incapacitated for attending to domestic affairs as usual.

Later, when the baby had become a youth, whose proper education and requirements the father continued consistently to forget (some were unkind enough to say neglect), friends made arrangements to give the boy his rightful opportunities—at a distance from his parent. "Out of sight, out of mind" was never more thoroughly exemplified; for the second time, La Fontaine promptly forgot his son's existence.

When, after a lapse of several years, the boy returned, one of the famous fabulist's patronesses arranged to have father and son meet in her *salon*. It was to be, for La Fontaine, a surprise meeting; and a surprising meeting it certainly proved.

La Fontaine was much pleased with the modest, winning and intelligent young man presented to him, whose name the hostess purposely neglected to mention. He entirely failed to recognize him, but when, at the close of the interview, he was enlightened as to his identity, he displayed a parental pride and pleasure that seemed to promise at least an intention to cultivate his son's acquaintance in the future. They parted with mutual admiration and regret—and La Fontaine forgot him again.

Another instance of his forgetfulness, less remarkable, perhaps, but more startling, is related in a recent little study of the poet's life by M. R. Peirsall. La Fontaine, he relates, had attended the burial of one of his friends; nevertheless, not very long afterwards, his feet straying naturally toward the familiar doorstep, he went to call upon him. A shocked servant informed the poet that monsieur was no longer living. La Fontaine also was shocked, but, presently recovering from his surprise, murmured regretfully as he turned away: "True! True! I recollect I went to his funeral."

THE PASSING OF A ZEPPELIN

WHEN three Zeppelin airships attacked London one night last September the whole population of the city watched with anxiety to see how the new antiaircraft guns would work. They were efficient; but it was an aeroplane, not a gun, that brought down the L-21 and that provided London with the most remarkable sight it has ever seen and the most wonderful sound it has ever heard. Mr. Lewis R. Freeman tells in the Cornhill Magazine of the fall of the Zeppelin and of the succeeding events:

Not a sound, not a shadow, heralded the flare of yellow light that suddenly flashed out in the north-eastern heavens and spread latitudinally until the whole body of a Zeppelin stood out in glowing incandescence. Then a great sheet of pink-white flame shot up, and in the ripples of rosy light that suffused the earth for scores of miles I could read the gilded lettering on my binoculars. That was undoubtedly the explosion of the ignited hydrogen of the main gas bags, and immediately following it the great frame collapsed in the middle and began falling slowly toward the earth, burning now with a bright yellow flame, above which curled black smoke. A lurid burst of light—doubtless from the exploding petrol tanks—flared up as the flaming mass struck the earth, and half a minute later the night, except for the questing searchlights to east and south, was as black as ever again.

Then perhaps the strangest thing of all occurred. London began to cheer. I should have been prepared for it in Paris or Rome or Berlin or even New York, but that the Briton—who of all men in the world most fears the sound of his own voice lifted in unrestrained jubilation—was really cheering, and in millions, was almost too much.

Under my window half a dozen Australian Tommies were rending the air with "coo-ees" and dancing round a lamp-post, while all along the street, from doorways and windows, exultant shouting could be heard. For several blocks in all directions the cheers rang out loud and clear; the sound of the millions of throats farther afield came

to my ears only as a heavy rumbling hum, a sound disturbing, unearthly, fantastic.

Certainly never before in history—not even during the great volcanic eruptions—has so huge a number of people (the fall of the Zeppelin had been visible through a fifty- to seventy-five-mile radius in all directions, a region with probably from ten million to fifteen million inhabitants) been suddenly and intensely stirred by a single event. I can hardly say yet which stirred me more deeply, the fall of the Zeppelin itself or that stupendous burst of feeling roused by its fall.

QUEER BORNEO NAMES

IT must be a matter of some difficulty for a member of the tribe of Kayans of Borneo to keep track of his own name. Among those people, when a child is born it receives the name of some repulsive object or is simply called "it," so that, not having a distinctive name, the evil spirits cannot identify it and cause it harm.

When the child is two or three or four years old they name it, say, Tijan. The father is thereafter known as Tama Tijan,—Tama meaning the "father of,"—and the mother is known as Inai Tijan,—mother of Tijan. The father's original name, Kebling for example, is dropped and frequently it is forgotten unless there are other fathers of Tijans. In that case the father is known as Tama Tijan Kebling—father of Tijan, formerly Kebling.

If Tijan dies, then Tama Tijan's name becomes Oyong Kebling (meaning "Kebling the bereft," provided Tijan was the oldest child). If a younger child dies, the father becomes Akam Kebling; if his wife dies, he becomes Aban Kebling. If he becomes a grandfather, his name will be Laki Kebling. Laki is distinctly an honorary title, like its equivalent *datu* among the Malays. With those people *datu* is superior to the title *hadjil*, borne by one who has made the pilgrimage to Mecca. *Datu*, literally grandfather, is equivalent to elder with us.

Among the Kayans it is a breach of manners to ask a man what his name is. If a white man does so through ignorance, the man will turn to a bystander and ask that the stranger, who does not know the customs, may be informed. If a man tells his own name, the evil spirits will hear him, and can more readily do him harm.

SLIGHTLY EXAGGERATED

THE line between purely rhetorical exaggeration and a reprehensible perversion of truth is not always easy to draw. In the high tide of eloquence, even preachers occasionally forget that it exists. A committee of remonstrance once called upon an old-time Newburyport preacher to protest against the unbridled exaggerations that he permitted himself in the pulpit. The preacher admitted his fault very humbly.

"Indeed," he said to them sorrowfully, "I have shed over it barrels upon barrels of tears!"

The "meenister" of a country kirk in Scotland, a century ago, was less amenable to reproach, even if he invited it—as Mr. J. R. McKee has recently related in a collection of theological anecdotes. His clerk had ventured to suggest the ill effect of exaggeration upon the congregation; the minister, rather offended, declared himself unaware of transgression, but requested that if he erred again the next Sabbath he might be reminded, by a discreet cough, to curtail his eloquence.

The next Sabbath he described how Samson tied the foxes' tails together. He said, impressively:

"The foxes in those days were much larger than ours, and they had tails twenty fut long—"

"Ahem!" coughed the clerk.

"That is," continued the preacher, "according to their measurement; but by ours nae more than fifteen—"

"Ahem!" came the cough, more loudly.

"But sin ye may think that extravagant, we'll juist ca' them ten fut—"

"Ahem! Ahem!"

"Mon," shouted the parson, leaning over the pulpit and shaking a forefinger at the clerk, "ye may cough all nicht if it suit ye, but I'll na tak aff anither fut! Wad ye hae the foxes wi' no tails at a'?"

WHISTLERIAN MALICE

WHISTLER always brought a spirit of fun with him," says the late Lord Redesdale in his recently published *Memories*; and the incident that follows appears to confirm his lordship's words:

There came a day when, to my great regret, Whistler made up his mind to leave the old house in which he had lived for fourteen years and to build the "White House" in Tite Street, mainly prompted, so he told me, by the wish to show what he could achieve in decoration. E. W. Godwin was the architect, and it was not long before they quarreled over the work, in commemoration of which Whistler caused a stone to be inserted in the front of the house, engraved with the words:

"Except the Lord build the house, they labor in vain that build it. E. W. Godwin, F.S.A., built this house."

The stone has long since disappeared. Godwin died in 1886, and in 1888 Whistler married his widow—a quaint ending to an artistic feud.

CHINESE TACTICS

AT the beginning of the Chino-Japanese War, says a contributor to the *Washington Star*, one of our military attachés saw a Chinese regiment take the field at a review and go through a very curious performance.

The soldiers carried long bamboo poles like fishing rods, and with these they rushed at one another, yelling wildly and making very queer gestures and grimaces.

"What's the game?" asked the American. "That regiment," a Chinese general answered, "is one of our very oldest. It is now practicing a form of assault that dates from prehistoric times. The idea is to trip the enemy up with the long wand, throw water in his face and, in the midst of his bewilderment at this extraordinary treatment, to cut off his head."

HE ALWAYS HAD

THE "sporting" son of wealthy parents was offered a job by an old friend of his father.

"How much will you pay me?" he asked.

"All you are worth," said the friend.

To which he replied with businesslike brevity:

"No, thank you. I can do better than that."

THE CHILDREN'S PAGE

FLUFF AND THE BUTTERFLY

By Abigail Burton

"NOW, for a nap," said Fluff. She rolled herself into a ball on the top step, in the way she had learned from Mamma Cat; and she curled her tail neatly about her toes. Oh, but she was cosy! "Don't you want any more cream?" asked Snuff, her brother. "There are three licks left," added Puff, her sister. "You'd better hurry." And indeed one of the three licks was already gone! "You finish," said Fluff, "For I've had enough!"

Goodness! I never heard a kitten purr in rime before! She had just closed her eyes, when — Woo! Something touched her under the chin! "A naughty mosquito," thought Fluff. "Why does he keep me awake, when I'm so sleepy!" But the mosquito had nothing to do with it. Fluff found a place under the big apple tree. She settled herself again, when — Boo! Something lighted right on the tip of her little pink nose! "An apple blossom has dropped a petal on me," thought Fluff. "And I'm sleepy —" But the apple blossom had nothing to do with it! Fluff wriggled her pink nose, but it kept right on tickling. So she shook her eyes open. And what do you suppose she saw? A white butterfly dancing in the sunshine! So the mosquito and the apple blossom really had nothing to do with it.

"Come back, Mr. Butterfly!" cried Fluff. "Come back and say you are sorry!" She hopped up on her hind feet and tried to catch the butterfly; but he had no idea of being caught, I can tell you! Away he flattered in the sunshine. And after him ran Fluff as fast as she could go. In the field the grasses were all dancing. My, but they were merry! And when they saw the white butterfly and the little white kitten, they danced more gayly than ever. The butterfly lighted on a blade of grass. Oh, but he was a tease! He spread his wings and pretended he was a daisy! And when Fluff came hurrying—she was in such a hurry that she never saw him at all! Away flew the butterfly, while the kitten laughed with the flowers. They laughed so hard that the tears came into Fluff's eyes, and even the daisies shed some petals! And when they stopped laughing, that butterfly was nowhere to be seen!

Fluff scrambled up a big stone; but the butterfly was not on the grasses, or on the daisies, or even in the sky. Oh, but he was a tease! When she turned to scramble down again, she caught a glimpse of her shadow. And there was the butterfly riding on her back!

Away flew the butterfly, while the kitten squeaked with excitement. She squeaked so hard that she lost her balance and tumbled head over heels down the stone and into the soft grass. And that butterfly was nowhere to be seen!

Fluff scrambled up a big tree; but the butterfly was not on the grasses, or on the daisies, or even in the sky. Oh, but he was a tease! When she turned to scramble down again, she caught a glimpse of her shadow. And there was the butterfly riding on the tip of her tail!

I'm not sure that the butterfly flew away, but at any rate the kitten wriggled. She wriggled so hard that she lost her balance and tumbled head over heels down the tree and into the soft grass. And when she stopped wriggling, that butterfly was still riding on the tip of her tail!

Fluff whirled round and round in a circle, trying to catch the butterfly. Oh, but he was a tease! No matter how fast she turned, she could not catch him, for he whirled round and round, too, on the tip of her flying tail.

It was the fastest merry-go-round you ever saw. The ants and the beetles and the crickets and the daddy longlegs and the flies and the gnats—oh, a whole alphabet of insects!—formed in a circle and cheered. It was all so amusing and exciting and wrigglesome! At last both the kitten and the butterfly were so dizzy that they tumbled out of the circle and into the soft grass head over heels. And when the kitten stopped dizzying —

Well, anyway, that butterfly was not riding on the tip of her tail!

But what was that fuzzy tickle? And what was that ticklesome fuzz?

"He's right on my head!" Fluff cried indignantly. "Where I can't scratch him without scratching me!"

She shook her head; but the harder she shook it, the tighter the butterfly clung.

Fluff ran and ran until she came to a fence. And she sprang, and sprang right through the fence. It was wires, you see. But the butterfly did not get through. Oh, no! He was scraped off and left swinging on the tiptop wire—although it did not seem much of a swing, after that merry-go-round; and Fluff ran and ran without ever missing him at all.

THE BABY PAN

By John Clair Minot

It was in the April meadow, Where the grass the greenest grows, And the birches fling their shadow, And the pebbly runnel flows, That a vagrant bit of laughter Rippled round a little hill, And the music that came after— Oh, how sweet it was and shrill! There are times I hear it still.

Then I crept a little nearer, Till I looked adown the slope, And I saw then, clear and clearer, What I'd never dared to hope: There sat April's music master Where the pebbly runnel ran, Piping shriller, sweeter, faster, On his reed, the Baby Pan! Hoofed and horned but like a man.

Little lambs came skipping, prancing, Through the greening April glade: Strange it was to see them dancing To the music that he made. And the birches, swaying, swinging, Leaned above him, giving heed, While the Baby Pan was bringing Springtime magic from his reed. Was it Spring that piped, indeed?

Then he saw where I was hiding, And he promptly ceased to play: Laughed at me with roguish chiding, Turned and scampered fast away. But his tracks were plain before me: It was not a dream, I knew, For around me still, and o'er me, Music thrilled the morning through. Lambs and birches heard it, too.

BUT TEASER ONLY PULLED THE HARDER

MENDING MELISSA'S DRESS

By Dorothy French Newbury

ELIZABETH sat on a hassock mending Melissa's dress. Melissa was her oldest and largest doll, and Elizabeth did not know how she had managed to tear her new spring dress. Still, it did not matter much how it happened, after all. The only thing to

do was to mend the dress, and since Melissa was not able to mend it herself Elizabeth was trying hard to do it for her. Besides, it was Elizabeth's birthday, and she was going to have a party in the afternoon. Of course Elizabeth could not allow Melissa to wear a torn dress to the party.

It was a beautiful spring morning, and it was the hardest thing in the world to stay in the house on such a morning, let alone mending a dress that should not have been

RAINBOWS

By Clinton Scollard

When, with soap, I bubbles blow, Rainbows form and gleam and glow: So, when rainbows arch in air, Some one's blowing bubbles there!

torn. Just outside the window there was a robin singing in a maple tree where the leaves were barely out of the buds.

"Oh, come out! Oh, come out! Oh, come out!" the robin was singing, almost as plainly as a person could speak the words.

"I can't stand it much longer!" sighed Elizabeth. "But I just must mend this dress so that Melissa can go to the party. O dear! It's such a job!"

Then, just as she was putting some more thread in her needle, Teaser came bounding in through the door.

"Don't you dare to bother me, Teaser!" said Elizabeth. "I'm as busy as I can be!"

But Teaser was not to be put off in that way. He jumped round the room in little, short leaps, stopped in front of Elizabeth long enough to bark sharply, and then bounded to the door and back again.

"Yes, yes, Teaser," said Elizabeth, "I know that it is a beautiful day, and I want to go out and play with you, but this dress simply must be mended."

Teaser barked again. No doubt he knew very well what she said, but he had no idea of giving up so easily. Suddenly he seized Melissa's dress in his teeth and pulled it.

"Stop, Teaser!" cried Elizabeth. "Stop, I say, or you will tear it worse!"

But Teaser did not stop. He only pulled the harder. Suddenly, with an extra tug, he pulled the dress from Elizabeth's hands and dashed through the door, with the dress flying behind him. Elizabeth leaped from her hassock and ran after him.

"Come back! Come back!" she cried. "Come back here this instant, Teaser!"

Teaser looked over his shoulder and tried to bark, but, with the dress in his mouth, he did not succeed very well. Out of the yard he ran and down the road, with Elizabeth, now on the verge of tears, calling to him in vain as she pursued him.

Not far from the house Teaser suddenly stopped in the middle of the highway. He dropped Melissa's dress and began to sniff at a parcel that looked as if it had just fallen from a passing wagon. At first Elizabeth was so eager to pick up Melissa's dress, now more soiled and torn than ever, that she did not see the parcel; but Teaser barked again and danced round her in such a way that she had to notice it. She picked it up and ran with it back to the house.

"See, mother!" she called. "See what Teaser found in the road, where he had dragged Melissa's dress—the horrid thing!"

The parcel bore no address. It was a long box, wrapped in plain brown paper. What could it be? Who could have lost it?

Melissa's mother decided to open it. Perhaps there would be a name or an address inside. And when they took off the wrapping paper and removed the cover, what do you suppose they found? A beautiful doll, about the size of Melissa, dressed in the loveliest clothes!

"Oh! Oh!" was all that Elizabeth could gasp; and Teaser, who was much excited over the box and its wrappings, barked two or three times as loudly as he could.

Just then Elizabeth's father came in. "Would you like that doll?" he asked.

"Like it!" cried Elizabeth. "Of course I would like it, but of course I can't have it! Some little girl has lost it—or some little girl's father was taking it home to her."

Then Elizabeth's father laughed, and took her on one knee and the wonderful doll on the other knee.

"Well," he said, still laughing, "that new doll has come to your birthday party. I was bringing her home from the village, and the parcel fell from the wagon just before I got here. Teaser saw it fall, but it was too large for him to carry, and he made you go and get it before I could go for it myself."

"Oh, then she's mine, after all!" said Elizabeth, and she seized the beautiful new doll from her perch on her father's other knee and hugged him and the doll at the same time. "And Teaser knew it all the time and was trying to tell me!"

A little later, when Elizabeth looked deeper into the box that the doll had come in, she found there several extra dresses. One of them she promptly gave to Melissa to take the place of the soiled and torn dress that was now fit only to be thrown away. And what a merry birthday party they had that afternoon, and Teaser enjoyed it quite as much as Melissa and the new doll enjoyed it!

WITH a cry of dismay, Rosemary sprang up and, scattering behind her scissors and lawn and spools, ran to the window. "Mother, look here!" she cried. "Do you suppose the men have that line in the right place? The lilies will be on the other side of the fence. I thought they were on our lot, didn't you?"

"I'm sure I supposed they were yours by right of discovery, to say nothing of possession," replied Mrs. Sewall, with a laugh. "Why don't you go to Mrs. Handley? I am sure she would let you move them if she understood."

"I wouldn't ask her for the world. She would think it childish. She is so stiff and cold and unfeeling, and I don't believe she has a bit of imagination. How could she understand?"

Mrs. Sewall glanced at her daughter uneasily, but made no reply; she had already exhausted her resources in trying to reconcile her daughter to an uncomfortable situation.

"I do wish they had never come there to live!" moaned Rosemary. "It would have been bad enough to have anyone build on that lot; but if they had been congenial people, I would not have minded so much!"

Mrs. Sewall smiled faintly, and Rosemary added, "I believe you like them, mother."

"I do. They seem to me to be excellent people, quiet and well-bred; and I feel quite sure they are the sort that do not show their best points on short acquaintance."

"But, mother, it isn't a question of points—good or bad. It's a thing you can't reason about. And dad feels toward them as I do. And he ought to know, when he is the treasurer of the company that Mr. Handley works for."

She turned to pick up her sewing. Suddenly, as if struck by a sudden thought, she said, "How much alike the Handleys are, mother. Did you ever see husband and wife resemble each other so? They look like brother and sister."

"That's not uncommon," replied her mother. "People who are alike are sometimes very congenial. They understand each other for one thing, and then there is less jarring than between opposites. Shrinking, sensitive people like the Handleys would instinctively avoid anything of that kind."

Rosemary laughed incredulously. "Well, you certainly do beat all, mother! The Handleys shrinking and sensitive! To me they look as hard and cold and sharp as nails."

Mrs. Sewall made no reply, and a moment later Rosemary went out into the garden. She walked slowly over to the lilies and stood looking sorrowfully at the long row of reddening buds. Twelve years before, when she was a little girl, Rosemary had come with her parents to look at the site of their new home; here, in the tall, wild grass that covered the lot, she had found the lilies—a single plant then. They were something like tiger lilies, but smaller, of a brighter red, and less freckled. At first, her father supposed that they had strayed from some garden and gone wild, but later he found that they were a species of wild prairie lily—a veritable lily of the field, more splendid than Solomon in all his glory!

When the grass was mowed that first spring in their new home, Mr. Sewall gave the man instructions to spare the lilies, but as they were not then in bloom, and looked like weeds, the man forgot; there were no red lilies that summer.

After that, the appearance of a man with a scythe was the signal for Rosemary to take her stand beside the lilies and remain on guard until he had gone. Under Rosemary's unflinching watchfulness the plants had thrived and spread until there was a long, broad row of them.

Now the precious flowers that she had cherished so long had been snatched from her without warning and dropped at the feet of people who, she felt, were incapable of appreciating them. At the thought of losing the lilies her eyes filled with tears.

Suddenly, through her tears, she saw Mrs. Handley coming toward her; Rosemary would have fled, but it was too late.

"O Miss Sewall!" cried Mrs. Handley. "Do you suppose this line is in the right place? Your lilies are on the wrong side of the fence."

"Your lilies!" This unhesitating acknowledgment of her ownership dealt Rosemary's antagonism a staggering blow. In spite of herself, she softened toward the woman whom she had so disliked.

"I thought they were on our ground, but it seems they're not," she replied, with a smile that was somewhat forced.

"It's too bad," said Mrs. Handley. "I wonder if you could move them this fall?"

Rosemary spoke this time without a touch

The RED LILIES and ROSEMARY

By Mary M. Parks

of constraint. "Oh, I wouldn't like to do that, Mrs. Handley! They are wild lilies, and were here when we came."

"They are glorious!" replied Mrs. Handley; she looked admiringly at the beautiful flowers. "We noticed them when we looked at the lot last July; Mr. Handley said then he would like to live where we could see those flowers." She hesitated, and her face flushed as she continued shyly, "Mr. Handley is a great admirer of your father. It is really amusing, he is so boyish about it. So we had a double motive in choosing this particular lot."

Rosemary glanced aside in embarrassment. "Thank you! We think dad is fine, of course."

"You used to spend a good deal of time over here before our house was built, didn't you? I saw your hammock and a little rustic table under the trees the day we looked

suddenly. "I'll take half of them, and we'll have a row on each side of the fence."

"Very well, we will compromise on that. There comes your father, and Mr. Handley will be here soon," answered the other, as she hastened back.

Rosemary flung herself down in her hammock and pressed her hands to her hot cheeks. All the bitterness that she had been nourishing for weeks had disappeared before Mrs. Handley's sympathy and understanding.

"Mother is a wonder," she said to herself. "She was right about the Handleys."

How easy it was to misjudge others! Who, for instance, that had heard the words that had passed her lips during the past hour would have believed that she was not shamefully two-faced? And yet she had been absolutely sincere in every word she uttered, both to her mother and to Mrs. Handley. When she entered the house her parents were already seated at dinner. Rosemary ate silently, for she was thinking of her talk with Mrs. Handley.

"What about your lilies?" her father asked, after a little. "I see they are on the wrong side of the fence."

"Mrs. Handley wants me to move them, but I shall take only half," replied Rosemary, with some constraint.

"Really, that is very generous of our neighbors—only to keep half of your flowers."

Rosemary winced. His mocking tone jarred on her.

"Father, I've been mistaken in the Handleys," she said tremulously. "I have just been talking to Mrs. Handley, and she is very sweet and kind and gentle, and you know how much alike they are. From things she said I am sure he is the same."

"Nonsense! I came to the Weston Department Store as treasurer three years ago, and in all that time I've never known Handley to show the slightest feeling of interest in anything. He's a good enough fellow, I suppose, but he's a fish. He hasn't a drop of red blood in his veins."

"O father, indeed that isn't true! I thought the same about her. And she says he likes you, father. Now, did you ever suspect it?"

Mr. Sewall laughed heartily as he rose from the table. "Never," he answered, apparently with amused indifference. Then he turned soberly to his wife. "I'm sorry, dear," he said, "but I shall have to go back to the store for a little while this evening. Jerrold, the secretary of the company, is ill, you know, and his work is at sixes and sevens. I must straighten it out as much as

I can this evening. Jerrold's a pretty sick man—dangerously sick, we fear."

"Oh, what a pity! He is much liked, isn't he?"

"Yes; he and Handley are about at opposite ends of the scale of popularity," replied Mr. Sewall.

Rosemary looked at her father and turned sadly away. Mr. Sewall, who had spoken half in a bantering mood, noticed her reproachful expression. All that evening he could not forget it. He wondered what she could have discovered in the Handleys.

Three days later, to the sorrow of all his associates, Mr. Jerrold died, and after a short interval the executive staff of the Weston Department Store met to choose his successor.

"We can't fill his place, but I suppose we must have some one to rattle round in it," said Mr. Hurley, the president, as he handed to Mr. Sewall a slip of paper on which some names were jotted down. Mr. Sewall glanced down the column; at the last name his eye paused. In his mind rose a picture. He saw the red lilies, now in brilliant bloom, swinging their scarlet censers in the glowing July sun; he saw his daughter's face, flushed with earnestness, as she warmly defended the Handleys, and the look of troubled reproach she had given him when he scoffed at her view of the matter; and he heard again her words, "She says Mr. Handley likes you, father."

"James Handley!" he murmured thoughtfully.

"Oh, Handley!" laughed the president. "I shouldn't consider him at all. I hope I am not superstitious, but I have a strong liking for the number seven. Like the ancients, I think it the perfect number, and I added his name in order to complete the list."

"Well, if there is anything in the number

seven, he is seventh on the list," replied Mr. Sewall, with a smile.

"Oh, but the man is a stick, Sewall!" protested the other. "He hasn't a grain of magnetism or initiative. Let's pass on to the other names."

"Handley lacks magnetism, true enough," Mr. Sewall persisted. "I wonder if we have let that work against him? Most of us dislike him."

"See here, Sewall," said the president tartly. "You know in business magnetism is a tremendous asset, and I think young Simpson is the man for us. You will notice that I put his name down first."

"But shouldn't we first make sure that we have not let our personal feelings govern us somewhat in our attitude toward Handley—unconsciously, of course. Speaking for myself alone, I am afraid it has been the case. I can recall several instances where I may have allowed my dislike for Handley's personality and my hasty estimate of his character to work against him."

"I should be sorry to think that we had been unjust to any of our men."

Mason, the bluff old advertising manager, the senior of them all in years and service, had been biding his time with extraordinary patience; now he suddenly straightened his big frame and smote the table with the flat of his hand.

"I'm glad to hear you speak that way, Sewall!" he boomed. "I've always said that Handley has not had justice from this house. He started in here as a mere boy, and he never has had a genuine promotion. He has stood by the firm through two receiverships. When others deserted, Handley was on the job, and he simply gravitated into their places until he reached the head of his department,—not an important one, as you know,—and there he has stuck. He's a disappointed man. You fellows of the new management don't know his history as I do. Handley is without exaggeration the most dependable man I have ever known."

"That's all very true, Mason," replied the president slowly; "but after all Handley is more or less of a squeezed lemon. I will keep him in mind and try to do something for him; but we need live men at the head of our house."

The slender young vice president had been sitting motionless and silent, with his large, calm eyes apparently fixed on vacancy. Now, for the first time, he changed his position and spoke in his dry, cool voice:

"I think we are all losing sight of the main issue. Our secretary has no special need of magnetism or initiative. The things in his charge are routine matters that require merely the carefulness and watchfulness that Handley is noted for. I had not seriously thought of him for the position until Sewall spoke about him that way; but after careful consideration I believe that he would be a far better man here than in his present position. In fact, I think we could hardly find another man so well fitted for the place; his long familiarity with our business is invaluable in that position."

"Well," said the president, with a smile, "you fellows seem determined that he shall have the position, and you're beginning to convince me that he's the man for it. Let's talk this over a little more thoroughly."

When Mrs. Handley heard her husband's step on the walk that night, she ran to the door to meet him. For an instant the two faced each other in silence. Handley was breathless with haste and excitement; and his wife was so much surprised at the change in his appearance that she could find no words with which to greet him. He looked ten years younger.

"Come out where it is cool!" he exclaimed, as he fanned himself with his hat and tried to speak calmly. "A most astounding thing has happened, Martha. I have been appointed secretary of the company."

"Jim! In Mr. Jerrold's place?" exclaimed his wife joyfully. "And you always thought they were prejudiced against you. Didn't I tell you that your faithfulness and loyalty would be rewarded in time?"

The man shook his head, with a puzzled look. "It wasn't that. Of course those things have their weight. I couldn't have hoped for advancement without them; but something else turned the scale, and I may never know what it was. I've been called to the office many times. We all are, and often we know that there are squalls ahead. But the instant I stepped inside the door, I saw that—well, that the wind had turned south—for the first time in twenty-five years, Martha."

There was a catch in his throat, and he paused a moment. "Not even you can know what this means to me. It is a bitter thing to put one's whole self into a business as I have done, and then to feel that the business doesn't reciprocate, so to speak. And I can't even guess what brought about this sudden change."

And yet, at that very instant, his eyes, attracted by the flaming mass of color and the swaying hammock just beyond it, were fixed on the red lilies and Rosemary.

DRAWN BY W. F. STECHER

"I'LL TELL YOU WHAT I WILL DO," SAID ROSEMARY. SUDDENLY, "I'LL TAKE HALF OF THEM, AND WE'LL HAVE A ROW ON EACH SIDE OF THE FENCE."

at the lot. You must miss your old summer resort. I didn't realize then that we were ousting you."

"But, dear me, Mrs. Handley, the lot didn't belong to me. I have been rather silly about it, I am afraid. You see, I played there when I was a little girl, and had almost lived there for years; but the east veranda is really a fine place for my hammock and tea table."

She smiled brightly as she spoke, but in spite of her her voice shook.

"I understand," replied the older woman, in a low voice. "It is alive with beautiful memories. You must have felt very badly when we cut the big oak from the house site. I begged James to spare it."

The sympathetic words soothed the girl's sore heart. Impatiently she shook the tears from her eyes. "He couldn't," she said. "The house had to go right there on that knoll. The ground slopes away so evenly in all directions."

"I am so sorry," murmured Mrs. Handley. "It seems sometimes that everything we acquire in this world is wrested from some one else. Mr. Handley says he finds it so at the store. He has been disappointed so often; but he says each time that if he had won promotion some one else would have lost. I wish sometimes that we could live on an uninhabited island where there wouldn't be so much jostling."

"Why, Mrs. Handley, you ought not to feel so!" Rose said quickly. "You have the same rights in the world as anyone else."

"Oh, rights, rights! The longer I live the more I hate that word." Then she went on more quietly: "You must move your lilies this fall. I will help you. We can still see them; for the division fence will be very low."

"I'll tell you what I will do," said Rosemary,

CHANDLER SIX \$1395

Chandler Records Are Owners' Records

Not to our knowledge has a professional motor car driver ever made a record with a Chandler Six.

But all the thousands of owners of Chandler Sixes, every day, are making the kind of records that count. Records of Satisfactory Service.

The Chandler Company has never built a racing car. Chandler owners do not want racing cars.

The 55 to 60 miles per hour speed that *every* Chandler car will do is speed much greater than you would ever ask for.

The Chandler Company has never built a special

mountain-climbing car with short wheel base and low gear ratio.

The *ease* with which *every* Chandler climbs steep grades on high gear is satisfying to the Chandler owner.

The Chandler Company has never supplied any Chandler dealer anywhere with a special gear ratio for demonstrating purposes.

What any Chandler Six does *your* Chandler Six will do.

The manufacturer of *one* six can make just as big *claims* as the manufacturer of any other six. But

The Chandler is a *Fact*-Car, Not a *Claim*-Car. And These Are Facts, Not Claims.

There is no other six more flexible in control, more responsive to your every demand, than the Chandler.

There is no other which will pull hard grades on high with greater ease.

There is no other so economical in operation.

There is no other which embodies in its design and construction so many features characteristic of high-grade, high-priced motor cars.

There is no other of more beautiful body lines or greater riding comfort.

Through four years of conscientious manufacturing effort backed up by a previous experience of many years in the building of high-priced sixes, the exclusive Chandler Motor has been developed and refined to a point approximating perfection. It is a *fact*-motor, not a *claim*-motor. See it perform. Drive it. Learn how it *stands* up.

FIVE ATTRACTIVE CHANDLER TYPES OF BODY

Seven-Passenger Touring Car, \$1395 Four-Passenger Roadster, \$1395 Seven-Passenger Convertible Sedan, \$2095

Four-Passenger Convertible Coupe, \$1995 Limousine, \$2695

Are You Sure?

ON the steep down grade or the elbow turn is your brake one that you can place absolute confidence in? An unreliable brake is worse than no brake at all. It gets you into trouble. There is one way of being sure, sure for once and all time. Equip your bicycle with the recognized standard brake equipment—the

DUPLEX COASTER BRAKE

With this famous brake on your hub you can go where you please with absolute knowledge that it will control your speed no matter what demands you may make on it. Cyclists have tried it for years under all conditions and have found it never-failing.

Its action is powerful, smooth and flexible, enabling you to stop instantly or gradually. Its large ball bearings and sturdy construction make it everlastingly durable. This is the brake that has grown up with the bicycle—16 years of satisfactory service. It is 100% efficient. See that the Corbin Duplex is on your wheel. Equipped by all bicycle dealers everywhere.

FINDING STANLEY

HOW Stanley found Livingstone in Africa is a familiar story, but how Vizetelly found Stanley in Zanzibar is less well-known although equally interesting. Mr. F. L. Bullard tells the story in Famous War Correspondents.

James Gordon Bennett, owner of the New York Herald, commissioned Vizetelly, one of his correspondents, to go to Zanzibar and find Stanley, who then had been away from the outside world for eighteen months on his expedition for the relief of Emin Pasha. The instant he got news of Stanley, Vizetelly was to hurry to the interior to meet the explorer and get from him a letter for the New York Herald. Above all else, he was to beat a New York World man named Thomas Stevens, who was also looking for Stanley.

For six months Vizetelly was at Zanzibar with time hanging heavily on his hands. There were rumors in plenty about Stanley; of reliable information there was none. It was known that Stanley had met Tippoo Tib, but the rest was conjecture.

A telegram came from Bennett ordering his representative to get an American flag for presentation to Stanley, but no such flag was to be had in Zanzibar. Vizetelly, however, was equal to the occasion; he borrowed one from a United States warship that happened to be in port, and had a Genoese outfitter make him a half-size copy of the huge banner. The flag was barely ready when definite news of the explorer arrived at last.

Alas! To meet Stanley it was necessary to travel through German territory that had recently been the scene of an insurrection. When permission was refused, Vizetelly cabled the facts to Bennett in Paris. Through his friendship with the German ambassador in the French capital, the publisher arranged matters so that the German consulate at Zanzibar received a cable from Prince Bismarck, ordering that Vizetelly be allowed to pass through the territory.

The correspondent organized his caravan and plunged into the interior, and lo! his rival appeared one day in his tent. The World man had been refused permission to traverse German territory, but he had watched Vizetelly's start and pluckily enough had followed his rival. Vizetelly made him a guest at his mess, although he knew that Stevens meant to beat him if he could. The World correspondent proved to be ready enough to eat Vizetelly's food, but not to acknowledge the courtesy in his paper. Vizetelly felt justified, therefore, in arranging with the German authorities to have any messages Stevens might send back stopped at the coast. Bennett, meanwhile, had telegraphed Vizetelly a promise of two thousand pounds sterling if he succeeded in his enterprise.

Finally the two correspondents reached Stanley's camp. Mounted upon an ass from Muscat and side by side with a German lieutenant riding an African ox, Vizetelly rode forward with dignity to the meeting, while Stevens left the column of his protector and ran ahead, in order to be "first." Vizetelly duly presented the flag, and that evening sent to the Herald the first message that reached the outside world with definite tidings of Emin's rescuer.

The next morning the traveler handed the correspondent a long letter for the Herald, which Vizetelly at once sent off by special runner. Thus it reached Bagamoyo; thence it went by German steam launch across to Zanzibar, and from there it was cabled to London. A note in the New York paper stated that the cost of sending the fourteen hundred words was thirty-five hundred dollars. Stevens was beaten.

On returning to Zanzibar, Vizetelly found this telegram awaiting him:

"My congratulations. In accordance with my promise two thousand pounds sterling to your account with Rothschild to-day.—Bennett."

SEA SNAKES

MANY persons are familiar with the names of the most dreaded and deadly of the poisonous land snakes, writes a contributor to Country Life, but very few, apparently, have any knowledge of the innumerable sea snakes, most of which are highly venomous, that infest the waters of the Indian Ocean and the western Pacific.

Nearly all of them differ from the land serpents by the laterally flattened and oar-like shape of the tail, and also by the scales of the under surface of the body. When cast ashore accidentally, the majority are quite helpless and soon die, for they are unadapted for getting about on land. Three species, however, differ from the majority of the sea snakes. One of the most common kind is a three-foot snake that lives in the waters from the Bay of Bengal to Oceania. This species easily crawls on land, and sometimes makes journeys of a considerable distance inland.

Most of the sea snakes have brilliant colorings. They feed on fish and other marine creatures and are extraordinarily active. In length, they vary from about two feet to as much as ten or twelve feet. Sea snakes, also, differ from land snakes in the shortness of the tongue. In their natural element they thrust only the extreme tip of this organ through two small notches in the closed mouth. They have comparatively small nostrils, placed on the top of the snout, and furnished with a valve that opens to admit air and that closes to exclude water when the reptile is beneath the surface.

Statement of ownership and management as required by the Act of Congress of August 24, 1912.

The Youth's Companion, published weekly at Boston, Massachusetts, for April 1, 1917.

State of Massachusetts, County of Suffolk.

Before me, a notary public in and for the state and county aforesaid, personally appeared Edwin Stockin, who, having been duly sworn according to law, deposes and says that he is one of the owners of The Youth's Companion and that the following is, to the best of his knowledge and belief, a true statement of the ownership and management of the aforesaid publication for the date shown in the above caption, to wit:

1. That the names and addresses of the publisher, editor and managing editor, and business managers are: Publisher—Perry Mason Company, Boston, Mass.; Editor and Managing Editor—Charles M. Thompson, Cambridge, Mass.; Business Managers—Seth Mendell, Kendal Green, Mass.; James M.E. Drake, Boston, Mass.; Charles E. Kelsey, Newton Center, Mass.; Edwin Stockin, Watertown, Mass.; John A. Dickson, Evanston, Ill.; Oliver B. Merrill, Summit, N. J.; Francis W. Hight, Winchester, Mass.

2. That the owners are: Seth Mendell, Kendal Green, Mass.; James M.E. Drake, Boston, Mass.; Charles E. Kelsey, Newton Center, Mass.; Edwin Stockin, Watertown, Mass.; Charles M. Thompson, Cambridge, Mass.; John A. Dickson, Evanston, Ill.; Oliver B. Merrill, Summit, N. J.; Francis W. Hight, Winchester, Mass.

3. That the known bondholders, mortgagees, and other security holders owning or holding 1 per cent or more of total amount of bonds, mortgages, or other securities are none.

Sworn to and subscribed before me this 14th day of March, 1917, Joseph W. Vinal, Notary Public.

THE AUTOMOBILES' DEATH LEAP

DURING the great retreat of the Serbians in the face of the Teutonic invasion, the condition of the roads was such that many motor cars had either to be destroyed by their Serbian owners or left to fall into the hands of the invaders. The former alternative was generally chosen.

In Ipek, writes Mr. Fortier Jones in the Century Magazine, there were many automobiles, motor lorries, limousines and touring cars. They were drawn up round the public squares in imposing rows. Apparently from habit, the chauffeurs potted about them, polishing the plate glass and nickel and cleaning the engines. But when evacuation was announced they drove a little way out of the town. Some of them had brought hand grenades, and, leaving the engines running, they lifted up the hoods, struck the percussion caps of the bombs, which they dropped beside the cylinders, and then ran. Seven or eight seconds later the racing motor would be blown to scrap iron.

Other chauffeurs saturated their cars with petrol and set them on fire. Limousines became roaring furnaces and then exploded into glorious bonfires. But those methods were as nothing compared with that which one chauffeur conceived and, by setting the fashion, brought several others to adopt.

Three or four kilometres out of Ipek one of the roads turns at a right angle and shrinks into a two-foot trail cut in the side of a sheer cliff three or four hundred feet above a stream. There is no fence; the earth ends and space begins. Having arrived at this point, to step out of the car, let in the clutch and push down the accelerator was less dangerous than the grenade, easier, quicker and far more exciting than the fire. It was a great game.

There was a long gray car that took the brink like a trained hunter, leaping far out over the edge. As its power was suddenly released from the friction of the road, the engine roared and trembled like a live animal during the infinitesimal instant that the car hung upright, held by its own momentum. Then the motor dragged its nose downward as true as an arrow until it struck the steep slope, down which it went in quick somersaults. The tires burst with loud reports that could be heard above the crash of the breaking car. Before it rolled into the stream it became a ball of fire.

A ponderous limousine followed and tucked its nose into the slope without a spectacular leap. It was like a fat old lady falling downstairs. A large French motor lorry ploughed a terrible path down the cliff, pretty well giving knock for knock, and finally grinding to splinters the wreckage of the other cars on which it landed at the bottom. Each make of car took the leap in an individual manner. Sometimes they flew almost to bits. The tires invariably blew out with loud reports.

One famous and inexpensive American car made the leap. It had up good speed, and its lightness sent it far beyond the brink, where it floated four hundred feet above the river. It acted almost as if it wanted to fly. But once started on its downward course, it gyrated with incredible swiftness and, bouncing on the river bank, flew beyond the other cars, swam the stream and came to an eternal resting place on the farther side.

MILITARY PUNISHMENTS

THE cat-o'-nine-tails is now long out of date. As a writer in Lloyd's, of London, says, there are very few punishments in the British army at the present day. The discipline is strict, but it is enforced in a manner that makes obedience easy.

Until comparatively recent years, however, military punishments were frequently inhuman. The cat was the great weapon, and British soldiers were stripped to the waist and triced up and cut to pieces for offenses that were sometimes trifling. The passing of the first Mutiny Act in 1689 authorized the application of the lash. Courts-martial had the power of inflicting corporal punishment to any extent; and not infrequently those tribunals flogged men to within an inch of their lives. If a man could not stand the whole of his punishment at once, he was carried to hospital and probably brought out again, when his wounds were only partly healed, to receive the remainder.

Again and again the question was raised in Parliament. Generals and colonels used to rise in their places and solemnly protest that flogging was necessary to the maintenance of discipline. Time has proved them a little in the wrong! Can we imagine a cat-o'-nine-tails in the ranks of the democratic army of to-day?

The French were the first to abolish the penalty. Discipline in the French ranks, however, has always been very rigid. In the days of the French Revolution a general who did badly was likely to have his head chopped off. Commissioners of the Convention were on hand with portable guillotines!

In the Russian army of old the most formidable punishment was running the gantlet. The bayonet of the prisoner's musket was held against his stomach so that he should not walk too quickly, and he was then compelled to march between two lines of the regiment, drawn up to form a long lane. Each soldier was armed with a plant hazel wand, with which in turn he struck his wretched comrade. Up to the middle of the last century two and three thousand blows were given at a time, and under Peter the Great twelve thousand could be ordered. If the sentence was that those should be dealt "without mercy," the victim was, of course, flogged to death. Needless to say, that appalling punishment has long disappeared, and the Russian army is now disciplined on much the same plan as the British army.

VALUABLE CRITICISM

THE author of Children of the Dead End, Mr. Patrick MacGill, who is now serving at the front, received a striking reminder that "a prophet is not without honor save in his own country" when he took advantage of a week's leave to visit his native village in the west of Ireland.

The villagers, with all of whom he had been acquainted from boyhood, now looked at him askance. He had written a bad book, he was told, and it followed, therefore, that he must be a bad man.

"Then you don't like my book?" Mr. MacGill asked one of them.

"Like it?" was the indignant reply, according to the Tatler. "I wouldn't read it for a hundred pounds, money down!"

The Brownie Boy

There's great fun out-doors in taking Brownie pictures and there's great fun in-doors in developing and printing.

There's not only the fun of having the pictures but the little camera and the literature we furnish with it, (including the magazine *Kodakery* free for a whole year) gives a good foundation in photography.

Brownie Cameras \$1.25 and up.

EASTMAN KODAK COMPANY, ROCHESTER, N. Y.

How We Tell when Roasted Peanuts are "Done"

WE roast the peanuts for Beech-Nut Peanut Butter after they have been shelled. And when the roasting man sees that they have reached a certain light brown color, he says "Take them out." For the peanuts are done. He tells it entirely by the color. This man has been roasting peanuts for years. He has his ovens right under great big windows in the roof—just like a photographer's studio—which makes the light very steady.

This is one reason for the good "roasted peanut" taste of Beech-Nut Peanut Butter.

Beech-Nut is delicious on bread, crackers or toast, but maybe you know some better ways besides those. Send us a letter about the way you like to eat it best.

If you have never tasted Beech-Nut Peanut Butter ask mother to get a jar—today.

"Kant Slip" Inner Liner

For Automobile Tires. A complete inside fabric reinforcement. Enables you to get 500 to 1000 miles more from a nearly worn-out tire. The flaps prevent slipping, therefore liner isn't stuck to tire and can be transferred from one to another and used over and over. Try the "Kant Slip" Inner Liner now, and get a few hundred miles more out of your old tires. It will pay. Sold by dealers and by mail. Send for circular and price.

Patent applied for. **FORD & LYON, Fitchburg, Mass.**

Hit the Trail

Now is the time to actually live those dreams you've dreamed all winter

—to get that bicycle which is going to take you back and forth from camp—off to the fishing pond, to the swimming hole, to the ball game, or on glorious rides along the open road.

Of all your outfit for summer sports, first and foremost comes the

Columbia Bicycle

It is a speedy, sturdy bicycle, wonderfully well made. It is the bicycle your father will recommend, for he probably rode a Columbia when he was young.

There is a new model to meet every need—a model at a price to fit every pocketbook.

The handsome **Motobike** has all the advantages of motorcycle equipment—long handlebars, roomy saddle, storage tank, stand, electric lighting outfit and other features.

Ideally adapted for earning a little spending money during the summer is the **Service Model**—while, with its carrier removed, it is an excellent all-around bicycle.

You should see the many models at the bicycle store. And read all about them in the big 1917 catalog—write for it.

Westfield Manufacturing Company
Dept. 48 Westfield, Massachusetts

Grape-Nuts

contains the rich supplies of phosphate of potash grown in wheat and barley.

Its mission is therefore clear and plain—it supplies what ordinary food lacks. And it does its work in a sturdy, straightforward, dependable way, as tens of thousands of its users can testify.

Quick Relief for Husky, Hoarse, Tickling Throats. 25c at all Drug Stores. Sample for two-cent stamp. Frederick Stearns & Company, Detroit, U.S.A. In Business Over 60 Years

THE YOUTH'S COMPANION is an illustrated weekly paper for all the family. Its subscription price is \$2.00 a year, in advance, including postage prepaid to any address in the United States, \$2.25 to Canada, and \$3.00 to foreign countries. Entered at the Post Office, Boston, Mass., as second-class matter.

New Subscriptions may begin at any time during the year.

Money for Renewals should be sent by subscribers directly to this office. We do not request Agents to collect money for renewals. Payment to strangers is made at the risk of the subscriber.

Payment for The Companion, when sent by mail, should be by Post Office Money Order or Express Money Order. When neither of these can be procured, send the money in a Registered Letter. Silver sent through the mail is at the sender's risk. It is liable to be stolen or to wear a hole through the envelope.

Renewals. Three weeks after the receipt of money by us, the date after the address on your paper, which shows when the subscription expires, will be changed.

Always give the name of the Post Office to which your paper is sent. Your name cannot be found on our books unless this is done.

Letters should be addressed and orders made payable to

PERRY MASON COMPANY,
The Youth's Companion,
Commonwealth Ave. and St. Paul St., Boston, Mass.

PERNICIOUS ANAEMIA

THIS is a chronic form of anaemia, characterized by a great reduction in the number of the red blood cells and also by changes in their character. It generally has a fatal termination. Some cases progress rapidly and end quickly in death; others go on for years, with intermissions and relapses, but still progressing slowly to the same end; a few end in recovery.

Many patients in the early stages of the disease feel well, and refuse to consult a doctor. The family may notice an increasing irritability and weakness, and the patient, although fat, is pallid and looks ill. He may insist upon attending to his work, but if that involves much physical effort he soon finds that he cannot do so.

An examination of the blood made between the severe attacks may quite fail to establish the diagnosis, so that the condition may for some time be mistaken for Bright's disease or a valvular heart trouble. A very characteristic thing about the affection is its tendency to improve and then relapse. These relapses are limited to three in most cases.

Although medical science can do little to preserve life in pernicious anaemia, still it can do something for the sufferers. The main thing is to restrain the energy that impels them to unwise effort. They should not be sent away from home with a promise that "change of air" is going to do them any good, nor should they be permitted to dissipate their energies, either at work or at play. The state of the teeth and of the intestinal system should be carefully seen to, for it is possible that the disease may be caused, or aggravated, by auto-intoxication from one of those sources.

In the treatment physicians often resort to transfusion of blood, but that seldom brings more than a temporary improvement. In some cases they give arsenic apparently with good effect, but the remedy that seems to offer the greatest promise is radium injected into the veins. That, however, has been used in so few cases that it is impossible to say whether or not it is really curative.

MARTHA HALE'S MAKE-UP WEEK

"BUT, Ellen, the climax of that wonderful sermon came when the minister said, 'Some of you have friends who are no longer friendly. They love you still, but they haven't the courage to tell you so. They are waiting for you to take the first steps toward making up. I hereby appoint next week as make-up week. May it be filled with the richest experiences of your lives.'

"When I heard those words, Ellen, I forgot I was in a great city church, and was back here in Hillsboro living next door to Nettie Clarke that I hadn't spoken to for ten years."

"Why, Martha," remonstrated Mrs. Hale's cousin, who was spending the day with her, "you have always spoken to Nettie Clarke."

"Yes," admitted Martha Hale, "but not in spirit. Discussing the weather and asking where the next Ladies' Aid meeting is to be don't require much grace. Well, Ellen, during the closing hymn my heart chanted, 'Nettie loves me still! Nettie loves me still!' Our quarrel seemed so foolish, and I was so glad that in twenty-four hours I should be back in Hillsboro keeping make-up week."

"When I stepped off the train the next day there stood Nettie on the corner talking with Agnes Noyes. I was sure I heard her speak my name, and she laughed in a way that I didn't quite like. Then when she saw me, and deliberately crossed the street to walk on the opposite side, I felt something freeze inside me. It was much easier to forgive Nettie when we were fifty miles apart than it was when I met her face to face."

"I just couldn't go over to Nettie's that night, I was so tired and troubled, and the next day I wouldn't go. I felt my heart grow harder and harder every hour, and I wished, oh, how I wished, that the minister had told us how to make up!"

"Thursday afternoon I was resting out on the piazza when little Doris Blake rolled her hoop over the walk and called joyously, 'O Mrs. Hale, Mabel and I ain't mad any longer. We *splained* it all out, and we *love* each other now!'"

"Explained it all out!" I repeated wonderingly as Doris skipped down to Mabel's house. Was it possible there was something that Nettie didn't quite understand? Before I had time to change my mind I wrote a letter to Nettie, telling her everything I knew about our trouble. Then I ran over and slipped it behind her key blind, where she would find it when she came back from the village. Half an hour later Nettie was standing in my kitchen doorway. There was something that she hadn't understood.

"At the next Ladies' Aid meeting Nettie and I sat side by side on my parlor sofa and 'explained it all out' to our astonished friends. And we all agreed we would have a make-up week in Hillsboro as well as a clean-up week, for it is as important to keep our hearts clean as our back yards. You can't imagine, Ellen, what a change it has made here. It was one of the proudest moments of my life last Sunday when our minister referred to Hillsboro as the 'village of neighborly love.'"

On July 30th, 1747,
Lord Chesterfield
wrote to his son:

"DO you take care to keep your teeth very clean by washing them constantly every morning, and after every meal? This is very necessary to preserve your teeth a great while, and to save you a great deal of pain."

Lord Chesterfield's advice holds good today—and with this great advantage—you have Colgate's Ribbon Dental Cream to help you—as good to the taste as it is good for the teeth.

Something New for Your Bicycle

Electric Bicycle Lamp

New Style

This two-cell Bicycle Lamp has a powerful silver-plated reflector and handmade tungsten bulb. The battery case, which is of a new design, is finished in rich black enamel, and clamps to the crossbar of bicycle. The switch is on the battery case, within easy reach. The Lamp operates on two common dry batteries. These are not included in our offer, but may be purchased at local store to save transportation charges.

OUR OFFER. Send us one new subscription (not your own) for The Youth's Companion, with 60 cents extra, and we will send you this Electric Bicycle Lamp, postpaid. Sold for \$2.00. See note below.

New Bicycle Horn

Automobile Type

Every man or boy who rides a bicycle will want one of these new Bicycle Horns. The slightest touch of the plunger produces the well-known automobile warning note, which commands instant attention and gives ample notice of the rider's approach. The Horn is finely finished with black enamel, measures 3 x 3 inches, and may be attached to any part of the bicycle tubing. Good for motor cycles, too.

OUR OFFER. Send us one new subscription (not your own) for The Youth's Companion, with 15 cents extra, and we will send you this fine Bicycle Horn, postpaid. Sold for \$1.50.

NOTE.—These Premiums are offered only to our present subscribers to pay them for introducing the paper into homes where it has not been taken the past year.

Don't Inflict a Truss Upon Your Child

GROWING children need a great amount of care and attention. Especially is this true when the child is unfortunate enough to be ruptured. But the parent who harnesses a ruptured child with a truss is inflicting an injustice. Trusses seldom fit well. Spring trusses are dangerous. No truss can be comfortably worn in bed. Most trusses are conspicuous. Few of them are uninjured by water. The Brooks Rupture Appliance has none of the drawbacks of a truss. It is especially adapted for wear by children because it is made to the individual measure of the wearer. It rests flat and smooth, and its soft cushion adheres to the flesh, making slipping impossible. This cushion is always cool and comfortable, owing to a constant circulation of air.

SENT ON TRIAL
To convince you of the great comfort and relief which your child will obtain from the Brooks Rupture Appliance, we shall be glad to send you one on free trial. If you are not entirely satisfied, we will cheerfully refund your money. You may deal with us with the knowledge that you are receiving the care and attention of a sanitarium. We are not a factory. The Brooks Rupture Appliance has the endorsement of the country's leading physicians. Thousands of happy wearers daily sing its praises. Do not permit your child to suffer any longer. You owe it to the child and to yourself to learn more about this Appliance without delay.

Use the Coupon. Use It Now.

NATURE & SCIENCE

BIRDS AND THE CLOCK.—When the clocks were set ahead an hour in Paris last June, in accordance with the new daylight-saving regulations of the French government, the change had no effect upon the habits of the birds of at least one part of the city. The author of a communication to the Société de Biologie reports that for two years she had been accustomed to walk through the Luxembourg Gardens every morning at eight o'clock and to give bread crumbs to the birds, who knew her well and who gathered every day to wait for her. On June 15 she walked through the gardens at eight o'clock, as usual; but as the clocks had just been set forward an hour she was really sixty minutes ahead of time. Nevertheless, the birds were there waiting for her, apparently already familiar with the change. The incident seems to show that city birds, at least, depend for their knowledge of time more upon the life and movement in the streets than upon the height of the sun.

A NEW FIRE PERIL.—The careless use of electric irons, toasters, pads and other electrical contrivances causes so many fires every year that the National Board of Fire Underwriters has issued a warning to the public. There is no danger from any of the utensils so long as they are used with care and according to directions; but some owners do not realize how unsafe it is to leave them in circuit when they are not in use. In such cases they become overheated, and are likely to set fire to anything combustible with which they come into contact. Most of the fires that start from such causes are small, but the aggregate loss is large, and occasionally the fires are serious. In Boston recently a house was damaged to the extent of \$350,000 by a fire that was traced to an electric plate warmer in the butler's pantry. Fires of that class are a special peril to life, since they usually occur in dwellings and often break out at night. The commonest cause of fires of that kind is leaving an electric flatiron on the ironing board with the current turned on. In such a case the fire may not break out for some hours. Most of the fires are entirely preventable. They can be charged to nothing except carelessness on the part of the person who was using the electric implement. Many of the manufacturers of such articles have provided safety appliances for them, among which are some that are fairly effective; but there is only one thing that will really insure safety. That is to shut off the current the moment you actually cease to use the electrical tool, whatever it may be.

STRANGE NESTLINGS.—From the zoological point of view, says Mr. William Beebe in the Zoological Society Bulletin, the most interesting bird living on the earth to-day is probably the hoactzin, in spite of the fact that its flight is like that of an overfed hen, its voice as harsh as that of the peacock and its odor like that of putrid flesh. The hoactzin has defied time and space, and in voice, actions, arms, fingers and habits recalls the relationship between birds and reptiles that existed in long-past ages. It lives in bands in the tropical forests of South America, frequents the borders of streams, feeds upon leaves and fruits, and rarely quits the lower trees and bushes. Unlike all other living birds, the hoactzin is born with well-developed claws, and soon after it is hatched begins to crawl about by hooking its claws to twigs and branches and using its wings like feet. The young hoactzin, however, sheds its claws within a few days. The photograph of a nestling hoactzin is taken from the Zoological Society Bulletin.

PUMPING OUT HOLLAND.—Holland has called electricity to its aid in its never-ending fight against the encroachments of the sea. In January, 1916, tremendous storms from the west drove the North Sea into the narrow bottle neck of the Zuider Zee. Because of a simultaneous windstorm from the north, the pressure became so great that the dikes gave way and the Waterland region of Holland was flooded. Only the elaborate system of inland dikes and drainage canals and a hastily built cofferdam kept the flood from the larger cities. As it was, the flooded area reached almost to Amsterdam. According to the Edison Monthly, three and one half billion gallons of water covered the land. The existing pumping stations had a capacity of twenty-eight thousand cubic feet a minute—one quarter, perhaps, of what was needed. In the emergency the Dutch decided to use electrically driven centrifugal pumps stationed at many points throughout the flooded area. The floods occurred on January 14. By March 31 the pumps had been built, the motors delivered and installed, the cross-country electric cable had been stretched from Amsterdam and the work of drainage had begun. By the end of April all the polders had been drained, and in another month the lower lakes were emptied. Thus modern pumps and electric motors did all the work in four and one half months, whereas it took a year and a half to clear the land of the flood of 1825, which covered a smaller area.

BELOW THE MOUNTAINS.—Researches of the United States Coast and Geodetic Survey, carried on in recent years, prove beyond doubt that mountains are not held up by the rigidity or strength of the earth's materials, but by the fact that the materials under them (in the outer portion of the earth) are lighter than normal. The higher the mountain or the plateau, the lighter is the material under it. The principle is exactly the same as that which makes an iceberg float. The portion of the iceberg that is above water is held up by the large mass of ice—which has a density lower than that of water—in the submerged portion of the berg. So, in the case of the mountain, the portion above the general level is held up by the lighter material under the mountain, which extends down to a depth of about sixty miles. Although the mountain is held up or floated by a lighter material under it, the bottom of the ocean is depressed because the material under it to a depth of about sixty miles below sea level is heavier than normal. What may be considered as the normal condition is that which obtains in the large river valleys and under the coastal plains.

Ride the Goodrich GIANT

Here, boys, is the strongest, finest-built Bicycle Tire ever made—the Goodrich GIANT Safety Tread, made in the World's Largest Rubber Factory. It has no rival!

The GIANT—and only the GIANT—has two plies of specially-woven *motorcycle fabric*, with pure rubber forced through the loose meshes until it becomes one solid and inseparable unit, as you can see ("B").

The GIANT—and only the GIANT—has such a thick tread ("A") of black, sinewy rubber—the same kind used in the big Goodrich Automobile Tires.

See the massive three-bar tread design ("C"). No other bicycle tire can support you so safely on slippery streets, muddy roads, or on quick turns. This Safety Tread design has been made famous on millions of Goodrich Automobile Tires.

Ask your dealer about the GIANT and the other Bicycle Tires in the complete Goodrich line, "each a leader in its class." A price, a tread, and a style to suit everyone.

GOODRICH

BICYCLE TIRES

Let Us Hope This Baby Won't Reach The Poison

106 children were reported poisoned in the last three years by arsenical fly destroyers. And this is but a fraction of the actual number. Arsenical fly poisoning and cholera infantum symptoms are almost exactly the same. Diagnosis is difficult. And first aid in arsenic poisoning must be quick.

Don't subject your children to this danger. Use the *non-poisonous* fly catcher

TANGLEFOOT

safe, sure and efficient, which catches the fly and embalms its body and the deadly germs it carries in a coat of disinfecting varnish.

GOVERNMENT ISSUES WARNING

Earnest A. Sweet, Passed Assistant Surgeon in the United States Public Health Service, makes the following statement in Supplement No. 29 to the Public Health Report: "Of other fly poisons mentioned, mention should be made, merely for a purpose of condemnation, of those composed of arsenic. Fatal cases of poisoning of children through the use of such compounds are far too frequent, and owing to the resemblance of arsenical poisoning to summer diarrhea and cholera infantum, it is believed that the cases reported do not, by any means, comprise the total. Arsenical fly-destroying devices must be rated as extremely dangerous and should never be used, even if other measures are not at hand."

DRAWINGS BY NORMAN ROCKWELL

EVEN ON THE FACE OF THE CLERK WHO WAS MEASURING
TED THERE WAS A SMILE

GREINER, AT THE OTHER SIDE OF THE ROOM, REMARKED, "YOU
HAVE THE BOY SCOUTS' UNIFORM HERE, TOO, DO YOU?"

WHEN Ted Ripley read the application blank and saw that he had to set down his height and his weight, he groaned aloud. For a moment he was tempted to overstate them both; but he was a truthful little soul, and therefore with a sigh he wrote, "Height, 5 feet, 5 inches; weight, stripped, 118 pounds." Then he posted the application and resigned himself to face inevitable disappointment.

"I bet I'm the puniest freshman that ever came to Brampton College!" he muttered. It was his most frequent, even if not his favorite, remark.

He was indeed so slight and delicate that his efforts to take part in sports had met with either kindly or derisive discouragement.

"Say, you little fellow, you'll get broken in two!" the coach of the freshman eleven had said when Ripley presented himself as a candidate for quarterback.

"No, I won't, either," Ripley had answered, with such appeal in his blue eyes that the coach grumbled:

"All right, we'll give you a trial."

He let Ripley get into the scrimmage one afternoon, and when the practice was at an end he said to him, "Your spirit's all right, kid, but you're too light; you haven't the strength—so you needn't come out any more."

It had been the same with baseball, except that there the coach had been more brutal. "You've got to have strength enough to hit the ball outside the diamond," was the comment that had erased Ripley from the squad of candidates—the first man to be dropped. Even when it came to tennis, Ripley had to play with a lighter racket than the ordinary man uses—and then he did not play well.

Ripley's spirit was bigger than his body. He was not afraid to attempt anything that other fellows of his age were accustomed to do, and he was always weighing himself and measuring himself in the hope of discovering that his growth was not stunted, only belated. In his room morning and night he did exercises that no doubt kept him in good physical

heart, Ted wanted to qualify himself for the little-thought-of yet always ultimate and possible duty of a citizen—the bearing of arms in defense of his country.

"It will mean taking a whole month out of the summer vacation," protested his easy-going roommate, Mark Perrin.

"It will be a month of the finest kind of vacation," Ted declared.

He telegraphed to his father for permission to enroll himself for the camp, and received it. And that day he got the necessary application blank at the office of the Messenger, and in spite of its discouraging requirements, which to his mind intimated a strong probability of rejection, he mailed it at once to the camp adjutant.

"Perhaps if I'm one of the first to apply, they'll take me," he thought.

He tried not to let himself dwell hopefully on his chances. As the days went by and he learned that more than a hundred men from Brampton had sent in applications and that among them were most of the prominent athletes of the college, he felt depressed. Of course now there would be no place for him. He even felt little satisfaction at hearing that the applications from Brampton were almost twice as many as those from Crane College, Brampton's historic rival.

Mark Perrin was finally enmeshed in the growing popularity of the Plattsburg idea. When he told Ted that he, too, had sent in his application, Ted expressed his satisfaction, and then added mournfully, "If they turn me down and let you in, I'll be awfully sore—and I'll bet that's just what will happen. That's usually the way; you come loafing along at the end and without half trying get what I've been vainly struggling for from the start."

Mark laughed his good-natured laugh and said, "It does seem as if it were a mistake sometimes to be too keen about things."

"He thinks they're going to turn me down," thought Ted gloomily; and the fact that another person should think it made Ted more than ever certain of it.

When the communication came in the long envelope marked War Department and bearing

condition, but he could not see that they increased the power of his muscles, or promised to add a cubit to his stature.

When the Brampton Messenger, the college newspaper, published the first announcement of the military training camp for students, to be held at Plattsburg under the auspices of the War Department, Ted Ripley made up his mind at once that there was the place for him. He had never shot a rifle, he had never had any military drill, he had never gone camping; and now here was a wonderful opportunity to have all those experiences in the best possible way. And more than that, deep down in his

the frank of the government, Ted opened it with a feeling of faintness. Then exultation flashed over his face, for he read that his application had been approved and that he was ordered to report at the Plattsburg camp at ten o'clock on the morning of July 6.

"They took me, Mark!" he cried to his roommate, who came in at that moment.

"Me, too," said Mark. "I almost wish they hadn't. I bet the food will be something fierce."

"You think of some very funny things," remarked Ted. "I'm going right down now to order my uniform."

Early as he was, he found two other

Brampton men ahead of him, getting measured by the tailor for the khaki trousers and olive-drab flannel shirts and canvas leggings prescribed in the circular of instructions. They were both juniors, known to Ted by name and reputation, for they had both of them played on the junior football eleven, which had defeated the freshman eleven for the class championship. Richard Greiner and Henry Carton were two of the prominent upper classmen who were fully conscious of their importance and resented being brought into relation with any persons of less importance than themselves. This fact Ted did not know; he watched them admiringly while their measurements were being taken, and he was unaware of the disapproval in their glances at him.

A clerk came up to Ted and asked what he could do for him.

"I want to be measured for the uniform," Ted answered.

"Yes, sir." The clerk got out his tape measure and Ted took off his coat.

Greiner, at the other side of the room, remarked to the man who was setting down his measurements, "You have the Boy Scouts' uniform here, too, do you?"

The remark was accompanied by a disdainful glance at Ted, who caught both the words and the glance. Carton and the tailor's clerk both chuckled; even on the face of the clerk who was measuring Ted there was a smile. Ted tried to look as if he had not heard, but he knew all the time that his burning cheeks proclaimed his injured sensitiveness.

"The leggings aren't made to order, and I'm afraid the smallest size will be too large for you," said the clerk apologetically, yet with a trace of amusement in his voice.

Ted was irritated, but strove to be dignified. "Never mind; I'll take the smallest size, and I guess they'll do," he answered.

He saw Greiner bend toward Carton and heard him say something about "a soldier with sparrow's legs." Carton laughed again, and Ted's cheeks burned hotter than ever. He was annoyed with himself for being so hurt.

"Shucks!" he said to himself, as he walked to his room. "I must get over being bothered

by remarks about my looks. So long as I can do the job—that's all I need to think about."

Every night and morning he did his physical-training exercises more vigorously than ever; in the afternoons he took long runs. If his muscles were small, they were firm and flexible, and by his conscientious efforts he increased his power of endurance. Mark Perrin, who did not alter the lazy tenor of his life, laughed at Ted's earnestness. "Anyone would think you were in training for the crew," he said. "The way you're working you'll go stale before you ever see the camp."

Besides trying to make himself as fit as possible physically, Ted endeavored to acquire such information as he could from studying the infantry drill regulations and the field service regulations of the army. He found much of the reading technical and difficult, but there was a good deal in the "school of the soldier" and the "school of the squad" that he could understand; he felt that he should not be going to the camp absolutely ignorant. Again his roommate ridiculed his preparations and assured him that they would not help him a bit.

"It's well enough for you to talk," Ted answered. "But I've got to make myself as good as possible, so that they won't send me home when they see how small I am."

After the close of the college term, Ted had ten days with his family at the seashore. They all accompanied him to Boston and saw him off on the special train that was to convey the Brampton contingent to Plattsburg. Ted was rather ashamed to have such a fuss made over his departure—almost as if he were actually off to war. No other fellow seemed to have his entire family—a mother, a father, two sisters and a little brother—standing about him on the platform and saying last words to him. If he had been big it would have been all right, but as it was it would probably make people think him more of a "kid" than ever. There he was, thinking about his size again, in spite of all his resolutions!

And there were Greiner and Carton standing close by and taking it all in!

"Now, Ted, you must get aboard," said

Mrs. Ripley. "It's almost time for the train to start, and I don't want you to get on while it's moving. Good-by, dear!"

She kissed him, and then his sisters kissed him, and then his little brother kissed him. His father only grasped his hand, and Ted was conscious of a great feeling of relief.

His mother unfortunately made one last damaging speech—one that Greiner and Carton must have heard:

"Do be careful with the gun, Ted; do be careful, and don't shoot yourself or anyone else."

Ted felt annoyed, and then, when he was seated in the train and the train was pulling out of the station, he felt remorse that he should have been annoyed by anything his mother could have said.

The train was filled with Brampton men, but they were mostly upper classmen, and among those of his own class who were on board there was no one with whom Ted was especially intimate. Mark Perrin and the few others whom Ted knew well were going up from New York. So, as there was no one in the car that seemed particularly to invite his society, Ted turned in early and went early to sleep. He was roused the next morning by the porter, who announced that in twenty minutes they would reach Burlington.

It was a fine, warm summer morning—a perfect morning for the trip by boat up the lake. Ted roamed round the deck, enchanted by the views across the water of the Green Mountains on one side and the Adirondacks on the other.

Two hours after leaving Burlington he had his first glimpse of the camp. On a broad open slope running down to the lake were spread the khaki-colored tents—rows and rows of them; the camp was laid out in streets. Between the railway at the foot of the slope and the camp was a broad stretch of green, and Ted heard some one remark that there must be the parade ground. In the centre of the camp there were grouped some tents much larger than the others, and from open spaces near them smoke was ascending. Men in khaki uniform could be seen moving about the camp streets—and some who were not in uniform at all were to be seen bathing off the pier that projected into the lake. Ted gazed eagerly, excitedly, while the boat several hundred yards out from shore passed by the camp. He felt the thrill of anticipation and adventure more keenly now than at any time since he had left home.

In a few minutes he was in the midst of the crowd swarming off the boat out on the Plattsburg wharf. He gave up his trunk check to a soldier with a yellow cord round his hat, followed the crowd, boarded a trolley car, and after a ride of a mile or so alighted with the others at the entrance to the camp. Soon he found himself in line for the adjutant's tent; and while he was waiting, who should pass by, in full uniform from service hat to army boots, and looking quite soldierly, but Mark Perrin.

"Hi, Mark!" Ted shouted; and his roommate turned and came up, grinning proudly.

"All settled?" Ted asked.

"Yes. I got here early this morning, and I'm all fixed up. I'm over in Company G."

"What's the first thing I do?" asked Ted.

"Well, after the adjutant assigns you to a company, one of the company sergeants assigns you to a tent. Then you go to the quartermaster for your blankets and sweater, and so on; and to the ordnance table for your rifle and stuff. And you have to go to the surgeon's tent and have a medical examination."

Ted's heart sank.

"Have you done everything, Mark?"

"All but the medical examination; and that's a cinch. Well, I hope I see you in G Company, Ted."

Mark moved on at a pace more brisk than his usual loitering gait. Ted wished he were as near to being a soldier!

At last Ted reached the adjutant's tent and received from the officer there an assignment to Company B. He was disappointed that he was not to be near Mark, but he took his assignment card and went in search of his quarters. At the head of Company B street a tall youth in khaki looked him over.

"They're arranging us according to height," said this person. "You'll go down with the short fellows. Way down at the end—last tent on the left, tent 26. Go in there and make yourself at home."

Ted walked down the street, looking curiously into the tents on either side. They were large enough to hold six cots; and inside all of them there was hustle and activity; fellows stowing away their things, making their beds, changing their clothes. In front of every tent were a tin pail and a basin, and in the

middle of the street was a hydrant at which one of the recruits was performing the belated ceremony of brushing his teeth.

Ted passed on down to the end of the line and entered tent 26. Two fellows who were getting into their uniforms greeted him with a surprised stare and then a cool nod of recognition; they were Greiner and Carton.

They had already made up their beds on one side of the tent. Four canvas cots lay folded in a heap on the ground. Ted dragged one of them out and began to set it up. The wooden supports were stiff and worked hard; he finally succeeded in snapping the crossbar at one end into place, but he could not manage to slip the bar into its socket. He pushed and pulled and bruised his fingers and felt the sweat pour down his face, but his efforts were

in vain. Neither Greiner nor Carton offered to help him. And Ted had made up his mind to one thing before coming to the camp: he was going to do everything for himself without ever asking for help.

"Let's go and get our rifles, Harry," Greiner said; and Ted felt glad enough that the pair were leaving the tent. They may have forgotten that the walls of a tent are not like those of a house, or their carelessness may have been more or less intentional; at any rate, when they were outside, Ted heard Greiner remark, "Hard luck having that kid shoved in on us," and Carton reply, "Yes, he'll queer the whole squad."

Ted thought that it was hard luck, too, but felt that he, and not Greiner or Carton, was likely to be the sufferer.

TO BE CONTINUED.

and had run in quite handy by to Seguin when it came nighttime; but about then the breeze commenced to peter out on him, and finally mod'rated down like, till there wa'n't nothin' left of her to speak of; but still seems's though there was this scand'ous heavy old easterly sea heavin' in, so's every laidge along the whole shore was breakin' a clear torch.

"Jim, he'd kind of fanned her along in up abreast of Seguin somewheres, same's I said; but bimeby, after the wind had let go complete, he begun to git so ter'ble sleepy seems's though he couldn't hold his head up noways he could work it. The pore feller was all tuckered and beat out, you see, and not to blame, neither; but he turned to and tried all manner of ways to git woke up a grain, till bimeby he seen 'twa'n't the least mite of good in the world to fight agin natur' no longer. He

seen he was jest bound to go to sleep spite of fate, and all the thing he could do was to take and fix his boat so she would look after herself the best while he was takin' him a few winks below.

"Of course, he might have hove over his killick, and all the reason he didn't was that he knewed the bottom was so ter'ble broken all along down that ways, and the sea bein' rough as a grater, he cal'lated 'twould chafe off his warp in ten minutes' time.

"Seguin Light, he figured, laid a matter of half a dozen miles inshore of him, and what little air there was goin' had give up, till she was nigh stark calm. He took and hauled down his jib, give the mainsheet a few foot of slack, sot his alarm clock to go off in jest one hour's time, and turned in.

"Wal, sir, nobody can't never tell jest ex-actly what did happen after this 'ere. Nigh's ever you can come to it, the wind went to work and breezed up from the east'ard quite spiteful, and instead of wakin' him up at the time she was sot the blame' alarm clock must have went back on him altogether, or else he was so dog tired he never paid no attention to her at all.

"Anyways, the fust thing ever Jim Fairway knowed, his boat fetched up all standin' with an unrighteous old crash, and the next second a big sea piled aboard of her till Jim like to have been drowned right there in his bunk. But he got out and fetched a leap on deck, and by good luck the next sea swung the dory chock in alongside, so he jumped into her, cut the painter, and finally was hove end over end clean up in amongst the rocks, consid'ble bruised and rattled, but alive jest the same.

"'Twas jest beginnin' to come on daylight then, and he soon see that he was on Small P'int, a short piece to the west'ard of Kennebec entrance, and pretty nigh the raggedst berth his boat could picked to lay herself, too, for in no time at all there wa'n't no sign of her to be seen, without it was a mess of rub-bidge the sea had throwed up about him amongst them laidges.

"Wal, now, that was some hard lines, to take and lose his boat and gear, and all his trip of fish so fashion, wa'n't it, though? Total wreck, she was—never once save so much as a tholepin out of the dory, even, and pore Jim he finally come ploddin' of it home there feelin' blue as a whetstone, now I tell ye.

"Wal, of course folks all allowed 'twas 'too bad,' and a 'plague-gone shame,' and all them things; but this 'ere old Mister Preacher over across, soon's ever he heard tell of it, off he starts right away with a paper amongst his acquaintances to home, and planks his own name down on her too for a clean two hundred dollars, fust thing!

"Inside a week's time after he'd commenced to amplify round with his paper, them folks had chipped in money enough so's Jim started right off down-east to buy him a new boat.

"He'd had his eye on a one for quite a spell back, you see, and so never lost no time lookin' round to find what he wanted. All the thing this one lacked was a gasoline engyne, and there was pretty nigh cash enough left over to buy that with. But old sir over across here, down he went right into his pocket again, and had the machine ordered slap bang, for he allowed he didn't cal'lato to resk stoppin' outside no more nighttimes whenever he took a notion to go fishin' along of Jim Fairway!

"So that's all the reason I tell Jim that little nap of hisn was the luckiest thing he ever done, and what's more, I tell him that settin' under a preacher same's this one over across must do folks an extry lot of good, and I'd admire to take and try it on a spell myself!"

"SAME TIME, IT DON'T ALWAYS WORK JEST THAT WAY, NEITHER"

"BIMEBY HE BEGUN TO GIT SO TER'BLE SLEEPY"

"HE WAS POSSESSED TO GO FISHIN' ALONG OF JIM FAIRWAY"

A LUCKY NAP By George S. Wasson

"NO, sir!" declared old Capt. Bowse, as he stood at the helm of his fishing sloop. "Aboard vessel in pertic'lar, a man can't take and go to sleep on his job without he's liable to git into all manner of trouble. Same time, it don't always work jest that way, neither. I've got a son-in-law over across river from here that turned to one time and slep' himself right plumb into an almost bran', spangin' new boat, and the ablest little thing of her bigness that fishes out of this river, too! I tell him that nap of hisn was the luckiest one on record sence Adam was a yearlin'!"

"That sounds interesting, captain," one of his passengers said. "Why can't you give us the yarn? We're all ears, as the donkey said."

"Oh, wal!" Capt. Bowse replied modestly. "'Tain't no great of a yarn as I know of, but anyways 'twas one of them kind of things that seldom ever happen every day in the week.

"You see, this 'ere Jim Fairway over across here, that married my Clarry, he had him a little old schooner-rigged boat that he kep' on the move pretty nigh the year round, scrabblin' and scrutchin' every way he knowed how to git a living out of her. Jim was always a master young chap to work, and it's safe to say that nobody round here ever fished any harder than what he doos.

"But there! He's had a scand'lous lot of sickness in his fam'ly to buck against for a consid'ble spell back, and his doctor's bills has been something tremenjis. But he's kep' a-pluggin' right at it early and late in that old drag boat of hisn, always in hopes some day he'd be able to git holt of a better one, but same time never once seeing no great prospects of gittin' a dollar ahead for boats or nothin' else.

"There's consid'ble many summer rusticators stops over across here, you know, and Jim he'd make a fair thing of it for a few weeks summer times takin' 'em out fishin' and pleasurin' round, like. Jim's a nice, clever-appearin' feller as ever you seen, and seem's though them rusticators always sot quite a store by him; but the thing of it was, his plaguy old boat wa'n't noways fittin' for the business, and was notorious dull, too. Dear sakes! She wouldn't sail no more'n a toad in a bucket of tar, and didn't have no accommodations, neither.

"But seems's though there was one old rich feller in pertic'lar amongst them summer folks—a preacher, accordin' to tell; he used to be in some one of them big churches up to the west'ard. He was possessed to go

fishin' along of Jim Fairway, and allowed how he knowed where to find fish the best of ary man in this river. The pair of 'em, though, got left out over-night once or twice for lack of wind, and then I know one time they got ketched clean away off here on the Outer Ridge in a heavy nor'wester, and like to went adrift altogether in the old basket.

"Wal, this last fall we had a spell of consid'ble good fishing chock off here on the Mon-hegin fall ground, you see. There was fish there, all right; but the way I look at them things at my age, this 'ere running fifteen or twenty mile broad off'n the main with these small-size open boats late in the fall of the year ain't jest what it's cracked up to be. I seen that the fust trip ever I made out there in this boat of mine here; and when she won't fetch ye back to the turf, there ain't many of her bigness that will!

"Wal, though, I run in one pretty good trip of fish to market there to Portland, and then come to the conclusion I wouldn't resk no more sech chances. I ain't quite so spry as I was fifty year ago, and besides I guess likely my blood may have cooled down like, a little mite, too. But land! Jimmy there, he hung right to it same's a dog to a root, and made nine trips runnin' that fall out to the Mon-hegin ground, all soul alone, mind ye, in that crazy old packet of hisn.

"Wal, sir, come to take it the ninth time ever Jim Fairway went out there, he was pretty nigh done up and beat out complete, now I tell ye what! You see, the way it was, was this way with him. Besides hand linin' them cod and pollack tight as ever he could jump by daytimes, he'd have to be up by nighttimes, too, a-jiggin' squid for bait to work with. Then quick's ever he'd made out to git a trip of fish, he'd have to hustle for market there to Portland, and 'tain't no great wonder that nine trips of them kind, one comin' right atop of the other, should take the kink clean out of ary man, no matter if he was built of boiler iron.

"Wal, this 'ere ninth trip in to market was an extry good one—consid'ble more'n an average good fare, 'specially for one man all soul alone. He had aboard two thousand pounds of cod and pollack, besides three big-sized halibut; and bein' that fish was chock up and fetchin' a master price jest then, he nachally cal'lato to hustle 'em to market fast as ever he could shove his old hooker, so's to make sure and git all there was comin' to him.

"Seems's though he held a nice, pretty little air of wind from the s'uth'ard at fust,

A KENTISH HOP GARDEN

By Eden Phillpotts

IN southern Kent on this summer day the plains of The Weald extend basking under sunshine and blue sky. The grasslands stretch for miles, and the russet of the hay and the silver of the mown hay are broken by the dark and heavy green of a thousand hop gardens. Seen afar they present no great charm; but approach them, and you will see the fairest growing thing that man cultivates.

Let us go to the hop gardens in early July, before the bur has thickened and while the glory of growth has brought them to their utmost expression. The pageant of leaf and line is at the full. The alleys stretch away ten feet and higher above The Weald—the pale, bright mould of which sparkles in sunlight and fades to purple through the dim tunnels of shadow between the hills.

Above each alley the hops rise massive on twin poles of stout chestnut or ash. Each pair of stakes is separated from the next by six feet, and round and round them tightly twines the bine, to get a grip for its aerial leap aloft. The lower, mightier leaves overlap one another and shadow their neighbors. They are three-lobed and five-lobed and serrated—the embodiment of health and vigor, for these are prosperous hops and bear no scar of blight or trace of mould. Here and there shines the yellow dust of sulphur or the metallic stain of spraying—to show that their perfection was not won without battle.

The master bines cleave to the main supports, then climb aloft and run every way along the network of cocoanut twine above. The whole garden is crisscrossed with this yellow twine—thirty miles of it to little more than an acre. The setting of the stakes and the weaving of the string meant many a long day's toil in early spring, when men prepared the theatre for this spectacle. Now noble arches span the green alleyways, and from them on all sides fall traces and streamers of life, sweeping and springing and tumbling away into threads so delicate that they seem no more than rays of light trembling against the green. The riot and medley of their twiners

one a little cone of translucent leaves, all bend downward and introduce a symmetry of pattern into the tangle of the growth. Now is the fruit full ripe, and to-morrow's dawn will see the pickers in a little army stream to the attack.

Hop picking is a great annual event for many thousands of Londoners, and throughout the strenuous year of the East End many men, women and children look forward to this month of work amid green things and under summer skies. Toward the middle of August, and sometimes earlier, the great main crop comes into bearing, and then there is mighty exodus from city to countryside. Special trains bring the townsfolk to the gardens. They live in shanties erected for the purpose, or under canvas tents, like an army; and the country welcomes them with mingled feelings, for, while many companies are orderly enough, others introduce a restless and lawless element into the sylvan scenes of their labor, and the villagers are glad when they vanish.

But not all the picking is done by cockneys. Here, in the gardens with which we are concerned, local people answer the hop master's summons. From a neighboring hamlet they come to him; and as the August sun creeps at five o'clock from a bank of white fog that

thins into blue and reflects the gold of day, along winding lanes and over field paths streams a company of old men and maidens, women and children.

A hundred people enter the gardens with their parcels of food, their perambulators of babies, their stools and umbrellas and other luggage. A few veteran men there are, glad to earn a pound or two at the picking; but young men are rare—it is not their work. The greater number of hoppers are women, old and young, with their daughters and granddaughters, their little sons and grandsons, to help them. They

chat together cheerfully, praise the hops and praise the weather, then draw their numbers and scatter through the fallen ranks of the harvest to take up the stations prepared for them.

The pole pullers have been at work since dimmest dawn, and already the steadfast front and ranks of the garden are broken. Rifts and rents gape every way. Masses of tumbled bine, clinging to the fallen poles, await the pickers, and down each alley stand the empty bins—great canvas bags on wooden legs—waiting for the hops to fill them. They look like fat, brown, four-footed animals in the shadows.

The people take their places in companies round each bin. Sometimes a family with common interests set to work to fill a single

receptacle; sometimes, where different pickers labor together, the bin is divided, so that each may fill her own division of it. The poles are dragged to the edge of the bin and the hops swept off to drop therein. Then begins a steady pluck! pluck! pluck! like the sound of cropping animals in a grass field; but louder still runs the ripple of laughter, the chatter of voices, the prattle and the shouting of children. Each little one has his own box or basket to fill, and all, to the smallest, work busily at first. Then the younger children grow idle and wander away to play together; but the women pick on steadily, bushel after bushel, and strip the bine with quick, practiced fingers that never tire.

Above the elderly pickers are perched great, rusty, black and blue umbrellas that make a pleasant harmony with the green hops and the azure sky above. Some workers wear gloves, some an old stocking with the toe cut off, which protects their arms but leaves their fingers free. Up and down the rows plod the tallymen with their books and bushel measures to record the pickings and to credit the folk at each bin.

"Must keep the people sweet," said an old tallyman to me as I went along with him. "'Tis very tiring work when the sun's overhead; and if I was to drive 'em and order 'em and be too harsh with my bushel measure, they'd grumble against me, and a bad spirit would come into the garden. If we start well, we go on well, and the better the spirit the better the work. 'Tis all right on a day like this, but we've got to keep their tempers against the bad weather, when like enough they'll have to work all day in a torrent of rain and half a foot of mud."

Before noon there came a great "wain" laden with empty sacks, into which the bins, now full, were swiftly emptied. Then the whistle for dinner sounded, and the pickers, stopping work, took their way to the shelter of hedges and tall trees, and to the brinks of cool water holes, scattered at the edges of the fields. Here they ate their sandwiches and drank from their bottles; and sometimes the women made a little fire to boil their teakettles, while the old men smoked their pipes and told their stories.

Meanwhile the "wain," laden now with five and twenty full sacks, lumbered away up a grassy hill, where the farm stood beside its lofty pair of twin oasts—the drying kilns.

Those great buildings are built of red brick; red tiles cover the cones above; and, to crown them, heavy cowls—wooden, hood-shaped covers—swing on the wind. A weather vane protrudes from each cowl mouth, and on these broad, horizontal bars, which catch the wind and turn the cowls, there prances in miniature the White Horse of Kent. The whole horse is stamped in black also on the master's hop pockets, and every one of these mighty sacks, seven feet high, and soon to be filled to bursting, carries the famous symbol to market.

Everywhere through the hop lands you see the great oasts rising, like humpbacked giants, above the farms and beside the gardens. Here they stand singly or in couples; here, at some great centre of the industry, where a hundred acres of hops need simultaneous drying, the oasts cluster half a dozen at a time.

We enter the oast to find that it is divided

into two chambers by a floor of open timbers upon which is stretched cloth woven of horsehair. Beneath on the ground there glow open ovens fed with anthracite and charcoal, upon which sulphur is thrown liberally to sweeten the flame. A great heat without smoke ascends to the horsehair floor and, looking down through it, you see the red eyes of the fires glowing beneath and notice a genial warmth that begins at your feet and creeps upward. Overhead rises the shadowy dome of the oast narrowing to the cowl; and from the mouth above a white feather of steam will fly anon—the fragrant reek of the hops.

To the hair they come fresh from the hands of the pickers. The sacks are shaken out, and a hop drier with a mighty rake spreads a layer fifteen inches deep over the floor. The glory

of the bunches and tassels is gone; they lie in a level, green mass dim in the twilight of the oast, and there are little points of darkness in the green, where the last small leaves, stripped away with the hops, litter their surface.

In five minutes begins the change, and the life and sap of the newly plucked harvest surrender slowly to the heat rising from beneath. A visible steam begins to rise from them—a vapor rich and fragrant. Slowly it ascends, grows denser and fills the dome above. Then the sweet cloud flies away through the mouth of the cowl to scent the outer air. The

WOMEN, OLD AND YOUNG, WITH THEIR DAUGHTERS AND GRANDDAUGHTERS

door of the drying chamber is shut, the fires are stoked, and the green carpet aloft is left to desiccate and shrink and yield up its nature to the heat.

For twelve hours the process continues and the hop drier tends his ovens; then, at midnight, when the last vapor has sped, the bed of hops is raked out and piled in a golden green heap, rustling and dust dry, on the wooden floor of the cooling chamber. Their weight has much diminished. The heavy, aromatic reek has gone and in its place an odor, brisk and tonic, fills the cooling room. Lanterns flash and overhead a bat or two flutters in and out from the open doors.

In the floor of the cooling room yawns a round hole and in it hangs the hop pocket now to be packed. It opens under the press and is soon filled, with the help of a great wooden "scoopit," or hop spade. Down tumble the rustling hops in a great cloud, and the air, gusting upward, lifts a little fountain of dust and dry petals at each full shovel. Then the press grunts and stamps on the pocket with its iron foot, until the hops are trampled tightly in. One hundredweight and three quarters, say the scales,—more than enough,—and the hop drier, who gets a shilling for every pocket filled, decides in the back of his mind that the next bag shall not be quite so heavy.

That is all to tell. The black horse will be stenciled on each of the great sacks, and anon, by dozens and hundreds, they will find their way to the London Hop Exchange.

But the hop gardens offer better entertainment than the oast, and you turn again to them for refreshment, glad that all the glory of the year's yield is not yet garnered. Now, at evening time, the folk have gone, and where all was cheerful noise and murmur of laughter there is silence. The sun has westered, and its light beats against the wall of the hops and splashes the entrance of each tunnel with a golden blaze, making the inner darkness great by contrast. These battlements with all their bravery will fall to-morrow; they face the sunset for the last time.

As the magic light sinks and passes, the many aisles grow dim and the earth's mighty shadow creeps up the walls of the hops until only a final blaze flickers along their crests. A roseal tinge warms the western sky, and the

NOW, AT EVENING TIME, THE FOLK HAVE GONE

THEN BEGINS A STEADY PLUCK! PLUCK! PLUCK!

and spirals, their entanglements, their drooping sprays that rain down over every column, the expression of lush, unconquerable life, the sparkle and delicate magic—for these phenomena words are indeed a medium too clumsy.

Overhead the main runners soon reach to pole top and swing into the air, seeking for further support. Against the blue sky their green is changed, and they shine radiantly transparent where the bine turns and knots and doubles upon itself and weaves volutes and circles, scrolls and spandrels of fairy architecture with little fanlights and oriels opening on heaven. And every form is living; every day sees these emerald palaces put forth new spires and minarets above their sturdy battlements.

But the glory of growing will soon cease and the fruit begin to appear. The little clustered pin points on the bine swell swiftly at this season, and every rainstorm that sweeps the garden to set the alleys glittering and every hour of July sunshine advance the promise of the harvest. In a month there is a magical change; the hops are laden with countless clusters and bunches of golden green fruit, here grape-like in bunches and here set in knobs and tassels. Every pole seems to bend under them, and where before was light movement, as of a dance, now the breeze makes the weighted streamers bend slowly, jealously, as if reluctant to bruise the increasing crop. Unnumbered the bunches hang and seem to drip their amber beauty over the dark leaves behind them: their silvery fruits, each

THE "WAIN," LADEN NOW WITH FIVE AND TWENTY FULL SACKS, LUMBERED AWAY

hops take leave of the good sun from which they have drawn their fullness and their glory. Ruin already spreads round where their fallen neighbors lie.

Masses of the hop poles stripped of bine are piled stark together, and the growth that flouted so bravely at sunrise is heaped in tangled masses—a welter of leaf and stem and twine—its treasure gone. By and by the stuff will be stacked for winter use in the cattle byres.

The naked earth is visible again, and here and there upon it still tower poles with growing plants climbing over them. These are the "male" hops, whose sterile catkin sparkled like showers of silver over the leaves in June, but which now are withered and brown. The pole pullers in the full bustle of work, when fifty busy people at the bins are calling for more bine, waste not a moment to cut down those fruitless hills.

In the gathering dusk there is a pattering of small feet among the hops, and gray shapes move through them. They are lambs that have wandered into the garden and are feeding joyously on the leaves within their reach. They are not trespassers, for, although sheep would greedily pull down the bines and commit a fault, the lambs are not strong enough to do harm, and are suffered to enjoy their supper without rebuke.

Then night welds all into a dusky mass. The stars twinkle above and earthborn lights answer them from below; nocturnal things peep about and enjoy the fragments of the hop pickers' dinner; glowworms light their little lamps; the corn crake croaks in the corn and overhead hoots the owl. Soon the short night is ended and day returns, bringing back the pickers with it. For a month they will labor steadily here, wet or fine; and you heartily wish them fair weather, since the work once begun cannot stop until the last pocket is full and the last oast grown cold and empty again.

Then will the ceaseless and punctual round upon the land begin again; for the work, of which we have witnessed only the crown and completion, extends throughout the year, and the hills, from which all growth and life have been so relentlessly shorn away, demand much enrichment to support once more so great a shock.

There are varieties of hops and the hop masters have their predilections. Tolhurst Golden, Fuggle's, Brambling, the Prolific—such are the hop kings of the Kentish Weald.

With winter begins the hop pole cutting from the copses of chestnut and oak, ash and beech, which give a harvest of this light timber that is gathered every fifteen years. The poles are trimmed and their points soaked in creosote to defy the action of the soil. Then, in February, the men begin to dress the land, to clear away all dead stuff and to trim the hills; for although a growth begins at that season, all the early sprouts are cut away. In March and April the men are setting the poles anew and weaving the web of the twine that binds them in its mesh for the climbing hops to cover presently. Then there is the business of charcoal burning, to prepare the fuel of the future oast fires.

In May come women to fasten the infant bines to the poles. They use rushes for this purpose and tie each climbing point a yard above the earth. The rushes were gathered last July and are now ready for their service.

In May, too, artificial manure is chopped into each hill, and during June and July the "shimmer"—a sort of harrow drawn by one horse—works through the alleys, loosens the soil and keeps the garden clean. With late July one deep furrow is ploughed down the middle of every alley for winter drainage, since a wet winter is bad for the plants; and all this time, from the spring onward, the sprayer works and pours tons of disinfectants upon the growing canopy of the foliage to keep down the evils that endanger the crop.

Then comes the yield again. Bad years are not uncommon, but the shrewdest husbandmen know how to fight them, and in skilled hands the industry, for all the heavy expenses incidental to it, offers a return more generous than can be counted upon from roots, or pulse, or corn. Hops are grown successfully in America, in Canada and in Austria; but the needs of the plant are peculiar both above-ground and below, and only in certain regions have the many experiments made therewith succeeded.

Hop growing is one of the world's minor industries; yet none that I have studied ever offered me more pleasure in its beauty, its simplicity and the kindly folk of the field who practice it under the open sky.

REUBEN'S PORTION

By Joslyn Gray Chapter Ten

THE weeks that followed were dreary indeed—like to those persons who considered the disappearance of Mabel Graham's notebook to be a baffling mystery and to Reuben Cartwright and Rusty Miller, who both thought it not so much a mystery as an unhappy secret. Everyone in the village knew about the missing book; some began to wonder whether Rusty Miller, in one of her fits of temper, could have destroyed her classmate's book. Mr. Langley was as eager as the head master to clear up the mystery.

It was a backward spring. A second and heavier snowstorm followed the one that had spoiled the skating on February 29; snow lingered on the hills and in the woods until May. The roads were in the worst condition within the memory of the oldest inhabitants. Children who had no rubber boots to wear to school had wet feet constantly; and elderly persons scarcely got out at all, for driving was as uncomfortable as walking, and more perilous.

At last May came—bright and warm and yet exhilarating. The very first day was one to make the most indifferent catch his breath. A week of spring sunshine dried the roads and cleared the last vestige of snow from the hills

course, a difference of a day had not greatly mattered.

That very evening he drove over to Wenham to see Mabel Graham.

Mabel was overwhelmed first with amazement and later with chagrin. When she was able to answer the master's questions, she admitted that on the day when the notebook was lost she must have changed her mind and decided to take the book home with her. She remembered that she had stopped by the wall for a few minutes to watch the others skate, but she had not the slightest recollection of carrying the book. And not having it when she reached home, she had really supposed that she had left it at school, since she did not remember taking it from her desk.

There was little to be said. Mr. Phillips told her that he should explain the matter at school on Monday morning, and asked Mabel whether he could say anything for her. The girl shook her head. At that moment Mr. Graham's voice, raised in anger, came through the closed door from the other room, and the girl looked beseechingly into Mr. Phillips's eyes.

"Has pa got to know it?" she asked.

"Surely, Mabel," he said, and then, pitying her, asked whether she should prefer to have

she was so happy that the mystery had been cleared, and partly because she suddenly realized how terribly Mabel must be suffering, her anger vanished. She felt that, in Mabel's place, she never could have borne it; and when she saw her appear at school looking so very forlorn and disconsolate, her warm heart began to ache in sympathy.

Rusty, for the first time, was really kind to Mabel. And Mabel, who, like everyone else, knew that whatever Rusty's action might be, it was never other than thoroughly sincere, was touched. On Tuesday she went to Rusty at the close of school.

"Rusty, I'm sorry I said mean things about you," she said; and her face was very red.

"Oh, that's all right!" cried Rusty, coloring in turn, and held out her hand impulsively.

"And I'm—I think it's only fair that you or Reuben get the scholarship," Mabel went on.

"Oh, but, Mabel, no one can tell yet!" Rusty declared, although everyone knew that Mabel's week of failures in the review must have seriously lowered her record.

The girls parted cordially. And in the glow of warm feeling that was upon her Rusty felt equal at last to doing what she had longed to do for many days. She set out to find Reuben.

He was on his way home, and she saw him at a distance. Rusty felt that violent exercise was exactly what she needed to work off superfluous excitement, and she ran after him as if it were a matter of life and death. She was breathless when she caught up with him. He looked so startled that, being unable to reassure him by words, she laughed.

"O Reuben," she cried, as soon as she could speak, "what do you think? Mabel Graham

and I have made up, so that I am at peace with all the world. Come with me till I tell mother, and then I'll go back to Miss Penny's to tea, and afterwards we'll make candy and be jolly, you and I and Anna and Miss Penny."

"O Rusty!" cried Reuben, with shining eyes.

"Reuben, you know I was just fierce because I thought you didn't want me to come back to Miss Penny's," Rusty confessed, "and I couldn't get over it; but now —"

"I thought you didn't want to come back on account of my being such a log," said he.

"Why, Reuben Cartwright!" she exclaimed. "Of all things in this world! How could you?"

"Oh, easy enough," he said, and smiled frankly.

Rusty smiled, too, but then her brow clouded.

"But, O Reuben," she said, "I'm afraid you'll never forgive me! I'm afraid I really thought you—did something to Mabel's book—not for yourself, you know; but I thought maybe you were sorry for me because Anna is prettier and sweeter, and you wanted me to have the prize to make up. I don't see how I ever thought you could do it, though."

Reuben smiled. "It's all right, Rusty. It's—rather funny. For—what do you think? I thought perhaps it was *you* that did it. Not for yourself, but I thought you were sorry for me because I was a log, and wanted me to have the prize to make up."

Rusty did not smile. Her face grew white. Her eyes flashed.

"Reuben Cartwright, do you mean to say you thought I stole that notebook?" she demanded.

"I didn't think you *stole* it, Rusty; I only thought —"

"I *took* it?" Rusty stopped short and confronted him angrily. "All right!" she exclaimed, and then bit her lip. The color flooded back into her face.

"O Reuben, I don't know what I'm saying or doing!" she said remorsefully. "Of course it was no end worse for me to think that of you than for you to think it of me, and here I am getting mad right in the midst of making up! Whatever will become of me? I'm sure I don't know."

"Let's not bother about it any more, Rusty," he suggested. "Let's just think how good it is that the book is found and we're friends again. Now everything will turn out right if only you get the prize."

"I don't care so much now," said she. "Poor Mabel! If I had a father like hers, I should want the prize to make up for it."

Poor Mabel, indeed! For right in the midst of their merrymaking that night a neighbor came in with the news that Wat Graham had been arrested and that the Mudgetts were flying hither and yon to get bail for him. He had not only lost every penny of his own but he had nearly wrecked the bank.

Of course that news spread. Mr. Langley was thinking of it later that evening when his doorbell rang. Answering it himself, he was startled to see Rusty Miller on the step

DRAWN BY CHASE EMERSON

"I'LL TELL MR. PHILLIPS HOW THE CLASS FEELS," HE SAID QUIETLY

and shaded nooks; and the late arbutus in the woods burst into sudden luxurious bloom.

At the end of that week, a farmer who lived on a back road near the pond where the children had skated in the winter came one evening to Mr. Phillips's house. The master himself opened the door.

Without speaking, the farmer held out rather gingerly a pulpy mass that looked like water-soaked newspapers, but that might have been the decayed top of a monster toadstool. Mr. Phillips eyed it critically and made no move to take it; he stared in amazement at the visitor and his strange bundle.

"We found this yesterday over the wall of our cornfield, my man and me," said the farmer, at last—"the piece that lies near the road on the side toward the pond; there was a big drift there and it's just melted away."

Still Mr. Phillips peered at the mass without moving to take it into his hands. Then suddenly the thought flashed over him that this was the missing notebook! He took it eagerly, with his thoughts in a tumult. Had some one taken the book and buried it under a snow-drift? Had —

"Soon as ever I fetched it to the house," the farmer went on, seeing that Mr. Phillips understood, "my wife knew what it was. 'It's that very notebook,' says she, 'that there was all that row about.' And then she recollected how a big sort of overgrown girl in a purple bonnet had stood right there by the wall for a spell watchin' 'em skate on the day when the snow come at night. If you recollect, sir, it was the 29th of February. She must 'a' laid it down and then gone off without it. See, here's a handkerchief that was with it, marked with a G. I found 'em yesterday, but my wife thought as how I'd better not fetch 'em in till to-day, so as to give her time to do up the handkerchief."

Mr. Phillips groaned inwardly, although, of

him tell her father now. Mabel finally decided that this would be the easiest way.

Of course Mr. Graham was rude and overbearing. His business affairs were said to be approaching a crisis. He was certainly worried about them, and that did not make him any easier to deal with; but when Mr. Phillips left, the master had the satisfaction of knowing that the worst was over for Mabel.

On the way home he stopped to impart the good news to Mr. Langley, who begged to be allowed to pass it on to Reuben and Rusty. By Sunday afternoon it was generally known in the village, which was a very good thing, for the excitement at the academy on Monday was at fever pitch. Even the janitor was observed in a corner of the basement with his handkerchief to his eyes, a circumstance that his mention of dust did not explain—a *lucus a non lucendo*, as the master said to Mr. Langley.

Just as the bell rang at nine o'clock, Mabel Graham entered the schoolroom and dropped into her seat. She had begged to be allowed to stay at home for the rest of the year, or even to return to the high school at Wenham; but her father had insisted upon her going on at the academy, and had warned her to put in her best work toward the prize. Her classmates treated her much more kindly than perhaps might have been expected; no one "rubbed it in," as Anna Miller expressed it. Reuben, who had always been his natural self, had no need to change his manner. It was Rusty Miller, of course, whom Mabel most dreaded to meet.

She had perhaps more reason than she knew. Now that the matter was settled, the other girls had told Rusty that Mabel and her father had accused her of stealing the book, and that Mr. Graham had threatened to have the law on her. For a little while Rusty was, of course, full of wrath. Then, partly because

and Reuben waiting at the gate with the pony. It was after nine o'clock, and when people called at the parsonage later than half past seven in the evening it meant illness or trouble; but Rusty quickly reassured him by explaining that she had not come to see the pastor, but the chairman of the school committee. Mr. Langley took her into the sitting room. Reuben could not leave the pony.

"I trust," Mr. Langley said politely but plaintively, "that your business with the representative of the school committee has nothing to do with prizes or scholarships or college educations. I've had enough of such this winter to last all my life."

"O dear!" said Rusty. "But that's exactly what it is about! Just this once, please, Mr. Langley?"

He smiled kindly and begged her to tell him what he could do.

"We are sick to death of it, too, Mr. Langley, Reuben and I. He would a lot rather work his way through college anyhow, only he gave Mr. Phillips his word to try, so he can't not study, you know. And Mabel Graham wants to go just frightfully, and—you heard about her father?"

Mr. Langley nodded.

"Well, the truth is, as the thing stands now, the prize is between Reuben and me. Mabel has lost her chance through getting all zeros the week after her book was lost, and, being examinations, it counted fearfully. She was all to pieces because of her book, and at the end of the week she was sorry and borrowed Reuben's, and did well ever since, but—"

"Well?" he asked.

Rusty rose and came to Mr. Langley's side, standing by his chair just as little children did, and as she had done when she was a little girl—just as his own little Ella May would have done.

"O Mr. Langley, if that week weren't to be reckoned in, Mabel would get the prize! Reuben and I have been all round the class, and we all agree we'd like not to have it count for any of us—just have it blotted right out, you know. And if you would only agree and put it up to Mr. Phillips, why, it would go through."

He gazed at her questioningly.

"You see, it was so sudden," she said, "and Mabel was so upset. If she'd had time to think, she wouldn't have done as she did. I do such frightful things myself when I'm mad that I understand how hard it is on Mabel. Honestly, I don't think it's fair to have that one week when she was all to pieces spoil everything for her."

Mr. Langley led her gently out to the carriage and helped her in. Reuben jumped in and the two looked at him eagerly.

"I'll tell Mr. Phillips how the class feels," he said quietly. "And I'll say that I quite approve. And, children, it's right good of you to let me be your messenger—it warms the cockles of my heart. Good night!"

He returned to the house with a glow within, yet more than ever yearning for little Ella May.

Six weeks later, at the academy on graduation night, he stood talking with a clergyman from an adjoining town who had had a part in the programme that had just been completed. The young people had gone through their parts and received their diplomas, and Col. Wadsworth had made a little speech and awarded the prize in person.

"Doesn't it seem rather a pity?" said the stranger. "Some one was telling me that the boy and girl who just missed the prize were both unusual, whereas the stout girl who won it isn't above the average, and got it only on the score of a remarkable memory. Now, that won't mean much in college—and the gifts of the other two might."

"And will, I hope. No, it isn't a pity; it's just right as it is," declared Mr. Langley. "I rather think the boy and girl will both get to college somehow; and if they have to work their way through, why, that isn't a calamity—particularly in the case of Reuben. I know if I had had my own way to make, I should be a very different man to-day."

"It isn't bad for the boy, as you say," said the other, "but the little girl—she looks too high-strung. It's hard on any girl, making her way, but this particular girl—it would seem to me like using a delicate, high-stepping horse to haul stone."

He looked really distressed.

"There, now, you've gone and done it," said Mr. Langley reproachfully. "I shall have to tell you a secret that I didn't mean to divulge just now." He hesitated, and then, after a short pause, asked, "You remember my little Ella May?"

"I never saw her," said the other gently, "but I remember, Brother Langley."

"Well, the day she was born I put a sum of money in the bank in her name as the beginning of a fund for her education. It was a small legacy that had fallen to me. Then a week after she was taken away from us a gift of one hundred dollars came from her aunt out in California, who never saw Ella May. I added that, and I have kept on every now and then, so that now it amounts to a tidy little account. I have always meant to use it for some other little girl, and, though I've

never confessed it even to myself, I suppose I've really had Rusty Miller in mind a good many years now."

Mr. Langley paused and, turning his face a little to one side, cleared his throat gently. When he looked again at his friend there was a suggestion of tears in his eyes, but on his lips there was a smile.

"You see, I have felt, and more strongly as the years go by, that I should have liked Ella May to be just like Rusty—even to the red hair and freckles. Well, when this prize was

offered, I hoped Reuben would get it, so that this money of Ella May's should fall naturally to Rusty; but at one time this spring, when it looked as if Rusty would win the scholarship, and I heard of Watson Graham's bad luck, I began to think I might have to devote it to his daughter—she that got the prize to-night. That, I confess, was a hard alternative to face, but I hope—well, it's all right now; but mind, brother, that you keep it dark!"

THE END.

IN THE LARD VAT

By Dwight B. Pangburn

A PACKING plant contains hundreds of manufacturing processes under one roof, and there are just as many chances of getting into trouble if you are careless, according to Henderson, the chief engineer, who told me the story of Jimmy Brett.

Jim always prided himself on being a quick workman, and on never wasting time with any superfluous motions. So one day, when the report came that the steam valve on lard vat No. 2 was leaking, the superintendent, wanting the job done in a hurry, sent Jim to see to it.

There are four lard vats in the plant—large, vertical iron tanks, somewhat like boilers standing on end. Each vat is about six feet in diameter, tapering at the top and bottom, and

WANTING THE JOB DONE IN A HURRY. HE SENT JIM TO SEE TO IT

extends through three floors of the building. A large pipe drains it at the bottom. In the next story there is a gauge glass to show the depth of the material inside. The vat is filled from the third floor through a circular opening about two feet and a half wide; a tight-fitting door covers the opening. The iron rim at the top of the tank projects about three or four inches above the floor of the room in order to keep out dirt and to prevent waste water from running into the vat when the floor is scrubbed.

When the materials from which the lard is to be made have been dumped into the vat at the top, live steam is turned on. The steam pipe enters near the top of the tank, and the valve is beside the filling door close to the floor; the pipe runs down inside nearly to the bottom, so that the escaping steam will the more thoroughly agitate the mixture. After a charge has been run through, the vat is filled with water, into which steam is injected; the water boils and bubbles until the interior of the tank is clean. Since the materials that are used in making lard are very inflammable, the "charging" room, into which the vats open, is isolated, and is cut off from the rest of the plant by fire walls with self-closing doors.

The report of trouble with vat No. 2 did not show where the valve leaked, but Jim quickly saw that the steam was escaping badly at the stem. He thought that that was the whole of the matter, for when he turned the steam off and on the valve seemed to work all right. As the valve was of the type that can be packed under pressure he did not take the time to turn off the main valve, which controlled the supply to all the vats; besides, he did not wish to stop work in the other vats, which were in operation. No. 2 had been cleaned the day before, and the lid was standing open. Although the valve was almost directly over the edge of

the opening, Jim, who always avoided an unnecessary motion, did not close the lid.

He loosened the packing nut at the stem and put in the new packing. He had begun to tighten the nut again, and was leaning over the opening, when suddenly his foot slipped on the greasy iron floor, and his weight came full on the wrench. The tool shot off the nut, and before Jim had time to catch his balance he fell headfirst into the vat.

It was fortunate that there was ten feet of water in the tank, for otherwise he might have broken his neck. On account of the trouble with the valve, the water had been allowed to stand in the tank since the day before; although he found the water uncomfortably warm, it was not unbearable.

Jim was a good swimmer and his first act was to get his head above water. He wondered why he had such a hard time in keeping himself afloat; then he noticed that he was still clutching his pipe wrench firmly in his hand. The level of the water was a little less than ten feet below the top of the vat, and it occurred to him that with some effort he might be able to throw the wrench out; he hoped that the noise it made in falling on the iron floor would attract some one's attention.

First, however, he tried to call; but after a minute he remembered that there was no one in the room, and that, even if his voice were not entirely muffled by the tank, it would never carry through the fireproof doors. For the same reason it would avail him nothing to throw the wrench into the "charging" room. He tried pounding on the wall of the tank with his wrench; but apparently the boiling and bubbling in the other vats drowned the noise, or if anyone did hear it he would think merely that some workman was making repairs.

Jim had been in the tank only a few minutes, but he was already much exhausted; the sturdiest athlete, burdened with a heavy weight of metal, as Jim was, could not keep afloat long if he tried to swim in hot water with his clothes on. But Jim did not become panic-stricken; indeed, the fast-growing danger seemed merely to clear his head. In spite of the weight of the pipe wrench he clung stubbornly to it, for it seemed his only resource for attracting attention from outside.

As he glanced about he noticed the steam pipe that ran vertically through the vat; a moment later he was clinging to it. He was indeed grateful to be freed of the strain of keeping himself afloat.

He had hardly taken hold of the pipe, when a new idea came to him. Treading water, he clamped the wrench to the pipe about two feet below the surface. Then he tore off one strap of his old overalls, and tied one end to the pipe and the other to the wrench, so that if the tool should slip he could regain it. That done, he worked himself gingerly upon the handle of the wrench, which gave him a fairly comfortable seat.

When he put his hands on the pipe above the surface of the water, he made a horrifying discovery. It was hot—too hot to touch, in fact! Under the water the heat had been rapidly carried away; and so he had not felt it much there. When he had tried the valve he had evidently failed to shut it entirely, or else it leaked at the seat as well as at the stem.

It was not a pleasant prospect to perch on the handle of a wrench and wait for some one to come and rescue him. He had thought of trying to climb out of the vat on the pipe; but he could not have done that even if the pipe had not been too hot to touch, for it passed out at the lower edge of the tapering part of the tank a foot more than his arm's reach from the top.

HE LOOSENED THE PACKING NUT AT THE STEM

He realized now that it was not merely a question of waiting for some one to rescue him. The steam was flowing steadily into the vat, and before anyone came he might be parboiled, or even actually scalded to death. He already imagined that the water was considerably warmer.

He found that by splashing water against the pipe he could keep it fairly cool for a foot up from the surface; he guessed, therefore, that the steam was not entering the vat very fast. Taking off his clothes, he wrapped all of them, except his overalls, round the pipe from the water level up, to serve as insulation against the heat.

Then, slipping off his seat, he moved the wrench up to the water line, where he made it fast again as well as he could. Next, he wrapped his overalls about his hands and wrists, to protect them from the hot pipe in the attempt that he was about to make. When he had buckled his belt in the last hole to make as large a loop as possible out of it, he was ready.

He had left his shoes on to keep the tender soles of his feet from the hot pipe. Now, putting his feet against the pipe just above the wrench, and grasping the pipe with both hands, he managed after a struggle to pull himself into a standing position.

To his joy he found that the upper part of his body was now in the tapering top of the tank, so that from where he stood he could just reach the sloping side opposite; thus he could partly support himself, and had to keep only one hand at a time on the hot pipe, which was already burning him through the cloth protectors.

He could reach within a foot and a half of the opening at the top. Just above the edge of the opening he could see the valve—the root of all his troubles. Was it near enough for him to carry out his plan?

It seemed as if his left hand were grasping a red-hot bar as he leaned out and with his right hand swung the looped belt toward the hand wheel of the valve. Twice it struck the wheel and fell short. As he made his third cast he let go of the pipe, for he could bear the pain no longer, but as he let go he threw himself upward. The loop caught over the pulley!

But his sudden leap had loosened the wrench, which had fallen to the bottom of the tank. With his footing gone, therefore, he dangled by one arm from his belt.

For a moment he hung there, nearly ready to give up the struggle and to drop back into the vat. Then his will gained the upper hand again. To get out now meant a climb no harder than he had made many a time as a boy, merely to get a few coveted apples. He would not give up. Bringing his badly burned left hand into play again, he painfully worked his feet up through the opening. One hand caught

the rim, and slowly the rest of his body followed. Then he fell in a heap on the floor.

"Ach himmel, lazy-bones, couldn't you find a better place as dot to schleep?" growled Dutch Franz, the assistant engineer, a few minutes later, as he stepped into the dusk of the "charging" room on his way to another part of the plant; but when he saw that except for his shoes Jim was naked, he changed his tone.

Jim was out for several weeks with his burns, and to this day his left hand is a little stiff; but since that time he has been the most careful man in the company and the greatest advocate of "safety first." He has charge of all the accident-prevention work in the plant now.

COULDN'T YOU FIND A BETTER PLACE AS DOT TO SCHLEEP?"

PRINCE LVOFF.
THE PREMIER OF RUSSIA

FACT AND COMMENT

SOME men are always at their post—leaning against it.

Forgive completely. They whose words recall
Forgiven Faults, have not forgiven All.

APPREHENSION that the withdrawal of the American Commission from Belgium will mean the end of relief work should not deter anyone from making contributions to the Belgian Relief Fund. The Commission for Relief has taken up its headquarters in Holland, and will conduct its work in Belgium through Dutch agents.

THE United States Bureau of Fisheries is working hard to make the public see the value of hitherto neglected sea food. It has introduced tilefish and grayfish and sea mussels, and given them a popularity that seems certain to grow; and now it follows with a good word for the sablefish, sometimes called the black cod, which abounds along the Pacific coast from San Francisco to Alaska.

THE Alaska reindeer—which, curiously enough, are wards of the United States Department of Education—have increased from the small herd brought from Siberia in 1892 until they now number 70,243. That, too, in spite of the fact that about nine thousand were killed last year for meat and skins. Two thirds of the reindeer belong to the natives, for whom they are solving the problems of food, clothing and transportation. The rest belong to the missionaries, the Lapp immigrants and the government.

APRIL has been our war month ever since the Battle of Lexington and Concord in 1775. On April 12, 1812, Congress imposed upon British trade the embargo which may be taken as the first step toward the second war with Great Britain. On April 21, 1831, the Black Hawk War began. On April 24, 1846, the war with Mexico began. In April, 1861, occurred the attack on Fort Sumter that precipitated the Civil War. On April 21, 1898, the United States declared that a state of war between this country and Spain existed.

THE Episcopalians are the first of the American church bodies to raise the minimum sum that they agreed upon as necessary for an endowment fund to sustain aged and infirm ministers. A few weeks ago they announced that they had in hand the fund of five million dollars that they began to raise only a year or two ago. The Methodists, Presbyterians, Congregationalists, Baptists and other denominations are raising or preparing to raise similar funds, which are to contain from two million to fifteen million dollars.

AN agent of the White Sox-Giants baseball combination, which intends to visit the southern continent next winter, has returned from a reconnoitring tour with reports of great anticipatory enthusiasm. He says that the people of all the large South American cities are eager to see the great North American game. How great the interest of our own people is in baseball appears from the fact that the agent carried a letter of introduction from President Wilson and approached the men who are interested in outdoor sport in South America through the American consuls.

WHO can tell how extensively our preventable fires count in the cost of living? In the United States there is a fire for every minute of the year. The daily destruction of \$600,000 means an economic drain that affects all business life and all domestic life. When an Illinois elevator burns, with a loss of 700,000 bushels of corn and 300,000 bushels of oats, or

a fire in a Maine warehouse destroys whole trainloads of potatoes, it is easy to see what it means; but every fire affects the cost of all commodities, although the effect, like many of our taxes, may be obscure and hard to trace.

WHY AMERICA IS AT WAR

THE great step has been taken. The United States, reluctant to admit that in its dealings with a nation hitherto friendly it must resort to the last crude argument of force, reluctant to cast aside the traditions of a century and to engage in the warfare of the European peoples, has learned at last that anything less would prove us untrue to the principles and the ideals we inherit from generations of forefathers who loved both liberty and justice, and who were ready if need be to die for them.

Who, as he read the President's address to Congress, could doubt the justice of our cause? We have not entered the war hastily or thoughtlessly; we have not entered it revengefully or with hatred in our hearts. We take up arms because we know that autocracy must be struck down if there is to be any room on the earth for freedom or any hope of peace. We fight, in the President's own fine words, that the world may be made safe for democracy.

The people of the United States have been gradually coming to understand that for a long time; the final precipitation of national sentiment was brought about by the revolution in Russia. It was astonishing to see how that revolution cleared the air. A war that began as a war of national aggression, of commercial rivalry, of dynastic ambition, was at last seen clearly to be an epochal struggle between the forces of absolutism and democracy. It was that all the time, but because Russia, the most absolute of monarchies, was fighting on the side of the Western democracies, it has been hard for some of us to understand.

The Russian people have opened our eyes. They have shown us that the Czar's government was all the time an unwilling and treacherous participant in the war. The oligarchy, knowing that its own existence depended on the victory of Germany and Austria, betrayed the nation into defeat after defeat, and planned to desert the allies it had agreed to support. It was the treason of the bureaucrats that gave the people the motive and the strength to overturn the ancient dynasty and set at defiance the political and religious traditions of centuries.

Only in the empires of Central Europe and Turkey does the principle of absolutism and "divine right" still exist. It was that principle that plunged Europe into this war; it is that principle that is responsible for the barbarities that have marked its course. But the events of the war, and especially the democratic triumph in Russia, have shaken its hold even upon its most devoted adherents; there are millions of Germans who question it to-day as they never have questioned it before. "Must the whole world be free except Germany?" exclaimed a Socialist in the Reichstag when he heard of the Czar's abdication. He need not fear. The world cannot forever exist half free and half absolutist. The German people themselves will in time strike the decisive blow for freedom.

The great wars that ended at Waterloo began with a tremendous movement in behalf of human liberty—the French Revolution. When they closed, that movement had been betrayed in the country of its origin and overwhelmed by the forces of reaction. The present war began as a daring attempt of autocracy to impose its will on the world. Shall it not end in a momentous advance of the human race toward freedom and brotherhood?

ANOTHER ADVANCE

CONSTERNATION struck the politicians of both the great parties when it was announced that all postmasters, even those classed as "presidential," were henceforth to be appointed in conformity to the civil service law. It meant another blow at the spoils system, under which the local Congressman or the Senator of the party in power virtually makes the appointments.

What an absurdity the spoils system is! The United States Post Office is nothing but a great business institution. It employs nearly or quite two hundred thousand persons, and in the course of a year receives and expends more than three hundred million dollars. Since it is used by almost everyone in the country, it is to the last degree important that it be run with extreme efficiency; but if there is any device less calculated to produce efficiency than choosing postmasters because they

have rendered partisan service, and changing the whole force every time there is a political overturn, such a device has yet to be found. When anyone can show that there is a Democratic way and a Republican way of distributing mail, and that one is better than the other, The Companion will cheerfully join a campaign to restore the old system.

Politicians of the baser sort are opposed to the change. Under the old order of things they have "patronage." Just now there are Democrats who oppose it because there are still some Republican postmasters who have not been turned out by the present administration, and Republicans who oppose it because they cannot bear the thought that any Democrats who now hold the offices shall be permitted to retain them when the Republican party comes back to power. But of course, if the change is ever to be made, it must be made by the party that at the time is in power, and therefore in possession of the offices; and if postmaster-ships are hereafter to be non-political positions, as they should be, it does not matter whether the man who sells you postage stamps votes on your side or on the other.

HOME vs. STREET CORNER

AS a part of the recent entrance examination at an American college of high standing, the candidates for admission were asked to write upon what they regarded as the reforms most necessary to be made among the boys of their acquaintance. The replies taken as a whole brought out two facts of great interest: first, that the writers almost all mentioned cigarette smoking, the use of bad language, boastfulness and loafing on street corners as the evils most common to boys of seventeen; and, second, that they agreed even more generally in naming the corner loafing as the most serious fault, both in itself and as a cause of the others.

To older people the information is not new, but it is none the less important. Those college boys, for all their youth,—perhaps, indeed, because of it,—see with clear eyes. The earnestness with which they announce their discovery and ask for reform should awaken the zeal of those who have the remedy so largely in their hands.

One obvious way to prevent a boy from spending his evenings in the streets is to make home more attractive to him. How many parents try to do it? Listen to what one college boy says: "Although sometimes a boy will not seem to care whether his father is interested in him or not, he is secretly pleased when he coöperates with him." Fathers and mothers who have never tried the plan should act on that hint for a week, and watch the result on the boy. They will also find it of interest to notice, too, whether the inconvenience to themselves is real or only fancied.

But every boy has the "gang" instinct, which must play its part at a certain stage of his development. The trouble is that it is difficult to use it for the boy's good because of the absurd but undeniable fact that boys at one period of their lives take pleasure in appearing worse than they really are. "The time-worn philosophy of boyhood and youth is that the brave men are the bad men. The worse a man may be, the more worthy of imitation he is."

Most youths soon outgrow the days of their allegiance to the motto, "Seem and not be." None the less, street-corner loafing can do them nothing but harm. The tone of the individual, instead of being raised by that of the group, is lowered by it. He loses the inspiration that springs from common feeling and action in a good cause, and for that loss he may suffer all the rest of his life.

The faults in boys are due partly to themselves and partly to their parents. The best way that fathers and mothers can help their sons to correct their shortcomings is to try to remedy those for which they themselves are responsible.

GERMAN STRATEGY

THE first striking event of the spring campaign in France was not an offensive but a retreat. The Germans withdrew along a line from Arras to Soissons, a distance of nearly a hundred miles, and abandoned not only the region over which the battle of the Somme was fought, but also the wide salient at Noyon, which brought their line within seventy miles of Paris.

The retirement was conducted with the greatest skill. Tactically the German army is as efficient an instrument as ever, whatever may be the truth about its striking power. Whether that army will be able to stand on its

new line as firmly as it did on the abandoned line remains to be seen; if it cannot, it will have to give up nearly the whole of France in another retreat; if it can, the German general staff can use the men it has released by shortening its line, together with the reserves that this year become of fighting age, to aim a tremendous blow at some one of its enemies—probably at Russia.

There was at first great confusion among the military experts who tried to explain the German retirement. Berlin declared that it was intended to disconcert the Allies' preparations for a spring drive, and to get the armies out of the trenches into a position where Hindenburg could use the strategy of manoeuvre.

But the movement, as a matter of fact, surrendered at the start almost everything the spring drive was expected to win, and the Germans have had all they can do to hold their new positions. It is more likely that Hindenburg gave up a line made dangerous by the continual pressure from the British and French, and retired to a straighter, shorter and more easily defended line—especially since the retreat gave up nothing that it was essential for the Germans to hold.

The Allied armies are doing their best to turn him out of that line; if they succeed, it will be the most serious defeat Germany has suffered since the Marne; if they fail, we may expect to see a great German offensive against the Russians, who, for all the spiritual uplift of their successful revolution, may be supposed, as a result of the confusion of the moment, to be less able to resist than they will be when the new government is firmly established and wanted to its task. The Russian republic, like the first French republic, must fight for its life. We who sympathize with democracy everywhere shall hope for another Valmy.

BUSINESS AFTER THE WAR

Sequel to Increase Your Production

MOST of the writers who have speculated upon the conditions that will prevail after the war lay great stress upon the impoverishment of the belligerent peoples. There can be no question as to the facts they present. Yet they may not be altogether sound in their conclusions—in their belief that trade, commerce, manufacturing and other enterprises will be depressed by reason of a lack of buying power.

The end of the war will see, in the belligerent countries, an enormous depletion in the stocks of goods that have been deemed necessities. They have been drawn upon and not replaced. Besides that, the governments have incurred billions upon billions of debt, on which they must pay interest, to be drawn from the people by taxation. Those are the conditions that are held to hinder, even to prevent, business prosperity.

But let us look a little further. To whom does each government owe those mountains of debt? Mainly to its own people. Moreover, the device of popular loans has distributed the debts widely. Great financiers have lent the governments huge sums, but also the merely well-to-do and even the poor have lent according to their means. The interest, then, will go to millions of public creditors to whom it will represent income on their investments. Taxation and the payment of interest will therefore not destroy the particular forms of wealth useful in recuperating from disaster, which are ready money and bank credit, but will merely transfer them.

There is another element in the situation that must not be overlooked. During the continuance of the war there has been no unemployment. Every man and every woman who could work has been occupied, and in most cases at wages higher than have ever before been paid. After making all allowances for the improvident, the wage earners must have made great savings, which will be available as soon as the time comes to put them to use. Although there is an unparalleled deficiency of almost all commodities in ordinary use, there is also an unparalleled abundance of the means to purchase them. The situation, then, portends not stagnation of business, but extraordinary activity.

In support of this theory, it is interesting to recall a similar condition in the past: that of this country after the Civil War. Our public debt in 1865 was more than two and a half billion dollars, and the interest on it averaged four dollars to every man, woman and child in the country. Those figures, of course, are small in comparison with the great debts of the European countries, but when the increase of wealth in the last fifty years is taken into account, the actual burden on the people of

the United States was perhaps as great as that which will rest on any people of Europe. Yet the nation, which owed most of the debt to its own citizens, paid it with ease, and the close of the war was followed by an expansion of business that did not end until over-speculation brought on the panic of 1873. History may repeat itself.

CURRENT EVENTS

WAR WITH GERMANY.—The Sixty-fifth Congress met in special session on Monday, April 2. The House re-elected Champ Clark, Democrat, of Missouri, as Speaker. He received 217 votes, to 205 for Mann of Illinois, 2 for Gillett of Massachusetts and 2 for Lenroot of Wisconsin. —On Monday evening the President appeared before the two houses in joint session and read a message that asked Congress to declare a state of war against Germany. The President said that the course of the German government was a challenge to all mankind and a warfare against all nations, and that neutrality was no longer possible. He declared that the United States must enter the war against autocracy, seeking no conquest or indemnity, but solely to make the world safe for democracy. He urged (1) the utmost practical cooperation in counsel and action with the governments already at war with Germany; (2) extension of liberal financial credits to these governments so that the resources of America may be added so far as possible to theirs; (3) organization and mobilization of all the material resources of the country; (4) full equipment of the navy, particularly for the means of dealing with submarine warfare; (5) an army of at least 500,000 men, based on the principle of universal liability to service, and the authorization of additional increments of 500,000 each as they are needed or can be handled in training; (6) raising necessary money for the United States government so far as possible without borrowing and on the basis of equitable taxation. —When the President had finished speaking, resolutions that declared a state of war were introduced in both branches of Congress. By insisting on a point of order, Mr. La Follette made it impossible for the Senate to take immediate action, but on April 4 that body passed the resolution by a vote of 82 to 6. The next day the House took similar action, after passing four big appropriation bills that failed to go through at the last session of Congress.

RUSSIA.—Dispatches from Petrograd, although meagre, indicated the continued success of the revolutionary movement. The provisional government on April 1 transferred to the fortress of St. Peter and St. Paul all the persons with the deposed Emperor and Empress at Tsarskoe Selo, thus leaving the former rulers isolated at their place of detention. —Political prisoners to the number of nearly 100,000, released from their Siberian exile by the new government, have returned to their homes.

SPAIN.—Prompt measures by the government at Madrid crushed, at least temporarily, what threatened to become a serious revolutionary movement. Premier Romanones said that the government considered the disturbances as labor troubles without serious political significance.

SWEDEN.—Carl Swartz, the Premier of the new Swedish Cabinet, said on March 31 that the policy of Sweden would continue to be that of strict neutrality.

DANISH WEST INDIES.—Denmark formally transferred the Danish West Indies to the United States on March 31, and Admiral Oliver became governor of the islands.

THE GREAT WAR

(From March 29 to April 4)

To Americans, and perhaps to the world as well, every other event of the week was overshadowed by the momentous determination of the President and Congress that the United States could no longer maintain its neutrality, owing to the affronts that the nation had received from the German government. The great events of April 2, 3 and 4 at Washington are reviewed in another column. They were naturally received with enthusiasm in London and Paris. Berlin was apathetic, and seemed to be more interested in the rising movement for internal reform in Prussia than in the addition of another nation to the list of its enemies. German officials said that Germany would not declare war, although submarines would continue to sink American ships that entered the war zone.

The most interesting activities in the field took place on the western front. Little by little the British and French troops drove back the Germans defending the new line from Arras to Vailly until it began to be seriously questioned whether the line could hold. The most important British gains were made in front of St. Quentin, which is regarded as the key

point of the German line. The British drove through Savy and Savy Wood and took and held important positions on the ridge that runs northward before St. Quentin. On April 4 they were only a mile from the city, and the official reports spoke of indications that the Germans were preparing to abandon it. The British also took the important town of Croisilles and moved nearer to Cambrai.

The French pushed forward on the plateau that overlooks St. Quentin, and reached the outskirts of the city. They also counter-attacked in Champagne, where they drove the Germans out of trenches taken a few days before.

The report came from Copenhagen that the great German headquarters had been moved from Charleville, in France, to Kreuznach, which is only a few miles from Bingen on the Rhine. If that is so, it seems to imply a general retirement from northern France, and perhaps a blow at Nancy or some other important point in eastern France. The Germans have called up their last resources in man power; men of fifty, or even more, are to be put on the firing line, it is announced, in the hope of building up a larger strategic reserve than ever for Hindenburg's use.

The French Senate passed an indignant resolution arraigning the German high command for the wanton pillage and destruction wrought along the line of retreat in France.

The British forces in Mesopotamia moved up the Diala River to Dely Abbas, driving the Turks before them. The Russian column advancing from Kermanshah is only about fifty miles away, and the Turks will probably soon abandon Khanakin, the intermediate position that they still hold.

In Palestine the British army met what appears to have been the chief Turkish army in that region near the ancient city of Gaza, and defeated it; nine hundred prisoners, including the entire staff of the 53d Division, were taken. Gaza is on the seacoast nearly due west of Jerusalem. Sir Archibald Murray, the commander in chief in Egypt, mentioned in his report that a military railway was being constructed behind the British front, along the seacoast.

In the region of Kovel, in Volhynia, the Germans began an offensive and forced their way across the Stokhod River.

German submarines kept busily at work. Berlin gave out a long list of vessels sunk in

THE OLD BRIDGE IN KREUZNACH

March, and the British official report admitted the loss of 31 vessels during the week. Among the ships sunk were the Aztec, an American armed merchantman, which went down with the loss of at least eleven American lives, and the British steamer Alnwick Castle, which was sunk 320 miles out at sea, with a heavy loss of life. The British government warned Germany that it would exact stern reprisals for the offense of sinking hospital ships. The German defense for sinking the Asturias is that the British have in the past used hospital ships to transport unwounded soldiers.

A new German sea raider, the Seeadler, is at work in the South Atlantic. According to reports from Rio de Janeiro, it had up to the end of March sunk eleven merchant vessels.

Chancellor Bethmann Hollweg spoke in the Reichstag on March 29. He declared that Germany had never wished war with the United States, and had acted only in self-defense. He also said that Germany would not assist the forces of reaction in Russia.

The proceedings in the Reichstag are not reported in full, but it is clear that Ledebour, Scheidemann and other Socialist leaders are demanding immediate political reforms in the empire, and, above all, in Prussia. The tone of the Chancellor's speech indicated that he appreciated the growing strength of the reform party, although he made no concessions that could be expected to satisfy it. There were reports from Holland and Denmark of popular disorders in Berlin, Hamburg and elsewhere. Berlin officially denied that any such disorders had taken place.

Mr. Penfield, our minister to Austria-Hungary, has been called home for a conference with the President. Count Czernin, the Austrian Foreign Minister, took occasion to say during the week that the Central Powers were still ready to enter a peace conference at any time, and he suggested that one might be held without an armistice as well as with one. Three members of the Austrian Cabinet are said to have resigned, having been detected in collusion with a banker who sold army supplies at exorbitant prices.

France has called the recruits of the class of 1918 into training. Germany and Austria are understood to have called out the class of 1919.

Flour Facts

Unusual weather conditions during the last growing season have produced a smaller, lighter kernel of wheat, making it necessary for flour millers to take extreme precautions in wheat selection and in milling.

The Pillsbury Flour Mills Company is fully prepared and equipped to meet this situation. Huge wheat-storage capacity and unexcelled laboratory facilities make it possible for us to select the right wheat and to mill it the right way.

As a result, Pillsbury's Best flour is being produced on the same high quality basis which has always characterized it. It costs us more money this year to maintain the Pillsbury standard, but we are making the same good flour and will continue to do so.

You who already know and use Pillsbury's Best need not worry about spoiled bakings. You can rest assured that with Pillsbury's Best your usual methods will produce the same delicious bread, cake and pastry.

The Flour Question Settled "Because Pillsbury's Best"

THE DEAD DAUGHTER

By Eleanor Hammack Northcross

THE people soon will fill the rooms,
The rooms she kept so fair;
So many flowers—she would have loved
To set them here and there:
They are too huddled in one place,
The lilies seem to stare.

I wonder if things are done right?
So many will be here:
She would have known; I hate for them
To find things looking queer.
I want pink roses on her breast—
The lilies are too near.

The lace is out of neck and sleeves—
The dress I want to wear;
She took it out a week ago
To make some slight repair.
I want to wear the dress she loved,
I wish the lace were there.

I am so tired! So many things
She had done swift and right
Went halting in my bungling hands—
Their ease was her delight.
More lilies? Here, close to her feet.
Where will they be to-night!

BEING PERFECT

"Be ye perfect!" quoted Nancy, looking up from her Testament. "Be ye perfect!" I do think that's the most appalling command, Aunt Molly, don't you? Why, it's impossible to be perfect. There's no use in trying, for the harder you try, the more discouraged you are sure to get. How do you suppose—anyone—ever expected us to be perfect?"

Aunt Molly smiled reassuringly. "I know just how you feel, Nancy," she said. "I used to worry over that, too, and think it was quite impossible, and all that, just as you do. But one day I heard a very wise man talk about it; since then, it's never troubled me at all.

"He explained that 'perfect' is really a relative term, not an absolute one, as most persons think. And your perfection is measured by the standard that is set before you at a given time. For instance, Nancy, when you were a little girl doing arithmetic,—multiplication, let us say,—and you came home with the mark of one hundred per cent, did that mean that you were a perfect mathematician—or were expected to be? Not at all. It meant merely that you were perfect in that day's work."

"So that, Nancy, is all, I believe, that is asked of us human beings now: to be perfect in each day's lesson as it comes. The rest of that verse, we are told elsewhere, we are to 'grow up into.'"

"HARMLESS GOSSIP"

WHAT were you talking about?" demanded Celia Wray as she joined the two younger women on the piazza. "Don't stop. Your faces were all lighted up; it must have been interesting. Can't you go shares?"

"Oh, it wasn't anything," said young Mrs. Hart, with a deprecating laugh. "Just a little harmless gossip. You wouldn't care for it, Miss Wray; you're above such trivialities, I'm sure."

"Harmless gossip!" echoed Miss Celia. "Of all the overworked conventional phrases, I believe there's none I find more annoying. It's so inadequate."

Leila Hart flushed. "There was really no harm in what we were saying," she began, rather stiffly, but Miss Celia cut her short.

"Of course there wasn't. Don't I know you and Mary Fordham by this time? When you two put your heads together it's not to hatch mischief; quite the contrary. That's what I object to; you had nothing to be ashamed of, really,—all three of us know that,—yet because I've happened to catch you gossiping like the two nice, natural, neighborly human women that you are, you think you must apologize, and defend yourselves—and of all possible weak defenses, 'harmless' is the weakest!"

"Well, but, Miss Celia," argued Mary Fordham, "it was harmless; and what else could we say? You don't call gossip exactly—uplifting, do you?"

"Not precisely that, perhaps; but it's often expanding, broadening, softening, enlightening, humanizing and awakening! Oh, yes, my dears, it is! You know that as well as I do, if you'll stop a minute to think."

"There's very little gossip that's merely negative and 'harmless'; most gossip is definitely bad or good, friendly or unfriendly, kind or unkind. Most bad gossip is bad enough to deserve other names than gossip, anyhow. Spying, prying, slandering, talebearing, backbiting, ridiculing, exaggerating, bearing false witness, or true witness so presented as to produce an effect of falsity—there are words to name such hateful things frankly in all their hatefulness; they oughtn't to be sheltered under the 'harmless' cloak of gossip."

"But the good gossip, Miss Celia; you've just called it 'harmless' yourself!" cried Leila Hart, triumphantly.

"It's harmless, of course; but it's so much more than that that it ought to be more positively characterized," explained Miss Celia. "It's right and normal to enjoy gossip; to exchange news and comment and even fair and kindly criticism upon the actions, adventures, fortunes and misfortunes of persons we know. It's because it's the first, fundamental, primitive, persistent, necessary basis of conversation that it tends to crowd out other subjects so often. To care for nothing except gossip is, of course, wretchedly narrowing and petty; to take no interest in even the right kind of gossip is, once in a great while, the indication of an able mind given wholly to greater subjects, but, nine times out of ten, it indicates something widely different—not a superiority of brain, but an inferiority of heart. It's the plain and simple fact that a lack of interest in other people's affairs usually means a lack of warm, human, comradely feeling for other persons. Bad gossip is contemptible; good gossip—not 'harmless,' but good—is the medium in which the old-fashioned, indispensable virtues of sympathy, neighborliness and mutual service oftenest live and thrive."

"Oh, good! good!" cried young Mrs. Hart. "It's grand to have our self-respect bolstered up so powerfully, isn't it, Mary?"

"It certainly is," agreed Mrs. Fordham. She added, with a shy laugh, "We were gossiping about poor, dear little Dolly Heriot's love affair. It really looks now as if it might come out right after all,

and we couldn't help being excited. Shall we tell her all about it, Leila?"

"Do!" said Miss Celia, settling back to listen, "and don't skip anything—not a single, least thing. Dolly is a darling, and I'd rather hear whatever we outsiders have a right to about her love affairs than read a dozen novels—bless the child!"

IN THE NAME OF HWA CHENG TOON

ALTHOUGH the Japanese are passionately devoted to the oldest of imperial dynasties, they have great respect and admiration for the founders and maintainers of our young republic. The history of *Washington Kuen* (Mr. Washington) is well known among the educated, and an illustrated popular life of him by a Japanese has wide circulation.

Twenty years ago a little pamphlet biography of *Yurishesho Shimusun Gurando* (Ulysses Simpson Grant) enjoyed great popularity; its introductory chapter briefly reviewed the lives of other personages conspicuous in American history, notably *Korobusu of Itaria* (Columbus of Italy), *Amerikusu, Washinton Kuen*, and *Taitoryo Rincorin Shi* (President Lincoln, Mr.).

Now, M. Fernand Farjanel in his recent book, *Through the Chinese Revolution*, shows us that in China no less than in Japan the name of Washington is known; more, it was a word of inspiration to the revolutionists, in the movement that so lately overthrew the autocratic Manchu dynasty. Oddly enough, as M. Farjanel points out, the Chinese republicans, remembering of Napoleon only that he rose upon the ruins of ancient monarchy and fought the league of sovereigns of Europe, frequently invoke together the name of the Father of his Country and that of the ambitious warrior who made himself an emperor and his brothers and marshals kings. The queer conjunction occurs in the popular battle hymn, which the Frenchman calls the "Chinese Marseillaise."

Let all strong men with one accord
Acclaim the Revolution!
Washington! Napoleon! Sons of Liberty,
Come and live again to draw the sword!

So sang the revolutionary soldiers of China as they marched and drilled. So sang the crowds gathered in the streets of Chinese cities, under the swinging lines of colored lanterns:

"Hwa cheng toon! Na po loon!"

No true republican of the Occident, capable of understanding the words of the "Chinese Marseillaise," could fail to respond to the Orient's apostrophe to Liberty, with which it concludes:

O Liberty, the greatest boon from heaven
Peaceful and strong, thou bringest to the earth
Ten thousand wonders new.
Grave as a ghost thou art; thy giant arms
Reach upward to the skies.
Thy chariot is a cloud, the wind thy steed,
Come, thou, and rule the world!
Pity the dark night of our slavery
And shed thy rays of light upon our need!

A STRANGE TRAP FOR DEER

WHEN Capt. Kimball, my mother's grandfather, settled on the Connecticut in New Hampshire and named the place Haverhill, after his birthplace in Massachusetts, writes a contributor, the country was swarming with wild game, and he often killed deer and bears on his own place.

One day, soon after the Revolution, he went out in his wood lot with a hired man to chop some trees. The captain had a dog named Watch, known far and wide as "Kimball's bear dog." Watch followed his master and began scouring the woods for game. He soon started a deer, and his excited yelping made the woods ring. The deer seemed to be running in a circle, and the two men stood, axe in hand, listening.

In a little while the deer turned, and they could tell by the dog's voice that it was heading straight for where they stood. They had very little time to wait before the deer, a large buck, burst from the brush and dashed across the little space where they had felled several trees, putting his whole soul into speed. When he had nearly reached the shelter of the trees once more, he encountered a tree that had fallen across another in such a way that its trunk at that point was about eight feet from the ground. The dog was too close to allow a turn, and the buck leaped to clear the obstruction; but he "took off" too far back, and landed on his stomach fairly across the top log.

With a leap nearly as long as that of the buck, Capt. Kimball seized both of the animal's hind legs as they were kicking vigorously and swung his weight on them, so that the buck could not get across the log. As the captain clung he shouted to the hired man to run round and kill the buck, but the fellow was afraid of the big horns that looked so formidable.

"Then come here and hold these legs!" yelled the captain. "And if you let go before I tell you to, you'll wish you'd chosen the other end and taken a chance with the horns."

The hired man came up, took hold under the captain's hands and put his weight on the buck. When he was sure that the man had it nicely balanced, the captain killed the animal, and the Kimball family ate fine fat venison for supper.

WITHIN RANGE OF THE GERMAN GUNS

A CORRESPONDENT of the Bystander tells a touching story of an old couple who live in a little French town where they are in constant danger of bombardment. Before the war the town had twenty-five thousand inhabitants; there are about a thousand civilians living in it now, and it is full of soldiers.

When the correspondent asked the woman what sort of life she was leading, she laughed and replied, "As always! When the shells come we don't get excited as we used to. We say, 'Tiens! they're bombarding again!' and we go below. Of course we only go below for the big shells, the 305's. We have got quite used to the others."

Her basement is comfortable as basements go. It has a tiled floor, a kitchen table with American cloth on it, a few chairs, a cupboard, a handsome old armchair, a funny, old-fashioned bed, a little petrol stove, a cage with a canary in it, and on the walls some pictures cut from illustrated papers.

The rooms above are mostly in rags now, but the old man is going to build up his house again as soon as the Germans leave off bombarding, he says. "We have a son at the front," he explained, "and you know we want to have everything ship-shape for him when he comes back home again."

"Now and then," said the old lady, "when the shelling gets very fierce, we go down into the cellar, and then we're not so comfortable."

I looked up at her, and the old couple laughed.

"I'll show you," said the old man.

He lifted a corner of an old carpet that hung on the wall, and I saw a great breach in the wall and some rough stone steps. The whole town is honey-combed with deep cellars. "They say the Spaniards built them," he said.

Down there in the dark pit he showed me a little embrasure in the wall. There were two rough wooden benches and a box marked in squares.

"We come down here and play drafts when the bombardment gets too fierce," said the old man. "Sometimes a shell drops nearer than usual, and then the whole house shakes. I won a game the other day when that happened. My wife got nervous. She beats me, as a rule—but she lost her head that time."

THE GREAT HUDSON-RIVER CHAIN

A TABLET erected by the Daughters of the Revolution marks the site of the furnace where our forefathers forged the great chain that stretched across the Hudson River during the latter part of the Revolution. One of the huge hammers used in the manufacture of the chain lies in front of the tablet.

In October, 1777, the ships of the British expedition, commanded by Sir Henry Clinton, ascended the Hudson as far as Kingston, considerably above West Point, after having broken a large chain and other barriers. The river towns were lost and Kingston was burned, but the defeat of Burgoyne at Saratoga disarranged the plans of the British and compelled Clinton to withdraw to New York. Nevertheless, Washington expected him to return in the spring, and ordered that suitable defenses should be made.

While numerous batteries were being constructed at West Point and at Constitution Island the proprietor of the Sterling Iron Works offered the opinion that an iron chain could be made that would be strong enough to prevent any ship from passing upriver. Work began at once. The workmen made the great links, which averaged two feet in length, of iron bars two and one half inches square. Each weighed about one hundred and forty pounds.

If we compare these links with the anchor chains of the big liners of to-day they do not seem so large. Each link of the Mauretania's chain, for example, weighs four hundred pounds, is about four feet long and is made of four-and-one-fourth-inch iron. The chain makers of 1778 provided a large margin of safety, however, for the difference in size of the ships to be held by the respective chains is far greater than the difference in the size of the chains.

Two or three links at a time were carried over the mountains on ox carts and mule back. At West

REMAINS OF THE OLD STERLING FURNACE

A SECTION OF THE ORIGINAL CHAIN

Point the workmen welded them together at the edge of the water, and on April 30, 1778, suspended the completed chain, which was one hundred and eighty-six tons in weight, on logs across the river.

It is said that Arnold ordered a link to be taken out and carried to the smith's for repairs that he pretended were needed. He assured Maj. André, that the link would not be replaced. But the discovery of Arnold's treason frustrated his plans; and as his order was never carried out, the chain remained intact until it was removed after the conclusion of the war.

At West Point a section of it, consisting of twelve unbroken links, part of a thirteenth and two cleaves, now surrounds a monumental group of mortars captured from the English. A larger part of it is on the lawn of the Hewitt Homestead at Ringwood, New Jersey, while many towns in New York proudly display sections of this interesting relic of the Revolution.

HE BROUGHT THE DOOR ALONG

ONE of the most original characters I ever met, especially in his ways of doing things," began Snagsby, with a reminiscent smile. "was a man named Ephraim Joggins, who owned a side-hill farm a mile or so from Basswood Flats. I lived in that place for several years and got pretty well acquainted with Joggins and his ways, and during that time I never knew him to do anything in the same manner that any other man would have done it. If there was any wrong or outlandish method of doing a thing, Joggins was sure to find it out and do it that way. His mental faculties seemed to work differently from other persons'; or, as I may say, he possessed a left-handed intellect, so that what appeared to be the wrong way of doing things to other people, appeared to be the right way to him.

"One incident that happened while I was living in the place illustrates his peculiarity.

"Joggins lost the key to his front door and wanted to get another. Anyone else under those circumstances would have unscrewed the lock and taken it to the locksmith's to have a key fitted to it. But Joggins didn't. He carefully took the door off the hinges, although he had to remove nine screws in the operation, and then, hitching up his team to the big lumber wagon, he drove round to the front of the house, lifted the heavy door into the wagon and calmly drove off to the locksmith's, a mile and a half away.

"When he went in, empty-handed, and told the

locksmith he wanted a door lock fitted with a key, the locksmith looked up from his work and said:

"All right; bring in your lock any time you happen to be going by and I'll attend to it!"

"Got it here now," says Joggins, kind of careless-like. "Didn't know but you'd come out to the wagon and do the job out there; but if you'd rather have it in here, all right. I'll bring it right in."

"And Joggins went out and tugged away until he got that door out of the wagon, and a minute later he came staggering into the shop with it on his back.

"There you are!" he sang out, as he propped the door up against the counter.

"I didn't want to offend a good customer," said the locksmith in telling some friends about it later in the day. "Joggins always paid cash down for everything he bought or for any job he had done; but it was mighty hard work keeping my face straight while I was fitting a key to that lock and helping Joggins get the door back into the wagon. But I never even smiled until Joggins was out of sight and hearing. Then I sat down and laughed until my sides ached!"

MORE PROVERBIAL WEATHER

A READER who was interested in the article on proverbs about the weather, published in *The Companion* last January, sends us these old English verses, which, he says, are attributed to no less distinguished an author than Dr. Jenner, the conqueror of smallpox:

The hollow winds begin to blow.
The clouds look black, the glass is low,
The soot falls down, the spaniels sleep,
And spiders from their cobwebs peep.
Last night the sun went pale to bed,
The moon in halos hid her head;
The boding shepherd heaves a sigh,
For see a rainbow spans the sky.
The walls are damp, the ditches smell,
Closed is the pink-eyed pimpernel.
Hark how the chairs and tables crack!
Old Betty's nerves are on the rack.
Loud quacks the duck, the peacocks cry,
The distant hills are seeming nigh.
How restless are the snorting swine!
The busy flies disturb the kine;
Low o'er the grass the swallow wings,
The cricket, too, how sharp he sings,
Puss on the hearth, with velvet paws,
Sits winking o'er her whiskered jaws.
Through the clear streams the fishes rise,
And nimbly catch the incautious flies.
The glowworms, numerous and light,
Illumed the dewy dell last night,
At dusk the squalid toad was seen
Hopping and crawling o'er the green.
The whirling dust the wind obeys
And in the rapid eddy plays;
The frog has changed his yellow vest,
And in a russet coat is dressed.
Though June, the air is cold and still.
The mellow blackbird's voice is shrill;
My dog, so altered in his taste,
Quits mutton bones on grass to feast;
And see yon rooks, how odd their flight.
They imitate the gilding kite,
And seem precipitate to fall,
As if they felt the piercing ball.
'Twill surely rain; I see with sorrow,
Our jaunt must be put off to-morrow.

THE FLAG OF LEXINGTON AND CONCORD

UNDER what flag did the "embattled farmers" fight? That was no national flag then, no state or provincial flag even. But, says Mr. Peleg D. Harrison in *The Stars and Stripes* and Other American Flags, there was a flag there nevertheless.

The farmers of Lexington carried the cornet or standard of the Three County Troop. That banner was designed for a local company of cavalry raised in the counties of Essex, Suffolk and Middlesex, Massachusetts, in 1659. The office of color bearer of this troop was a kind of inheritance in the Page family. The standard was carried in King Philip's War in 1676. When the minutemen were organized Nathaniel Page, 3d, of Bedford, carried the old flag to the drills. At the midnight alarm Capt. Page snatched up the standard and carried it with him to Concord, where it "waved above the smoke of that battle."

The flag is now preserved under glass in a fire-proof safe of the Public Library at Bedford, Massachusetts, and can be seen by arrangement with the librarian.

The ground is crimson-colored satin damask emblazoned with an outstretched arm, in the hand of which is an uplifted sword. This representation is the color of silver, as are three circular figures that are probably intended to represent cannon balls. Upon a gold-colored scroll are the words, "Ince aut Moriture" (Conquer or Die). The flag is about two feet long by one foot six inches wide.

CONCERNING ICE CREAM

ICE cream was certainly first served in the United States by Dolly Madison, the wife of President Madison, and it has often been said that she invented the popular dessert. A writer in the *Illustrated World*, however, says that the first ice cream was made by Gunton, a London confectioner. But Gunton's method of freezing was crude and uncertain, and it remained for Nancy Johnson, the wife of an American naval officer, to invent the ice-cream freezer.

The ice-cream business has far outgrown the small hand freezer. Vast quantities are frozen by special machinery. The industry has become so great that fortunes have been made out of it. Last year, according to the *Indianapolis News*, the American people consumed two hundred and fifty million gallons, which, figured at only a dollar and a quarter a gallon, means a business of more than three hundred million dollars.

THE WRONG DIAGNOSIS

WHEN one John O'Shea appeared in a police court to answer to the charge of being drunk and assaulting the police, an officer declared that the man had been dismissed from the army with ignominy.

"No," O'Shea protested, "it wasn't that at all that I was suffering from; it was varicose veins."

THE CHILDREN'S PAGE

The POLKA DOT PUP and the GEESE

By Mary Louise Baker

Peter S. Pindle took his Polka Dot Pup . . .
Where the pumpkins grow when the sign is "up".
There the Pup in his zeal to investigate
Kept spinning his tail at a terrible rate.

A stately old Goose with her own precious three
Greenest of Goslings - if green they may be . . .
Were cropping the grass in a garrulous mood,
When the Polka Dot Pup discovered the Brood.

The meeting was brief, for Sir Lucifer Gray
Taught our gay Puppy his Manners that day;
The speed he attained was prodigiously great
When once he discovered the wide open gate.

WHY THE TURTLE CARRIES HER HOUSE

BY ABIGAIL BURTON

TILLY TURTLE stood sweeping the front steps. It was a wet day, but Tilly Turtle did not mind a little rain. All that she was afraid of was dust, for she was a tidy housekeeper. But why was she wearing her bonnet? And, dear me, if she did not have on her best shawl!

Chatty Chipmunk was watching from her doorway. You know Chatty Chipmunk is much interested in other people's doings. She had seen Tilly Turtle drive up in the stage. Why, there had not even been time for Tilly Turtle to unpack her bags! And here she was cleaning house!

Chatty Chipmunk could stand it no longer. She put on her overshoes and went splashing across the road.

"So you're back from your visit to your cousins," said Chatty Chipmunk.

"Yes," said Tilly Turtle.

"And how are all the Snappers?" asked Chatty Chipmunk.

"Well," replied Tilly Turtle, and she went on sweeping. The water flew off her broom and splattered her caller.

"Dear me!" exclaimed Chatty Chipmunk. "It is wet!"

"I'd rather be wet than dirty," said Tilly Turtle.

"But what about your bonnet?" asked Chatty Chipmunk.

"Good gracious!" cried Tilly Turtle.

She had forgotten her bonnet! And she went right into the house. She did not ask Chatty Chipmunk to come in. However, Chatty Chipmunk did not mind. She shut her umbrella and took off her overshoes and followed Tilly Turtle.

Fanny Field Mouse came hurrying in after Chatty Chipmunk. She brought a plate of cookies just out of the oven.

"I was baking," she explained. "And I knew, Tilly Turtle, that you didn't have any cake in the house."

"Here is a dish of cheese," said Molly Mole, taking off her cloak and wiping the rain from her spectacles.

"How kind you are!" cried Tilly Turtle. "Draw up to the fire, ladies, and I'll make a pot of tea."

The house was swept now, and the bonnet was not hurt. Tilly Turtle was in a better humor. She bustled about, making her guests comfortable.

"Are you having a housewarming?" asked Sally Sparrow.

She carried a basket with a glass of jelly. She was a famous hand at jellies.

"There are some nuts in my cupboard that I meant to bring," said Chatty Chipmunk, not to be outdone. "I'll go for them."

"Don't be long," said Tilly Turtle, "for the tea's ready."

Chatty Chipmunk dearly loved a cup of tea. It made talking so comfortable! So she was not long, I can tell you. And she began talking just as soon as she came back!

"But why were you cleaning before you even stopped to unpack?" asked Chatty Chipmunk.

"Such a looking house you never saw," Tilly Turtle explained. "And I left things in mud-pie order, too!"

"Everyone says you're the best housekeeper in the meadow," replied Fanny Field Mouse.

"If you had seen it!" Tilly Turtle waved a saucer impressively. "Crumbs all over the floor and dust in the corners!"

Molly Mole nibbled a cookie without speaking. She was conscious of several cobwebs at home!

"That was the Ants," Chatty Chipmunk put in eagerly.

"When they had their party."

"What party?" Tilly Turtle demanded.

"Well, Augustus and Angey Ant were going to be married," Chatty Chipmunk began chattily. "And you weren't home, so they had the wedding here."

"I can't believe it!" cried Tilly Turtle.

"It's true," said Sally Sparrow. "Granny Glowworm told me about it. She goes to all the parties, you know."

"They say Angey made a beautiful bride," added Fanny Field Mouse.

"And have you heard about the Beetles?" Chatty Chipmunk asked.

"Heard what?" asked Tilly Turtle.

"They gave a party here two nights ago," said Chatty Chipmunk. "They had planned to have it under the hawthorn bush, but it rained."

"So they used my house as if it were a public hall!" said Tilly Turtle.

"They thought it wouldn't make any difference, my dear, after the Ants," Molly Mole put in mildly.

"Oh, it's quite true!" said Sally Sparrow. "Granny Glowworm was in charge of the lighting. They had five hundred Glowworms about the walls."

"It's a mercy they didn't set the house afire," said Tilly Turtle grimly.

"Granny Glowworm said there wasn't the slightest danger," said Sally Sparrow, and she put on Molly Mole's cloak by mistake.

"Though it's well to be on the safe side," said Chatty Chipmunk, hunting for her overshoes.

"I'll never live here again!" Tilly Turtle declared.

"Chatty, I'm coming to spend the night with you. And tomorrow I shall hunt up a new house."

"But you won't move out of the neighborhood?" cried Fanny Field Mouse.

"No-o-o," said Tilly Turtle. "I shall get a small place, just to fit me. The Ants and the Beetles and all their friends can stay outside. And when I go visiting again, I shall take my house with me! I know it can be done!"

And that is why Tilly Turtle carries her house on her back.

THE FAIRY OF THE ROSES

BY ANTOINETTE D. COURSEY PATTERSON

MOST people thought the old lady who lived in the house that stood all by itself was very queer and very cross; but Alline said she was cross only because she had rheumatism, and that if you could get her to tell a fairy story she would forget all about the pain, and be just as pleasant as anything.

"I'm going to her house now," said Alline, "for she promised she would tell me to-day about the fairies of the roses."

"Can you see that rose tree?" said the old lady, when Alline was comfortably seated on a stool beside her. "Well, it is owned by a fairy who, like the old woman who lived in a shoe, has more children than she knows what to do with. She is so dreadfully afraid of having anything happen to them that she has shut each one up tight in a rosebud. There they will stay until they grow big enough and strong enough to burst the buds open, and then each one will fly away."

"And where will they go?" asked Alline.

"That I cannot say," answered the old lady; "there are so many of them, and they choose such different places. They are also very fond of disguises—sometimes one might take them for butterflies, at other times for humming birds. Often, when you can't see them at all, you can find out just about where they are by listening."

"Oh," cried Alline, "what do they say?"

The old lady shook her head. "Who can tell what they say? If that were possible, mortals would perhaps be wiser than they are. You can often hear them either whispering among the leaves—though there are some who will tell you it is only the wind—or singing by the brook a little tinkling song."

While the old lady and Alline were talking, a sudden shower that had come up passed over, and the sun shone again in all

its warm brightness. The birds began to sing, and in through the window darted a humming bird. It darted right out again; but not before the old lady and Alline had both seen it.

"Alline," the old lady said, "a bud on my rose tree looked this morning as if it might be pushed open soon. Go to the window and see if the fairy hasn't come out."

Alline ran to the window. "I see a great white rose," she said. "That little humming bird must have been the fairy. Oh, I'm so glad we both saw it!"

A VISIT TO IRELAND

BY CHARLOTTE BREWSTER JORDAN

Oh, when we visit
Ireland,
We take a jaunting
car,
And jog along o'er
hill and dale
To see the things
afar.

We pause beside the Wishing Well,
Where fairies live, they say;
We kiss the Blarney Stone, and pluck
The shamrocks by the way.

But best we like in
Ireland,
Of all that we have
seen,
The lads and lassies
merrily
A-jigging on the
green.

PUZZLES

1. VERSATILE AL

The al confined to one place; the al praising himself; the inferior al; the al true to country, love and duty; the actual al; the al on which life depends; the fatherly al; the injurious al; the rural al; the illustrated al.

2. GEOGRAPHICAL DELETION

Take a letter from a river in Europe, transpose, and find a word that denies or renders negative.

3. CHARADE

My first is a boy's name often seen;
My second, the smallest part you can mean;
My third is something we use each day;
Don't feel my fourth—it doesn't pay.
My fifth is a letter. My whole, when guessed,
Is a poet the children love the best.

4. RIDDLE

It bosses me around all day,
And tells me "work" or "sleep" or "play."
It has a pair of small, hard hands,
But carries nothing. There it stands
And says the same words o'er and o'er
(You'd think in time 't would learn some more).
Oh, in its face I'd like to stare
And say, "You stop!" But I don't dare.

5. NUMERICAL KNIGMA

I am a word of eight letters. My 3275 is a flower; my 456 is a number; my 238 is a metal compound; my 3564 is a fissure; my 426 is two thousand pounds; my 186 is a fowl; my 41385 is a number; my whole is a girl's name.

The FAMILY PAGE for APRIL

Address your letters to THE EDITOR OF THE FAMILY PAGE, THE YOUTH'S COMPANION, BOSTON, MASS.

RELAY GAMES

PLAY is nature's method of preparing the young for the bigger game of life. A child comes in after an hour of hide and seek rosy-faced, happily tired, ready for supper and sleep, but he has gained something more than physical benefit. He has attained mental alertness just as surely as he has acquired the ability to run with greater speed. Closely associated with his mental benefit is the moral development that comes when he begins to grasp the meaning of "fair play."

Of all the different kinds of children's games, none surpass in variety, interest and training value the relay games. Their appeal is universal, and they have this advantage over the games in which each player is independent of his comrades: the spirit of teamwork is part and parcel of them. On playgrounds, in the school yard, at parties—wherever children or adults gather in numbers—there is an opportunity for one or more of the many kinds of relay games.

Readers of The Companion who were interested in Neighborhood Play in the Family Page for April, 1915, will find in the games that follow suggestions that will help them in any work that they may have undertaken for the purpose of guiding community play.

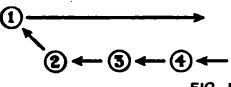

These games are complete in themselves. But you will find it interesting sport to use them as suggestions upon which to build games of your own.

PASSING AND THROWING RELAYS

Relay games in which the players throw a ball or some other object are of primary appeal. In the classification at the end of this article games of that sort appear under the head of Passing and Throwing Relays. One of the commonest is pass and toss.

Pass and Toss. The teams form in a line facing sidewise with the two end men of each line a long pace forward, as shown in Fig. 1. At the signal to begin, No. 1 throws a ball or a bean bag to No. 8 and runs toward the rear. No. 8, on receiving the ball, passes it to No. 7 and steps into the line. No. 7 takes a step forward and passes the ball to No. 6, who in turn passes it on. In the meantime, No. 2 has stepped into the place of No. 1, and when the ball reaches his hands he immediately throws it to No. 1, who is now in the position that No. 8 first occupied. The game goes on in that way until No. 1 is back in his original position at the head of the line.

Baseball Relay. A still more active game is baseball relay, which requires a baseball diamond, but not necessarily one of the regulation size.

Any even number can play, but the game is most enjoyed when there are six on a side. The only apparatus needed is a baseball or a tennis ball for each team. The players form in two lines, as shown in Fig. 2, one team at first base, the other at third base.

The first to start—Nos. 1 and 6—have each a baseball, and stand with one foot on first and third bases respectively. The next to run—Nos. 2 and 7—must not be less than six feet from their bases. At the word "Go!" the leaders run.

Each player must run at least three bases and must touch each base in turn. After touching his third base he may at any time throw the ball to the next player, who must be standing in his proper place in line, not less than six feet from the base. As soon as that player catches the ball he may run, but if he drops the ball he must pick it up and return to his original position, six feet from the base, before starting again. The second and subsequent runners do not touch the base after they have caught the ball. They start from a sub-base or line six feet behind the base. As each player after the leader leaves his place to run, the lines move inward one step, in order to bring the next runner into the place that has just been vacated.

After having run three bases and thrown the ball, the players drop off to one side, in order to be out of the way; but the last runner of each team will have no one to throw the ball to, and therefore must run all four bases.

The umpire, who stands at the point shown in Fig. 2, decides which of the players, No. 5 or No. 10 in the figure, first crosses the finish line.

Bean Bag. The relay games in which players stand in a row and pass objects from hand to hand are usually less violent than those in which throwing and running have an important part, but they are no less interesting to the players, and often are more amusing to the spectators.

In bean bag each player stands in front of a stack of bean bags. At the signal, No. 1 of each row takes up a bag and passes it back to the team mate behind him, who in turn passes it on. In that manner the team handles all the bags, and the player at the end stacks them on the floor. A familiar and highly entertaining variation is to let the players pass the first bag between their feet, the second over their heads, the third between their feet, and so on.

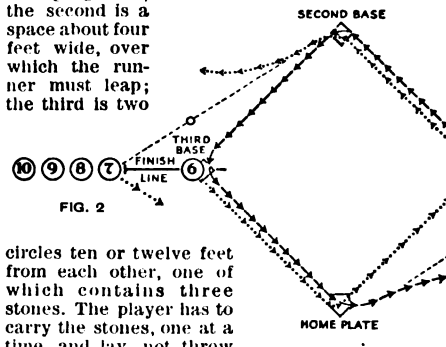

OBSTACLE RELAYS

Obstacle relays are almost without number. To children each new obstacle makes a new game. In the classification that follows are listed a few of the more common games. One that is obviously an outgrowth of the game in which the players carry bean bags to and from a circle marked on the floor is especially

interesting. It is in reality a combination of an obstacle game and a carrying game.

Divide the players into squads of equal numbers with a captain for each squad, and draw two lines to mark the specified distance for the race, which of course should depend on the age of the players. Between the lines arrange three obstacles for each squad, as shown in Fig. 3. The first obstacle is an oblong space about ten feet long marked with cross lines, through which the runner must hop on one foot without stepping on lines or changing feet; the second is a space about four feet wide, over which the runner must leap; the third is two

circles ten or twelve feet from each other, one of which contains three stones. The player has to carry the stones, one at a time, and lay—not throw—them down in the other circle. The second runner shifts the stones again, and each successive runner repeats the manœuvre.

The squads line up behind the starting line, and at a given signal the first runner in each team runs the distance, overcomes the obstacles, and passes over the finishing line. As soon as he crosses the line he raises his hand high in the air, and the second runner starts. It is a good plan to station judges at the obstacles to record the fouls. In determining which squad is the winner, every foul made is added to the number of the position in which it finishes. The team that has the lowest score wins. Thus, if squad A should finish first but makes two fouls, its score would be three, and therefore it would lose to squad B in case squad B should finish second and make no fouls.

A Japanese Relay. In Japan the schoolboys play an amusing game in which the contestants have their hands tied behind their backs and at the signal run a few yards to where waste-paper baskets have been placed in a row on the ground, one for each participant. Without touching the basket or the ground with his hands, each boy has to get a basket on his head and finish the race.

This game can be made a relay game by having teams of players whose hands are tied and making the conditions of play as follows: each player in turn runs to the basket, gets it on his head, runs to a line, turns, and on his way back to his team mates replaces the basket on the spot where it originally stood.

ATTITUDE RELAYS

There are several games that may be grouped together under the classification of attitude relays. Many of them are grotesque, and therefore full of fun. The rabbit race, which savors of an Indian origin, is a good example.

Two teams of boys form on the starting line in a stooping position, with their hands on the line and their feet behind it. In running the race each player must make leaps, in imitation of a rabbit. First both hands should move forward, then both feet should pass the hands as a rabbit's hind feet pass his forefeet.

On reaching the line at the opposite end of the grounds, the two "rabbits" cross it with both hands and both feet, turn and continue the race to the starting line, where No. 2 of each team takes up the sport.

One-Foot Relay. Another game, a combination of carrying and attitude, is one that girls play more often than boys. Two or more teams form rows at a starting line, and at the signal "Go!" each leader, standing on one foot, kicks with the other foot a bean bag placed on a mark in the line. As the bean bag slides along the ground ahead of her, she hops after it and kicks it again and again until it crosses a line thirty feet from the point where she started. She must then kick it back to the starting line.

No. 2 of the same team now places the bag on the mark and takes her turn, and so on until all the members of both teams have played. If a player begins to hop on her right foot and to kick with her left foot, she must continue to play in that manner, and *vice versa*. At no time may she place both feet on the ground until the bag has crossed or reached the starting line.

Book-Balancing Relay. It is small girls who most enjoy this game, which is valuable in teaching

them to control their muscles in walking. Two teams, each consisting of five or more players, stand in place at the starting line. Forty feet distant is another line on which two players stand, one opposite each team.

At the signal "On your mark," the first girl, A, of one team places a light book on her head. At the signal "Get set," she places her hands on her hips and stands in position to start. At the word "Go," she starts forward with a skipping step and advances toward her team mate, B, who is standing on the line forty feet away.

When halfway there she must turn all the way round, still using the skipping step, and then continue forward until she reaches the line. Then her team mate, B, removes the book, places it on her own head and skips toward the team on the starting line, turning all the way round when halfway there, as did the first girl, who is now standing on the forty-foot line.

When B reaches the starting line, C removes the book, places it upon her own head and advances toward A. Meanwhile B has gone to the foot of the line. C and A now change places as A and B did. D takes the book, and so the game continues until everyone has balanced the book twice. The game ends when the team is in its original order. A is on the starting line with her team behind her, except B, who is on the forty-foot line.

If the book falls during the race, the girl must pick it up, place it on her head again and start at the point where she dropped it. When a girl returns from the forty-foot line to the starting line, she takes her place behind the team and gradually moves forward until the game brings her to her original place. Team No. 2 is of course playing at the same time; the contest is to determine which team can finish first.

CARRYING RELAYS

As the classification suggests, carrying relays, like the attitude relays, are almost numberless.

All up is a game that makes use of circles drawn on the floor or marked on the ground. In front of each team and at a distance of thirty or forty feet are two three-foot circles, in one of which stand three Indian clubs. Each player in turn runs to the Indian clubs and, using one hand only, transfers them to the empty circle; he then runs back to his team and touches the player next in line, who runs forward and shifts the clubs back again, and so on.

That time-tried favorite, the potato race, becomes a relay by the simple expedient of having alternate players *replace* instead of pick up the potatoes. It is a game for boys and girls of all ages.

The same adaptability cannot be credited to the knapsack race, which is nevertheless one of the most exhilarating and amusing of relay games. Only well-grown boys of good physical development should take part in it, for each player carries a partner a certain distance on his back, and then, in turn, is himself carried.

The rules of the game are few. Two lines are marked out on the greensward about thirty yards apart. The players who are to carry line up on the mark. At the word "Go," one player gets on the back of his partner, who carries him pickaback to the other line. There they shift; the carried becomes the carrier, and runs back to finish with his burden. Players may not touch their partners before they receive the word to start if they are at the head of the relay line, nor may any succeeding pair touch each other until their team mates whom they follow have crossed the line. Falls during the race do not disqualify, so long as the runner does not take any steps beyond the point of fall before his partner is again on his back.

It is necessary, of course, to have the partners of equal strength. A small boy may be a light load for a big boy, but a big boy would halt his small partner on the return trip. Proficiency depends on making the shift quickly.

The following brief classification does not, of course, include all relay games. Its purpose is to list the various types and to be of suggestive value rather than to serve as a catalogue.

RELAY COURSES

Circular Track. One member of each team starts at the same mark, runs round the track and touches an object or passes one to the next man of the team, who continues the race. If the track is large,

the runners may be stationed at regular intervals; if it is narrow, two teams may be stationed on opposite sides.

Parallel Track. Each team runs round two separate objects, such as posts, trees or chairs, on courses parallel to each other.

Straight Track. There are two kinds—shuttle and succession. In shuttle races, half of each team stand at opposite ends of a straight course. One player runs down and the next back, and so on. In succession relays, all members of teams start at the same mark, and as each one crosses the finish line a judge at the line drops his raised hand as a signal for the next in line to start.

Convergent Tracks. The teams start at widely separated points, run to a central point and return. Each runner covers the same distance.

KINDS OF RELAYS

- Passing and Throwing Relays.**
- Pass and toss.
 - Baseball relay.
 - Ball passing. After the ball has been passed down the line, the rear player runs with it to the head of the line.
 - Bag pile. The players, standing in a line, pass bean bags from the head to the foot, stack them and pass them back again.
- Obstacle Relays.**
- Sack race. Each team has one sack, which each runner uses in succession.
 - Leapfrog race. Each player vaults over all of his team mates.
 - Barrel race. The members of each team crawl through a barrel.
 - Climbing relay. Over a fence or other object.
 - Tumbling relays. Each player does some simple feat, such as rolling over, turning a handspring or a cart wheel.
- Attitude Relays.**
- Run backward.
 - Hop forward or backward.
 - Jump forward or backward.
 - Skip forward, backward or sidewise.
 - On all fours, either face down or face up, forward or backward.
 - Rabbit race.
- Carrying Relays.**
- Egg and spoon. The players carry the egg in a teaspoon.
 - Knapsack. Each runner carries another on his back.
 - Water carrying. A cup, dish or pail is used.
 - Transfer races. Indian clubs or other objects, such as stones, placed in a circle must be carried, one at a time, to another circle.
 - Potato races.
- Skill Relays.**
- Each contestant runs to a certain spot and does something previously agreed upon, such as driving a nail, sawing a piece of wood, hitching and unhitching a horse, drawing a picture, doing a problem in arithmetic.
- Combination Relays.**
- Any two or more of the above races combined in one. For example, each member of a team runs a certain distance, then hops, then stands rolls over, then jumps a fence, then carries a pail of water, then drives a nail.

APPLICATION OF BRAID BINDING

THERE are three ways of applying braid or tape as edge trimming—entirely by hand, entirely by machine, and by a combination of hand and machine work. In each case care must be taken to "ease" the braid with the left hand, as the work proceeds, in order to avoid shrinkage in wash material and puckering in silk or woolen goods. Braid invariably shrinks in laundering more than other material.

When the application is to be made by hand alone, place the braid on the right side of the material close to the edge, and backstitch the two together. The stitching should lie very near the edge, but not near enough to cause fraying. After the backstitching is completed, fold in half and crease the braid and hem it down on the wrong side of the material. The braid should just cover the backstitching on the wrong side and the hemming run close to it.

In the combination method the process is the same except that the first stitching is done on the machine. In the machine work special care must be taken to keep the braid sufficiently lax. To do the work by machine alone, fold the braid in half, place the material between the folded halves and baste carefully, then with one stitching on the machine catch in the three thicknesses.

A NEW WAY TO RAISE POTATOES

THERE is a method of planting white potatoes that gives a maximum yield from a minimum area. It is the banking system, which, although not to be recommended for extensive planting, is admirably adapted to the home garden.

Suppose the space available is but three feet wide and only of moderate length. By the common method of planting on the level, only one good row of potatoes could be grown in it, or, at a pinch, and by injudicious crowding, two rows. If, however, good earth is heaped to a depth of two feet over the three-foot width of space, and the top of the bank is flattened, and the sides are packed gently but firmly to prevent slipping, three rows of potatoes can be raised, all of them under conditions that will favor their

CONTINUING THE FAMILY PAGE FOR APRIL

growth. Potatoes need a moderately rich soil, and it is essential that the soil be well drained. A bank like that described can, in the making, be made as rich as you please, and the drainage of it will be nearly perfect. Moreover, the stalks and the foliage of the plants, falling over the sloping surface of the bank, act as a natural mulch that helps to keep the bed from drying out. The long potato roots will pierce deeply into the heart of the soil and find moisture there.

The danger from drying out is the only one to which this method is exposed. It will be minimized if early potatoes are grown. They get the benefit of the abundant spring rains, and are nearly matured by the time the heat and the drought of

summer come on; in any event, they are so far along that they will withstand conditions that would injure younger plants.

The use of this method presupposes that the gardener has plenty of good earth at his disposal—leaf mould, sand, path scrapings, loamy drift, and so forth. Well-rotted compost is excellent to add to the bank, but the richer ingredients should, of course, be well mixed with the heaped-up soil.

Where one row of plants will produce two bushels of potatoes by the ordinary method, the same amount of land will produce six bushels by the terrace system. If one row produces four bushels, the bank will produce twelve. And because of the advantages that have been mentioned, the proportion may be even greater. The system requires extra labor, but it pays.

THE COMPANION RECEIPTS

These receipts are gathered from original sources in America and Europe, and are fully tested

SERVING RICE

THE foundation of all proper rice cooking is boiled rice, and this must be prepared right. Before it is boiled, rice must be washed in three or more waters. Slowly add one cupful of washed rice to two quarts of vigorously boiling water. Add one tablespoonful of salt and boil twenty-five minutes. Drain it in a colander, rinse with cold water, and steam it in the oven five minutes. The water in which rice has been boiled contains nourishment in an easily digested form. With the addition of beef broth it tempts and strengthens an invalid. It may be used as a basis of many soups. Boiled down, flavored and sweetened, it makes a delicious blancmange.

Potato and Rice Croquettes.—Mix thoroughly one cupful of cold mashed potato, one cupful of cold boiled rice, one well-beaten egg, a teaspoonful of salt and a dash of pepper. Add gradually one half cupful of sweet milk. Form the mixture into croquettes; roll them in flour, and fry them in deep, hot fat.

Rice Pudding with Ginger.—Cook one cupful of rice until it is well done. Add one half cupful of sugar, one large tablespoonful of butter, a dash of nutmeg and one half cupful of finely chopped preserved (dry) ginger. Mix the ingredients thoroughly, add one quart of sweet milk, and turn the mixture into a pudding pan. Let it bake in a moderate oven for three quarters of an hour.

Rice and Tomato Soup.—Pass through a sieve one pint of cooked tomatoes; then stir into them two quarts of beef stock, or other prepared stock, and add four heaping tablespoonfuls of uncooked rice that you have thoroughly washed through several cold waters—to remove the sticky substance with which it is coated. Boil the soup slowly for three quarters of an hour, and serve it very hot.

Rice with Prunes.—Cut into quarters prunes that have been slowly stewed with sugar and a little grated lemon peel. Make a rice custard by pouring over one cupful of cooked rice one quart of milk, two well-beaten eggs, one cupful of sugar and a liberal dusting of grated nutmeg. Cook the mixture until the custard is smooth, then add the boiled prunes, syrup and all. Cook it five minutes longer, and serve it cold with cream.

Rice with Green Peppers.—Select even-sized sweet green peppers; remove the stem end and scrape out the seeds and inner white fibre. Scald the peppers with boiling hot salted water, and remove them from the water at once. Fill the peppers with cold boiled rice seasoned with salt and a slice of bacon cut into very fine bits. Place them in a buttered pan and let them bake for fifteen minutes. Serve them with a meat course.

Rice and Ham with Eggs.—Mince cold boiled ham, and add to it either hot or cold boiled rice in the proportion of two parts of rice to one of ham. Put the mixture into ramekins, drop an egg on the top of each, and add salt, pepper and a bit of butter; set the ramekins in a quick oven and leave them until the egg is set. Serve very hot in the ramekins. If you wish, of course, you can dispense with the ramekins and bake the mixture in a large serving dish.

Spanish Rice.—Put into a saucepan two tablespoonfuls of butter. When it is very hot add half a cupful of rice that you have washed well and then allowed to dry. Fry the rice until it is brown, stirring it frequently; then add an onion chopped very fine, two tablespoonfuls of cooked tomato and a little salt and pepper. Cover the mixture with hot water and let it cook until the rice is tender. Add more hot water as needed, but do not stir the mixture after you have added the water.

Rice Cheese Cakes.—Put over the fire half a cupful of sweet milk and two tablespoonfuls of butter; let the mixture reach the boiling point, then stir into it a tablespoonful of flour that you have mixed with two tablespoonfuls of cold boiled rice. When the milk has been absorbed, add gradually four eggs thoroughly beaten, and then a cupful of grated cheese. Season the dish with salt, pepper and a little Cayenne, then remove it from the fire. When the mixture is cool enough to be handled, shape it into small cakes and fry them in hot fat.

Rice Scallop with Cheese.—Boil one cupful of rice in salted boiling water for half an hour. While it cooks do not stir it, but shake the pan occasionally. At the end of the thirty minutes drain the rice through a hair sieve and arrange a layer of it in a deep baking dish. Over that layer place a layer of grated American cheese, and alternate rice and cheese until you have used all of the rice. For the last layer use rice. Dot the top with bits of butter and pour over all a cupful of sweet milk. Bake it in a quick oven for half an hour, and serve it from the baking dish. If the cheese is very fresh, add a little salt to each layer.

The Prize Dish Of All Food Creations

Recipe

At berry time use berries. At other times any sort of fruit.

Mix in these Puffed Grain bubbles. A crisp, flaky crust improves any fruit creation. And these taste like nut-meats, made airy and thin.

Add sugar and cream. This is all done in a minute.

The result is a food confection. Made of fruit, nuts, sugar and cream—the usual sweetmeat components.

Yet a perfect food, so rich in nutriment that a dish is half a meal.

No morning table ever held a more delightful dish. No mind can picture one. And every home can have it.

Partly fill a dish with Berries.

Add half as much Puffed Wheat.

Complete it with Sugar and Cream.

Puffed Wheat

Puffed Rice

and Corn Puffs

Each 15c Except in Far West

Noon and Night Float Them in Bowls of Milk

Here are whole-grain dainties puffed to eight times normal size. A fearful heat gives them an almond taste. They are bubble-like and crisp.

Every food cell is exploded. Digestion is easy and complete. Every atom of the whole grain feeds.

As noon time foods they do not dull. As bedtime foods they do not tax the stomach.

So they are hygienic foods. They are whole-grain foods. And the most delightful tidbits that ever went in milk. Serve them often in place of foods which do not meet these standards. Keep all three kinds on hand.

MAKING AND APPLYING DESIGN

III. Color Printing with Linoleum Blocks

An interesting and convenient method of transferring a design to the fabric that you wish to decorate is by block printing. The process, in brief, is to carve the unit of your design upon a block, color the printing surface of the die and stamp the design on the fabric at regular intervals.

In its uses block printing has many similarities to stenciling; you can use it effectively for decorating curtains, bureau covers, table runners, scarfs, waste-paper baskets and many other articles. The restrictions that the process imposes are that the fabric must not be too dark in color, and that it have no heavy nap, as velvet or plush has. Also in block printing, as in stencil work, the design must be very simple. That means that you must select as the form of nature from which you derive your motive a simple subject.

The crocus, of which a plant analysis is shown here, lends itself admirably to the purpose of block printing; but any simple flower that appeals to you will serve your purpose equally well. When you have decided what you intend to make and on what material you will make it, you are ready to create the unit of your design. A careful study and analysis of the flower will give you a choice of many pleasing forms that would serve admirably for the unit. If you will compare the accompanying plant analysis and the photograph of the bag, you will see what elements were chosen as the unit for the all-over pattern and the border of the bag.

When you have created your unit and planned its distribution over the material, you are ready to prepare the block. By using linoleum mounted on a wooden block instead of a plain wooden block you will save much time and work, for the linoleum is easier to cut than the wood, it does not split so readily, and its printing surface is as good. You can buy linoleum in various styles and thicknesses; for block printing you want linoleum that is as heavy as you can get, and that is of the natural color. If it has a printed design on it, it is useless.

Cut a piece of linoleum in some regular shape, as a square, triangle or rectangle, whichever best suits the character of your unit, and glue it on a piece of wood of similar shape about an inch thick; in order to get a perfectly flat printing surface, keep a weight on the block until the glue is thoroughly dry. No block should be more than three or four inches square. If you are to make several blocks, you can mount a larger piece of linoleum on a larger piece of wood and then saw out whatever shapes you want. The simplest method of transferring the design to the block is to make a tracing with a soft pencil on heavy paper; you can do that by holding the sheets against the window. Then hold the heavy paper against the window and trace the design on the back of it; now place the paper on the block with the side first traced in contact with the linoleum, and with a hard pencil go over the design again. The lines of the soft pencil will remain on the linoleum.

With a sharp penknife—wood-carving tools, if you have them, are better—remove the material round the design as deep as the burial that forms the foundation of the linoleum. Keep the edges of the design sharp and clear-cut.

The next step is to prepare the fabric for stamping. Pin it securely on a table with a pad of several newspapers or pieces of cloth under it. Next measure the surface and mark with pins or a soft pencil the position of the spaces to be filled with the unit. If, for example, the block is two inches square and the design is a border, the part of the pattern that is to receive the border should be divided into two-inch spaces. You must use care in that work, for the final stamping must be done quickly and accurately.

You are now ready to color the printing surface of the block. On fabrics use artist's oil colors. The following four are all that are necessary for this kind of work: alizarin crimson or crimson lake, chrome yellow No. 2, permanent blue and flake or zinc white. The first three are primary colors, and you can get all other colors by combining those three in different proportions. White serves to

lighten and soften the other colors. In mixing colors add turpentine, for they are too thick to use as they come from the tubes.

The colors should always be a few shades darker than the material or background, and yet not so dark as to make the design seem like a hole in the fabric. On a very light material you will naturally use lighter and softer colors than on a darker material. Do not apply the colors so thick that they destroy the texture of the fabric, or so thin that they run. You will be wise to experiment on some scraps of the material before you begin.

You can put different colors on the different parts of your unit and stamp them at the same impression. For example, if your unit is a blossom, you may have the petals pink, the centre a dark red, and may repeat that dark red on the outer tips of the petals. You can effectively blend two colors in large units, but do not try to do it in units that are less than one inch square.

The natural colors of the plant from which you derive your design need not limit the colors that you use; you can conventionalize the color just as you conventionalize the design. Indeed, you should avoid the full colors of the natural flower, for they are too suggestive of pictorial effect, which, as was pointed out in the earlier articles of this series, is to be avoided in this kind of design.

All that remains to do now is to stamp the impression of the block on the cloth. Guided by the pencil marks or pins, place the block firmly on the material and give it a sharp rap with a hammer. The block will leave a clean, clear print of your unit. Repeat the process until you have filled the necessary number of spaces.

The bag shown in the photograph gives an application of the process of decoration described above. It is made of natural-colored pongee silk, and is ten inches wide and fourteen inches high. A yard of material thirty inches wide will make two bags, and besides, furnish remnants for experimenting with the block.

To make the bag, cut a piece thirty-four inches long by eleven inches wide; fold it lengthwise and crease along the fold that forms the bottom of the bag. After turning the side edges in half an inch and the top edges three inches, sew the bag together. Run two rows of stitching five eighths of an inch apart round the top about two inches from the edge; through the casing thus formed in the double thickness run silk cords. You can finish off the cords with tassels. Line the bag with a pretty colored silk.

Transfer the design to the fabric before you sew the bag together, for thus you can spread your piece of goods flat. The unit of the border design is one and a half inches wide by one and three quarters inches high. The small rosette that forms the unit of the all-over pattern is repeated at regular intervals of two inches vertically and three inches horizontally.

The color scheme of this bag consists of a cool red and a subdued orange about equal in tone. In the border red is used at the top and blended to orange at the bottom; the pattern gains variety by having the middle petal of each unit entirely of red. In the dot design the three large petals are orange and the four smaller divisions red.

PRACTICING WITHOUT A TEACHER

THERE are many girls who have acquired some facility in piano playing and who are anxious to progress but are unable, for one reason or another, to employ a teacher. Finding that they are falling into careless habits and that their practice is becoming spasmodic and unprofitable, they get discouraged and are tempted to give up their music.

If you are one of those whose music is in that precarious state and you should come under the instruction of a good teacher, he would immediately put thought and system into your work. If it is possible for you to take only one lesson a month or even one every two months, by all means avail yourself of the opportunity; but if that is absolutely out of the question, you can become, by a little careful planning, your own instructor.

You must first have a daily period for practice. Perhaps other occupations make it difficult for you to accomplish it, but even a very little regular time every day—say from twenty minutes to an hour—is better than several hours one day and no time at all for several subsequent days. A good half hour of steady, concentrated practice just before or after breakfast will prove the most wonder-working thing that you can do.

Observe the custom rigorously for five days a week, and on the sixth give yourself a lesson. With a critical ear, and taking the attitude of an impartial listener, go over what you have previously practiced, and assign yourself a definite amount of work for the next week. Write down on a card just what you are to practice each day and the time that you are to give to each item. The morning practice, when brain and fingers are fresh, will furnish the foundation of your musical work; such other playing as time permits you can add during the day.

Assuming that you adhere closely to your half hour a day, let us see how you can most effectively employ it. Begin with five minutes of technical work.

BAG MADE OF PONGEE SILK DECORATED WITH A DESIGN BASED ON THE CROCUS

In that you should strive to acquire flexibility of muscles and command over the principal finger motions. Strike a key with each finger several times, making the motion prompt and flexible. Then play one or two scales or arpeggios slowly and evenly for a few times. If you are not familiar with scale and chord fingering, you should get one of the fingered editions of scales and chords, of which there are many in print.

Ten or fifteen minutes should next be devoted to the careful study of that part of a new piece that you have selected to learn. In order to keep your interest alive you should constantly supply yourself with fresh material for the purpose. There are many ways in which you can keep on the track of new music. If there is a music store accessible, the salesman will suggest pieces of the required grade. Otherwise you can write to leading publishers for graded catalogues; they are glad to furnish them. Most publishers, too, advertise albums of classic compositions that contain an abundance of good music.

Be sure that the music you select is worth while—that it is really good music. Use only the best editions, those that are fingered and phrased especially for students. Above all, select music that is well within your ability—pieces that are neither too long nor too intricate.

Taking a short passage, perhaps a line or two, of the piece that you have chosen, divide it into single measures and analyze each measure, at first with separate hands, in order to make sure of the position of each note and the fingering and the time it should have. Afterwards build those measures up by degrees, and finally unify them by the proper phrasing. On the following day study a few more measures on the same plan, and join them to those that you have previously learned. So day by day you will master new passages until you have the entire composition under your fingers.

The remainder of your half hour you should devote to a review of one or two pieces that you have previously learned on this plan. Use all care to discover any omissions or mistakes, and every day commit to memory a few measures of the piece that you review. Try to invest the composition with significance. Attach some imaginative conception to it, or give it some emotional stress that will make it interesting to one who hears it.

There is not room for much sight reading in your brief half hour; but if you can occasionally devote a few minutes to it you will be well repaid. Collections of simple piano pieces are useful for that purpose, and the playing of duets with a friend or of accompaniments for instruments or singers is excellent practice. Be careful in such reading to proceed slowly, and, having once begun a composition, to pursue it to the end, unless it proves utterly impracticable.

Regularity and care are the requirements for success; with them you ought to move steadily forward. Seize upon any helps or criticisms that present themselves. Your friends who are studying with teachers will be glad to give you hints. Read constantly one of the musical magazines devoted to the interests of students and teachers. Join a musical club, if one is available; and, above all, take every opportunity to hear good players at recitals or concerts.

By keeping your mind alert toward the newest and the best musical thought and your enthusiasm alive and active you should be able to make such an improvement in your work as will put to shame those of your companions who are neglecting to take advantage of the expert instruction with which they are favored.

DOLLARS FROM GINGHAM AND BEANS

[The third in The Companion series Earning Money at Home]

A FEW years ago a young girl found it necessary to earn some money if she was to continue to live at home, as she wished to do. The family residence is on a much-traveled highway, over which great numbers of motor cars pass every day and along which crowds of children go to and from school. It occurred to the girl that the site offered a good chance to sell things.

She spent ten cents for seeds of common garden bush beans, which she planted in an unused sunny spot in her father's garden. When she had harvested the crop, she bought five yards of strung,

bright-colored gingham and made it into bean bags. Some she made square, some round, some in the shape of animals, and on them she embroidered eyes, mouths and noses in colored worsted.

These bags she displayed for sale on a large square of canvas that she stretched on the roadside fence. The whole supply sold almost at once.

The gingham had cost seventy-five cents and the beans ten cents. The hundred bags that she made sold at ten cents apiece, so that she had a profit of nine dollars and fifteen cents.

The next year she made six hundred bags, and by making them a little more elaborate sold them for twenty-five cents apiece. Her profits that year were a hundred and forty-five dollars. By degrees she added other things to her stock, such as eucalyptus buds and pine-needle pillows, the materials for which she collected while the beans were growing. Now the profits from her little business keep her in spending money the year round.

NOVEL MAY BASKETS

THE good old custom of "bringing in the May" calls for a great number of baskets, as every observer of May Day knows. There is a need for all varieties, from the roomy kind intended for large, broad-leaved flowers to the smaller shapes used to hold the tiny, short-stemmed blossoms for which the Maytime season is famous. The baskets here shown are pretty and unusual.

The foundation for each basket is a paper cup—either an ordinary drinking cup, such as may be had for less than a cent, or a cup made out of smooth, flexible cardboard. Baskets having that kind of foundation may be filled with damp earth or moss without danger of injury, and therefore are well adapted to holding flowers in warm weather.

Cover the cup neatly with a strip of white or colored crepe paper seven inches wide by eight inches long, finish the base with a disk of heavier paper, and add a ribbon hanger in some prettily contrasting color. To make the tulip basket shown in Fig. 1, paste round the cup neat flower designs cut from crepe or other colored paper. All cup-shaped flowers—such as poppies, snowdrops and daffodils—lend themselves well to this purpose. By way of variety, the extra paper turned inside for a lining may be brought up and

FIG. 1

FIG. 2

tied or gathered into the shape of a bag. A decoration that will please children is the figure of a bird (Fig. 2) or of a fairy fastened to the inner edge of the cup and apparently poised on the rim.

The rosebud basket (Fig. 3) requires a little more work, but it is pretty enough to be well worth the trouble. Its long stem and broad, up-reaching petals make it appear a good deal larger than the other baskets. Cover the cup with pink, white or yellow crepe paper, and build the rose round it. To make the flower itself, cut out from the same paper, and crimp at the edges, seven petals five and a half by six inches (Fig. 4) and three larger petals (Fig. 5). The easiest method is to cut patterns first from plain paper, and then, folding the crepe paper as often as is necessary, make all the petals with only two cuttings. Sew the smaller petals, lapped like rose leaves, round the lower edge of the cup, and over them, in the same place, sew the three larger petals. The top edges of the larger petals will fall just a little below those of the smaller petals and thus furnish the pretty, irregular outline of the real rose.

To make the calyx, fold green paper in three thicknesses and cut a pattern like Fig. 6. Take care to cut the pattern all in one piece. Spread the calyx round the rose with the clefts half an inch above the base of the cup. Make a stem by twisting green paper round a six-inch piece of flexible wire, and ornament it with two or three paper leaves with saw-tooth notches round the edge. Stuff a little raw cotton into the bottom of the calyx, insert the stem, and secure the whole as naturally as possible. Hangers or handles of narrow green ribbon will provide the final touch. If you choose, you can give the basket a flat base instead of a stem by pasting flat the bottom of the calyx and finishing it off neatly with heavy paper.

The same working plan can be followed with other flower forms. Such baskets should find ready sale at church fairs and bazaars. They would serve well, too, for decorative purposes on such occasions. A festoon of giant rosebuds or a dozen yellow daffodils hung in a ring will prove a pleasing addition to any booth.

There is no limit to the designs and color combinations that can be used for baskets of this kind. The necessary materials are inexpensive, and the work is so simple that even a small girl can have an attractive collection ready for hanging on the first of May.

TERMS

THE YOUTH'S COMPANION is an illustrated weekly paper for all the family. Its subscription price is \$2.00 a year, in advance, including postage prepaid to any address in the United States, \$2.25 to Canada, and \$3.00 to foreign countries. Entered at the Post Office, Boston, Mass., as second-class matter.

New Subscriptions may begin at any time during the year.

Money for Renewals should be sent by subscribers directly to this office. We do not request Agents to collect money for renewals. Payment to strangers is made at the risk of the subscriber.

Payment for The Companion, when sent by mail, should be by Post Office Money Order or Express Money Order. When neither of these can be procured, send the money in a Registered Letter.

Silver sent through the mail is at the sender's risk. It is liable to be stolen or to wear a hole through the envelope.

Renewals. Three weeks after the receipt of money by us, the date after the address on your paper, which shows when the subscription expires, will be changed.

Always give the name of the Post Office to which your paper is sent. Your name cannot be found on our books unless this is done.

Letters should be addressed and orders made payable to

PERRY MASON COMPANY,
The Youth's Companion,
Commonwealth Ave. and St. Paul St., Boston, Mass.

BILIARY COLIC

IT is difficult to say which is the more painful, biliary colic or renal colic. The origin of both is the same—the slow passage or the arrest of a solid body in a membranous canal intended to transmit liquids only.

They are both marked by paroxysms of agonizing pain that radiate in every direction. In renal colic the pain is chiefly, or primarily, in the back and loins; in biliary colic it is on the right side of the abdomen just beneath the ribs; but in both cases the pain darts and spreads to such a degree that the sufferer can hardly remember where it began or tell where it is worst.

Biliary colic is very likely to begin in the night or in the early morning, after an earlier period of rather broken sleep. Its cause is the passage of a gallstone from the gall bladder to the intestine, and as there may be several stones in the gall bladder, the trouble is very likely to recur in those who have suffered one attack. The immediate occasion of the attack sometimes appears to be indulgence in an unusually heavy dinner, although it may come on without any apparent cause.

The pain is agonizing and may even cause death in a person who has a diseased heart. Vomiting, which often comes on, only adds to the distress unless by some happy chance the abdominal movements concerned in the act force the gallstone out of the canal into the intestine. Then the pain ceases at once.

Ordinarily the attack lasts several hours, and stops as suddenly as it began; it afflicts persons over forty; and women more often than men.

Apart from the pain, an attack of biliary colic is a very serious matter; a person who has had it should at once seek medical advice as to the means for preventing further attacks. A surgical operation may be necessary if many gallstones are present. Fortunately, this is now not a very serious procedure.

MRS. REYNOLDS AND THE BORROWERS

MRS. HAYES had finished her call and risen to go, and yet, very clearly, there was something on her mind. At the door she turned impulsively.

"I don't know what you will think of me, Mrs. Reynolds, but I feel as if I must warn you—as if it wouldn't be right not to. Have the Carletons been over yet?"

"No one has been here to call, but Mrs. Carleton has stopped at the gate once or twice."

Mrs. Hayes hesitated. She was no lover of idle gossip, that was clear.

"It's just—the way they borrow," she said. "And you never get things back—or, if you do, nine times out of ten they are spoiled. They borrow everything—almost the shoes off your feet."

"Thank you, very much," Mrs. Reynolds responded cordially. "I appreciate it. I have several things I should not care to lose." She was laughing a little, and her warm handshake sent her caller away comforted.

Half an hour later Mrs. Reynolds had another caller, the oldest Carleton girl. She made her errand known without any embarrassment.

"Mother's broke her carpet sweeper, and she wanted to know if she could borrow yours, 'cause company's coming."

"Won't you sit down?" Mrs. Reynolds asked pleasantly. "When is your company coming?"

"No'm, I guess I can't. She's coming to-night."

"So you want the sweeper for to-day. That is very convenient for me since my sweeping day is to-morrow. I know you will be busy with company, so tell your mother not to bother to return it; I'll come for it myself in the morning."

The Carleton girl gave her a puzzled look.

"I dunno as we'll be through with it," she ventured. This was clearly an experience for which she had no orders.

A glint of laughter lighted Mrs. Reynolds' eyes.

"If you are not through with it you can send for it again," she said.

She was as good as her word. The next morning she went over to the Carletons' for her sweeper. Mrs. Carleton received her somewhat stiffly, but Mrs. Reynolds chatted so pleasantly that she soon "thawed." She even gave evidence of her good feeling by sending over in the afternoon for the ice-cream freezer.

Mrs. Reynolds was glad to lend it. She herself, it appeared, was to make ice cream Saturday. Mrs. Carleton need not bother; she would send for the freezer.

In the next week the Carletons borrowed a lawn mower, cake tins, curtain stretchers, a ladder and a pair of scales. Mrs. Reynolds lent each thing cheerfully, and went for it within two days. The second week they borrowed only garden shears and a cutting table. The third week Mrs. Carleton came, but only to call.

"I've wanted to ask you," Mrs. Hayes said, hesitatingly, one day when she met Mrs. Reynolds, "how you get on with the Carletons."

"Oh, very pleasantly. They haven't borrowed anything for a month."

Mrs. Hayes' eyes widened. "I don't see how you do it!" she exclaimed.

ANSCO

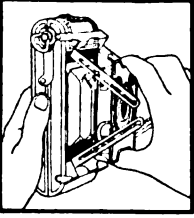

CAMERAS & SPEEDEX FILM

The Sign of the Anso Dealer

Anso Vest-Pocket No. 1. Equipped with single achromatic lens, \$6.00; with rapid rectilinear lens, \$9.50. Other Anso Cameras, \$2 up.

Closer than your best friend is the Anso Vest-Pocket No. 1, for it stays with you always—in your pocket. No interesting picture can escape it, for it is self-focusing and can be quickly brought into action by a slight pull on the front.

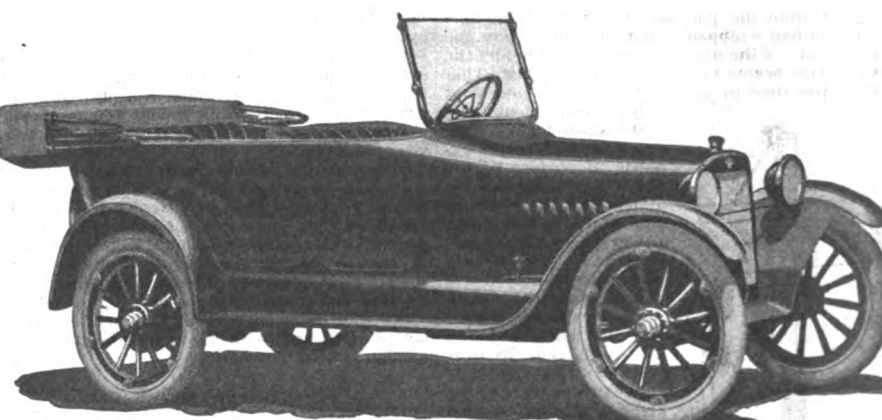

A slight pull on the camera front gets it ready to "snap."

The Anso V-P No. 1 is the smallest and lightest camera made to take 2¼ x 3¼ pictures. Sharp, clear enlargements can be made from the negatives. Go to the Anso dealer and ask for a demonstration, or write to us for a catalog.

ANSCO COMPANY BINGHAMTON, NEW YORK

SAXON "SIX"

Giving Good Service—Gaining Good Will

This is the Saxon "Six" Record

It is one thing to give good service when new.

It is quite another and greater thing to continue to give good service after thousands of miles of use.

Though the first wins your good will, the second holds it—and deepens it.

It is this enduring quality of Saxon "Six" that gives permanency to your satisfaction in its performance.

It offers a rugged resistance to the never-ceasing attack of road and weather long after cars of lesser strength have succumbed.

Its power-flow retains practically its original quietness and smoothness.

Its easy-riding, even-driving quality is undiminished.

There seems to be no lessening of its amazing flexibility, no slowing down in its swift pick-up.

So that the good will Saxon "Six" gains at the start by its ability to give good service is retained and intensified by its ability to continue that good service, day after day, month after month, season after season.

Saxon "Six" is \$865; "Six" Sedan, \$1250; "Four" Roadster, \$495; f. o. b. Detroit. Canadian prices: "Six" Touring Car, \$1175; "Six" Sedan, \$1675; "Four" Roadster, \$665. Price of special export models: "Six," \$915; "Four," \$495; f. o. b. Detroit.

Ask any questions you wish about the contents of this page. They will be gladly answered.

The BOYS' PAGE for APRIL

Address your letters to THE EDITOR OF THE BOYS' PAGE, THE YOUTH'S COMPANION, BOSTON, MASS.

"RED FLAG UP!"

FLOAT fishing is a good deal like fishing through the ice, except that you do it in a boat instead of on skates. You can put the equipment together with the aid of a small saw, an auger, a hammer, a jackknife and a few pins and tacks.

The float is a piece of board about five inches square. A long board of hard wood half an inch thick that will not crack easily or splinter will furnish you with plenty of material.

In the centre of each square bore a hole about three quarters of an inch in diameter, as shown in Fig. 1. Then with your knife fashion an upright about seven inches long, of the shape shown in Fig. 2. Its diameter at the top should be a fraction of an inch smaller than that of the hole you have bored through the square, and the lower section a little larger than the diameter of the hole, so that when you thrust the upright into the hole from beneath only the upper three and a half inches can pass through.

To fasten the upright to the body of the float (Fig. 3), tie a bit of cord round the upper part of the upright close to the top plane of the square, bring the cord down over the side of the square, and tie the other end of it round the lower part of the upright close to the lower plane of the square.

Now you have the superstructure completed, and you find that it rests upon the water with the stick through it pointing straight up and down, the round part out of the water, and the square part under the surface.

The next step is to attach the line, which should be about twice the length of the line that you would ordinarily use from a boat. Fasten one end of it securely round the upper portion of the upright (as

In Fig. 3) close to the upper plane of the square; wind on half of the total length, leaving the other half of the line free. In the upper end of the upright insert an ordinary pin and bend it as shown in Fig. 3. Make a small loop knot in the line, fasten it loosely over the pin, and let the free length hang down into the water. Now comes a very important detail in the sport of float fishing: from a red rag—flannel is the best material—cut an oblong strip several inches long and an inch wide, and tack one end of it to the under-water end of the upright. (Fig. 3.)

Perhaps you have half a dozen or twenty or thirty of these floats—according to the area of water in which you intend to fish. You and your "chum" now set forth in a rowboat or in a sailboat, carrying your pail of live bait; you put out the floats, one at a time and some yards apart, and then wait for the sport to begin.

The perch or the pickerel or the bass or, in salt water, the bluefish comes along, lingers hungrily about your bait, and then gobbles it, hook and all. As he swims away, his weight overturns the float above him.

You shout, "Red flag up!" and the chase is on.

Away you row in pursuit of the fish, which endeavors to run off with your float. The loop has slipped from the pin, and the half of the line that you had wrapped round the upper (now the lower) part of the upright must unwind before the float itself begins to move away very fast. That gives you time to get started toward your float before your float gets really started away from you. The five-by-five expanse of surface of the board is a handicap too difficult for the ordinary fish to carry along for any great length of time. Eventually—the smaller your prize the sooner it will be—you are going to catch up with that float.

If the fish are biting well, you soon discover that you do not have time to rebait the hook of the first float you have pulled in, for off to the starboard another red flag is up, and that float perhaps is disappearing. It has been under for two minutes now. The fish must be a "whopper"! "Red flag up!" shouts your "chum," who has been gazing sternward. And "Red flag up!" you yourself cry, almost at the same moment, for you have just given a hasty glance to port.

And so sometimes you will find seven or eight red flags in as many directions. Which shall you choose to pursue first? This one that is nearest is hardly being pulled under at all; that one farthest out, which you started for first, has reappeared for a moment, only now to go under again; and as it undoubtedly is a big prize in prospect, you row in that direction.

Perhaps you have to row clear across the lake before you catch up. The fish probably is making for the seclusion of those lily pads that you see near the opposite shore. It is a massive pickerel, and you sigh with relief when he is safe in the boat; then off you go again, back to the region where the other flags are bobbing.

Such is the sport of "red flag up." Once a boy and his father in a sailboat on Massachusetts Bay chased a float for more than a mile. The wind was blowing so that they had to tack often; and, at last getting close to their quarry, they found it necessary to sail off in still a new direction when the gamy fish decided to seek deeper waters in another part of the bay. They spent an hour in overtaking the float, but the reward was a bluefish too large for the boy to handle alone.

The oceans with their bays and harbors are free for this sport at all times, but in the inland waters of some states the method is restricted to certain kinds of fish; in a few states it is not permitted. Therefore, anyone who wants to try the sport on inland waters should ascertain definitely what the law is in regard to it. Your postmaster or your legislative representative or perhaps your town librarian may be able to furnish you with the

YOU SHOUT "RED FLAG UP!" AND THE CHASE IS ON

information, but the safest way is to write to the commissioner of fish and game of your state.

A word about live bait: you need not keep your minnows in water. Spread a layer of dry sawdust on the bottom of the pail, then a layer of minnows, then a layer of sawdust, and so on. There is a chemical property in the sawdust that will keep your bait alive longer than will water that is growing stale. Another advantage is that your pail and its load will not be nearly so heavy to lift.

THE WAY TO START

TO get the proper starting position for the sprints, kneel on the ground with the toe of your front foot about four inches behind the line, and the knee of your back leg alongside the joint of the great toe of your front foot. If your legs are long, place your front foot about six inches behind the line, and your back knee an inch or two behind the great-toe joint of your front foot. With your fingers on the line, come to "set" position by pushing slowly with both feet until the front thigh is at exactly a right angle with the calf of the leg and the back thigh is at a little less than a right angle, with the shin parallel with the ground. That will bring your shoulders about two inches over the line, your back level, about four fifths of your weight on your front foot and one fifth on your hands. Keep a firm, steady pressure against your back foot.

Be particular about every one of those details. Have a friend see that you get them right. If you are long-legged and short-armed, you may not be able to get your back level when your legs are at the proper angle, but do not let that discourage you. The leg angle is the more important, because the power of the leap depends entirely on that.

When the starter calls, "Get set!" concentrate attention on the gun. Think of nothing else. Have every nerve and muscle tense. Be ready to explode every ounce of energy at the crack of the pistol.

When it cracks, give a quick, powerful leap straight forward from both feet. Do not try to leap as far as you can—try to leap quickly. Do not leap mostly from the front foot; that will throw you up into the air. Do not leap mostly from the back foot; that will throw you too low and may cause you to stumble.

Take a short, quick second stride and come up gradually into your running form, "digging" as hard as you can all the while. Not until you have gone ten or fifteen yards should you reach your regular running form. Straightening at once slows your progress.

Your arms should help you in getting off quickly. As you leap from your marks, sharply jerk forward the arm opposite the back foot. Throw the other arm back rigid and bring it forward in turn with the first stride of the front foot, so that the opposite arm and leg move in unison. That will require considerable practice, but will more than repay the time and trouble that you give to it.

Dig your heels parallel with the starting line, not at right angles to it, and make them deep enough to hold four spikes.

AN OPTICAL TOP

ONE of the latest optical illusions is a little contrivance that will furnish a great deal of amusement for anyone who makes it. The materials needed are some ink, a piece of cardboard, a pin, some sealing wax, a pen and a pair of compasses.

On the cardboard describe a circle about two and one half inches in diameter. Divide the circle into halves and fill in one half with jet-black ink. Now divide the other half into four segments, and in each segment draw in ink with your compasses and pen three lines, as shown in the figure. When the ink has dried, cut out the circle of cardboard with a pair of scissors.

Push a pin through the centre clear to the head, turn the disk over, and drop a piece of melted sealing wax round the pin on the side opposite the head. Hold the pin erect until the wax has hardened, and the top is complete. Now hold the top, inked side up, under a strong light, and spin it slowly by twirling the pin with your fingers. Some of the lines that you have drawn on the cardboard will appear colored, and the colors will change if you reverse the rotation. A strange thing about the top is that different colors will appear to different persons.

A Test For Your Shoulder Joints.—To test your shoulder joints, hold a tapeline at arm's length in front of you, with your hands about thirty inches apart and your knuckles up. Now try to pass the tape over your head and downward behind you. It is natural and permissible to bend one of your arms and to bring your hand near the shoulder. Reduce the distance between your hands as practice permits. You will find that below thirty inches "every inch counts." Two other interesting

"stunts" to prove your suppleness appeared in the Boys' Page for February. Look them up again.

A SIMPLE METHOD OF LEARNING THE STARS

MOST boys wish that they knew more about astronomy, but many of them are deterred from taking up the study because they think that it is too "deep" for them. It is as easy to learn interesting things about the stars as it is to learn interesting things about flowers or birds.

If you wish merely to be able to converse intelligently about the night skies and to answer the questions that your friends ask as to the names and movements of the bright stars, you can acquire the necessary knowledge in a few evenings, and with no working materials except instruments that you can make in fifteen minutes, and a star map that you can buy of almost any publisher of school-books or dealer in optical goods. If you have difficulty in finding such a map, write to the Editor of the Boys' Page. He will gladly tell you where you can get one.

You can get a good idea of what a star map is by imagining a photograph of the whole night sky. The stars appear in their relative positions, and indeed for practical purposes their relative positions may be said not to change. That makes it possible to identify stars after having first learned one or more of them.

For example, if you learn to know Arcturus you can easily learn Spica and Denebola, because the three together form an equilateral triangle.

If you do not know the polestar already, it will be well for you to learn that first of all. A great many persons who can name no other know the polestar, and know that the two stars in the bowl of the Dipper opposite the handle point to it. It is an interesting star, because it is the only one in the whole heavens that apparently never moves. It is always in the north, and, although you will notice that in the course of a few hours other stars set behind the horizon or move across the sky, the polestar holds its place.

Why is that? Well, in the first place, the movement of the stars across the night sky is due to the motion of the earth. The stars rise and set—or seem to—just as the sun does. For our purpose, we shall speak of them as moving, just as we speak of the sun as moving. Stand facing the north some night and imagine that you are holding the handle of an open umbrella with the tip of the central rod just touching the polestar. The sky itself is the inside of the umbrella, and the stars are bits of white paper pasted on the black cloth of the umbrella. Now, if you slowly twirl the handle of the umbrella toward the left, the west, the stars, although they keep their relative positions, will move all together toward the west. The only star that does not move is the polestar; that merely spins in its fixed place, because it is the pivot—the tip of your umbrella. That illustrates the movement of the stars, and explains why the polestar is stationary, and why the farther a star is from the polestar the larger the circle it describes.

Having learned how the stars move, you know why it is always possible to identify one star from its position among other stars that you already know, for the relative positions of the stars do not change. By comparing the stars, then, with the pictures of them on your star map, you can learn their names. To a great extent you can do it "by eye," because star groups are characteristic, and you can remember them accurately enough to recognize them on your map. In some cases, however, you will make mistakes. Then it will be necessary to be a little more scientific and measure star distances. That is simpler than it sounds. Star distances are measured in degrees. The diameter of the moon is half a degree. The Dipper from end to end is about 26°. You can prove it in this way:

With a pair of calipers as a hinge, fasten together two straight sticks about a foot long, so that you have what looks like a large pair of wooden compasses that can be moved to form any angle. Squinting along one arm of your compasses as if along a rifle barrel, sight the end star in the handle of the Dipper; then with your eye still at the apex of the instrument, point the other arm at the end star in the bowl of the Dipper. The angle between the two arms of your compasses will be 26°, which is the distance between the two stars.

You can measure the angle of your compasses by placing the apex of them at the centre of a large circle that you have drawn on a sheet of cardboard and marked on the circumference with degrees. The whole circumference is of course 360°, half of it is 180°, a quarter of it is 90°, and an eighth is 45°. A little experimenting will enable you to divide the eighth of the circle into forty-five equal parts, each of which will be a degree. With your compasses and the circle that you have drawn, you can determine, roughly, the distance

of any star from any other. Then you can determine the angles that represent certain lengths on the star map.

An article in the Boys' Page for May will tell you something about the planets, which are, of course, quite different from the stars.

KICK THE BAR: A NEW GAME

IN all the large cities there are thousands of boys whose parents live in the tenement-house districts, and who have no place in which to play except the open streets. Those conditions exist in Boston, where the narrowness of the streets and the crowds place still further restrictions on sport. Most of the boys have little or no money to spend, even for such necessary and inexpensive articles as a baseball and a bat; yet out of their small resources they have created a new, original game that is as lively and as exciting as baseball or football, and that requires but a single implement, which costs them nothing and is almost indestructible.

The boys call the game kick the bar, obviously from the implement with which they play it and the use to which they put the implement. It is a piece of old rubber garden hose or single-tube bicycle tire fourteen or fifteen inches long, cut diagonally across the ends to enable it to stand against the side of the curbstone, convex side out, as shown in Fig. 1.

The players on a side may be any number from four or five up. The regular clubs, of which there are many in different parts of the city, usually have nine members.

Although they call the field of play a diamond, it is really a square. The home plate is usually an electric-light pole or the post of a street lamp. It may be only a paving stone near the curb, with a chalk mark on it; but it must be on the right-hand side of the street, as the catcher faces.

The line from home plate to first base extends along the curb; that from first to second crosses the street to the opposite curb; that from second to third returns along the left-hand side of the street; and that from third to home recrosses to the starting point. A glance at Fig. 2 will show the arrangement and also the positions that the players occupy.

The positions, however, are not arbitrarily fixed. As in baseball, each player takes the place where he can do the most good, and covers as much ground as he can. When fewer than nine players take part, the positions indicated by the higher numbers are left unfilled.

Play begins by placing the piece of rubber—the bar—against the curb. The fielders on the "out" side are in their places. The first player on the "in" side takes a short run in the gutter, parallel to the curb, kicks the bar as far as possible into the diamond, and then continues on toward first base.

If anyone of the "out" side catches the bar on the fly, the runner is out and the next player takes his turn at kicking. If, on the other hand, no one catches the bar on the fly, whoever gets it throws it at once to the catcher at home plate.

Here comes in one of the peculiarities of the game: all players must be put out by the catcher and at the home plate, except such as are caught out on flies. There are no basemen in the ordinary sense. The players whose stations are at or near the bases are merely fielders who try to catch the bar on the fly or to recover it and throw it home.

If the first player was not caught out on the fly, he is safe at first base if he reaches it before the catcher at the home plate receives and holds the bar. If he does not reach first base in time, he is out, and the next player on his side kicks off.

Another peculiarity of the game shows itself when the bases are full. That is the rule that permits the catcher to say, as soon as he has caught the bar, which runner he wishes to put out. Since it is also a rule that after a kick the men on bases cannot start to run until some fielder has caught or recovered the bar, the game is full of excitement and unexpected turns, and calls for the utmost agility.

When three members of a side have been put out, the teams change places, as in baseball.

Playing the game in the street is, of course, only a makeshift. Where space is available, the boys prefer to play in a field. There a square stone or a stake or a block of wood takes the place of the curb; and the lines of a baseball diamond are followed, rather than those of a square.

No small part of the fun of kick the bar comes from the fact that the boomerang-shaped piece of rubber pipe has a most wobbly and erratic flight that is hard to judge and that makes it difficult to catch. To drive the bar a long distance it is necessary to strike it, not with the toe, but with the top of the foot halfway between the toe and the highest part of the instep.

A STAMP FOR CANADIAN TROOPS

ONE of the most interesting stamps the world war has produced has only recently reached the hands of American collectors. It is one issued in Ottawa, Canada, for use by relatives and friends of Canadian soldiers stationed on the Bahama Islands. The Canadian government issued a stamp for special dispatch of mail matter from Canada to the Canadian soldiers on the Bahamas. It seems odd that Canadian stamps were not used. This is a philatelic mystery yet to be solved.

The stamp employed is the fivepence orange of the Bahama issue of 1903, but surcharged in black, SPECIAL DELIVERY. The picture on the stamp is of "the Queen's Staircase," near Nassau, one of the most beautiful views on those islands. It is understood that only eight hundred were issued; if that is true, the stamp will become one of the war rarities.

FIG. 3

FIG. 2

FIG. 2

Famous Hill-Climb of HUDSON SUPER-SIX

In a hundred cities, Hudson dealers have won the local records with the Super-Six.

Not in America only. In several countries Super-Sixes have won the hill-climbing records.

But the Pike's Peak climb last September was the world's supreme test. There twenty great cars, all specially built, met for a race to "the top of the world." And the Hudson Super-Six made the best time of all.

What They Drove

The Super-Six, remember, is a small, light Six. It doesn't win by size. It won these tests just as it won all other worth-while records—by endurance.

This invention—patented by Hudson—has minimized motor friction. It thus added 80 per cent to the motor's efficiency. It nearly doubled the motor's endurance.

You don't care to climb Pike's Peak at the speed the Super-Six showed it could do. You don't care to go 102 miles per hour, as a Super-Six stock chassis has done.

Or 1819 miles in 24 hours, also with a stock chassis.

But you want the car which holds those records, if you buy a great car. Not because they prove capacity, but because they prove endurance—prove that no service you will ever demand will equal its capacity.

All-Round Ruler

But the Hudson is now more than monarch in performance. It is fully as distinctive in style and beauty this year, in finish, in equipment and in luxury. It has a new gasoline saver, in the form of radiator shutters, which, through controlling the heat of the motor in part, overcomes the disadvantages and waste of the present poor grade of gasoline. It has a patent pneumatic carburetor, exclusively Hudson, self-adjusting to every engine speed.

In whatever you prize most—performance, style, beauty or economy—you will find the Hudson leader. That's why it leads all other front-rank cars in sales.

Overland
 TRADE MARK REG.

—two minds with but a single thought

Every indication points to a demand very much in excess of the possible supply of automobiles this year.

We are prepared.

This year we apply the economies of vast production for the first time to a *complete* line of automobiles—an end toward which we have been working for eight years.

Light Fours, Big Fours, Light Sixes and Willys-Knights, including the marvelous Willys-Knight Eight, are built and sold with

- one executive organization,
- one factory management,
- one purchasing department,
- one sales force,
- one group of dealers.

There is now an Overland or a Willys-Knight for every class of buyer.

Every one of these beautiful cars is a better car—better in appearance, in performance and in riding comfort.

One of them is the car of your dream under the evening lamp.

See these cars now. Get a car yourself this spring.

TWO DOLLARS A YEAR · FIVE CENTS A COPY

KNEE-DEEP in snowy billows of fine cotton cloth, long ravelings of which clung to her trim dark-blue morning dress, Fair Ellicot looked with troubled eyes across the quiet, grassy square.

From the other side of the square a row of quaint dormer windows above laden apple boughs peered placidly back at her. Those dormer windows were old friends of hers.

"It's a shame!" she declared to herself and the billows, as she reached for two selvages and began to measure one against the other. "A thorough shame!"

She snipped emphatically with her scissors; then, with repeated tugs that relieved her disturbed feelings, she rent apart the breadths of new-smelling cotton cloth. "Ten!" she counted. "And if it's true, I think —"

"In my day," observed some one behind her, "we had to overcast seams down the middle. It wasn't just tear and hem."

"O Aunt Molly!" Fair turned impulsively to the newcomer. "My Great-Aunt Molly Grandon! Did you hear that John Halpine intends to —"

"Sheets first!" Great-Aunt Molly remarked crisply. "Finish tearing — and then we'll try John Halpine for all his future sins."

The brisk little lady—in spite of the silvery curls that framed her fresh-colored face, no one ever thought of her as old—sat erect on the straightest of the available chairs, and looked on while Fair swiftly doubled the remaining piece of material, clipped the fold, and, with a sweep of her round young arms, tore apart the last two sheets.

"A whole dozen?" asked Miss Grandon.

Fair nodded happily. "I told father thirty-nine yards, but he brought me forty. He said he might as well buy an even number of yards while he was at it. So I've allowed for splendid wide hems. Forty whole yards of sheeting! The glory of it nearly took my breath away when I began to measure them!"

"You'll have a proper setting out. Did you ever make up a set of sheets before?"

"Never all by myself," said Fair, "though I helped Cousin Martha hem hers, two years ago."

"And how did you measure them?" inquired Miss Grandon.

"Why, with a yardstick, of course! Wasn't that right? First I thought of doubling and cutting the whole big piece in two, then in two again, and then each of those pieces in three; but it was so bulky to handle that way that at last I figured out exactly how many inches to allow for each one, — a hundred and twenty, — and measured the first one; then —"

"You cut each of the other eleven by that?"

"It came to the same thing. I folded the first so that I could use it to measure the second one, then tore off the first so there would be less to handle, then

used the second to measure the third by, and so on."

"All the way down the dozen?" A queer twinkle lighted Miss Molly's blue eyes.

"Until I reached eleven and twelve, of course," said Fair. "The last piece had just two sheets in it so I didn't have to measure by number ten. I simply halved the piece."

Great-Aunt Molly raised her hands—then let them fall helplessly at her sides. "Fair Ellicot! Bring me that yardstick! Now, you measure the last two."

There was a rustle of the sheeting; then the young girl looked up perplexed. "I—I can't make them come out right. They ought to be a hundred and twenty inches long, but they're almost a hundred and thirty! The piece must have run over forty yards, don't you think?"

Great-Aunt Molly shook her head. "Now, measure number ten."

Fair measured, and then remeasured. Her brown eyes opened wide.

"Scant hundred and seventeen! Aunt Molly, it's bewitched! I can't make it any other length! What ails it? Why are you laughing?"

"It's a lesson you'd have had to learn some time, and no great harm is done, thanks to your father's extra yard. Why, I've known some people who measured that way, instead of making sure that each piece matched the first in length, and got only eleven sheets and a piece over. Some folks tear scant, and some

allow over without knowing it. But I'd let them stay as they are; some day you may need a pair extra long, and there they'll be.

"Now," she went on, "you can tell me what's wrong with John Halpine. I didn't know that he had come back."

"I—I don't think he has," began Fair, bringing her mind with some effort away from the blunder she had made. "But the whole township ought to get up a protest! Think of any man's having the heart to tear down the old, old homestead, where his family had lived for ever so many years before the Revolution, and to put a new house with modern improvements in place of those sturdy old walls! And all because the town council wouldn't pay an exorbitant price for it, when there was a question of turning it into a historical museum! Hasn't he any pride in it? Why, artists and writers have come from all over the country to see it! And think of the old stories of how the Halpine women barred the windows and doors, and kept the Indians from burning it, for days and days, while all the men were away hunting!"

"Who told you?" asked Miss Grandon.

"Oh, Mrs. 'Lias Moody. Imagine a *portecochere* in place of that lovely old pointed trellis with the trumpet vine! It would be sacrilege!"

"You feel proper certain, Niece Fair? You know last week you were so worked up because

the Farrowes were going to let their little granddaughter be adopted by strangers out West, so's not to have the expense of keeping her—and 'twas all talk. And then the fuss about the new rules in the Sunday school that made you feel so discouraged. It was all smoothed over easier than not. Mrs. 'Lias Moody, eh? And she said who told her?"

"She said the whole thing came to her direct from headquarters."

"H'm! Now, I'd give something worth while to know what she'd call headquarters this time. Niece Fair!"

"Yes'm!" with a start.

"How strong in you is the 'Ellicot grit,' as your father calls it? You used to have a plenty — walking little narrow fences, and keeping from crying when you fell down."

"Why, — I hope — there ought to be a good stock of it inside me somewhere!" asserted Niece Fair stoutly. "It's a thing you have to bring out and prove, though, before you can be altogether sure."

"Precisely!" said Miss Molly. "Well, if you've enough 'Ellicot grit' to follow this story back to what Mrs. 'Lias Moody calls headquarters, and bring me word *exactly* how it started, step for step, you shall have those double-damask napkins with the clover pattern for your linen chest. Will you do it?"

Fair gasped. She was not afraid of Mrs. 'Lias Moody—but the rumor might have reached her through half Wilchester. She looked up quickly, catching a queer expression — was it quizzical or doubtful? — in

Great-Aunt Molly's eyes that roused "Ellicot grit" in every inch of her. With a sudden swoop she gathered all the sheets remaining on the floor and tossed them recklessly on the couch, whisked the clinging threads from her skirt, hastily pinned on her sailor hat and marched downstairs.

Mrs. 'Lias Moody, mending a huge faded blue-yarn sock with royal-purple cotton, was rocking comfortably on her side veranda. Fair sat down on the step and glanced up at her.

"Mrs. Moody," she began, trying to assume a casual ease of manner, "did they—whatever it was—tell you what firm in the city was getting out the plans for John Halpine's new house?"

"They?" repeated Mrs. Moody. "'Twas Barby Farrow heard all about it, and happened to mention it to me, comin' home from Sewin' Circle. You might find out from her."

"You say Barby told you it was really certain that John Halpine intended to pull down the old homestead because he resented the town council's not buying it?"

Mrs. 'Lias Moody stirred heavily—perhaps uneasily.

"Well—leastways she 'lowed that was the only reason there could be for his doin' it. She said there'd been talk of persuadin' him to sell it, so's it could be used for a library and museum, sort of, but he set the price higher'n they'd

"SHEETS FIRST!" GREAT-AUNT MOLLY REMARKED CRISPLY. "THEN WE'LL TRY JOHN HALPINE FOR ALL HIS FUTURE SINS"

MEASURE FOR MEASURE

a notion to pay. I don't hold with gettin' even that way, nohow; but it come straight to Barby from them as knew."

"Perhaps, then, she will know about the architect," said Fair, with a queer little quaver in her voice as she stood up to go. Barby was—well, Barby was abrupt.

"Let me-know who she says 'twas!" Mrs. Moody called after her.

Barby Farrow, tall and angular, was frying doughnuts in her small summer kitchen when Fair knocked. Barby turned with a disconcerting snort, and with a jerk of her head motioned the visitor to a chair.

"Hot day!" she said grimly.

"There's quite a breeze in the shade. I found it pleasant on Mrs. Moody's porch."

"H'm!" Barby Farrow sniffed. "What'd she have to say?"

"She had been telling me what is being said in Wilchester about the old Halpine house. Have you any idea what firm of architects Mr. Halpine is employing to make the plans for him? For the new house, I mean? Great-Aunt Molly was interested in hearing about it, so I stopped in to ask Mrs. Moody."

"What'd she know? All I told her was what her that was Car'line Babbitt told me—that he'd have to get some of them high-toned city fellows to draw out his plans for him. There'd likely be no one here in Wilchester good enough to do it for him, now he's been to the legislature and Cuba, and got notions! I told Sarah Moody I s'posed he'd be havin' party-cosheers and all them fancy sort of fixin's on it. All else I know is that he's plannin' 'bout tearin' down the old place soon as he gets here from his trip. And there's to be modern improvements all over it—lectric push buttons and steam-heatin' radiators, and the like, I s'pose. Her that was Car'line Babbitt had it come to her right from them that ought to know, if any do, so there ain't no mistake 'bout that part of it. Have a fried cake. Them on the platter ain't too hot to eat."

The doughnut of ceremony eaten, Fair went on in quest of "her that was Car'line Babbitt." Wilchester offered no other title to Israel Briggs's wife, who still kept the sign that bore her maiden name swinging above the door of the one real "Dressmaking Establishment" in the village. Caroline was too good a manager to let a perfectly good blue-and-gold-painted sign be wasted.

"Specially when folks has come to know it all through the county," she argued. "If I took it down and put up 'Mrs. Isr'el Briggs,' instead, they'd go away thinkin' 'twas some stranger had bought out the 'establishment.' Isr'el ain't never been what you'd call a public character."

Fair looked up at the sign and wondered whether it would prove the mark of "headquarters." But "her that was Car'line Babbitt" had gone to "the store," and the "Dressmaking Establishment" was, for the time, in charge of the mild-faced little man who sat with his chair tilted against the worktable, contentedly whittling.

"Perhaps you'll know, then, Mr. Briggs," pleaded Fair. "Did Car'line tell you anything about the firm of city architects who are to make the plans for John Halpine's new house? Barby Farrow heard of it from Car'line."

"Why," piped Israel Briggs, "all Car'line knowed was what she happened to hear some one 'at was settin' on Hawtree's porch talkin' over with Kathern. They was sayin' that John Halpine would be sure to tear down the old place and put up a spandy new residence. And as Car'line's got the notion as how some day John and Kathern's likely to make a match of it, why, Kathern ought to know what she's talkin' 'bout."

Katherine Hawtree! Was she "headquarters"? Fair shrank from going to her tall, handsome friend, with the dwindling story that grew ever more elusive; but she braced herself and entered the Hawtrees' gate.

Katherine, in the side garden path, noticed the little stiffening of her shoulders.

"You'd better tell me what it is, Fair," she said, slipping her arm through the young girl's. "I've seen you setting your courage for an encounter before this, and I know the symptoms. Out with it!"

"Katherine! It's—it's such a queer thing to do,—to ask,—but I've promised. A queer story came to me, and made me—hot. I told Aunt Molly, and she offered me something I want very much if I'd show enough 'Ellicot grit' to find the headquarters from which it started. It hasn't been easy."

"And you've traced it back to me?"

"I think so," said Fair honestly.

Katherine's face grew puzzled. "I wonder what it can be? But your Great-Aunt Molly is a wonderful person, and my special chum. She wouldn't have started you on such a chase if there hadn't been some good reason."

"You see," said Fair, "each person had heard it straight from one who knew. Mrs.

Lias Moody, who had told me of it, passed me on to Barby Farrow—and Barby wafted me into the 'establishment' of 'her that was Car'line Babbitt.' Car'line happened to be out, but Isr'el told me that she had overheard a talk between you and some person unknown on your porch in which it was said that John Halpine would be sure to pull down the old house and build a modern residence in its place."

Katherine's face was a study in bewilderment and interest; then suddenly it lighted up.

"I'm not headquarters, Fair, but I can send you direct to them. The person with whom I was talking is your Great-Aunt Molly Grandon. And I believe she knew it when she sent you out!"

Fair hastened homeward, half tempted to laugh and to cry at the same time. She found Great-Aunt Molly still in the straightest chair, with her hands folded in her lap.

"You," said Fair, "are headquarters, Great-Aunt Molly Grandon."

"So?" Miss Grandon's eyebrows went up visibly. "Who told you?"

"Katherine Hawtree. Isr'el Briggs told me

that 'her that was Car'line Babbitt' overheard a conversation between Katherine and one unknown, which conversation she passed on to Barby Farrow, who was Mrs. Lias Moody's informant."

"And how much of the story did you have left to take to Katherine?"

"You—or Katherine—said that John Halpine would be sure to tear down the old house and put up a new one—with modern improvements."

"Why, so we did! A new henhouse, in place of that ramshackle old lean-to that fills up the corner of the meadow. It's been an eyesore for years. You know, John is an enthusiast on scientific poultry culture, and means to take it up in earnest. He wrote me so last week."

"Niece Fair," went on the little lady, with a twinkle in her eyes, "did it occur to you, while you were out matching one story with another,—and finding 'em fall short when you got right down to measuring,—that history sometimes repeats itself proper quick? Before you went out, you know, you were —"

"Tearing sheets!" said Fair Ellicot.

Of course the orange and gray of Chamberlain was everywhere.

We went into our dressing tent, put on our running clothes, and then went out and limbered up a bit.

At two o'clock the half mile was started, and we were pretty well pleased with ourselves when it was over. Maynard got third place, but the one point for Maynard did not look important against eight that we won.

Then came the trials for the hundred yards; two of our men qualified. We did not expect much from the sprints, and we did not get much. In the finals we took third place; Maynard won first and Chamberlain second. That started the cheering, for the orange and gray was pretty well represented on the stands, where Maynard and Preston had each only a handful of fellows. When they called us for the trials of the high hurdles, I did not have any trouble in winning from the two Chamberlain runners and the one Maynard man opposed to me. Then came the mile run.

Each school was allowed three starters; our entries were Carl Atherton, Dick Bannet and

Bobby Hart. I heard the trainer giving them their instructions.

"This is Bannet's race if he can get it," he said. "But if Bannet can't win it, you must, Atherton. Hart, here, will start in and make the pace for you two, and at the end of the third lap you must draw up to the front. Save yourself for the two miles if you can, Atherton; but if you have to win this, do it. We can't take any chances. And you see if you can't take third place, Hart."

The nine runners did some pretty manoeuvring for the pole. When they went down the back stretch on the first lap, Bobby was making pace and Carl and Bannet were running fourth and fifth. That was the order for two laps. Then a Maynard chap named Green sprinted and took the lead. Bannet pushed up to third place.

Bobby held on for a while, then dropped back. He had just about used himself up. Beckner, the Maynard "crack," was running strongly in sixth place, and Carl was watching him closely at every turn.

When the last lap began only five men were left in the running—Green, Bannet, Fuller of Chamberlain, Carl and Beckner.

That was a pretty race; but it did not come out right for us. When the home stretch began, Fuller passed Bannet and Beckner got away from Carl. Then it was Fuller, Bannet and Beckner all the way to within twenty feet of the tape, with a couple

of thousand spectators yelling like mad, and crimson and blue and orange flags waving.

Carl was trying hard to come forward, but he had waited too long and was out of it; just as much out of it as Bobby, who was jogging doggedly along half a lap behind. Twenty feet from the finish Fuller spurted again and left two yards between him and the two others, who were fighting hard for second place.

"Come on, Dick!" we shrieked. "Come on! Come on!"

But Bannet could not do any more, and Beckner drew slowly away from him in the last half dozen strides. Bannet was used up when we caught him. And Fuller, too, was pretty tired. Only Beckner seemed fresh, and we knew then that he could have had first place if he had wanted it, and that he was saving himself for the two miles.

Things did not look so bright for us after that race. And after the next one, the finals in the one-hundred-and-twenty-yard hurdles, they looked worse; for all I could do was to get second by a hairbreadth; Maynard took first by several yards and Chamberlain third.

I was pretty well cut up over that, but there was still the two-hundred-and-twenty, and I vowed that I would do better in that. There was need of improvement, for we had thirteen points to Maynard's fourteen, with Chamberlain not far behind with nine. Things were not happening at all as we had figured them.

We had counted on eight points in the quarter-mile race, but all we got was three, for almost at the start Carstein of Chamberlain left everyone behind and won by fully thirty yards! That was the trouble with Chamberlain; you never could tell what mischief it would cause.

They called us out for the two-hundred-and-twenty-yard hurdle race. The Maynard man and I were nip and tuck at the second hurdle. I was a little quicker on the cinders than he, but he hurdled a good three inches lower than I, and that made things even. But at the fourth hurdle he got down too low and over went the bar. That put him out of pace a little, and I ran for all I was worth. I tipped the next hurdle myself, but not enough to throw me out.

At the seventh, I think it was, I was running even with a chap at the far side of the track and the Maynard fellow was behind. After that I put every ounce into beating the unknown,—for there was no time to see who he was,—and we had a battle royal. We came over the last hurdle right together, and

DRAWN BY T. D. SKIDMORE

THEN THE PISTOL POPPED AND THEY WERE OFF

THE TWO-MILER

By Ralph Henry Barbour

WE were sure of winning that spring. John Blake, the manager of the team, said that if we did not win he should walk home when school closed. And as John lives in the western part of Ohio and is a man of his word, you can see that we were pretty cocksure.

We met Maynard College and Chamberlain College every June in what we at Preston called the "Tri-Track," which was a quick way of saying Triangular Track Meet. The year before, Maynard had beaten us by five and a half points. Chamberlain usually did not produce a strong team, although it had a way now and then of upsetting our calculations in an irritating manner.

We had been hard at work all the spring, and when the Saturday of the "Tri-Track" came we had seventeen men ready to do their best. The meet that year was at Chamberlain, and in consequence we put Chamberlain down for twenty points, five more than she had ever won. There were one hundred and seventeen points in the thirteen events; to win first place in any event counted five, second place three and third place one.

As I say, we allowed Chamberlain twenty points, mostly seconds and thirds, although we did think that her man Cutler would capture first in the high jump. Then we put ourselves down for seven firsts. That made thirty-five points. We felt likewise sure of five seconds. That gave us fifteen points more, making fifty in all—more than enough to win. We conceded the rest to Maynard.

Of those seven events in which we expected firsts, only one seemed in the least doubtful; that was the two-mile race.

Carl Atherton, the captain of the team, had run the distance the year before in 10 minutes, 41 4-5 seconds, and had cut that down a second this spring in practice. But all the year we had been hearing a good deal about a new runner at Maynard named Beckner, who was said to have done the two miles in forty "flat." We felt willing,

however, to trust Carl for the two miles.

John Blake decided that for once the whole team should go to Chamberlain. Usually our funds were low, and only the men who were absolutely necessary were taken; but this year the subscriptions had been more liberal.

Bobby Hart was almost as much pleased as anyone at John's decision. Bobby had worked hard during the two years he had been in school, and deserved to get into a real race. He was not a great runner, but there is plenty of room on the track in the "distance" runs.

"I'm going to try for third in the mile," Bobby confided to me on Friday night. "I think I can do better than I ever have done."

"Yes, but I'm afraid you can't get third. First will go either to Carl or to Dick Bannet, and Maynard's sure to have a man close to them. I shouldn't wonder if Carl let Bannet have the mile and saved himself for the two."

"Well, anyway, I'll have the fun of trying," answered Bobby.

We went over to Chamberlain Saturday morning, and nearly the whole school went with us.

Bobby was in great spirits. He kept us laughing all the way over, and I could not help thinking what a difference there was between him and Carl Atherton. There was Bobby, as happy as a clam because they had entered him for the mile and the two mile with no chance in the world of his winning better than third, and small hope of that; and there was Carl, happy, too, perhaps, but not showing it a bit, just sitting down at the end of the car talking to the trainer or reading a magazine, yet knowing all the time that he was sure of one cup, if not two. I could not help thinking that of the two perhaps Bobby would have made the better captain, if getting close to the fellows and heartening them up had anything to do with it.

We had luncheon at twelve o'clock, and at half past one we piled into a coach and drove out to the field. The old village was much decorated, and the crimson of Preston was more plentiful than the Maynard blue.

MODERN EXPLANATIONS OF GIANTS AND DWARFS

The small boy who, in giving an example of a phenomenon, said, "A cow isn't a phenomenon, a tree isn't a phenomenon, but a cow up a tree is a phenomenon," illustrated the common human interest in the unusual. Perhaps because we quickly become accustomed to the objects that are always round us, we are ready to pay attention to strange and exceptional occurrences.

Among the most striking of the unusual appearances in nature are marked variations in the size of human beings. From childhood our wonder has been awakened by tales of immensely large or remarkably small individuals and of their marvelous deeds. Indeed the fascination that giants and dwarfs have always held for ordinary mortals is reflected in the legends of mythical beings of great size and power, or of small size and unusual cunning, that have come down to us in the folklore of many different races.

Whenever phenomenal persons of that kind have been willing to appear in public they have aroused great popular interest. The Irish giant, Patrick Cotter, was more than eight feet high. His thumb was as large as an average man's wrist; his shoes were seventeen inches long. He once terrified a watchman by reaching out to a street lamp and taking off the top to light his pipe!

Charles Byrne, another Irish giant, was even taller than Cotter; and a Finlander, studied by the anthropologist Topinard, was nine feet and four inches in height.

Dwarfs have been quite as much the objects of interest and attention as giants. From very early times, as shown in ancient Egyptian sculptures, it was a custom of princes to have dwarfs among their retainers. In the Roman court they were regularly a part of the retinue; the Emperor Domitian had a band of dwarf gladiators, whose antics in mimic gladiatorial exhibitions enchanted his courtiers. Later, dwarfs were sought for the royal households of European states.

GEN. TOM THUMB

The dwarf, Geoffrey Hudson, who lived in England in the time of Charles I, was only eighteen inches tall, and was on one occasion served in a cold pie, from which at the proper moment he stepped out fully armed and accoutred. Many persons to-day can remember seeing performances in which Gen. Tom Thumb, the American dwarf, represented such statues as Samson carrying off the gates of Gaza, the fighting gladiator, and Hercules with the Nemean lion.

The family records of dwarfs and giants show that they are the offspring of parents of normal stature. They are, therefore, isolated departures from the ordinary size of man. They do not leave descendants. Scientific examinations and studies carried on in a comparatively recent period have given us an interesting glimpse into the conditions that determine these curiosities of growth.

The size of a person depends chiefly on the bony framework of his body. If the bones are thick and long, he is large; if slender and short, he is small. At birth, of course, the bones of all persons are very small, but they

By Walter B. Cannon
Professor of Physiology, Harvard University

have remarkable arrangements for increasing in size. Surrounding each bone is a sheath in which there is a continuous layer of minute active bodies, or cells, that lay down on the surface that they face deposits of new bone. Thus the structure gradually enlarges.

The long bones of the limbs would be heavy if that action alone occurred. But something else happens: the middle part of the shaft, which is originally solid, begins to be absorbed until the shaft is hollowed out; and thereafter, as the outside of the bone grows the inside is taken away, until a strong, hard cylinder filled with soft material has been formed. The ends of those long bones are in contact with one another, of course, at the joints.

HOW BONES GROW

In all probability the pressures and motions in the joints are unfavorable to the deposit of fresh bone immediately under the joint membranes. At any rate, the long bones of the limbs are not lengthened at the surface. Instead, there is, during the period of growth, a cap at either end of the shaft that acts as a sort of buffer between the shaft and the joint surface, and between the caps and the ends of the shaft there is a region that remains softer than the rest and that is made in part of the cells that lay down bone. It is there that the shaft elongates. As the shaft thus increases in length the caps continue to serve as buffers at the joints. And when full maturity is reached, the soft regions between the shaft and the caps become ossified with the rest of the bone, all distinction of these parts disappears, and the entire structure then has its completed size and form.

After this explanation of the process of growth in bone, the reader can see that any condition that interferes with the work of the bone-making cells will stunt the person in whom such a change occurs. On the other hand, any condition that delays the union between the caps and the shaft permits the bone-forming agencies to continue their work, and thus to lengthen the shaft abnormally.

Before we can have deeper insight into the conditions that affect this bone-forming process we must know about some other bodily activities. These activities will best be understood if we first consider an example. The salivary glands near the angle of the jaw are commonly known. Those glands take material from the blood and make it over into the saliva, which they pour through a tube or duct into the mouth for use as a lubricant and as a digestive agent. There are certain other glands in the body that likewise take material from the blood and make it into a new form, but they deliver this newly made stuff back to the blood rather than to one of the body surfaces. They are called, therefore, "glands of internal secretion" or ductless glands. The thyroid gland in the neck and the pituitary gland at the base of the brain are examples of those peculiar structures.

The substances manufactured by the ductless

glands are in many cases essential to normal existence. If, for example, either of the ductless glands mentioned above fails to perform its proper service, profound disturbances occur in the bodily activities. The effects are seen especially in altered chemical changes in the body and in unnatural growth.

THE IMPORTANT THYROID GLAND

Occasionally a child is born with a defective thyroid gland. His body then does not receive enough of the peculiar substance made by that gland, and dire results follow. The skin thickens, the bridge of the nose fails to grow, the tongue enlarges and protrudes from the open mouth, and there are other irregularities, including a stupid or idiotic mind and a stunted growth. Such children are called cretins. Some of the dwarfs recorded in historical accounts probably belonged to that class, especially those described as "silly dwarfs," "hideously deformed," "misshapen pygmies, deaf and dumb."

It has been found, fortunately, that by feeding to such a defective child the thyroids of sheep and cows, he can get enough of the necessary substance that the thyroid gland gives; his face loses its ugly and dull appearance, he becomes alert and intelligent, his skin regains its normal texture, and growth is resumed in him.

A disease called rickets, which may begin before birth or which may appear in infancy and early childhood, probably accounts for other dwarfs. That disease is characterized by an arrested or a perverted bone formation. The shafts of the long bones become thickened and often stunted. The bone may be so soft that it can be easily cut with a knife. Then the weight of the body or the pull of the muscles warps the bones; and when the bones solidify they naturally show many results of the early disturbances of growth, including a shortness that stunts the whole stature of the person. The softness of the bones of the skull permits the brain to enlarge; as a result, the so-called rachitic dwarfs have stunted and possibly misshapen bodies, but massive heads. They do not, however, have the mental dullness that is typical of the cretin. There is no evidence that rickets is a disease owing to a defect in one of the ductless glands.

THE WELL-HIDDEN PITUITARY

The pituitary gland, which is situated at the base of the brain and near the roof of the back part of the nasal chamber, also markedly affects growth. It is hidden so deeply in the head that we have hard work to find out much about it; it is surrounded by hard bone, but by means of the Röntgen rays we can photograph its nest. If the cavity is small, the pituitary body must be small; and if large, the gland is correspondingly large.

In cases where the long bones have failed to

grow, Röntgen-ray photographs show a striking shallowness and smallness of the bony cavity in which the pituitary rests. Dwarfs whose bodies, although short, are well shaped, who have large heads, and who have quick intelligence, can best be accounted for by assuming some lack in the proper activity of the pituitary gland.

Examinations show that in giants the pituitary gland is usually enlarged; either the gland itself is overgrown or it has changed into a gland tumor. In a person of average size the length of the bony pocket that holds the gland is about one third of an inch; in one giant recently studied, —a man eight feet and three inches tall,—the pocket was more than three times as long as the average. In all probability, the increase of bony growth is caused by too great a secretion by this gland.

The gland may increase in size at any time of life, but only when the overdevelopment occurs in youth does it cause the production of a giant. Then union of the caps of the long bones with the shaft is much delayed, and at the same time bone growth is actively stimulated.

Usually nothing extraordinary is noticed in those persons until they are thirteen to fifteen years old, and then the body lengthens remarkably fast. Magrath, one of the best-known Irish giants, is recorded as having grown in height from a little more than five feet when fifteen years old to six feet eight inches and three quarters during the following year.

NOT A QUESTION OF FOOD

If the gland enlarges after the parts of the long bones have become united the growth occurs only in the bony parts that project. The ridges over the eyes grow forward, the cheek bones become prominent, the nose expands, the lower jaw begins to extend, until the face appears like that of a huge Mr. Punch. At the same time the feet and hands enlarge. The sufferer does not increase in height, probably because the growing parts between the caps and shaft of the long bones have disappeared. If the disfiguring process is going on, it is now possible to stop it by removing some of the active gland substance.

Fairy tales have already acquainted us with the idea, which man has long entertained, that he might find a food that would make him grow to gigantic proportions. Bishop Berkeley, who for a time took care of the giant Magrath, was once accused of having applied some of his ideas of diet to the orphan boy, and thus of having caused his ward to reach a great height. There is, of course, no warrant for that tale either in history or in present knowledge.

There is no food like the cake that Alice saw in the Adventure of the Rabbit Hole, which could make anyone grow large. Only by leaving out necessary elements from the food or by slowly poisoning the body, or by changing certain of those remarkable ductless glands could anyone be kept small. Even feeding with the pituitary gland does not produce unusual stature. Perhaps, however, as knowledge increases, the processes of growth may be placed within our control; then we shall need to have no more giants and no more dwarfs.

only my speed on the ground beat him, and then by very little. Maynard finished a close third. And when I turned round and looked at the chap I'd beaten, I found it was one of our own men, Bert Poole, who had never won a place before in his life!

We felt better after that, for those eight points put us ahead; but when presently Maynard won six points in the furlong dash and Chamberlain got the remaining three, we began to worry again. The results from the field events then began to come in, and added to our anxiety. Chamberlain had taken first in the high jump, as we expected, but Maynard had left us only third place. In the broad jump Maynard had won first place and third, and given us second. In the pole vault that troublesome Chamberlain had again taken first; Maynard had taken second and Preston third. In the shot put we had first and second, and Maynard had taken third. In the hammer throw Maynard had beaten us for first, we had taken second and Chamberlain third. When we had finished figuring we could hardly believe our eyes. The score stood:

Preston 40
Maynard 40
Chamberlain 28

The two-mile run, the last event, would decide the meet. And there was Beckner.

Of course we had not lost faith in Carl, but big, strong Beckner was clearly the freshest man on the field, and he would take a lot of beating. We had to have first place to win the meet. Second and third would not be enough, unless Fuller of Chamberlain got first. In that case the championship would go to the school that took second. We did not know whether Fuller was

going to run or not, and we were pretty anxious to find out. Only Bobby seemed cheerful.

"We can beat them," he said. "Why, Carl can make circles round Beckner, and as for Fuller, that mile run used him all up."

"Maybe you will do something yourself, Bobby," said I.

"I shouldn't mind trying, but I guess they're not going to let me enter. I didn't show up very well in the mile; you can't go in and set the pace and have anything left for the end. I came in fifth, though." Bobby really looked pleased with himself.

"All out for the two-mile run!" called the clerk of the course, and we went down to the start. John Blake was looking blue.

"It's a long way out to Ohio," he said ruefully. "And the roads are dusty, too."

"Fuller's going to run, isn't he?" I asked.

"Yes, and I don't know whether that makes it better for us or worse."

"Answer to your names!" called the clerk.

There were seven entries there: Carl and Bannet of our school, Beckner, Green and another Maynard runner, and Fuller and one other Chamberlain fellow.

"On your marks!" called the starter.

"Hold on, please," said our coach. "We have another man coming. Where's Hart?"

"Here," said Bobby, stepping out from the group beside the track.

"Get in there," said the trainer.

So Bobby, much pleased, took his place in the second line.

"Get ready!" said the starter.

"Set!" Then the pistol popped and they were off.

For the first mile and a half a two-mile race

is generally rather uninteresting; but when the meet depends on it, that is different. We turned and watched the runners jog round the turn and come along the back stretch.

When they had covered a quarter of the distance, Fuller was no longer dangerous. He was running in short strides and had dropped back to seventh place. At the end of the first mile the runners were strung out all round the track. Green was making the pace. Behind Green was Beckner, running with a fine long stride, and almost treading on Beckner's heels was Carl. Carl was not quite so pretty a runner to watch as the man in front of him.

Ten or twelve yards behind Carl ran Bannet; Bobby was following close. A third Maynard runner and Fuller were disputing sixth place. A long way behind them the last man, a Chamberlain chap, was lagging along. And that was still the order when the sixth lap began.

Beckner alone seemed untired. Carl's cheeks were white, and had two spots of crimson in them. Bannet was looking pretty well used up, but Bobby seemed not yet fagged and hung on to Bannet closely. He had never tried himself to any extent in the two miles, but I thought that he was doing better than he had done in the mile.

Getting tired of making pace Green swung aside and let Beckner take the lead. Green fell in behind Carl, who was still treading in Beckner's tracks. Then the distance between the first group and the second began to open; Bannet was tiring. For a while Bobby regulated his speed by Bannet's, but soon he went round outside Bannet and passed him. That seemed to do Bannet good, for he spurred and kept close behind Bobby all round

the track. The third Maynard man and Fuller were out of it for good by this time, and the eighth man had left the track.

There were only two laps left now, and the shouting was pretty continuous. Up at the head Beckner seemed to want Carl to take the lead, but Carl refused. That cheered us considerably, for it seemed to show that Beckner was weakening. Finally Green went to Beckner's rescue; but he almost pumped himself out in doing it, and only set the pace for a few hundred feet, making it so slow that Bobby and Bannet closed up half the distance between them and Carl. Then Green fell out again and Beckner was once more ahead, but Carl was holding on grimly.

So it was when they turned into the home stretch. The shouting was tremendous now, for the spectators had left the stands and lined up along the track.

"Last lap! Last lap!" shouted the judges.

We shouted to Carl to keep it up! And the Chamberlain people, who liked us better than they liked Maynard, shouted the same thing. Even Bobby and Bannet were applauded, and I shouted to Bobby to go on and win.

On the turn Bannet stumbled and half fell, and lost several yards; that seemed to take the heart out of him. When the runners turned into the back stretch, Bobby was all alone a dozen yards behind Beckner, Carl and Green.

About the middle of the stretch Beckner started to draw away from Carl; but he only opened up about three yards before Carl was after him. That put Green out of it. We saw him wobble once and then throw up his arms and go over on the turf.

"Bobby's going to get third place!" cried

John. And, sure enough, there was Bobby still running, and running strong.

But our eyes were on Carl and Beckner. They were having it out, and as the turn began Carl crept up to the blue runner and tried to edge past; but he couldn't quite do it, and Beckner held the lead by a few feet until they were in the straightaway and headed for the finish. Then Carl actually got in front. A lot of us had gone halfway down the track to meet them and were yelling ourselves hoarse.

"Come on, Carl! Come on! You can do it!"

The Maynard fellows were shouting to Beckner at the top of their lungs. Carl was just about holding his lead, when suddenly he staggered, got one foot on the raised board that runs along the inside of the track, and fell on the cinders. He was up in a second and running again, but he had lost three or four yards, was limping and was plainly exhausted. And Beckner, none too fresh himself, came on down the home stretch all alone, wabbling a bit, but apparently an easy winner.

"Look at Bobby!" cried John. "Oh, look at Bobby!"

How he ever got there I don't know, but there was that blessed Bobby coming along

only a few yards behind Beckner and gaining on him at every stride. Now he had passed Carl; now he was almost up to the Maynard man; and we were racing alongside, leaping and shouting, while twenty yards ahead at the finish the judges were leaning forward with excited faces and their fingers on the "stops."

Stride by stride Bobby overhauled Beckner. Now he could have touched him with his hand. Now he was running even. Now —

"Preston!" we cried. "Preston! Preston!"

And then there was the finish—Bobby flying down the turn and Beckner falling into the arms of his fellows.

"Who won?" I shouted, dancing about in the crowd.

"Hart, by two feet!" said some one.

And John and I grabbed each other and danced.

"Hurrah!" shouted John. "I don't have to walk home!"

"Did you hear the time?" cried Poole, hitting me on the back. "Ten minutes, thirty-six and four fifths seconds! It breaks the record!"

We did an unusual thing that spring. We elected a track-team captain who was not a senior. His name was Robert Hart.

THE PLATTSBURGERS

By Arthur Stanwood Pier
In Ten Chapters Chapter Two

AFTER some further vain struggles with the refractory cot, Ted desisted from his efforts. "I guess I can sleep on it even as it is," he thought; and he went in search of his trunk. He found it in a pile of baggage, and dragged it without assistance to his quarters. Upon his arrival he found another occupant of the tent, a well-set-up, light-haired, pleasant-looking fellow, who addressed him with a friendly smile.

"I've just been told to bunk in here. My name's Stevens."

"Mine is Ripley," said Ted. "I hope this trunk of mine won't be in your way."

He dragged it to the foot of his bed, and Stevens, glancing down, remarked, "Don't you want some help setting that bed up? It really takes two to do it."

And without waiting for an answer, he seated himself on the foot of the cot, braced with his feet against the side bar and so forced the supports apart and enabled Ted very easily to slip the crossbar into its socket.

"Much obliged," Ted said gratefully. "I never would have thought of that trick."

"I've seen these cots before and struggled with them, so I've learned that putting them up is a two-men's job," said Stevens. "Want to help me, now, with mine?"

Ted was glad to feel that he could be of some help to a person who had so willingly helped him.

When they had set up the cot, Stevens suggested that they go and get their blankets from the quartermaster's department. As they walked up the company street, they told each other something about themselves; Stevens, Ted learned, was a junior at Crane College. The fact made Crane College seem to the Brampton freshman a much less hateful place than he had hitherto supposed it to be.

At the quartermaster's tent each of them received a pillow, a mattress, three chocolate-colored blankets, a chocolate-colored sweater, half of a shelter tent, a poncho, five aluminum tent pins, and a jointed wooden tent pole. They had these articles piled in their arms and on their backs in such a way that, walking carefully, they were able to carry them without spilling. Ted made his bed under Stevens's directions: "You fold your blankets so that they're just the size of the pillow and lay them, two under it and one on top of it, and turn your mattress back to touch it," Stevens said.

"Where did you learn just how to do things?" Ted asked.

"I've had militia experience; I was at camp last year for a couple of weeks. I know mighty little, though. Let's get our rifles now."

The distribution of ordnance was being made at the head of the company street from tables piled high with equipment of various kinds. What impressed Ted when he emerged from the line of fellows waiting to be supplied was the calculating skill with which articles were thrust into his hands and hung upon his shoulders and round his neck. He managed to carry to his tent, without dropping any of them, a rifle, a sheathed bayonet, a condiment tin, an aluminum water bottle, a drinking cup, a dish, a knife, a fork, a spoon, a cartridge belt, and an arrangement of various straps and buckles so complicated that, although he knew it must be the pack and haversack, he could not

possibly imagine how it was to be used. The rifle was copiously dabbed with cosmoline, much of which was soon smeared on Ted's coat.

Ted and Stevens found two fellows setting up the two remaining cots. One of them was short and chubby, the other was short and spare.

"Golly!" said the chubby one, as Ted dumped his load on his mattress. "We have to lug an awful lot of junk, don't we?"

With the next breath he had announced that his name was Charley Gray and that his companion was Frank Bradford, and that they were sophomores from Thorpe College, the old-time rival of both Brampton and Crane.

"We have got all kinds here now," said Stevens. "But Crane is outnumbered—three Brampton men and two Thorpe. I guess I shall feel lonely."

Just as he was expressing this apprehension, Greiner and Carton entered. Ted, after a moment's hesitation, performed the ceremony of introduction.

Greiner and Carton talked cordially with the others, but to the Brampton freshman they paid no attention.

"Capt. Hughes told me to tell everyone that in a few minutes we'll be ordered to fall in," said Greiner. "He doesn't want anyone to leave the company street."

"Does he want us to fall in, whether we're in uniform or not?" asked Stevens.

"Yes; he just wants to say a few words to us. Have you seen him? He's a peach! And Lieut. Wharton, too; he's a corker."

"How do you tell an officer when you see one?" asked Bradford.

"By the braid on his hat for one thing," said Greiner. "The privates and noncoms all wear colored cord round their hats, and the officers wear a gold cord with tassels in front. And then there are the little marks on the collars of their coats and their shirts—a bar for a lieutenant, and two bars for captain, and a star for major, and so on. And the officers all wear leather puttees, while the enlisted men wear leggings something like ours."

Outside sounded the command, "Fall in, B Company; fall in! Pass the word along!"

And from different tents it was echoed, "Fall in! Pass the word along!"

The occupants of tent 26 were prompt to respond. The members of the company were assembling at the head of the company street; there a big man in uniform with a megaphone in his hand stood on a table and surveyed the crowd with a smile. For it was a nondescript-looking gathering indeed, some fellows in uniform, some in their ordinary clothes, a few coatless and without collars.

"B Company, form in two ranks, facing to the left. Men from tent number one at this end; next, tent number two, and so on. Three men from each tent in the front rank, three in the rear rank. Lively, now!"

When they were lined up, they "counted off,"—first the front rank, then the rear rank,—beginning at the head of the line and going down, one, two, three, four, and then repeating and repeating that series of numbers. Ted found himself number one in the front rank of the last squad.

Capt. Hughes now descended from his table and took his place in front of the double line. By his side stood a younger officer, slim, ruddy of face, keen of eye,

"DON'T QUESTION ORDERS. I'M CORPORAL OF THIS SQUAD. AND YOU'LL DO AS I TELL YOU."

"Attention!" commanded Capt. Hughes. Not more than half the company understood the command.

"At the command, 'Attention!' bring the heels smartly together, head up, eyes to the front, thumbs along the seams of the trousers, and hold the position; no talking in the ranks. Attention!"

There was a rattle of heels, a slapping of palms against trousers; the captain and the lieutenant scanned the recruits closely.

"At ease!" ordered the captain. "That means you relax from the position of attention, but you don't talk. When the command, 'Rest!' is given, you may talk. All the men who have had previous military training in school or in the militia advance three paces."

In Ted's immediate neighborhood Greiner and Stevens were the only ones to step forward.

"You men report to Lieut. Wharton at the head of the company street. Now, there's just one other thing: the company call is one long blast on a whistle, followed by three short ones. Whenever you hear this,—the captain put a whistle to his mouth and blew,—it means, 'Company B, assemble.' Dismissed."

Ted walked back to the tent with Gray and Bradford. "I suppose they're going to pick the corporals now," he remarked.

"It makes no difference to me who's chosen," said Bradford cheerfully. "Both Greiner and Stevens look good to me."

"I'm hungry," said Gray. "When do they feed us?"

"Twelve o'clock," replied Ted. "The schedule's posted on the bulletin board at the head of the street. It's half past eleven now. Have you fellows had the medical examination?"

They had not, and they decided to accompany Ted to the hospital tent.

The medical examination, which Ted had so dreaded, proved to be not at all rigid. He did not have to show his strength, or his lack of it. A doctor looked at his feet and listened for a few moments with a stethoscope to his heart and his lungs. "O. K.," said the doctor, and Ted slipped on his socks and shoes and buttoned up his coat. "Cinch, wasn't it?" he said, when he rejoined Gray and Bradford. They agreed with him and expressed the opinion that anyone who was able to walk could pass such a medical examination as that.

They all decided that they had just time enough before luncheon to get into their uniforms. They unpacked their bags and strewed the contents about on their beds. In order that he might fold up his clothes without further smearing them with cosmoline, Ted took up his rifle, which had been lying across his bed, and leaned it against Greiner's cot. His back was toward the tent entrance, and he did not see Greiner come in. He did, however, hear his rifle fall; he turned to pick it up, and Greiner said insolently, "Oh, that yours? It was leaning against my bed; it didn't belong there."

Gray and Bradford looked at him with unconcealed surprise, but he busied himself

making his bed and paid no attention to their stare. Ted picked up the rifle without speaking. The barrel, the muzzle and the sights, which had all been smeared with cosmoline, were now encrusted with sand; Ted threw back the bolt and found sand in the breech.

"That gun will have to be pretty well taken apart before it can be cleaned," said Gray.

"Well, I suppose that's one of the things I must learn to do," Ted answered. "I guess I've got to be mighty careful how I put things down round here."

"You certainly have," said Greiner, with his back turned. "I'm corporal of this squad, and it's my business to see that everyone keeps his things in their proper place."

"That's all right, but you needn't go throwing things round on the ground. That's not putting them in their proper place."

Greiner disdained to answer. He finished making his bed, and then turned.

"That trunk of yours won't do there, Ripley. Put it over there." He pointed to a spot between Ted's cot and Stevens's.

"Why isn't it all right where it is?"

"Don't question orders. I'm corporal of this squad, and you'll do as I tell you."

Ted hesitated. Then he dragged the trunk into the place that Greiner had specified.

"I don't know whether you have a right to tell me where to put my trunk or not," he said. "I'm going to find out, and if you haven't the trunk goes back where it was."

"You'll find out, all right," said Greiner.

The assembly call for Company B sounded at that moment. Sore and angry, Ted took his place in the front rank of Squad 16. He wondered during the march to the mess tent why Greiner showed such animosity. It was consoling to have a muttered word of sympathy and indignation from Bradford.

In the mess tent Ted soon recovered his cheerful spirits. It was a lively and hungry crowd, and the food was plentiful and good. The boys sat on benches at oilcloth-covered tables; enlisted men waited on them more efficiently than elegantly; an economy of dishes produced an economy of table manners. "Butter, please." "After you on the lemonade down there." "Let's have a whack at the beans." In such phrases the young recruits did not hesitate to make known their wants; and dishes were thrust from hand to hand and slid over the oilcloth surface with great rapidity.

Ted found an opportunity to ask the fellow sitting next to him, who proved to be a newly appointed corporal, how far a corporal's authority extended. He was chagrined to learn that the corporal was "boss" of his tent and was empowered to order the arrangement of equipment in whatever manner seemed to him best.

"Just the same, Greiner needn't have been so sharp with me," thought Ted. "There was no reason for making me move my trunk; he just did it to be nasty."

He was confirmed in this belief and enlightened as to Greiner's motive shortly after

luncheon. He was sitting on his bed, wiping his rifle with a rag and wishing that some one who could tell him how best to clean the piece would come in, when Greiner entered with a ramrod and a hammer. He drove a nail into the tent pole and hung the ramrod on it, and just as he was finishing, Carton made his appearance.

"Bill's in the next tent now, if you want to see him," said Carton.

Two tents pitched side by side are unlike two houses placed side by side; the conversation that passes in one is quite audible in the other. And presently Ted heard himself made the subject of a discussion in the neighboring tent by Greiner and Carton and the person that he assumed to be Bill.

"I asked Lieut. Wharton if he wouldn't transfer you to our squad and our tent, Bill; I told him there was a fellow in it that would just as soon go into another squad and other quarters," Greiner, who was speaking, chuckled. "But the lieutenant said he didn't want to be bothered making any changes now. I think perhaps in a few days we can fix it up."

"I hope you can," said a voice that was undoubtedly Bill's. "It would be great to get in with you fellows."

"The little freshman will queer our squad if we don't get rid of him!" complained Greiner. "He's too puny and too much of a kid to be of any use. I want to make our squad the prize one of the company; the other fellows all look as if they were good material. If we can get you into the kid's place, I'll back our squad against any bunch of six-footers in the street."

"I certainly should like to be in with you and Harry," repeated Bill.

"I think maybe the kid will be asking for a transfer on his own account before long," Greiner said. "I'm letting him see every way I can just how unpopular he is. I guess he'll soon be wanting to make a change."

Ted, with his cheeks burning while he listened, wondered if Greiner was not intentionally speaking so that he should hear. He made up his mind that he would not be driven out of either the tent or the squad, and that he would resist any plan of transfer.

A few minutes later Stevens came in and showed Ted how to clean his rifle; he provided him with some cleaning oil that he had obtained at the post exchange and a piece of Canton flannel. When Ted put too large a square of flannel on the end of the ramrod and the ramrod stuck midway up the barrel, so that he was unable to extract it, Stevens gave him a hand.

Ted was still working over the rifle when Greiner returned to the tent.

"I've got a job for you, Ripley," he said. "You can clean your piece some other time. We must have a rack for the rifles. Go up and look at the rack in the model tent at the head of the street; then go to the quartermaster and get some boards and tools and bring them here and set to work."

"All right," Ted hung up the ramrod and laid his rifle on his cot.

"I'll go with you," said Stevens.

"You'd better stay here and help me roll up the tent flaps," objected Greiner.

So Ted went on his errand alone. He was rather glad to have been assigned to this task; he had always dabbled in carpentry, and he was sure that in this particular matter he would give Greiner no just ground for complaint. He looked in at the model tent and saw that the model rack leaning against the tent pole was a very simple contrivance—nothing, in fact, but a shallow box standing on end and having notches cut in the top piece to receive the rifle barrels, while the butts rested on the bottom. He had no difficulty in getting the materials and tools that he needed, and after working for a short time in front of the tent he fashioned a very good rack, carried it inside and set it up. Greiner and Stevens came forward to look at it.

"Fine!" said Stevens, and he placed his rifle in one of the notches. "That's a neat job, Ripley."

Greiner looked more disappointed than approving.

"Since you're so handy with tools," he said, "you might turn to now and make us a rack that we can hang coats and sweaters on."

As Ted had observed such a rack in the model tent, he had no difficulty in executing the order; the rack was a T-shaped arrangement of boards, studded with nails and suspended by cord from the top of the tent pole.

"Well, Ripley, you've certainly done your

fair share of work for this tent," remarked Stevens, when the job was finished.

"Each fellow will have two nails, and be sure not to take anyone else's," said Greiner. "I'll take the two at this end; you take the next two, Stevens, and, Ripley, you take these. The same way with the rifle rack; each fellow must keep his rifle in the same place. Then we won't get things mixed up."

There were no duties for the afternoon until five o'clock, and Stevens suggested to Ted that they go for a swim. They had only to cross the drill ground below the camp and the railway track and they were on the rocky beach of the lake. About three hundred other fellows had chosen the same diversion for the afternoon; it was a lively and frolicsome gathering.

"This camp is going to be pretty good sport," Stevens said, as he and Ted were rubbing themselves down after half an hour of splashing and swimming. "We didn't have anything like this lake where we camped last summer—the eighth regiment. There was only a little brook a quarter of a mile away, and we had to carry all our water. It was a strenuous two weeks. But I'll tell you one thing,"—Stevens glanced round,—"we didn't have a corporal that was always trying to show his authority."

"Greiner does seem pretty bossy," said Ted.

"I want to see how much he knows. If he knows, it won't be so bad; but if it's mostly bluff, he'll make quite a mess of things."

The boys got back to the company street in time for the formation at five o'clock. The whistle sounded, the company assembled and fell into line, the corporals of the squads made their reports, saluting as they did so—"All present, sir," or "Private Smith absent"; and then, at the captain's command, the company came to attention and stood while the regimental band off in the distance played the Star-Spangled Banner. Everywhere in the camp men stood at attention, not only the young

there, seated in a semicircle, listened to a talk by the camp commander, who described in some detail what the course of the training would be and what the discipline to be exacted. After the lecture Ted got out his rifle and joined an awkward squad that under a good-natured

corporal was drilling and marching in the company street; they kept it up until it was dark, and then Ted went early to bed and early to sleep, and slept until he was roused by the bugle sounding first call.

TO BE CONTINUED.

OUT OF THE FOG

By E. E. Harriman

THE fog had come up from the Mississippi and hid-den all the countryside under a white blanket. As Gideon Mercer walked along the cow path by the river he moved more by sense of feeling than by sight, for the fog hung so thick that he could not see the path five feet ahead of him.

He had started out on his hunt at six o'clock in the morning, fully expecting the fog to lift within an hour and to give him a clear view of the river and the woods; but it had held on, and as time passed had even become denser. Off in the woods at his right his dog was hunting for a track. Wolf had no fear of fog banks, for his nose would lead him to his master at any time.

Twice ruffed grouse had sprung with quick thunder of wings from the bushes beside the path; and once the boy had almost stepped on a rabbit, but before he had time to swing his shotgun to his shoulder the mist had swallowed the cottontail. He could hear ducks quacking on the river, but he saw no sign of them or even of the water.

At last he decided to sit down on the next log that he saw and wait for the fog to lift.

Before he came to a comfortable seat, however, he heard ducks on the river in such numbers that he decided to stop, for he would be sure of a shot at them as soon as he could see the water.

At this place the path ran along the top of a bank more than forty feet high. He found a place among the bushes from which, when the fog blew away, he would have a clear view of the river, although he himself would be sheltered from view; there he sat down on the ground and, leaning back against a tree, waited. The minutes dragged slowly and he began to get restless. Wolf came back to look for him, or, rather, to smell for him, and Gideon held the dog against his body a little while for warmth; but the dog did not like inaction, and as soon as Gideon let him go he struck off again through the woods.

At last Gideon, now thoroughly restless, started along the path. He felt that he had to keep moving. He had hunted along this river bank for several years, and now he knew it so well that every turn was printed on his memory. Once he heard his dog come ranging through the woods to get a scent of him and then move off out of hearing.

Presently Gideon came to a place where the path led along the steepest part of the high bank, which here rose forty-five feet from the water.

At this point the trail left the shelter of a clump of trees and, twisting off abruptly, ran along the crown of the bank for about fifty yards and then turned again to the trees.

As Gideon reached this open space he heard the sound of something racing toward him along the path with reckless speed. Stopping short, he listened. It was some animal with padding feet—something that came fast, yet made little noise. The thudding was like that of bare human feet on soft ground.

From some distance away came a whimper, and he knew that his dog was on a trail. The padding feet came nearer, and Gideon, leaning forward, looked as far into the fog as he could. His hunting had always been confined to small game; he had never bagged anything larger than a raccoon, and he could not imagine what it was that was approaching.

The padding feet were very near, and Gideon was suddenly seized with a mild panic. He turned to the side of the path to find a tree that he could climb, but he had waited too long. Before he had taken a full step a big black figure burst from the mist, and his enemy was upon him. With consternation the boy saw that it was a bear.

After one startled whoop! of surprise the beast made up its mind. It was fleeing from a dog that whimpered along its trail, and here,

directly in its road to freedom, was a strange figure evidently trying to block its escape. Wasting no time, the bear charged, and in two long jumps reached the boy.

Gideon felt the bear's front legs close round him and realized that the

brute was seeking with its muzzle for a soft place in which to sink its teeth. The boy had no chance to use his gun, and even if he had had a chance the charge of fine shot would probably not have stopped the bear. So, letting the gun drop, he grasped the long hair at each side of the bear's neck and tried to hold those grinning teeth away from his throat; but with quick sidewise jerks of its head and by slashes with its teeth the bear broke the boy's hold.

One frantic shout for his dog broke from Gideon's throat, and then he fought with his bleeding arms to hold off the terrible jaws that were seeking his throat. Crossing his forearms in front of his face, he pushed the grinning mouth back, and again his cry for help went ringing among the trees and startled the ducks in the river so that they rose with flapping wings and excited quackings.

Far up the trail the dog lifted his nose from the track he was smelling and his hair rose over his shoulders. Stretching out his long body in space-devouring leaps, he rushed to answer that cry. He knew what it meant, and he did not hesitate.

Gideon was unusually strong for a seventeen-year-old boy. He knew that until Wolf came to his rescue he must hold those jaws away, and that, no matter how torn and lacerated his arms might be, he must not drop them off guard for one second. He writhed and twisted in an effort to break away; but ever that hug grew tighter and the snapping jaws fought harder to reach a vulnerable point. His legs began to feel strangely weak and his breath came painfully as he staggered about in the clutch of his antagonist. Just as he thought that he must give up, he heard a mighty snarl and felt the impact of a heavy body against the bear. Wolf had come, and under the impact boy and bear fell; the big mongrel was on top, tearing in frenzy at the neck of the bear.

Wolf had long jaws and splendid teeth, and he weighed more than ninety pounds. His father, old Coony, had once killed a timber wolf in a fight when three of the marauders had invaded the sheep yard, and Wolf was a worthy son. Moreover, he was devoted to his master; all that Coony and his pups ever thought about was serving the one love of their lives. They were one-man dogs always.

As the bear felt the teeth of Wolf fasten in its neck it let go its hold on Gideon and turned swiftly to meet the dog. The fight raged fast and furious, and several times the feet of the bear rested on some part of Gideon's body or legs. At last the boy managed to draw his legs out from under the fighting animals.

His first thought had been merely to get out from under the fighters, but now he saw a way by which he might possibly help Wolf. Placing both feet against the loins of the bear he kicked out with as strong a push as he could muster. The animals were on the brink of the slope, and Gideon kicked just as the bear reached forward to snap at Wolf's neck. The kick took the creature by surprise and, catching it off its balance, toppled it over. The bear fell forward; its shoulders and head struck Wolf, and both dog and bear went whirling over and over down the steep pitch to the river.

The water was deep there. When the bear came to the surface it had plainly had enough; it struck out for shore, which was rather steep there. As the huge creature strove for a foothold, Wolf came raging ashore and, rearing his shoulders out of the water, grabbed the beast by the ham and hung on.

The bear turned so quickly that it threw itself back into the river, and Wolf let go as the bear went under. The fog had begun to rise a little by now, and Gideon lay on the bank and watched. Wolf had got a foothold at the edge of the water, and as soon as the bear rose the dog began to snarl savagely. Taking one look at Wolf, the bear turned and swam downstream, obviously to look for a better landing place; scrambling along the shore, the dog tried to keep up with it.

Gideon got to his feet painfully and started for the nearest farmhouse, which was half a mile away. At the house the women cleansed his wounds and bandaged them while the farmer and his two sons went out to look for the bear. They found it in a tree a mile below the scene of the fight, with Wolf sitting below on guard. A shot brought the bear to the ground, dead.

DRAWN BY W. F. STECHER

HE HEARD THE SOUND OF SOMETHING RACING TOWARD HIM ALONG THE PATH

PRESIDENT WILSON DELIVERING HIS WAR MESSAGE BEFORE CONGRESS ON MONDAY EVENING, APRIL 2

FACT AND COMMENT

THE man who goes to the bottom of things is usually the man who gets to the top.

Say not the Future must be like the Past, Unless you know how long the World will last.

LAND seems to have gone up since we bought Alaska. For that we paid at the rate of two cents an acre. The Danish West Indies cost us something more than \$281 an acre.

THE plans for a statue of Abraham Lincoln in Petrograd and for one of John Hay in Peking show how the ideals of our New-World republic are leading Old-World empires toward a better day.

WAR is a great teacher of little economies. The scarcity of fats and oils forced Germany last year to collect the fruit stones that are usually thrown away. One hundred and twenty thousand tons were gathered, from which was taken more than a million pounds of oil.

JAPAN has recently bought of Portugal the little island of Macao at the mouth of the Canton River, near Hongkong. That gives Japan a strong naval base, such as Gibraltar gives to Great Britain and Helgoland gives to Germany. It can be used to menace any European power that tries to thwart the ambitions of Japan in China.

THE Children's Bureau has suggested that the first week of May be observed as Better Baby Week. Last year more than two thousand communities carried out the programme suggested, which included infantile welfare exhibits, baby health conferences, organization of societies for the support of visiting nurses, and outings for mothers and babies.

MISSISSIPPI is going ahead with its plans for the exhibition at Gulfport that will mark the one-hundredth anniversary of the admission of the state into the Union. Nearly all the states in the South will erect buildings on the grounds, and the national government will be represented. Several of the buildings will house permanent exhibits after the exhibition closes.

SINCE the beginning of this year four states—North Dakota, Ohio, Indiana and Arkansas—have granted suffrage to women through legislative action. There are now sixteen states in the suffrage column; but in each of the four latest states the newly granted privilege is limited or conditioned in some way, as it must be until the state constitution is amended. In Ohio the issue depends on a referendum.

A STUDENT of human nature can, we think, nowhere else find more to reward him than in the "agony column" of the London Times. There the English people display their characters with extraordinary frankness, many times in odd ways that make you laugh, but often in ways that are tragic and moving. Take this, for example:

LADY, fiancé killed, will gladly MARRY and give up life to the care and happiness of man blinded or otherwise incapacitated by the war.—Box Y. 496, The Times.

IN times when patriotic enthusiasm runs high there is much unnecessary confusion over the respect that is to be paid to our national hymns, The Star-Spangled Banner and America. It is The Star-Spangled Banner, and that alone, that the government recognizes as the national air and uses on all formal occasions. When played by an orchestra in any public place it should be played straight

through, without embellishments, and never as part of a medley. It is inevitable, both from the nature of the music and from the words, that America should be more sung in places of worship and at patriotic gatherings. Leaders in musical affairs have it in their power to lead the public into a better understanding of the proper use of the two songs.

AMERICA AND GERMANY

IF any reader of The Youth's Companion believes that this paper took its stand behind President Wilson in support of a war with Germany because of any prejudice against the German people as Germans or in favor of the British, French or Russians as such, he is wholly mistaken. For a long time The Companion was most circumspect in its neutrality because it did not wish to be accused of finding in a mere struggle between ambitious nations a deep moral issue that did not exist. But its editors do not see how anyone can any longer be in doubt that such an issue does exist; and that this war is one of the great convulsions by means of which the human race determines which road it shall follow into the future. It is a time comparable to that of the Reformation or to that of the French Revolution.

In this crisis we believe that Germany fights on the side of reaction and that its enemies fight on the side of progress. Not that the Entente nations are wholly blameless either for the war or for certain of their policies during the war. No nation ever fights for a perfectly blameless cause in a perfectly blameless way; but it is not merely a question of nicely balancing one incidental gesture in the struggle against another; it is a question of what at bottom divides the belligerents and what would be the meaning of a victory for either side.

Germany fights that Europe and then the world may be controlled by a spirit of autocracy in government: a spirit that would restrict individual liberty and the right of the people to conduct their own affairs, a spirit that subordinates the civil power to the military power, a spirit that glorifies war and believes it not only to be necessary once in a while but to be a legitimate instrument of policy. The Allies fight that the control of the world by such a spirit shall forever be impossible.

If the history of America means anything, if its citizens to-day believe in the principles that moved their ancestors when they made, and later, when they saved, this Union, we cannot doubt that this country has chosen the right side on which to stand. We are not hostile to the German people, but only to the false political philosophy that their rulers and too many of their educated men have taught them. We believe that for that philosophy to direct the future of the race would be a fearful calamity. We do arraign the German government for its course at the beginning of the war, for many things about its conduct of the war, and, above all, for its attempt to make an autocratic, militaristic, narrowly national spirit regnant in the world. But for the people we have large hopes. When they shall follow the example of their Russian neighbors, and abandon forever the philosophy that has led them blindfold into this catastrophe, they will find no one so ready as America to rejoice with them in their new-found freedom and to give them the right hand of fellowship.

SELF-GOVERNMENT IN RUSSIA

A GOOD many persons who are in general sympathy with the Russian revolution are afraid that the nation is unprepared for the responsibilities of self-government. It may not indeed be ready for them, but it is not utterly unprepared.

There is a great deal of illiteracy among the Russian peasantry, but not perhaps more than there was among the French peasantry at the time of the French Revolution. And, after all, literacy is not of the first importance; it is a fallacy of our own age that the ability to read and write is a test of a person's intelligence. It is merely an index of his opportunities. A man gets his ability to manage his own affairs and those of the community not from the primer and the copy book, but from the use of his native powers in the everyday business of life.

Furthermore, Russia is not without long experience in local self-government. The peasants are traditionally exempt from much of the ordinary law of the country and are governed in accordance with their own immemorial customs. The mir is a communal assembly of very great antiquity, comparable to the

Anglo-Saxon folk-moot or the American town meeting. It chooses the head man of the village and the tax collector and directs all the affairs of the community. The volost is an elective body that represents several mirs, and has for centuries appointed a court of justice with jurisdiction over all ordinary offenses.

The zemstvos, or elective provincial councils, instituted by Alexander II when he freed the serfs, represent all classes of the community—landowners, peasants and town dwellers. Although the bureaucracy has always tried to cripple the usefulness of the zemstvos, it has never succeeded. For half a century they have been a real force in Russian life. To their activity is owing everything that Russia has done in this war. When the bureaucracy broke down, they undertook to raise, to outfit and to provision the troops; they have kept the national spirit alive in the face of treason and defeat, and their support gave the leaders of the Duma courage to plan the revolution.

The Russian republic may fail—temporarily; no one can be sure about that; but if it fails, it will be for other reasons than any lack on the part of the people of experience in self-government.

EMERGENCY GARDENING

THE condition of the food supply is sufficiently critical to make gardening by everyone who has any facilities for it desirable if not imperative. The production of food should not this year be exclusively the work of the farmer. Back yards and vacant lots should be used as never before; both the householder in the city and the commuter from the suburbs should cultivate their plots of ground. In a back yard of average size a man who plants and cultivates intelligently can grow fifty dollars' worth of vegetables. If a million or two citizens who never grew vegetables before were to avail themselves of the opportunity that lies literally at their doorsteps, the economic gain not only to themselves but to the country would be important.

Back-yard gardening requires a small outlay of money for fertilizer, seed and tools. The soil is pretty sure to be acid and to require fertilizing. There is little potash to be had at any price this year; the gardener must depend on manure and lime. Manure is expensive; lime, on the other hand, costs little, and a pound of it will sweeten thirty square feet of ground.

Dig deep, turn in dried grass and stalks and let them rot; they fertilize the soil. If you use manure, spade it only into the plant rows and thus avoid wasting it. Do not put in the lime at the same time with the manure, but spread it later when raking the topsoil. Finely sifted coal ashes will help to pulverize heavy soil, but will not fertilize it.

In a number of towns garden clubs have been formed and are doing valuable work. They obtain permission to use vacant public land—and vacant private lots, too, for the owners are usually well-disposed toward their scheme. They rent the spaces to the poor of the neighborhood at a nominal price—perhaps a dollar for the year. They plough the land, supply the seed and the fertilizer, give instruction, and even in some cases furnish tools. The renter of the plot does the planting and cultivating and takes the crop. The garden club has supervisors to see that the various plots are being properly cared for; any that are neglected are withdrawn from the use of the persons to whom they were assigned and are turned over to others. Where the experiment was tried last year, it yielded excellent results; it is to be hoped that many communities will organize garden clubs this spring.

HOW WE CAN HELP

ALTHOUGH this country is far from being prepared for warfare in the field, there are many ways in which it can be of great help to allies who are well prepared. The most important thing is to destroy or to render powerless the submarine. That weapon is aimed at the shipping that carries supplies of food and war material necessary to Great Britain and to France. We must see to it that the quantities of such supplies are increased until they are adequate, and especially we must make sure that they reach their destination. Our merchantmen are already armed. It may be necessary for the navy to protect them on their voyage.

While we were at peace and neutral we followed international law in treating merchant vessels armed for offense as vessels of war. As such they could remain only twenty-four hours in any American port; but now, since

they are vessels of an ally in war, we can permit them to discharge, to take on cargo and to depart in their own good time.

Money to meet the overwhelming cost of the war is a first essential. We have it, both in cash and in banking credits. Our vast supply of gold and the immense deposits in our banks are available as a basis for loans, and the ways to make them useful are simple. Our own government may raise a great loan by popular subscription, and lend a part of it to the allied governments.

Probably the Allies do not require any assistance from our navy for blockade duty or to reinforce their battle fleets, but our ships can help in two ways. As we have already suggested, it may become necessary to convoy merchant vessels through zones of danger. We can also release for service nearer home many war vessels of the Allies that have been patrolling our coast for the last three years.

We can give important help in the newest form of warfare. The control of the air has passed more than once from one side to the other according to the number of aircraft employed and to the skill of the airmen. We can turn the scale in the matter of equipment permanently in favor of the Allies.

Those are the principal ways in which we can immediately "do our bit" in the great contest. Defending ourselves from dangers without and from dangers within is another matter, which may be important; but however pressing it may be, it will not relieve us of responsibility for what is to happen on the European continent and in the barred zones.

OUR GOLD IMPORTS

THE most striking things about the economic situation of the United States during the last two years have been our increased exports of goods and our increased imports of gold. The two are naturally connected. A country that buys goods from another country often pays for them in actual gold coin. When, therefore, we exported in 1916 two billion dollars' worth more of merchandise than we had exported in any previous year, it was natural to suppose that the payments in gold would increase correspondingly.

But at the beginning of the war that result was not certain. All the belligerent Continental governments forbade bankers to withdraw any gold for export from the state bank vaults, where most of the national stock of gold was kept. France and Germany even appealed to the people to exchange all the gold in their possession for paper money.

England did not do that; but there was only \$190,000,000 in gold in the Bank of England when the war began. Yet the United States received on import \$451,000,000 in gold during 1915 and \$685,000,000 in 1916. That is nearly ten times as much as is usually received in two years.

Where has it all come from? No official explanation has been made; but although most of it came to us from Canada, it came first from England, which established a huge gold reserve at Ottawa, and drew on it for shipment to this country. But England has never had any such sum of gold as has come to us. One explanation is that the South African mines, which are owned in England, have produced nearly \$500,000,000 since the war began. Virtually all of that crossed the Pacific to Canada, and came thence into the United States.

But even that accounts for less than half of our gold importations. The rest is gold that the Bank of France gave up to the British government, for use in settling the foreign obligations of both belligerents. In March, the Bank of France reported \$380,000,000 of its gold reserve as "held abroad"—which undoubtedly meant, in Canada. Probably the Imperial Bank of Russia has also contributed.

The Allied Powers have sent their gold to pay for such war material as they could not pay for with the money that they borrowed from us. But what became of the gold? Most of it went into the United States Treasury, where it is stored as security for an equivalent amount of gold certificates, of which no less than \$1,220,000,000 have been issued since 1914.

The gold certificates went into the hands of the general public. Many of them found their way into deposit banks. A very great part are in the vaults of the Federal Reserve Banks, which hold more than \$550,000,000 of gold as a reserve against their liabilities. About \$230,000,000 is held by government agents to secure, dollar for dollar, the new Federal Reserve note currency. The rest is in the tills and pocketbooks of the people.

The result has been, as the Treasury estimates it, an increase of nearly thirty per cent

in the actual money supply of the United States. How far that increase has caused the general rise of prices is one of the interesting problems of the day

CURRENT EVENTS

WAR WITH GERMANY.—Both Senate and House having passed the resolution declaring that Germany and the United States were in a state of war, President Wilson signed it on April 6. —The administration's financial plans, which were submitted to Congress on April 11, called for a bond issue of five billion dollars, and a note issue of two billion dollars. Three billions are to be loaned to the Entente Allies through a purchase of their war bonds. The Ways and Means Committee of the House was at work preparing a bill for increased taxes on incomes, inheritances, excess profits, and such luxuries as tea, coffee, sugar, tobacco and liquors. —President Wilson issued a statement in support of the so-called general staff army bill, which provides for the raising of the new army by means of a "selective draft" from men less than twenty-five years of age. There was considerable objection among Congressmen to this limited form of conscription. —The President was said to be in favor of a complete military understanding with the Entente Allies, but against a formal alliance. —Ships of the United States Navy took over the patrol of the western Atlantic, which released a number of British cruisers for duty nearer home. —United States officers seized the ninety-one German merchant ships lying in American harbors as soon as war was declared. The crews were interned. On April 9, when word came that Austria had broken off relations with this country, officers took possession of fourteen Austrian vessels in our harbors. —The crew of the German gunboat *Cormoran*, interned at Guam, blew it up to prevent seizure. Several of the crew were killed.

SUPREME COURT.—By very close decisions—one 4 to 4 and the other 5 to 3—the Supreme Court has upheld the constitutionality of the Oregon statutes establishing a minimum wage for women, and a ten-hour day for all factory employees.

THE FOOD SITUATION.—The winter wheat crop in the United States promises to be the smallest in a great many years. Unfavorable weather conditions are at fault. The International Institute of Agriculture reported that the supply of cereals of all kinds was 130,000,000 bushels below the normal requirements of the countries open to trade.

WAR PREPARATIONS.—The Council of National Defense voted to constitute a committee on food supply, and Herbert C. Hoover, former head of the Belgian relief work, will act as its chairman. The council also named a general munitions board, of which Mr. Frank A. Scott of Cleveland is the chairman. The board consists of fifteen military and naval members and five civilian members. —The Shipping Board is preparing plans for building a great fleet of small, wooden cargo carriers to be used for transporting supplies to Europe. Maj. Gen. Goethals has been asked to superintend the construction of these vessels. —The railways have named a war board of five, of which Mr. Fairfax Harrison, president of the Southern Railway, is chairman, to coordinate the transportation resources of the country in cooperation with the government. —About a hundred aliens who are known or suspected to be spies or plotters in the interest of the German government were arrested and imprisoned. —The new government armor plate and projectile plant is to be built at Charleston, West Virginia.

HERBERT C. HOOVER

VIOLATIONS OF NEUTRALITY.—Seven men convicted of plotting to destroy the Welland Canal or to blow up munition ships at sea were sentenced to prison in New York. One was a German artillery officer, another was an American citizen, and the others were members of the engineering staff of the North German Lloyd steamer *Kaiser Friedrich der Grosse*.

MUNITIONS PLANT DESTROYED.—The plant of the Eddystone Ammunition Company near Chester, Pennsylvania, was destroyed by explosion and fire on April 10. About one hundred and fifty were killed, mostly women and girls. A disloyal or demented employee is believed to have caused the explosion.

RECENT DEATH.—On April 8, Richard Olney, former Attorney-General and Secretary of State, aged 81.

THE GREAT WAR

(From April 5 to April 11)

The sweep of the world war widens. Following the proclamation of war between the United States and Germany, Cuba and Panama determined to conform their attitude to that of the United States. The resolution declaring war against Germany passed both houses of the Cuban Congress unanimously, and President Menocal signed it on April 7. It was believed that some others of the Central American republics, particularly Guatemala, might follow the lead of Panama.

Brazil was greatly stirred, first by the action of the United States, and then by the news that a German submarine had torpedoed the Brazilian ship *Parana*. There were many popular demonstrations of hostility to Germany, and on April 10 the government definitely broke with that country and gave the German minister his passports. The government of Argentina announced that it approved of the attitude of the United States toward Germany. The government of Costa Rica did the same.

The Chinese Foreign Office announced that seven of the Entente nations had agreed to a revision of the Chinese tariff, the postponement of the Boxer indemnity, and revision of consular rights of jurisdiction. If the others also consent, China is virtually sure to enter the war on the side of the Entente.

On April 7 the Foreign Office at Vienna gave our diplomatic representatives their passports, and Baron Ziwedinek, the Austrian chargé d'affaires, asked for his on April 9. There was no formal declaration of war; but it is likely to follow. It is understood that Turkey and Bulgaria will take the same course.

The western front remained the most important theatre of military operations. The British and French continued their pressure on St. Quentin and La Fère, but their gains were small. The real fighting shifted to the line between Arras and Lens. There the British attacked in force, captured the famous ridge of Vimy, and drove back the German line three or four miles over a front of ten miles or more. More than eleven thousand prisoners and a hundred guns were taken.

The attack was preceded by a spectacular battle in the air in which hundreds of aeroplanes were engaged. The losses are not definitely known, but must have amounted to forty or fifty planes on each side. The British seem to have regained the mastery of the air, for they report taking photographs and dropping bombs forty miles behind the German lines, and the success of the drive indicates excellent aerial as well as artillery preparation.

The British movement threatens the northern end of the new line to which the Germans have retreated; if it is carried farther, the Germans must abandon part if not the whole of that line, and give up Lens, with its valuable coal-producing territory.

The Turks were cleaned wholly out of Persia, and the Russian forces coming from Hamadan and the British army moving from Bagdad were in touch at last near Khanakin. It will be interesting to see what is the next move in that part of the world; the Turks must hold between Bagdad and Mosul if they do not wish to yield up two thirds of their empire to the enemy.

Berlin announced nine thousand Russian prisoners taken in the recent battle on the Stokhod River. Petrograd declared that the German advance had been checked and some of the lost ground retaken. There was some inconclusive fighting near Riga. Elsewhere there was comparative quiet.

The American ship *Missourian* was sunk, unwarned, by a German submarine near Genoa. So was the American steamer *Seward* in the Mediterranean. So was the Norwegian steamer *Camilla*, loaded with corn for the Belgian relief work.

It was announced from Christiania that more than a quarter of the Norwegian merchant navy has been destroyed chiefly by submarines since the war began. The weekly report from London admitted the loss of nineteen British ships.

Official reports from Ambassador Sharp in Paris and from American consular officials and relief workers in Belgium were made public by the State Department. They indicated that the newspaper reports of wanton destruction wrought in France by the German army and of cruelties practiced in deporting men and women and abducting young girls in both Belgium and France had not been exaggerated.

The Socialist leaders of Germany are in constant communication with the Socialists of Russia, trying to reach a basis for a separate peace between the two countries; it is believed that the German government is supporting their efforts, and that it is ready to exact some concessions from Turkey if by that means Russia can be got to make a separate peace. The Russian provisional government remains firm for the prosecution of the war, but it has announced that the new Russia desires no territorial conquest.

Gen. Foch, "the hero of the Marne," retired from active service at the age of 66.

It was announced that Mr. Balfour, the British Foreign Minister, would visit the United States to discuss war plans with our government.

Shore Road—Monterey, California

For General and Particular Reasons

Almost every Goodyear user has some special reason for preferring Goodyear Tires.

One buys them for their Braided Piano-wire base, the trouble it saves and the security it brings.

Another buys them for the On-Air Cure feature, and the protection it affords against blow-outs.

Yet another is won by their Rubber Rivet construction, and what it means in preventing loose treads.

Or perhaps their superstrong fabric appeals, with its greater endurance; or their All-Weather tread, with its added defense against puncture.

But *all* Goodyear users have a common satisfaction in the greater utility and service-worth of Goodyear Tires.

And *all* Goodyear Tires are built to evoke this common satisfaction, to provide a measure of wear and worth exceeding that generally given.

So you may be sure that whatever particular feature in a Goodyear Tire may appeal to you, the remainder of the tire is of a quality to equal it.

And that wherever you use a Goodyear Tire it will return you liberal usefulness for its cost.

That is the reason more Goodyear Tires are sold in America than any other brand.

Goodyear Tires, Heavy Tourist Tubes and "Tire Saver" Accessories are easy to get from Goodyear Service Station Dealers everywhere.

The Goodyear Tire & Rubber Co., Akron, Ohio

THE WILDWOOD LOON

By Arthur Guiterman

A Fable for Jesters

THE loon has to laugh till he dies!
He laughs when he swims or he flies;
He laughs on the stream and lagoon.
"Ha, ha!" laughs the wildwood loon.

The loon thought the world was a jest;
He laughed at his mate on her nest;
He laughed at the sun and the moon.
"Ha, ha!" laughs the wildwood loon.

He laughed at the deer and the bear,
He laughed at the mink and the hare,
He laughed at the fox and the coon.
"Ha, ha!" laughs the wildwood loon.

He laughed on the lake and the sound;
He laughed and he laughed, till he found
That laugh his perpetual tune!
"Ha, ha!" laughs the wildwood loon.

In grief and in pain and in dearth
He must laugh without heart, without mirth;
He must laugh, though to wail were a boon.
"Ha, ha!" laughs the wildwood loon.

RUNNING THE RACE

THE virtues that American young people to-day value most highly are courage, fairness, persistence, loyalty, self-sacrifice, ability to accept outward defeat gracefully but with a spirit that cannot be defeated. These are great qualities, and not to be acquired in a moment. Indeed, it takes a certain degree of moral training, whether conscious or unconscious, to enable one to recognize their greatness.

Dr. Grenfell tells an amusing story of the introduction of football in Labrador, when defeat was considered so unendurable a mortification that it had to be mutually agreed beforehand that neither side should win. "We saw," he says, "the unusual spectacle of the side that had been scored against solemnly allowed to walk across the field and kick a goal to save them the feeling of being beaten."

True sportsmanship is not limited to the gridiron or race track or tennis court; it concerns the whole of life. Do you remember how, three years ago, the great College Hall at Wellesley was destroyed by a fire from which many of the girls barely escaped with their lives? Personal possessions, valuable papers and collections, all the material things in the great building were lost. Yet three hours after the fire the whole college, gathered in the chapel, were singing, "O God, our help in ages past," and joining in Saint Paul's great exultation, "I am persuaded that neither death, nor life, nor any other thing . . . shall be able to separate us from the love of God, which is in Christ Jesus our Lord."

"It is a fine thing to be enthusiastic over victory," the president said that morning. "It is a better thing to have enthusiasm in defeat."

There could be no defeat for such a spirit as that. The magnificent sequel of uninterrupted work and immediately restored buildings was only what must follow, from the great laws of life.

That unconquerable spirit is no less an ideal in religion itself. It was a girl who was teaching physical culture—dissatisfied, unhappy, almost a failure because she was denying her best self—who one day faced matters squarely. "I saw," she said afterwards, "that I hadn't been fair to God, and I resolved then and there that I was going to turn about. I was going to put into my religion the qualities I taught my girls to show in their games."

That means that she was to keep herself in training spiritually, to obey unquestioningly, to give unflinching loyalty to God. And such loyalty and such obedience mean victory—for God cannot be defeated whether in his universe or in a human soul.

THIEVES

AS the judge opened the front door he heard Sheila's voice—a clear and pleasant young voice, but very, very decided. "I'm telling you this for your own good, you know, Katie. It's such a waste of time and money and everything else for you to try to do something you never were meant to do."

Another voice answered her. The judge was something of an expert in voices—his work had taught him to know especially all the tones of hopelessness and discouragement. The other voice was irresolute; it would take only a little more to make it despairing.

"Of course I knew I never could make a fine teacher, Miss Sheila, but it seemed as if I could teach the little ones—loving them so, and all. I—I'd sort of dreamed of it all my life."

"It's too bad, Katie," the young voice was warm with sympathy but no less decided, "but you'd better give it up. It's the only brave way."

The judge went into the library and a moment later Sheila came in.

"What kind of a day did you have, Uncle Judge?" she asked gayly.

The judge's fine face shadowed. "To-day," he said slowly, "a boy of seventeen was brought up. The charge was stealing a few dollars' worth of stuff from a hardware shop where he had been employed for a couple of weeks. He said he wanted to try to make something. I asked how long he had been at school. It was only a few months now and then."

"They all said I was stupid, and I reckon I was," he said dully.

"I went further back. He had had a stepfather who was always 'picking on' him because he was stupid. He bore no resentment; he accepted himself at the valuation that others had placed upon him. Yet he wanted to make something, Sheila—"

The judge pulled her round so that he could look straight into the young face.

"Sheila, child, listen to this. The law cannot touch the greatest thieves of life. The man who steals a loaf for his hungry family is punished, but the man or woman who robs another of courage or hope or confidence—the very stuff of life itself—cannot be touched."

"Why, uncle?" Sheila gasped. "You mean Katie Dime? But she couldn't teach!"

"You took away a life dream. Did you give her anything in its place?"

"But," Sheila faltered, "she's dull, Uncle John."

"But she loves—and love is the greatest miracle worker in the world. Child, you've got to make up to Katie somehow. You've robbed her of hope and

courage and her dream; now you must find out how to give them back to her. It is the court's decision."

The judge's warm smile took the sting from the words. But Sheila did not see it; her face wore a look of mingled pain and resolution. It was one of Sheila's growing moments—and growing hurts, sometimes.

A FELINE REFORMER

A TRAMP whose face was boyish and whose hair was iron-gray sat under a viaduct near a Kansas town waiting for a freight train on which to "beat his way" to the harvest fields. Grouped under the viaduct with him were half a hundred others of his type, for when the Kansas wheat harvest calls, thousands answer.

A little black kitten wandered into their retreat. One of the men playfully tossed a tin at her, and she sought cover in the hat of the tramp with the iron-gray hair. When a long freight train boomed up the track, bound west, and the tramp hurriedly reached for his hat, which had been lying near him, the kitten was still there.

Thrusting the little animal into his coat pocket, the tramp ran for the train; but the kitten wriggled out and the man stopped short. He believed that it brought good luck to make friends with an animal, and he determined not to desert his new-found companion even if he lost the train. Half an hour later he left on another freight, and soon settled himself on a flat car with a dozen other "gentlemen of the road."

Presently he pulled the cat from his pocket and, after conferring with the other members of the party, christened it Weary Willie, a name that suited not only the cat's general appearance but also its character. It gave way to an uncontrollable desire to sleep in its protector's lap.

The tramp secured a job on a western Kansas farm. He slept in the barn with the kitten curled up on a bed of hay near him. In the daytime, while he was shocking wheat, Weary Willie played with the farmer's children.

When the harvest was over and the tramp prepared to go, the children were broken-hearted at the thought of parting with the kitten. Not wishing to disappoint them, the farmer induced the tramp to stay for the autumn ploughing, and later in the season leased him forty acres of land.

Last year the tramp—a tramp no more—harvested an average of thirty bushels of wheat an acre from his leased land, and is preparing to farm three or four times as much land this year. The neighboring farmers keep him employed steadily when he is not working for himself, for they have found him a steady, conscientious worker. The seven hundred odd dollars that he received from his crop is almost entirely clear profit.

Weary Willie belied the sex that its name implied by becoming the mother of five fine black kittens, and her master is more than ever convinced that there is something in the tramp's superstition that a black cat brings good luck. That, and hard work, made a man of an outcast.

THE "BASEBALL GRENADE"

AN officer of the Ordnance Division of the War Department has recently invented a hand grenade that may enable our army to use effectively our national ability to play baseball. The new implement of warfare has the shape and size of the ordinary American baseball, and the thrower "delivers" it with the motion that a pitcher uses for an outcurve. It is a thin steel shell filled with a very powerful explosive, but, unlike the European grenades, it can be handled with impunity, for unless a hidden spring is touched the grenade will not explode, no matter how roughly it may be struck.

Reports of American military observers along the European front have indicated, ever since the commencement of the war, that the use of the ordinary grenade is very dangerous not only to the enemy but also to the men who handle it. Frequently when a soldier drops or strikes it by accident it explodes with terrific force.

The "baseball grenade" differs from the weapons of a similar nature used abroad mainly in the manner of handling it. The man in the trenches who "pitches" these grenades will have a peculiar metal contrivance strapped to his hand. As the missile leaves his fingers one of the prongs of the device touches a hidden spring in the grenade, and by removing a shock absorber inside the weapon makes the ball explode instantly upon contact.

The inventor, who was formerly a pitcher on the West Point team, has done away with the two principal objections to the European grenades—unwieldiness and liability to premature explosion—and has developed a weapon that will feel familiar to every American soldier. Only a comparatively small percentage of men can shoot accurately, but a much larger number can throw a baseball with sufficient force and direction to make the "baseball grenade" a very formidable weapon even in the hands of a newly recruited regiment.

A NIGHT VISIT FROM A GRIZZLY

ALTHOUGH they paid dearly for their experience, Ned Frost, a Yellowstone National Park guide, and Edward Jones, a cook, have thrown an interesting light upon the character of a bad-tempered grizzly bear. In Outdoor Life, Mr. Frost describes the encounter:

It was a very large, old grizzly, and I never saw a bear that looked bigger. We were asleep and knew nothing of his approach until he grabbed Jonesy and shook him out of bed, hit him with his paw and knocked him down. Jonesy's yells woke Shorty and me, and as I roused up in bed I grabbed the first thing I could, which happened to be my pillow, and threw it at the bear. As it struck right in front of him, I think it saved Jonesy from pretty near certain death, but the old devil saw me then and came for me. I had the presence of mind to pull the bedding over me and double up my arms and legs so he couldn't get at my body very well, and that is all that saved me. He shook me like a rat, rearing on his hind feet, three or four times; that is what tore my flesh so about the knees, and this, too, right through an eighteen-ounce tarp, six thicknesses of blankets and a wool comforter. The leg was cut to the bone in some places and the main artery exposed for three inches along the side of the left knee; but I was lucky enough to escape having the knee joint opened, and don't believe I shall have a stiff leg.

There was an automobile party camped about a mile from us and they came and took us to the Lake Hotel, where two good Eastern doctors were

working on us within an hour after the encounter. There were twenty-eight stitches and a couple of drains put in my leg, and Jonesy had nearly that many, I guess, put in the muscles of his back and shoulder where the bear had grabbed him (also through his bedding) and shook him out of his bed. I think it was lucky he left Jonesy for me just as he got him out of bed, and I also believe without doubt he would have killed me instantly on getting me out of bed only that he shook me seven feet and under some young jack pines and failed to see me go; for he stayed with my bed and tore it all to pieces before he left, while I got away behind the thick young jack pines.

This is the first time I have ever heard of any bear attacking anyone wholly unprovoked, and our experience only goes to show that you can never tell what a grizzly will do.

A HERO FOR A DAY

Master—Now, tell me some important event in history that occurred in 1906.
Schoolboy—Please, sir, I was born!

MR. PEASLEE ON UNNECESSARY SELF-SACRIFICE

BY the open door of Caleb Peaslee's cornered Deacon Hyne came to a standstill and looked in without speaking. His whole figure seemed to move in a nimbus of gloom, and Caleb felt a spasm of sympathy.

"Rheumatiz plaguin' ye, Lysander?" he inquired. Mr. Hyne shook his head dolefully. "Wuss'n that," he replied. "It ain't aches and pains that's botherin' me. I'm jest tryin' to do somethin' unselfish, and it's hurtin' me wuss'n haulin' a tooth."

Mr. Peaslee's look of concern gave way to a grin, and Mr. Hyne strove to smile with him, wryly.

"I'd been lottin' on gettin' me a new hoss hoe this spring," the deacon explained, "and I can spare jest 'bout money 'nough to buy it with. And now I've got reason to believe my wife wants to go off with that passel of women to some kind of a convention or other at Bangor, and that'll take jest 'bout the money I've saved for a hoss hoe. I've been tryin' for two days now to give up to her cheerfully, and I guess I've made out—I hope so, anyway."

Mr. Peaslee looked up with a curious expression in his eyes. "Did your wife tell you she wanted to go?" he demanded.

Mr. Hyne shook his head dejectedly. "She ain't yipped a word 'bout it to me, so far," he admitted. "But most all the women in the village plan to go, so I don't see no comfort there."

Caleb scrutinized an ear of corn carefully, and his mouth turned up a little at the corners. "My wife ain't goin'—I heard her say so," he observed at last. "More'n that, I happen to know—" He broke off abruptly and his smile widened. "I guess I've got a little story to tell you, if you want to listen to it," he finished.

Mr. Hyne gave a patient sigh. "I s'pose I've got to listen, if you're sot on tellin' it," he conceded glumly.

"Well, I've got a reason for wantin' you should listen," asserted Caleb. "Years ago, when my wife and I was fust married, somethin' come up jest 'bout like what you've been goin' through for the last two days, and it teach'd me somethin' that I ain't forgot."

"This special junket was somethin' that I wanted to go to jest as bad as she did, I felt pretty sure, but I never let on to her that I did. Instead of that I kep' tellin' her what a good time she'd have, and picturin' it all out."

"Them days, when we was jest startin' in, money wa'n't very plenty, and we both knew that if one of us went, t'other one'd have to stay at home. So I didn't give her much chance to plead with me to go in her place, but I packed her off and stayed at home and nussed my disappointment. So she went off alone, lookin' pretty sober."

"I ain't goin' into particulars of what my thoughts was that day, of her off havin' a good time instead of me—I ain't never felt any gre't pride in 'em, ever. I'll jest say that I pitied myself c'n'sid'able, and let it go that."

"Come night, she got back home, and I went out to help her out of the wagon,—she'd rode back with one of the neighbors,—and when she struck the ground I see right off that somethin' was wrong. She looked tired and sick 'nough to be put to bed and have the doctor—'s a matter of fact, she had to have him 'fore she got through with it. And I helped her into the house, and in less'n a minute I found out what a fool I'd been!"

"Come to get at the rights of it, she hadn't wanted to go at all, but I'd made such a touse over her goin' that she thought my heart was set on it, and she'd swallowed her wishes and gone. She hadn't had a happy minute for the day, or one when she wouldn't have rather been to home, a dozen times over. And she'd jest tired herself sick."

"There I'd been and gone and spilt the day for both of us, on 'count of not havin' a little clearin'-up talk in the beginnin'! But it teach'd me somethin', and you better believe it never happened again, nor nothin' like it. Nowadays I know fust if there's anythin' to worry 'bout, 'fore I do any sacrificin'."

"Comin' back to what I started to say in the fust

place," Caleb went on placidly. "I happened to hear your wife and mine talkin' 'bout the convention, and they both agreed that they couldn't be dragged there by wild hosses. So I guess your two days' worry is as good as wasted, and you can buy your hoss hoe soon's you're a mind to, fur's that goes."

"Honest?" demanded Mr. Hyne, brightening wonderfully.

"Honest!" Mr. Peaslee reassured him.

HISTORIC ANAGRAMS

THE making of anagrams is deemed to-day merely a game of words. It is no longer in fashion, yet clever persons still find occasional amusement in it, and a really apt anagram never lacks applause. But in old times, when the superstitious sought auguries and omens in the most insignificant circumstances, anagrams were often taken seriously. The transposition of letters, by which a word was made to spell something else, was supposed to indicate a real connection between the two meanings—at least, if it was a connection that anyone wished to find. There have been historic anagrams in plenty which have interpreted popular opinion, and a few that may even have influenced it.

A recent writer, M. L. Lejeune, has collected a surprising number, of which two excellent anagrams in Latin are especially interesting. The first, on Queen Elizabeth, so pleased her that it would have earned its maker a substantial reward, had it not been sent anonymously. It ran:

Elizabetha Regina Anglorum—Gloria regni solve manebat (The glory of the kingdom remained secure).

Its precise antithesis, made according to tradition by Mary Queen of Scots herself, who was always fond of mottoes, quips and plays on words, epitomizes in half a dozen words the history of the unhappy queen:

Maria Stewartia Scolorum Regina—Trusa vi regis morte amara cado (Driven by force from my kingdom, I fall by a bitter death).

In later days, when Napoleon, at the height of his power, had been bringing home choice plunder of pictures and statues from Italy, the Italians made from his name, Napoleon Bonaparte, the admonitory anagram, *Bona rapta, leno, pone* (Rascal, deliver up your stolen goods).

Napoleon's great opponent and final conqueror, the Duke of Wellington, was the subject of many English anagrams, most of which were poor enough. The best employs simply his name, without the title: Arthur Wellesley—Truly, he'll see war. The second Napoleon, at a time when England was suspicious of his intentions, was the subject of a better one: Louis Napoleon Bonaparte—An open plot! Arouse, Albion!

Naturally, the names of countries as well as of personages have been the subject of many anagrams, but in most instances with less than indifferent success. Ireland, to be sure, is certainly *Erin, lad*; but there is little significance, if unquestionable aptness, in the change. With the United States it is different.

The patriot may take his choice of several anagrams, of excellent quality and variety; for example: United States—*Inde uite stas* (Therefore thou standest securely). For those of a more fiery spirit there is another rendering, if they have sufficient faith in Uncle Sam's fighting qualities: *Dentatus iste*—(He has teeth). Best and last is one that all Americans alike may accept, retrospectively for the past and hopefully for the future: *United States—In te Deus stat* (God stands by thee).

THE SONG OF MERIT

JOHN CHINAMAN often has peculiar ideas about the wearing apparel that he buys in America. For one thing, he always wants boots that are several sizes too large, for he believes that in that way he gets more value for his money. In addition to excessive size, boots may have to possess other peculiar characteristics before they meet his full approval, as the following story indicates:

A California merchant offered a pair of fine boots that he had long kept in stock to a Chinese for three dollars. The Oriental finally took them, but two days later he brought them back.

"What's the trouble, John?" inquired the merchant. "Him good boots."

"Him no good," declared John. "Him no sing-song boot. Velly soon wear out. Me like sing-song boot or me catchee back t'ree dolla'."

"Sing-song boot!" exclaimed the merchant. "Me no sabe."

"Me t'ink you sabe, all lite," replied John. "Wha' fo' him boot no singee *Squeak! squeak!* when Chinaman walkee, alle same good boot?"

When the merchant had given him in exchange for the fine boots a pair of coarse, cheap ones that squeaked loudly, John Chinaman departed highly satisfied.

A TRUE PARTY MAN

A CERTAIN elderly Bostonian has a reputation as one of the staunchest of Republicans. In fact, he is convinced that the G. O. P., like the king, "can do no wrong." The present days of insurgency and schism within the body politic are to him a source of keen sorrow, and he loses no opportunity, in spite of his more than threescore years and ten, to argue the intrinsic stability of party principles and to prove that every evil condition that has arisen in the land is attributable to the Democrats.

The other day he had consigned all the Democrats to the thieves of Jericho and shown to his own satisfaction how safe are the reins of government in the hands of a Republican, when one of his listeners remarked smilingly:

"There's —, your namesake in P—; you know the graft they discovered he'd been working while he was in office. He's a Republican."

For an instant only the loyal Republican seemed subdued; then he brought his fist down on the table with a bang.

"That old rascal? Why, he's a Democrat at heart! He's a Democrat at heart, I tell you!"

THE CHILDREN'S PAGE

MAY FLOWERS

BY THOMAS TAPPER

The people talk of windy March
And of the April showers,
And how these two are sure to
bring
The welcome Maytime flowers.

But I am sure that both these
months
Are failures as to weather,
For every year they seem to get
Most sadly mixed together.

There's rain in March and April
wind;
The snowstorms get all twisted,
Which makes it clear that Maytime
flowers
Come forth quite unassisted.

WHEN FATHER HUNG A MAY BASKET

BY S. O. VERNON

MOTHER was helping Marjorie make a May basket. Robert was looking on with much interest, for he expected to share in the fun of hanging the basket a few evenings later. Father was sitting at the other side of the table, reading.

When mother and Marjorie were putting the last bits of tissue paper in place, father laid his book on the table and looked over at the others.

"Did I ever tell you about the adventure that I had one time when I went hanging May baskets?" he asked.

"No," answered Marjorie. "Did you really hang May baskets when you were a boy?" And Robert broke in with, "Please tell us about it now."

"The adventure happened one May when I was a little older than you are, Robert," went on father. "A party of us set out one night to hang May baskets to some young friends who lived over on the North Road, a mile or so away. My brother George and my sister Bessie were in the number, and two or three others. It was only twilight when we left home, and we cut through the old orchard above the house to avoid the road, where some one might see us. We came out on the North Road near the schoolhouse —"

"Was that the red schoolhouse under the big willow, where you dropped stones on the roof during the magic-lantern show?" asked Robert.

"The very one," answered father, with a laugh. "The next house beyond it was the place where we were to hang the first May basket. A girl named Mollie lived there. It was arranged that the others should hide in the shadows by the roadside while I hung the basket. I left them there and slipped across the road and into the yard. Just as I reached the house, and before I could fasten the basket to the door knob, I heard footsteps inside and knew that some one was coming to the door. I didn't dare to wait an instant, and, with the basket still in my hand, I turned and dashed round the corner of the house."

"I heard the door open behind me and knew that some one had come out. I must hide somewhere, for of course it would not do to be caught, especially before I could hang the basket. The first hiding place that I saw was the rollway to the cellar, which stood open at the end of the house. I slipped down the stairs and crouched in the darkness of the cellar. The next moment Mollie's father came to the rollway and slammed down the heavy door, and I was a prisoner. I started to cry out, but choked back the words."

"I didn't like that dark cellar very well, and I knew that the rest of my party would be wondering what had become of me, so I waited only a minute or two before I tried to raise the door. It would not budge. Probably it had a padlock, like our cellar door at home, and Mollie's father had snapped the lock when he closed the door, having no idea that I was inside. What could I do? I heard steps on the floor overhead, but I did not like the thought of calling to the family and confessing how I had allowed myself to be trapped. I sat there on a box and waited and waited and thought and thought for what seemed hours. At last there were no more sounds upstairs, and I felt sure that the family had gone to bed. Then I started to steal very quietly up the cellar stairs to the kitchen, and get out of the house unheard."

BETTY'S MAY DAY

BY
EMILIE POULSSON
AND
MAUD LINDSAY

The sky was pink as hawthorn bloom, that shining first of May,
And little Betty rose betimes, and to herself did say,
"No laggard will I be this morn, for when my tasks are done
Then free am I to gather flow'rs and to my playmates run,
For this is merry May Day, and upon the village green
The children meet, with garlands gay, to choose and crown a queen."

So hither, yonder, Betty sprang, her holiday to earn;
The porridge bowls must Betty wash, the butter she must churn;
Must beat the feather beds, and then the covers neatly spread,
And by no hand but Betty's must her own pet lamb be fed.
The chickens, too, and cooing doves—to feed them was her work.
From task to task she singing sped. Not one did Betty shirk.

Then eagerly she sallied forth, but scarce had reached the gate,
When smote her ear a pleading cry: "O Betty, Betty! Wait!"
'Twas Dicky boy who sobbing showed a finger held apart,—
A tiny bleeding finger,—and at once with love-taught art
She soothed the baby brother and his wounded finger bound,
Nor left him till again in glee his laughter echoed round.

DRAWN BY F. LILEY-YOUNG

"TIS YOU, DEAR BETTY, WE HAVE CHOSEN FOR OUR QUEEN!"

"Now I must haste indeed," quoth she, and tripped adown the lane,
When Brother Jock called out to her, and Betty stopped again.
"O sister! See how sad a rent is in my doublet torn!
I prithee let your needle's work correct that of the thorn.
Your nimble hands will quickly do this kindly deed for me,
You'll still have many shining hours for merrymaking free."

Right willingly the little maid the woeful rent did mend.
Who would not for a lad like Jock her labor gladly spend?
Then once again she started out. (The sun was climbing high!)
"I'll take," she thought, "the path that runs old Goody's cottage nigh,
For blue her hill with violets, her field is flower strewn.
Like gold the cowslips shine; yes, there I'll fill my basket soon!"

But when the cottage she drew near, a voice called, "Will you bring
To me, who lie here helpless, some cool water from the spring?"
And Betty's heart of pity then could hold no other thought
Until the sparkling water to the sick dame she had brought.
This done, the little maiden went with joy upon her way,
And soon was plucking eagerly the flowers bright and gay.

The pink-tipped daisy, primrose pale, and violets blue and white,
Foxglove and harebell from the wood, she gathered with delight.
And all the while she heard the birds right gayly chirp and sing.
The clear-voiced cuckoo called to spread the joyful news of spring.
The throbbing fluted chants of love above their half-built nest.
"I've flowers a-plenty," Betty said. "I'll weave them now, and rest."

A butterfly, white-winged and frail, lit on a fragrant spray.
"You fairy creature! You, like me, delight in flowery May!"
A tiny field mouse scurried off, "What now? Is your home near?
Poor frightened thing! I wish you knew that I am naught to fear!"
Then Betty glimpsed a squirrel spry, that leaping reached the wood.
"Dear Bunny! When I come again I'll bring to you some food."

Thus softly talked the little maid, and wove her wreath the while.
The face bent o'er her work was bright with radiant, happy smile.
For she was thinking of her mates; of which should be the queen.
"There's Hildegarde. Her golden hair would grace the crown. I ween!
There's dancing Tess, whose nimble feet are light as thistledown;
And merry Joan; now surely one of those will wear the crown."

But in upon her thoughts there broke a ringing, singing call.
"Come, Betty, come!" And toward her trooped the village children all.
"Oh, hasten, Betty, hasten! We will dance and sing and play!
For everything is ready now, to crown the queen of May.
Yes, everything is ready there, upon the village green;
And 'tis you, 'tis you, dear Betty, we have chosen for our queen."

I knew the inside of the house pretty well, and thought that would be an easy thing to do.

"I found my way to the cellar stairs all right and was nearly at the top of them,—how they creaked!—when what did I do but hit an empty keg that was standing on the stairs. It tipped over and rolled to the bottom. My, what a racket it made as it went bumpety-bump! down those stairs! In a second or two I heard steps, and before I could get back into the darkness of the cellar the door opened and there stood Mollie's father with a lamp in his hand. It seemed that the rest of the family had gone to bed, but he had been reading in the front room."

"What does this mean?" he asked, when he saw me. "What have you been up to now, John Archer?"

"You see, I was going to hang a May basket for Mollie," I began, but he didn't even let me finish.

"Isn't a cellar a new place for that?" he asked. "And aren't you out rather late for a youngster of your age?"

"And without giving me any chance to tell my story, he took me by the ear and hustled me through the kitchen and out of the door. You see, he was not very fond of me, on account of some of the pranks that I had been in. Just as the door closed behind me I heard some one giggling in the upper hall, and I knew that Mollie and her sister had got up to see what all the confusion was about. Then for the first time I thought of the May basket that I had forgotten and left behind in the cellar."

"When I got home—I guess I ran all the way—I found them all stirred up over my disappearance. The others supposed that I had hung the May basket before I ran round the corner of the house, and they had not seen where I went. They waited a while and then went on without me to hang the other baskets."

"And did Mollie find the basket that you left in the cellar?" asked Marjorie.

"Yes, they found it there the next day, and when her father heard the whole story he was sorry that he had hustled me out of the house so roughly. Perhaps your mother can tell you more about that part of the story."

"Why, what does she know about it?" asked Marjorie.

"Well, she ought to know a lot about it," said father, with twinkling eyes, "for her name used to be Mollie Rogers. And now it is time for you to go to bed."

THE FOOLISH HEN

BY NANNIE L. BONHAM

"PLEASE give me a piece of your bread," said the cat to the old hen that was trying her best to eat a loaf of bread that was almost as big as she was. It was far more than she needed for herself.

The old hen only ruffled up her feathers and clucked something that could not be understood, so the poor, hungry cat had to go without.

"Please give me a piece of your bread," grunted the little pig. But the old hen only ruffled up her feathers, took her big loaf and turned off to one side where she thought she would not be bothered.

"Please give me a piece of your bread," said the pigeon, as it flew down from the fence right by her side. The old hen was getting very angry by this time. She flew at the pigeon, and scared the little thing out of the yard.

"Please give me a piece of your bread," said a big, old dog. The old hen only ruffled up her feathers, as usual, and started at the big dog; but he did not mind that. "If you will not give me a piece, I will take it all," he said, as he started toward the big loaf.

The old hen seized the loaf of bread in her mouth and started on a run, but the dog could outrun her. She saw that she would have to do something quick, so she spread her wings and tried to fly over the fence. But just as she got to the top of the fence a little bird pecked at the loaf; and away it went tumbling back to the ground; and in her fright, instead of landing on the fence, she fell right into a barrel of water close by.

The old hen called the cat to help her, she called the pigeon to help her, she called the dog to help her, and she even pleaded, "O little bird, please help me! I am about to drown."

They all worked as hard as they could to get her out, but they could not. Just as the poor old hen was about to sink to the bottom of the barrel of water, Farmer Perkins happened along and took her out, almost dead.

The cat, the pig, the pigeon, the dog and the little bird all had a good feast off the old hen's loaf, and it was a long time before she was able to eat another crumb of bread.

DRAWN BY G. A. WILLIAMS
THEN THERE WAS A FIGHT, OF COURSE, BUT THE OFFICERS WHIPPED

FOWLER'S WATCH

JUST after the east-bound mail train left Grant's Station, New Mexico, about midnight of March 23, 1898, one of the express messengers roughly shook the shoulder of a man who lay asleep in the express car. This man, wide-awake in an instant, jumped up as he heard shots being fired, told the messengers to put out the lights, pulled his boots on, buckled his pistol belt about him and, rifle in hand, started toward the door. He was the express company's guard, Charles L. Fowler, a resident of Albuquerque, New Mexico.

The subsequent proceedings of Fowler were such that he carries to-day a handsome gold watch, chain and seal, presented by Wells Fargo & Co., as the inscription upon the watch says, "For fearless conduct." But the truth is that Fowler showed other good qualities besides fearlessness. He proved himself resolute and persistent also.

There was no moon visible that night, clouds obscured the sky, and as the train slackened speed and finally came to a stop Fowler was able to get out of the car without being noticed. Most of the gang that had "held up" the train seemed to be gathered round the engine, although back by the sleeping cars some one was keeping up a fusillade to terrorize the passengers. Fowler sat down under the side of the express car and waited.

Presently three of the bandits came toward his car, walking on the other side of the train. As soon as he could see their outlines the guard began firing. He "got" a man. One of the robber's companions helped him away; the other started shooting under the cars, hoping to "get" Fowler.

Guard and outlaw stalked each other, Indian fashion, under and round the cars, for some moments. Then the express messengers brought their guns into action, and the gang made off up the hillside. Guard and bandits had fired more than a hundred shots,—the station agent picked up the exploded cartridges the next day,—and the victory was with the defender.

The assailants disposed of, the guard set out to search for the crew of the train, whom he feared had been killed. In one car a Pueblo Indian had squeezed himself under the water cooler, thinking himself hidden. The white passengers, equally scared, had crawled under the seats; all but one stout woman, who lay trembling and groaning in the aisle. When Fowler appeared, they thought him one of the gang, and collapsed completely. Finally the guard found the engineer, who had jumped on the last car as the train pulled away from Grant's Station.

It was when it stopped at that place that the train had been "held up." The engineer had dodged the bandits, but they had forced the fireman to start the train and to stop it when out of sight of the station, shooting him in the knee by way of reward. The engineer now backed the train to Grant's and picked up the rest of the crew, who had been left on the platform, and the east-bound mail resumed its interrupted run.

Fowler stayed at Grant's. His business with the robbers had only just begun.

At Grant's he could get no help, for the few inhabitants thereabouts were Indians and Mexican sheep herders; but he had telegraphed the news of the "holdup" to his superiors, and at three o'clock in the morning a special train brought him two Navajo Indian "trailers" and three Americans. On another special train came General Superintendent Wells, accompanied by an officer. Mr. Wells put the six men under command of Fowler, and told him to "follow the bandits as long as there is anything to follow."

It would take a page of this paper to tell in detail the events of the next seven days. On the second day out, Fowler was joined by a deputy sheriff, Francisco Vijil, who stayed by him to the end; but three of his posse, men unused to hardship and mounted on slow

horses, proved more hindrance than help.

The trail led through swollen streams and over snow-covered mountain passes. Following it was bitter work for men who could not bear to be wet and cold and hungry. So after three days

Fowler told four of his saddle-sore, dispirited party to go back. He and Vijil and the two Indians kept on.

As the posse approached Arizona the bandits began to be heard from, at ranches and sheep-herding stations where they had stopped for food. There had been five concerned in the attack, but one had gone off by himself. One of the four was reported to have a lame leg; that was the man Fowler had shot. They all rode stolen horses. Fowler recovered two, which had been exchanged for fresh mounts.

Now the pursuers were getting into the outlaws' own country, where, whether from motives of friendship or fear, almost anyone would give the criminals warning. To guard against this, Fowler and Vijil made prisoner of every suspicious character they met, and took him along. Unfortunately, one of the suspicious characters got away.

That took the heart out of the Indians. They had lost the trail, anyhow. If, as now seemed likely, the "holdup" men had been told about the officers, the chances were that "gold and glory" could not be won by a capture; for, with wood, water and grass almost everywhere, the hunted men could keep moving for an indefinite time. So the Indians left—and took all the horses with them.

But at this very time, when things looked most hopeless, reinforcements came to Fowler and Vijil in the persons of two seasoned officers, who had been sent by the chief of the express company's secret service to meet them and help them out. Two horses were found. The four officers slipped away to a quiet mountain camp near by, where they could rest for the night and talk over the situation.

And here, the next morning,—because it was a secluded spot, just such a resting place as they also coveted,—the four outlaws rode right into the officers' hands! The rascals were fairly in the camp before they realized the posse. Then there was a fight, of course, but the officers whipped.

One of the bandits was killed. Another, severely wounded, was saved for the penitentiary. Two got away and left the country. The fifth man was captured later on in Utah. That gang "held up" no more trains.

But all this would not have come to pass and Fowler would not have earned his watch had he given up when the fatigued four did, or had he joined the discouraged Indians and gone back to town. True, luck seemed to favor him at the last—but that was because he was on the spot. He had kept on "as long as there was anything to follow."

AN ECONOMICAL ICE BOX

ACCORDING to the Christian Herald, an inventive Dane has contrived a substitute for refrigerators with ice in them—namely, boxes cooled by running water. His invention has proved so popular that in all the newer sections of Copenhagen the apartment houses are constructed so as to make use of it.

The iceless refrigeration is accomplished by conducting all the cold water that enters the house from the city mains through pipes at the back of the box. Since a great deal of water is drawn during the day, the refrigerators remain fresh and cool.

If the invention proves to be what it promises, it will come into general use throughout the world, for ice, which used to be considered a luxury, is now a necessity, and its price is often so high as to make it a matter of some anxiety to housekeepers.

The name of the Dane was not mentioned in the dispatch from Copenhagen, says the Herald in conclusion, but if his plan of refrigeration works as he expects, his praise will be sung round the earth.

\$1150 F. o. b. Racine
Mitchell Junior—a 40 h. p. Six
120-inch Wheelbase

\$1460 F. o. b. Racine
7-Passenger—48 Horsepower
127-inch Wheelbase

Mitchell
SIXES

For 200,000 Miles

John W. Bate, the builder of Mitchells, stands for lifetime cars. So we aim to have Mitchells give 200,000 mile service. Two Mitchells already have proved that they can do that.

To this end we have doubled our margins of safety in the past three years. Our standard now in every part is 100 per cent over-strength.

Never before have cars built like Mitchells been built at Mitchell prices.

Let your Mitchell dealer show you what this means. Ask him for a list of great engineers who selected the Mitchell because of its endurance.

You will certainly choose the car they chose, if you buy in the Mitchell class.

\$4,000,000 in Extras

Mitchells have a wealth of features which other cars omit. On this year's output these extras cost us about \$4,000,000.

There are 31 valuable features which most other cars omit. Things like a power tire pump, for instance.

There are cantilever springs which have never broken. There are oversize steering

parts, built of Chrome-Vanadium. There is 24 per cent added luxury over our last year models.

All of these extras are paid for by savings, due to our wonderful factory efficiency. John W. Bate's methods, in the past few years, have cut our factory cost in two. The added luxury is paid for by savings made in our new body plant.

An Amazing \$1150 Six

You will see this year a new Mitchell Six—Mitchell Junior. It has 40 horsepower and a 120-inch wheelbase. But it sells for \$1150 at factory. No other car around that price comes anywhere near its value.

Yet the larger Mitchell is sold on the same basis. And it comes in all styles of bodies.

You will find no other car which gives you, in these ways,

what you get in the Bate-built Mitchell.

TWO SIZES

Mitchell—a roomy, 7-passenger Six, with 127-inch wheelbase and a highly developed 48-horsepower motor.
Price \$1460 f. o. b. Racine

Mitchell Junior—a 5-passenger Six on similar lines, with 120-inch wheelbase and a 40-horsepower motor— $\frac{1}{4}$ -inch smaller bore.
Price \$1150 f. o. b. Racine

Also six styles of enclosed and convertible bodies. Also new Club Roadster.

MITCHELL MOTORS COMPANY, Inc.
Racine, Wis., U. S. A.

A KITTEN AND A TROUT HOOK

THE mistress of a Catskill boarding house owns some fine Angora cats, and sometimes sells one of them for a high price. There are boarders, however, who object to cats—even to the fluffy descendants of Asiatic beauties. So it has seemed a good plan to have a cats' residence, or cattery, where, within an inclosed yard, the Angoras can trouble no one.

The boarding house is near the famous Beaver Kill River, and in later May there are always a few trout fishermen who make this pleasant hostelry their headquarters. Thus, early in the season, when there are few boarders, the wire door of the cattery is left open and the cats wander at their will.

One May a beautiful "silver-tip" mother, named Lady, romped back and forth on the porches with her family of three fluffy kittens. The kittens had the longest and silkiest of fur, each with a dainty neck ruff, and their tails promised to rival the great waving plume of their mother. One was named Wander, another Bear, because he was supposed to look like a little grizzly, and a pudgy bunch of purest white had the name of Lassie.

Although Lassie was as fat as a possum, she was a born gymnast. She would dance all the way across the porch in eager chase after a house fly, with her fluffy paws beating the air, and sometimes leap twice her pudgy length upward. She could make flying leaps over both her brothers that would have gained her a prize in any kitten hurdle race. At her liveliest she was nothing less than a furry spiral of curvettings and back somersaults.

One day after dinner a fisherman prepared his rod for the sport of the afternoon. And for fear that the kittens should get hurt with the flies, and wishing to linger on the porch, he pushed his rod high into the Virginia creeper that covered the front of the porch; but he had barely taken his chair when a gust of wind shook the vines and dislodged the rod. It fell outward to the grass below, with the flies fluttering through the air. Instantly a bunch of white darted from under the porch, and Lassie had one of the trout flies in her mouth.

The next three minutes was a medley of a frantic angler, a more frantic kitten, and such yowlings and spittings as can be imagined. At last the fisherman captured the kitten and found that the sharp hook was deeply embedded in her mouth. He cut the snell of the fly away; but the kitten must have been suffering cruelly, for she would not allow any straining at the hook.

There were complications. The mistress of the house had gone to Roscoe, a railway town six miles away, and was not expected back until late in the afternoon. The angler tried to turn amateur surgeon, but any attempt to remove the hook transformed the bunch of fur into a bunch of sharp claws and teeth. Lassie needed a real surgeon, and the angler wisely decided to take her to one.

But the team had gone with Lassie's mistress to the railway town, and there was left in the stable only a slow-footed and ancient mare. However, Lassie must have a doctor, and the farm boy harnessed the mare into a sorry excuse for a buckboard and volunteered his services as driver. As the kitten had a trout fly in her jaw, it was appropriate that, in the lack of a suitable basket, a fishing creel should be chosen for her ambulance.

With the kitten in the creel, the relief expedition was halfway to the railway town when it met the mistress of the boarding house. The angler can never forget the pain on the good woman's face when she heard what had happened. She thought that the kitten would let her take out the hook, but she did not really know what sharp claws Lassie owned.

"I'll have to give it up!" exclaimed the lady, after a few moments of desperate trial. "You will have to take her to a doctor. But don't let him use chloroform; I've read that chloroform always kills kittens."

The angler wondered what brave surgeon

By Ladd Plumley

LASSIE WAS A BORN GYMNAST

would tackle the hook as it ought to be tackled without using something. However, he made no comment; and the farm boy drove on.

At the house to which he had been directed, the angler was told that the doctor was not expected back for many hours. Another physician, suggested by the farm boy, was also away, and no one knew when he would return. There were but three doctors in the town, and the angler's heart sank as the old mare was pulled up before the last chance. Fortunately, the third physician was eating a belated dinner.

Country doctors meet many emergencies, and it is seldom that their ingenuity fails them. When the doctor was told about his little patient in the creel, he smiled.

"I love animals," he said. "We won't have to use chloroform. Let me see—yes! I think I have an idea. Bring the creel into my office. You'll have to hold the cat."

"Then you must get out your sticking plaster and arnica," remarked the fisherman. "I think not," said the doctor, as he stepped to the corner and lifted down a heavy overcoat. "Let me take my patient. I'll put her into the sleeve of the coat and pin her in with safety pins, so that only her head will be out. Then I think you'll have no trouble in holding her."

If the angler should ever meet with an accident up in that country, he hopes he will have Lassie's kind-hearted and skillful doctor to attend him. Five minutes after the little cat had been securely pinned into the sleeve of the overcoat the hook had been cut out. True, the folks of the town must have heard Miss Lassie's uplifted and complaining yowls for a considerable distance; but her cries seemed to be due more to indignation at not being able to use her claws than to any considerable pain.

Then came a surprise. The surgeon had shut the window and closed the door of his office in the belief that when the kitten was released she would bolt almost anywhere; but it was the sweetest-tempered and most gentle of little Angoras that slipped herself from the coat sleeve. She sat on the angler's lap and purred and purred in supreme content. And when she was once again within the creel, she curled herself into a silky plump ball and slept nearly all of the way home.

As the old mare plodded up to the porch, an anxious little group waited. And as the buckboard came to rest, Lassie's mistress stepped forward. "It's all right!" exclaimed the angler. "The hook is out, and the patient is fast asleep. The doctor says there will be no complications whatever, and that you needn't be particular even about her food."

It was the most gentle of little Angoras that slipped herself from the coat sleeve

out, and the patient is fast asleep. The doctor says there will be no complications whatever, and that you needn't be particular even about her food."

QUEER FOOD

STRANGE foods, such as potato flour, artificial protein cakes, green bone-dust preparations, tabloid soups, pudding powders and other unusual things, have come into use during the war, says a writer in the New York Sun, and their adoption serves to remind us that much good food material is neglected in ordinary use. Only a few people eat snails; most of us would starve amidst plenty of locusts; and the thought of snakes as food would give those who call themselves civilized the shudders.

But unusual food, once become familiar, is often relished. Col. Roosevelt got the best work from his men on his African expedition by promising them raw steaks from slaughtered rhinoceroses and hippopotamuses. Capt. Bartlett, who carried Stefansson to the arctic waters, found raw polar bear flesh more appetizing than anything he had eaten at home.

Frenchmen eat snails, rats are sold in the Chinese markets, and dog steaks cost there more than mutton. Some arctic tribes prefer to have their fish decomposed before eating them, and even then perhaps they smell no worse than Limburger or Brie cheese. South Americans eat lizards, and mares' milk is a favorite Russian beverage. Truly, "there is no accounting for tastes."

FAIRY

Take Your Choice Of Seven

2 of the 7

LONG-LIFE KOKOMO BICYCLE TIRES

TASTES and needs differ. In buying a bicycle tire, a studded tread may appeal most strongly to you, while some one else may have a decided preference for a gridiron.

For this reason, you are offered a CHOICE when you buy KOKOMO Bicycle Tires. There is a variety of styles and prices—seven splendid tires—each the best tire we know how to build at its price.

All KOKOMOTires are good. And no matter which of the seven you choose you may be sure that you'll get a generous return for your money.

There has been no advance in the price of KOKOMO Bicycle Tires. There will be no advance if we can avoid it. When buying a new bicycle, see that it has KOKOMO Tires. When buying tires, ask for KOKOMO.

They'll take you home to lunch—

CHOOSE:

- EVERLAST - each \$5.00
- KOKOMO KORD - each \$5.00
- NO. 13 SPECIAL - each \$4.25
- STICK TIGHT each \$3.75
- DEFENDER each \$3.25
- OXFORD each \$2.50
- PIONEER each \$2.25

KOKOMO RUBBER CO., Kokomo, Ind.

A Leader For More Than Twenty Years

Time Is Here!

Spring has come. The roads and streets are ready for the tires of your bicycle. All over the country girls and boys are riding out into the fresh, free sunshine.

Are you one of them? If not, go to the bicycle shop to-day and look over the brand new up-to-the-minute bicycles of the famous Columbia Line.

An inspection of them will convince you that the bicycle you should ride is a Columbia. Glossy and handsomely finished they are—clean lined and graceful, swift-wheeled, strong and perfect in every detail.

Columbia bicycles have always been the leaders. Your father knows this. He probably rode one.

Half the fun would be lost if you let the summer pass without a Columbia bicycle. Your dealer has one waiting for you now. Make up your mind to own it.

The new catalog shows the wide range of models and prices. Write for it.

THE FIRST VIRGINIANS

WHO were the first settlers of Jamestown? Capt. John Smith and the others who came with him in 1607 were of course the first to establish permanently the English race and English institutions on this side of the Atlantic, but there were white settlers in Virginia on the banks of the James eighty years before them.

To the energetic and adventurous Lucas Vasquez de Ayllon belongs the credit for the earliest settlement of Jamestown. This man was one of the auditors or magistrates of Santo Domingo, which within thirty years of its discovery by Columbus had already become a populous and prosperous colony. He possessed the tireless activity and the eager ambition that animated so many of his countrymen in that golden age of Spanish history.

After making a voyage of exploration that took him to South Carolina, he visited Spain and got from the king—Charles V—a royal patent granting him the right to explore farther and colonize the lands to the northward. It was expressly provided, at Ayllon's suggestion, that the natives of the country were not to be enslaved.

In June, 1526, he set sail from Santo Domingo with three ships and a party of six hundred persons, men and women, including several priests and physicians.

He took with him also no less than a hundred horses. The expedition was more than five times as large as that which Christopher Newport brought over in 1607, and much more completely fitted out.

Ayllon touched the mainland a little farther north of the place that he had formerly visited. One of his vessels was promptly wrecked on the low sandy coast; but Ayllon built a small craft—a sort of pinnace—from the trees along the shore, and, having transferred men and stores from the wrecked vessel, kept on again northward.

It was stipulated in his patent that he should explore carefully any passage leading westward, for the men of that day still believed that the East Indies lay not far beyond the New World, and that a water route thither must exist. Accordingly, when the mouth of the Chesapeake was reached, Ayllon turned westward and sailed slowly up the James River.

Like the Englishmen who were to follow him eighty years later, he was charmed with the beauty of the country, and felt that he could not hope to find a better spot for his colony. The exact spot he selected cannot to-day be identified; but from the descriptions of it that remain it is clear that it was in the immediate vicinity of Jamestown, perhaps on the very island itself.

The settlement was given the name of San Miguel. The work, mostly carried on by the negro slaves Ayllon had brought with him, went forward slowly. The same malarial fevers that later thinned the ranks of the English settlers began to rage as autumn advanced. Ayllon himself fell sick, and died October 18. Before the houses were finished winter set in—a bitter winter for that latitude, for men died of the cold.

Dissensions also rose among the colonists. One party rose against the men to whom the dying Ayllon had committed his authority, and imprisoned them. The Indians were so badly treated that they revenged themselves by killing several of the settlers. The slaves also rose in rebellion and set fire to the house of Gines Doncel, who had usurped the government. There was sickness, suffering, famine, death.

At last came a counter-revolution and a sharp bit of fighting. Doncel and his party were defeated and the men whom they held in confinement were released. Doncel was killed and some of his chief supporters were executed.

By this time the enthusiasm of what colonists were left had naturally enough evaporated. With the coming of spring they determined to abandon the ill-starred settlement of San Miguel. They attempted to take the body of Ayllon with them for interment at Santo Domingo, but the vessel that bore it was lost on the voyage, and the first settler of Virginia found his grave at the bottom of the Atlantic. Only one hundred and fifty of the six hundred who had left Santo Domingo returned thither alive.

It is interesting to speculate on the changes that might have been wrought in American history had the Spanish settlement of Jamestown been successful and permanent. No doubt it is fortunate that it was not so, but whatever was the ill fortune of Ayllon and the unworthiness of some of his party, it is pleasant to think that the first Virginian was a brave and high-minded man, one of the honorable figures in the not always honorable story of Spanish colonization in America.

Standards of Service

In rural communities clusters of mail delivery boxes at the crossroads evidence Uncle Sam's postal service. Here the neighbors trudge from their homes—perhaps a few yards, perhaps a quarter mile or so—for their mail.

Comprehensive as is the government postal system, still the service rendered by its mail carriers is necessarily restricted, as the country dweller knows.

Long before rural delivery was established the Bell System began to link up the farmhouse with the neighboring towns and villages. One-fourth of the 10,000,000 telephones in the Bell System are rural. They reach more places than there are post offices. Along the highways and private lanes the telephone poles lead straight up to the farmer's door.

He need not stir from the cheerful hearth ablaze in winter, nor grope along dark roads at night for friendly news or aid in time of trouble. Right in the heart of his home is his telephone. It is the American farmer's key to the outside world, and in no other country is it found.

DE LUE'S GOLDEN GIANT SWEET CORN

The most important horticultural acquisition of recent years. Awarded the only Silver Medal ever given by the Massachusetts Horticultural Society for novelty and excellence in Sweet Corn.

DE LUE'S GOLDEN GIANT is the result of eleven years' selection by Dr. Frederick S. De Lue of Boston, Mass., from the product of "Howling Mob" crossed with "Golden Bantam."

With its 12 to 16-row ears it gives nearly four times the yield per acre that the Golden Bantam does with its smaller 8-rowed ears. The stalks are short and frequently produce two ears each.

Its orange golden color is richer; it is more delicious in flavor and is equally early.

To introduce DE LUE'S GOLDEN GIANT we offer a limited quantity in packets containing 36 kernels each at 25 cents the packet—not more than 4 packets to any one customer—postpaid anywhere in the United States and possessions.

Our 120-page Annual Catalog and Gardeners' Guide, 450 illustrations, seven colored plates and cultural directions, will be mailed on application.

TAPS

By F.W. Burrows

IN a book of personal letters and memorials printed for circulation among his friends, Oliver W. Norton, a veteran of the Civil War who at the beginning of his military career was brigade bugler to Gen. Daniel Butterfield's command, included a bit of historical information that is of too wide an interest to be allowed to remain in such comparative obscurity.

It is, moreover, of unusual interest to-day, when camps are again the dwelling places of thousands and the call of the bugle is heard the length and breadth of the country.

Gen. Butterfield had ability as a musician in addition to his ability as an army organizer; he especially delighted in the invention of bugle calls.

Perhaps the most interesting as well as the most beautiful of these calls is taps, which, according to the authoritative story of the general's bugler, came into existence in the following manner.

In the month of July, 1862, the Army of the Potomac rested in camp at Harrison's Landing, a point on the James River in

GEN. DANIEL BUTTERFIELD

Virginia. It was immediately after the seven days of fighting before Richmond. The losses had been heavy, and the army was recruiting its strength after the long struggle.

Day and night the long, winding valley and the hills on either side echoed to the bugle calls

that marked the rhythm of the camp life. The scene was more of peace than war, in spite of military duties and trappings; the many vacant places in the ranks, to which the new army had not yet become accustomed, and the sobering sense of a long-impending struggle that was born of the early reverses from which they had just suffered, put the soldiers at the close of each day into a state of meditation not untouched with sadness.

The old order for "lights out," which had been inherited from the earliest West Point memories, sounded a discordant and unsuitable note to the sensitive, musical ear of the general.

He immediately began turning over in his mind such musical phrases as seemed to him to convey the suggestion of the peace and quiet of the camp—of rest after labor. Perhaps the spirit of the hour in which that immortal musical phrase was born might be more perfectly expressed as a sense of *pause*—something related to the words of Shelley:

All is deep silence, like the fearful calm
That slumbers in the storm's portentous pause.

Having settled upon a combination of notes that seemed to him to be in tune with the sentiment of a sleeping camp of soldiers, he summoned his bugler, Norton, and began to teach him the new call, whistling the notes over many times, and correcting their time and phrasing. At last, satisfied with the result, he jotted the notes down with a pencil on the back of an old envelope.

That same night Butterfield's own brigade were the first to listen to the lingering refrain of the new call, and the next morning the buglers of other camps near by—for its music had carried far among the hills—began to inquire as to its meaning and to ask permission to learn it. Wherever it was heard it arrested immediate attention and lingered in the memory. It passed from army corps to army corps with great rapidity, and was finally substituted by general orders for the old "lights-out" call and printed in the army regulations.

Its use in the military burial service, both by veterans of the war and by the United States regular army, has added greatly to the tenderness of its associations. There are few musical phrases in the world held in deeper reverence; its sounding to-day will hush the noisiest and most boisterous throng.

Gen. Daniel Butterfield was born in Utica, New York, October 31, 1831. He was graduated from Union College in 1849, and joined the Seventy-first Regiment of New York in 1851. In 1860 he had risen to the rank of colonel of the Twelfth Regiment, which he led to Washington in April, 1861.

For his efficiency as an organizer he was rapidly promoted, and took part in many of the most important engagements of the war. His brigade was one of the most famous of the Army of the Potomac, and his personal bravery endeared him to his own soldiers. After the war his organizing powers were frequently called into requisition for great public parades and exhibitions. He died at Cold Spring, New York, July 17, 1901.

After the war, Oliver Norton lived in Chicago, where he was one of the pioneers in the tin-plate industry.—The Editors.

With Kodak and Brownie

You can get more and more fun from your in-door and your out-door sports. Pictures of your friends and your pets and the places you visit make fun in the taking and you will always enjoy the pictures as you look over the Kodak album.

And with the folding Kodaks or folding Brownies you can make an autographic record—write the date and title on the film at the time of exposure.

The Kind Soldiers Wear

A well-known magazine writer was addressing some banqueters on his war experiences. He glanced at his wrist watch, and some one laughed.

"Gentlemen," said he, "I have seen thousands of men doing deeds of heroism daily such as none of you here has ever dreamt of. And, gentlemen, every one of those men wore a wrist watch."

The Ingersoll "Radiolite" Strap Watch is a soldier's watch—a man's watch—and a real live boy's watch. Thousands upon thousands of them are in use by soldiers, sportsmen, and active, manly boys.

Ingersoll
\$4 RADIOLITE
Strap Watch

The Ingersoll Radiolite Strap Watch is the handiest of all the Ingersolls for boys. It tells time on the darkest night, its hands and figures being made of a new substance containing genuine radium, which glows ten years or more.

Go to a dealer's and see one—and all the other Ingersolls, from \$1.35 to \$6—for men, boys, girls and women. There's a display board showing twelve of them in his store.

The Penalty of Corns

No need now to waste time soaking your feet so often. Nor run the risk of paring.

BLUE-JAY plasters have ended millions of corns. This very night thousands of people will say goodbye to painful corns forever. Touchy corns are needless, even foolish.

Blue-jay brings instant relief. And in 48 hours the average corn is gone. Only a few stubborn ones require a second or third treatment.

A Blue-jay plaster, with its healing wax, is applied in a jiffy. No soreness, no inconvenience. The pain is not temporarily eased, as with paring. There is no danger, as with harsh liquids. Decide to join the happy crowd tonight which has won freedom the Blue-jay way.

The Youth's Companion,
Commonwealth Ave. and St. Paul St., Boston, Mass.

THE INSECT PERIL

A WRITER in an English journal has suggested that the next great war will be between man and the insect world. This war would be waged not only on insects that actually attack man himself, but also on all those winged or creeping things that are his enemies in less direct ways—those species that, to use the writer's phrase, "exist at the expense of human progress and happiness."

We all shudder with horror at the thought of a scorpion or of a centipede, although few of us ever see one of them, but we do not shudder enough at the thought of the untold millions of disgusting things that we are putting up with all the time. Perhaps it is unfortunate for us that many of these harmful, and even death-dealing, insects are very small. If they were as large as they are bad we should soon rid ourselves of them. When we see the house fly or the mosquito hugely magnified, we realize at once that, compared with them structurally, the tiger is a charming and beautiful thing; but we go away and forget the magnified picture and submit to the original of it.

The death toll that vermin have caused in the present war has so enforced its lesson that the world has roused itself to clean things up. The knowledge that certain insects were disgusting and unclean did not seem to be sufficient reason for action, but the knowledge that these same insects are quite as dangerous as so many bullets is a stronger argument.

England has to thank the militant suffragettes who came under arrest for one thing at least—the clamor they raised on their release with regard to the vermin that they had encountered in English prisons.

The extermination of these pests is a duty that the world faces—a righteous crusade in which we should all join. The scientists will tell us the best way to wage the fight, but scientific methods must be reinforced by a public opinion that will cease to tolerate unclean dwellings, stagnant pools, uncovered tanks, accumulations of exposed filth, and everything else that invites vermin and menaces human beings.

THE CHALLENGE

FOR three days Phyllis watched with a constantly growing wonder. On the fourth she cornered Sarah Ruth as she was clearing the upper hall.

"I can't stand it one moment longer!" she declared. "If you don't satisfy my curiosity you will have a case of nervous prostration on your hands. Sarah Ruth, how in the world do you know so many people at the ends of the earth? Do you like housework now? And, Sarah Ruth Osborn, don't you want to go to college any more?"

"The answer," Sarah Ruth replied, "is Miss Joanna Chesley."

"I asked you a polite question," Phyllis retorted.

Sarah Ruth laughed softly. "It was two years ago when you were here, wasn't it?" she said reminiscently. "And I was about as rebellious and unhappy as anyone could be. Of course I had the children, and deep down in my heart I knew that they were my duty, not college. But I persuaded myself that daddy could get some one to take care of them and give me my chance. I hated housework. And I had great dreams of what I could do when I had an income. Then Miss Joanna came for a visit. She hypnotized me until one day I poured it out to her. And then she gave me the hardest blow of my life.

"No, you wouldn't," she said bluntly. 'If you had an income you wouldn't do anything with it.'"

"Why not?" I gasped.

"Because you don't share the things you have," she retorted, "and anyone who isn't sharing what she has can't be trusted to share any bigger thing. No, I'm not going to tell you what or how. You've got a mind somewhere about you. Use it."

Sarah Ruth's eyes were dancing now.

"I was mad," she confessed, "hopping mad! It lasted three days. Then I took up the challenge. I was making blackberry jam, but thinking a lot more about what Miss Joanna had said than about the jam, when suddenly I remembered something she had mentioned once about jellies for sick people. I marched into her room with four glasses. 'You can have them for your old sick people, but you'll have to take them home,' I said."

"What did she say?" Phyllis asked.

"She said, 'Good for you, Sarah Ruth!'"

Sarah Ruth sprang from the window seat, pulled Phyllis to the end of the hall and threw open a closet door. Inside was a miniature county fair—preserves and canned vegetables, a rag rug, holders, several yards of tatting, flower seeds, rolls of silk scraps, doll clothes, jigsaw puzzles and a flower box.

"The children have caught the fever, too, you see. Miss Joanna helped us find places for things at first, but she soon gave us orders to go ahead ourselves. It's wonderful the way things and people fit in. Phyllis, I haven't thought of college for five months, not once!"

"I believe you, Sarah Ruth," Phyllis replied.

Glacier National Park

Has Something More

GLACIER National Park has the Alpine grandeur of Switzerland—on a far bigger scale. See its towering mountains, glaciers, sky-land lakes, cascades and streams. Ride horseback to the heights, motor or travel trails afoot. Modern hotels, Alpine chalets, tepee camps. Vacations, \$1 to \$5 per day.

Have You ? Quit Bran ?

Have you tried bran and quit it?

If so, go back—you need it. Bran is Nature's laxative. It means better spirits, better days.

But try it now in Pettijohn's, a delightful dainty. An ever-welcome dish.

Here the bran is hidden. Here the flake form makes it more efficient.

Let one week show you how it changes things—just a dish a day. You will not return to branless diet. And you never should. Your fine foods clog without it.

Pettijohn's

Rolled Wheat—25% Bran

A breakfast dainty whose flavory flakes hide 25 per cent unground bran.

Pettijohn's Flour—75 per cent fine patent flour with 25 per cent bran flakes. Use like Graham flour in any recipe.

Both sold in packages only. (1548)

NATURE & SCIENCE

SMOKED FRESH-WATER FISH.—For the past two years the United States Bureau of Fisheries has been smoking fresh-water fish at the station at Fairport, Michigan. The experiments have yielded interesting results. The bowfin, or grindle, hitherto considered almost worthless, has been found to be excellent when properly smoked. Of those who have tried samples of smoked bowfin, all speak of the unusual texture and flavor of the meat, and some consider it the best of all smoked fish. The bowfin is abundant in the Great Lakes and in sluggish waters from Minnesota and New York to Florida and Texas. In the Mississippi basin it is generally known as dogfish. The Bureau of Fisheries is to be congratulated if it succeeds in producing smoked fresh-water fish that will appeal to the consumer in appearance and quality, for it will mean that another cheap and nutritious food product has been added to the general supply.

A SMOKE INDICATOR.—It is important for engineers in charge of the boilers of large steamships to know the volume and density of the smoke that passes through the funnels of the vessels; and on warships, where it may often be necessary to produce smoke clouds during battles or manoeuvres, it is still more important. The Scientific American describes a novel apparatus lately installed on the United States destroyer Conyngham

that shows the men in the stokehold just how much smoke is passing through the funnels. The device makes use of the fact that selenium changes its electrical resistance in proportion to the intensity of the light to which it is exposed. In bright light the resistance is low, in dim light, high. The accompanying drawing from the Scientific American shows how the device is placed in the ship's funnel. On one side is a metal box that contains an electric lamp and a lens. The light from the lamp, passing through the smoke of the funnel, is focused by the lens on a selenium-wound, electrically charged wire in a similar box on the opposite side. When the funnel is full of thick smoke, only a little light can reach the wire; therefore the electric current naturally decreases in intensity. As the smoke passes away, the current gains strength. The current passes through a galvanometer, the scale of which is marked "dark," "light," "medium" and "clear"; and as the indicator is mounted in a convenient place in the stokehold, the firemen can see at a glance the effect of their firing.

THE IDEAL BOX.—The experiments of the engineers at the Forest Products Laboratory in Madison, Wisconsin, with a machine for testing the strength of boxes, described in The Companion for November 2, 1916, show that it is possible to make a much stronger box than the type ordinarily used and with less material. It is accomplished by using a larger number of nails and by properly proportioning the thickness of the sides and ends of the box. Damage to goods in transit causes a loss that amounts to many millions of dollars every year, largely because of defects in the containers. The wood experts of the Forest Service believe that the loss can be greatly lessened by making better boxes. Several associations have adopted the new kind of box recommended by the Laboratory. At a recent meeting of the Cannery Association a demonstration of the efforts of the Forest Service to produce an ideal box aroused great interest among manufacturers of canned goods, and many of the men announced their intention to follow the suggestions of the Laboratory experts.

PARRAKEET APARTMENTS.—Mr. George K. Cherrie, who made an expedition to South America for the American Museum of Natural History, found in the Paraguayan Chaco great numbers of parrots and parakeets living in community nests—great bird apartment houses. In an article in the New York Times Mr. Cherrie says: Some parakeets nested in natural cavities in trees, others constructed their homes in nests of termites (white ants). I found great colony nests that accommodated perhaps two hundred birds of the Bolborhynchus, a generic name for certain of the parakeet family. The parakeets, as a whole, have narrow, wedge-shaped tails, the central feathers being longest, and they are all of small or medium size. They belong to the family of the parrot, being distinguished by the peculiar shape of the tail and their smaller size. Some of the larger apartment-house nests were eight to twelve feet in diameter, dome shaped, constructed entirely of small, thorny twigs inextricably interwoven, so that the structure was remarkably strong, and the arrangement of the twigs at the top of the dome was such that it shed water perfectly. The entrance to these great nests was always from below. In many cases there were entrance tubes sticking from the under side like the legs of some great insect. These entrance tubes varied in length from a few inches to a yard or more. Like the body of the nest, they were constructed from slender, thorny twigs from eight inches to one and one half feet in length, twisted and interwoven so cunningly and so strongly held together that birds in full flight would alight on the ends of these long entrance tubes, then the tubes would oscillate and vibrate slightly, and the birds would quickly twist themselves into the entrance of the nest and disappear. Although these entrances were so strongly constructed, one could see through them and watch the bird as it ascended to its airy suite. At the top of each entrance tube was the chamber, in which were separate nests of one, two, three or more pairs of birds. The greatest number of nests I found in any single chamber was five. I learned that these nests were constructed entirely by parakeets, but that occasionally they were willing to let some other bird, say, the jabiru, or other species constructing large nests of twigs, build their foundations, or, more properly, the roofs of their houses. In several cases I found the parakeets beginning the construction of nest chambers and their entrance tubes below. These were connected to the great platform nests, which were occupied by jabiru.

**"The Best Thing We Could
Have Bought Them"**

"They've just been having the time of their young lives ever since we bought them bicycles.

"Have you noticed the color in their cheeks? They sleep like tops. And eat—why, they're eating us out of house and home.

"I'm glad I bought them

**'MIAMI-MADE'
BICYCLES**

—everyone tells me that they are unquestionably the best bicycles on the market today.

"John says that his bicycle rides easier and has more special features than any of the other boys' bicycles; and that, much as he bangs it around, it rides as good as the day he got it. When I get a bicycle for myself this spring, it's going to be a 'MIAMI-MADE'."

And that's the only kind you want. There are four lines of "MIAMI-MADE" Bicycles—the Miami, the Hudson, the Flying Merkel, and the Racycle. Each one has special features that you will like.

Conron

Roller Skate

Boys and Girls who skate to school get there on time. Roller Skating is safe, healthful exercise.

Naturally, every boy and girl prefers the Conron Roller Skate because it is the Sidewalk Skate with all the features of the high price Rink Skate. The Conron Roller Skate has a short turning radius and is extra strong and durable because of the trussed axles and "backbone" construction. Two big rubber cushions absorb all jars and shocks due to rough and uneven pavements. Ball bearings, of course, finish, heavy nickel plate.

Price **\$2.50**

Be sure and ask your dealer for the Conron Roller Skate. If he hasn't received his supply yet, tell him to write us and we will send him a pair by parcel post, prepaid, for your approval.

CONRON-McNEAL CO., Kokomo, Indiana
Makers of the Conron Extension Ice Skate—The Ice Skate That Fits Any Size Shoe

In a mental picture, he reviews the accident—the result of his recklessness.

He realizes too late that it is *always foolhardy* to motor on slippery roads and streets without equipping all four tires with

Weed Anti-Skid Chains

The Only Real Safeguard Against Skidding

Strange, is it not, *that some men laugh at peril*—they do not seek to avoid danger—and they have no fear because they have no prudence.

They continue to motor over sleety, icy, or wet roads and pavements with "Foolish Dependence Upon Bare Rubber Alone" until a false turn—a sudden meeting at a corner—a slip or a skid—*brings disaster as the punishment for their imprudence.*

You motorists with reasoning brains put on your Tire Chains at the first indication

of slippery streets, and the editors of the daily newspapers are urging *all* motorists to *follow your example.*

For instance, the Public Ledger of Philadelphia, Pa., published by the owners of the Saturday Evening Post, in an editorial on August 1st, 1914, said that the simple adjuration to "*Use Tire Chains on wet and slippery pavements*" deserved to find its way into a law, and that law should by all means be enforced.

Promote "Safety First" in YOUR motoring circle—insist that everyone use Weed Chains on ALL tires.

"WELL, you certainly have the most extraordinary things to do, Mary!" Lucy Gladwin exclaimed. "I do believe that no one in the Glenwood Avenue Church can wash a window or take a dose of medicine without asking your advice; and if they have as much as a toothache, they can't stand it unless you sit by and hold their hands!"

Her sister, Mrs. Thorne, turned her head feebly on the pillow and laughed. "What is it now, dear?"

Lucy looked at some notes in her hand.

"Mrs. Merrick's Jimmy is worse, and she'd like to see you—to weep on your shoulder, I suppose! Mrs. Trull's Eddy is growing troublesome, and she thinks you might advise her as to the best way to manage him. Miss Molly Hubbard wants to borrow your shawl pattern, and Miss Milly your recipe for green tomato pickle; and—there, you shall not be bothered when you are sick, anyway. I won't tell you another thing!"

"You don't appreciate," said Mary, still smiling, "what an important person Dr. Thorne's wife is! Or what a pleasure it is to be able to help in all these things," she added more softly.

"That is what makes being a minister's wife next best to being a minister."

"Oh, I dare say! And it's no wonder the people all adore you, Saint Marie; but I do think they might manage their households without your advice, my dear!"

With a mutinous toss of her brown head she turned to the dressing table.

"Mrs. Merrick's Jimmy," murmured her sister. "That is the little cripple. I am sorry he is worse. She is such a sufferer herself that I don't see how she gets along now, with all the rest of her family to do for."

"Those people always manage in some way, don't they?" said Lucy vaguely.

She was tying on her bonnet before the mirror. It was a "scoop" bonnet, which was very fashionable that year,—1845,—and its purple velvet brim framed Lucy's flower-like face most attractively. Over the bonnet she tied her sister's black lace veil, elaborately worked, and so long that it fell almost to Lucy's feet. A rich friend recently returned from Europe had brought the veil to Mrs. Thorne, and it was the envy of Lucy's heart.

"It's so good of you to let me wear it!" she said, smiling at her sister.

Mary smiled back at her. "Take care that it does not lead you into vanity. Run along now, dear; you'll be late to your lecture—oh, and, Lucy, you will go round the corner first, won't you, and take the pattern and the recipe to Miss Hubbard and her sister?"

"Yes, I will; and I will bridle my unruly tongue, and not say anything saucy to them—for your sake."

When she ran out into the sunshine, her face was as bright as the spring morning itself. So thought William Barclay, as he came toward her under the arching elms. His own face brightened in response, but he only bade her good morning somewhat gravely, as was his wont, and went on his way toward the college gates.

Lucy looked after him with artless reverence in her eyes. William Barclay, a special friend and protégé of Dr. Thorne's, was studying for the ministry. He was going to be a foreign missionary. His high purpose, his serious and ardent enthusiasm were written large in his clear-cut young face. Lucy wondered how it would feel to be as good as that. His goodness and her sister's were very much of a piece, she thought—lofty, luminous, quite different from her own little, everyday sort of piety.

One of a large family born and brought up in a little house in Rivermouth, Lucy had laughed and danced through all the sunny

SHE EXPLAINED TO HIM, WHISPERING, WHY SHE WAS THERE INSTEAD OF HER SISTER

STORIES OF A MINISTER'S WIFE

By Margaret Johnson

I. THE POINT OF CONTACT

years of her life until the preceding summer, when she had fallen seriously ill. So she had been sent, for a change of air and scene, to spend a year with her married sister in New Haven.

Good Dr. Thorne and his wife petted and cared for her tenderly; New Haven was full of young people and good times; and in that happy atmosphere the girl lost her cough and her pale cheeks, and blossomed into new gayety and loveliness.

She attended the lectures at the college, and had a hundred pleasant engagements and a host of friends. Upon her sister's work she looked with puzzled and sometimes impatient eyes. She thought of it impatiently now, after she had done her errand, until, feeling again the thrilling companionship of the morning, she walked on, forgetful of all except the exhilaration of the hour.

"Mis' Thorne!" A child's voice, shrill and breathless, stopped her. "O Mis' Thorne!"

Under her veil, Lucy smiled with sudden glee at being mistaken for her dignified sister. Then she turned and saw the child—a thin, white-faced little girl, who was already clutching at her dress.

"Come!" the child gasped. "Come, quick! Mother wants you; and Mis' Pettibone says maybe she'll die if you don't hurry! Please!"

"My dear," began Lucy; but the child had already darted wildly ahead. Half vexed at the delay, half moved by the appealing look that had been in the child's eyes, Lucy hastened after her. She would at least find out what the trouble was, if only for her sister's sake.

Round two corners they went, up a narrow street, and toward a low, dingy cottage set in a little yard. From the closed windows, as they approached, there came a muffled uproar—the racket of noisy children, the lusty screaming of an infant, a voice talking sobbingly above the hubbub, and now and then lifting itself into a shriek.

Lucy's guide ran up the steps and flung open the door. "Here she is!" she cried, with shrill triumph.

As Lucy stepped gingerly into a dark and narrow entry, some one bore down upon her hastily—a large, indefinite figure in the gloom.

"Thank goodness, you've come at last!" said a husky and breathless voice. "Take him, will you, and get him quiet, while I go up to her. Now that you're here, maybe we'll have some peace. This house is enough to set a well woman crazy!"

With these bewildering words she thrust a yelling, kicking bundle into Lucy's arms and vanished.

Lucy stood speechless. After the first moment of paralyzed dismay, however, she realized that the bundle in her arms was a baby, and that her immediate business, whatever else might happen, was to still its frantic cries. Opening a door at random, she found herself in a stuffy room, apparently full of children; she dropped into the nearest chair, and tried to soothe the little creature in her arms.

Herself the youngest of her family, she was not much accustomed to babies; but at this imperative call upon her resources, the gift that nature had put into her unconscious hands came suddenly to her

relief. The tiny face was smiling into hers by the time that Mrs. Pettibone—for that was the name, she learned, of the grim shape that she had encountered in the entry—reappeared as unexpectedly as she had vanished.

"Master hand at babies, ain't you?" Mrs. Pettibone said, with grudging approval. "Mis' Merrick's quiet now, just knowin' you're here. 'Send for the minister's wife,' she says, and—"

"Oh!" cried Lucy. "Mrs. Pettibone—please, I'm not—"

"Not too late," returned Mrs. Pettibone, with some asperity. "No, but you might 'a' been. She's nussed Jimmy night and day, with the neuralgy half killin' her, till I come; and come sooner I couldn't, if I was her husband's sister instead of his first cousin. The doctor says, if she don't take that medicine he left and get some sleep pretty quick, there's no tellin' what may happen. She's afraid to take it, for fear something may come to Jimmy while she's asleep. There ain't any danger really; he's better now. But it's got on her nerves. Now you're here—"

"O dear me!" cried Lucy desperately. "I'm not here! I mean, it's my sister! Can't you understand—"

"Can't you understand," retorted Mrs. Pettibone sharply, "that this is no time for foolin'? Just say you'll stay—There's Jimmy now! Yes, Jimmy boy, I'm coming!"

She disappeared again, and presently the wailing voice upstairs ceased. Lucy waited, with what fortitude she could command. Gathering round her, the children fingered her

veil and her black silk pelisse; and she talked and laughed with them softly, still holding the baby, until they, too, were amused and quiet.

Then Mrs. Pettibone came back. "Now," she said, "come up and see Jimmy. He's beggin' for you. And when she knows you're there, if you tell her to, she'll take her dose and go to sleep. 'There's no one I'd trust,' she says, 'exceptin' the minister's wife.'"

"Listen!" cried Lucy. "You must understand—I am not Mrs. Thorne!"

Mrs. Pettibone stared. "Then, if you're not, you'd ought to be!"

"I told you," Lucy began faintly, but Mrs. Pettibone cut her short.

"Three days," she said, with awful emphasis, "three days 'Liza Merrick has been goin' on like this, ravin' crazy with the neuralgy—you heard her with the hysterics when you first come in. 'You'll die,' I says, 'if you don't sleep.' And the doctor he says so, too. 'I can't trust nobody!' she says. 'I can't trust nobody—only the minister's wife! Send for her,' she says suddenly; 'and if she tells me to, I'll take it!' And so Lizzy went for you. And here you be, and now you have the cheek to go and say it's not you, after all!"

"It isn't!" cried Lucy. "It isn't! It's my sister! I mean, it's me, and not my sister—she's the minister's wife, and she's sick and couldn't possibly come, anyway. It was all a mistake, because I had on her veil and Lizzy took me for her. And oh, I am so sorry for poor Mrs. Merrick!"

"She'll die!" said Mrs. Pettibone.

Lucy straightened herself suddenly. The pink came back to her pale cheeks.

"She won't," she said steadily; "she shan't. If I'm not my sister, I am myself, and I will do what I can, in her place. You have told Mrs. Merrick that the minister's wife is here; now tell her that I say she is to take her medicine and go to sleep, and that I will stay with Jimmy and not go away until she wakes up. Take me upstairs, and let her see me through the door. You can tell me what to do, and I'll do it. Mrs. Merrick shall have her sleep if we can possibly manage it."

She was so calm and confident, she spoke with so sudden and surprising an air of

HE ONLY BADE HER GOOD MORNING SOMEWHAT GRAVELY

authority, that the imperious Mrs. Pettibone yielded without a murmur. Leaving the baby in its carriage under Lizzy's watchful eye, they went upstairs.

The room that Lucy entered was in complete disorder. The sun poured in at the windows, a hot fire burned in the grate, medicine bottles and cloths strewed the chairs and table; but she forgot all those in the look turned toward her from the bed, where the crippled boy lay.

With a little cry of comforting tenderness she went straight to him, and he held out his hands to her with the instant response of childish trust. She explained to him, whispering, why she was there instead of her sister; and then, moving softly about the room, she listened to the voices that came through the half-open door.

Mrs. Pettibone came in presently from Mrs. Merriek's room. "Now if we can only keep the house still for a while," she said with a sigh of relief. "Jimmy's all right for the present; he's better to-day. If you need anything, call me."

She went downstairs, and Lucy began her unwonted vigil. The very look of her bright face, the sound of her voice, the touch of her soft fingers, pleased and quieted the child. She told him little stories and sang him little songs under her breath; she patted his hands and smoothed his tangled curls, until his eyelids drooped and he fell into a doze. Then, rising cautiously, Lucy crept to the mother's door and looked in.

Quieted at last by the doctor's medicine and soothed by the silence in the house and by the thought that a trusted and longed-for person was in the other room with Jimmy, Mrs. Merriek had fallen into a deep sleep. Her face was worn and very white; but the sharp lines of pain and watching were quite smoothed out, and the tired arms lay relaxed and quiet at her side.

Lucy closed the door softly and stood with bent head. From the unconscious figure in the silent room something had passed into her heart that it should never lack again. The hidden spring of sympathy within her had been touched; and in that touch she had found the point of contact between her life and the lives about her. The reality of human need and suffering, the joy of ministering, the beauty of serving—the things that had been empty words to her before—were suddenly alive and real.

Jimmy's voice called her back to his bedside; and she went gladly, eager to satisfy that newborn wish to serve. Downstairs again, a little later, she took her turn at taking care of the children while Mrs. Pettibone stayed with Jimmy. And then, seeing that noontime had already come and gone, she set to work, softly but vigorously, at the kitchen fire.

"Mrs. Pettibone," she said, hearing the door open behind her as she bent busily over the stove, "I am going to give these children some dinner before I go. Is this the right pan to fry the bacon in?"

Turning, she held out the frying pan, and saw too late that she had thrust it directly under the astonished eyes of Mr. William Barclay.

The young man was speechless. Lucy, rosy-red but mistress of herself, withdrew the frying pan with composure.

"Pardon me, Mr. Barclay," she said calmly. "Will you please not slam the door? We are trying to keep the house still, so that Mrs. Merriek can sleep."

"Dr. Thorne asked me," explained the future missionary, "to call and see whether there was anything I could do. Is there anything, Miss Gladwin?"

He appealed to Lucy as commander of the situation, and she promptly and demurely accepted the post.

"Nothing, Mr. Barclay, unless you care to help get the children's dinner."

"Certainly I do!" said William, with alacrity.

A certain harassing doubt whether a creature so gay and lovely as Lucy Gladwin could have within her the stuff of which are made fit mates for foreign missionaries had been forever settled in his breast. Laying his hat on the table beside Lucy's bonnet, he went to work under her orders as became a man and a minister to be.

He was still there when, after the children had been fed, the baby woke from a long nap in its carriage, and shattered the quiet with a sudden wail.

Out rushed Lucy from the kitchen and down came Mrs. Pettibone from above; but the grim face of that redoubtable woman was shining with satisfaction and delight.

"Let him holler!" she cried, catching him up in her vigorous arms. "It don't matter now. She's awake—awake, and as quiet as a lamb. Pain's all gone. I've told her, too, about you not bein' the minister's wife; and she ain't put out a mite—says you've saved her life, whoever you be; and I guess she's pretty near right about it. Now you go home

and get rested, or you'll be havin' the neuralgia yourself before you know it!"

How long was it since Lucy had wondered impatiently at her sister's interest in these people! She put on her bonnet almost reluctantly. The children crowded round her to say good-by, and the baby crowded at her with renewed good nature. She stepped out with William Barclay into the balmy sunshine of a

world grown strangely wide. And from the doorstep Mrs. Pettibone, with the baby in her arms, spoke out her honest appreciation.

"If you ain't your sister," she declared, "you're next door but one to her, Miss Gladwin—I'll say that much for you; and what's more, if you ain't a minister's wife, you'd ought to be, that's all!"

"Amen!" said William Barclay very low.

DRAWN BY E. F. WARD

HE CHARMED THE SISTERS BY SINGING HYMNS WITH THEM

ADVENTURERS WHO SAILED

By Frances Margaret Fox

WHEN Silas Dean, working outside his tool house, saw Mandy Swansea enter the barnyard gate, he tried to escape her notice; but Mandy saw him and hastened in his direction.

"I'd like to know," she demanded, as soon as she had come within speaking distance, "what under the sun Prue and Becky are thinking of to start housecleaning in this kind of weather! Land sake, don't they know May is coming?"

Silas Dean himself had wondered about the domestic upheaval that was making the farmhouse an uncomfortable place for man or cat.

"There is no way of accountin' for the ways of womenfolks," he answered with dignity. "Besides, Prue and Becky are old enough to know their own minds." And then, without apology, he vanished into the tool house.

It was true that Prudence and Rebecca Dean were old enough to walk ever in the narrow path approved by their lifelong friend and neighbor, Amanda Mary Swansea; but in spite of the fact that Prudence was forty-five years old and that Miss Rebecca had accompanied her on life's journey forty-two years of that time, the spirit of youth possessed the sisters. They actually giggled behind the dining-room window curtains when Amanda, with uplifted nose, walked down the trim garden path to the road.

"She knows no more than she did when she came!" observed Prudence.

"How can anyone find out anything when there is nothing to find out?" demanded Rebecca. "Besides, Mandy Mary couldn't understand our new motto if we shouted it from the housetops:

"Adventurers who dare not sail their ships Till Wind and Tide are fair will make few trips!"

"Mandy Mary," said Prudence, "would want to know first off, who died and left ships to us—she would be as badly puzzled as she used to be about fairies. Do you remember how she used to stare at our nonsense?"

"Do I? Mandy would think we had lost our reason if we told her that we've determined to pack up and sail our ships for the port of Whatever-Joy-May-Come! Sakes alive! Columbus didn't want to see land any more than you and I want to sail into port! Now, just think of our living these past few years without ever hearing that they have gone and got up so simple an affair as Mother's Day!"

"Well, I suppose it's because our dear mother has been gone so many years that we haven't noticed. Wasn't mother a darling, though! Now I tell you, sis, white flowers may be all right as reminders of mothers whose work on earth is done, but our mother left us more than a pure-white memory; she left us rose-colored recollections. It's red carnations for us on

Mother's Day, as long as they have chosen our mother's birthday for celebration."

"Prue," answered her sister, cocking her head, "your eloquence is enough to make Cinderellas of us, but the point is, we must get out of the dust and ashes. Didn't we set out to get our housecleaning done, weather or no weather, by the 10th of May, and then bring home red

carnations from the greenhouse, and have company for dinner? Since you are the captain, Prue, I should think you would order the hands to get to work—in plain English."

"Very well," said Prudence. "Sail on, brave admiral, sail on!" into the attic and begin with the rafters!"

Now, it happened that Silas, not knowing that he had ships to sail, proved unreliable in time of need, and consequently his sisters, rather than await his grumbling convenience, tugged at carpets and furniture unaided. "They worked themselves nearly to death," to quote Amanda Mary, who wasted time in trying to discover their reason for so doing, when she ought to have been getting her own rags to the weaver's. In truth, the sisters were desperate enough to welcome a tramp who appeared one morning and offered to work for his breakfast.

"Shall we let him come into the kitchen?" whispered Prudence to Rebecca.

"He—he looks honest, Prue, and he's clean, and—let's risk it just once, because we do need some one to beat our carpets."

So they invited the tramp into the kitchen. Of course, a tramp, admitted into a farmhouse, might cut off the heads of the reckless housekeepers, and then stalk through the house and steal whatever he chose; he might even set the house on fire! A tramp might kill Silas and then escape on horseback! A tramp was the only fearsome picture in the "Dean girls'" art gallery of invisible portraits; he was worse than dragons or pirates.

"The boy looks harmless," ventured Prudence at last, "and he ate like a starving man, only he has the manners of a gentleman. Let's hire him by the day, Becky, and tell him that Silas will give him a check on the bank, and go along and identify him, so he'll know we don't keep money round."

Thus it came about that Mandy Mary was able to spread the news that a tramp was helping the "Dean girls" clean house; but before that tramp had beaten carpets two hours, Prudence and Rebecca believed that they were entertaining an angel unaware, and they made the boy one of the family. At last, Prudence asked him point-blank how he happened to be a tramp before he was twenty-one, and he answered by quoting their motto, and said that he had dared to sail his ships, that was all; but it settled his place in their hearts.

That evening he played such music on the piano that Silas forgot to worry about the bad weather and the spring ploughing; and he charmed the sisters by singing hymns with them. After a while he turned suddenly from the piano, and said, "I'll tell you how I happened to be a—well, a—tramp, if you will tell me how such lovely ladies as you happen to be old—I mean unmarried?"

Up spoke Miss Prudence: "We have never been fifty miles from home in our lives," she said, "and the boys we really liked when we were school-girls all went West! We have never been visiting, for we have no one to visit. Personally, I always intended to marry a sea captain, and then I should at least have seen New York, for I should have gone with him that far to say good-by. There, now! Why did you come here hungry this morning?"

"Just as easily explained," said the boy. "My father was a hat manufacturer, and I expected him to take me into partnership when I was twenty-one. I saved my spending money in college to convince him that I was in earnest. Then, when I was hoping soon to go into business with him, he suddenly sold out, and it broke me all up. I wouldn't listen to a word he said. I took my money—it was only one hundred and fifty dollars—and left home to make my fortune. I haven't made it yet."

"How do you know so much about housework?" demanded Miss Rebecca, after an awkward silence.

"Used to help my mother sometimes," answered the boy in low tones.

Then he turned quickly to the piano and played such joyful music that Silas kept time with his head and feet. When the boy had finished, Silas jumped up, shook hands with him, and invited him to stay all summer.

"Poor boy!" said the "Dean girls" sympathetically. "Of course his mother is dead. Silas must look after his clothes."

Spring cleaning was never so happily accomplished in that old farmhouse. As the work merrily progressed the "Dean girls" told the boy their secrets, and he laughed with them, and even agreed to be their guest of honor on Mother's Day. Then, hour after hour, as they worked, they talked of their mother—what she had said, what she had done, how she had looked—until she seemed to live again in the big, rambling house.

The sisters failed to notice that the more they talked of their mother the more silent the boy became; but one morning they did notice, for he broke down and cried.

"If you will give me paper and ink," he said, "I'll write to my mother."

Miss Prudence and Miss Rebecca brought the boy paper, pens and envelopes; and he wrote the letter.

"I'll drive to town and mail it," announced Miss Prudence. "Why didn't you tell us you had a mother?"

"I tried to forget it," confessed the boy. "because I didn't want my father to hear from me until I had made good."

"You must go straight home!" "Can't he stay with us until after Mother's Day?" Rebecca begged.

"Becky," Prudence answered sternly, "think of his mother!"

The answer to that letter was a telegram from the boy's father; and then Miss Prudence and Miss Rebecca Dean learned, not only that fathers and mothers forgive their boys in real life as well as in stories, but also that money may be transferred by telegraph.

"I fear we shall never reach port ourselves," observed Miss Rebecca on Saturday, May 9, when the boy had been gone several days, "and yet our ships didn't sail in vain when you think of that boy's mother."

Late that afternoon a huge parcel came by express. It was a box full of red carnations.

"Well, well, that beats me!" exclaimed Silas; but his sisters understood.

Following the carnations came a telegram from a joyful mother in New York, inviting and urging Miss Prudence Dean and her sister, Miss Rebecca, to come immediately for a month's visit. And, being ready, they went.

Miss Amanda Mary Swansea was much put out about it.

"If Prue and Becky were trying to get their housecleaning done so as they could leave for New York on the 11th of May," she said to her neighbors, "I don't see why they didn't tell us, so's we could all have helped; then they wouldn't have been so hard pushed as to have to take a tramp right into their house, to beat carpets. I didn't know that the girls had kith or kin in the world, let alone New York, and you can't get a word out of Silas. The girls, though, will tell us all about it when they get home and aren't so rushed with work."

And surely enough, having a beautiful story to tell and talk about ever after, they did

"THE TWA DOGS" By Marion Harland

DUKE'S young mistress always insisted that in a former incarnation he was a French marquis. His breeding was perfect, she alleged in support of the theory; his gallantry was that of the old school; he was true to traditions that he could never have heard of in his present state. She had a hundred examples to cite of his daily walk—she had almost said "and conversation"—to refute the doubts of those who, she complained in disgust, "thought dogs were all alike!"

He was only three years old when he was given to her by an army officer who had raised him from a puppy. The officer held him so dear that when his regiment was ordered to the Pacific coast his girl friend esteemed it a high honor that he asked her to accept his favorite comrade.

She could never speak without emotion of the parting between the man and the dog. Duke, she affirmed, comprehended the full meaning of the farewell, and when the two lay down upon the floor, and the gray-moustached colonel pillowed his head upon the dog's, the beholder stole from the room. The last scene must have no witnesses.

In saying good-by to his girl friend, the colonel put Duke's paw into her hand.

"You are hers now, old fellow! Take good care of her!"

"Duke understood every word of it!" she would say indignantly to skeptical listeners. "It was a solemn compact, and he accepted

the top of the stairs, if he were in an upper story, and survey the visitor from that watch-tower. If it was an errand boy, or the post-man, he strolled back to his former place, wagging his tail languidly. If a friend of the family appeared in the opening door, he ran swiftly and lightly down to the front hall, with ears alert and tail eloquent of glad some welcome. If on the way down he espied nothing portable, he sought in the library or the dining room for a letter, a cap or a handkerchief; if he found anything that answered his purpose, he bore it as a votive offering to deposit at the feet of the one he delighted to honor.

Sweet-natured and refined in every instinct though he was, he had one vulgar antipathy. With all his heart and soul and strength he hated cats! The bay window of the library in our city house opened down to the floor and overlooked the back yards of half a dozen other houses. The fences dividing these were, of course, the fashionable promenade of neighborhood cats. A glimpse of one of those cats was enough to arouse the sleeping demon in Duke. With a shriek of fury he rushed to the outer door and tore at it with tooth and nail until some one opened it. Then he rushed forth and leaped against the fence, all the time barking shrilly. When the paroxysm vanished with the frightened cat, he retreated miserably to his lair under his mistress's desk and lay there for an hour or more, the picture of abject distress. His apologist and interpreter would have it that he was conscience-stricken over his lapse into the ways of common curs.

Nothing in this biography is more true than the incident I select from a hundred descriptive of the habits and traits of a so-called "dumb beast" that may or may not have been gifted with subtler senses and more intelligence than the rank and file of his tribe.

A certain "charitable" busybody of our acquaintance was so oddly feline in visage and ways that she was spoken of behind her back as "The Tabby Cat." She had a flat nose, a wide, thin mouth, gray eyes, the pupils of which contracted queerly while she looked at you, and a veritable moustache with long hairs at the end that twitched into a gruesome resemblance of a cat's whiskers.

One rainy evening, as my son and I sat in the library upstairs over our books, the door-bell rang. When the young student, remarking that it "was too late for calls," moved to answer the ring, Duke went with him as far as his outlook upon the upper landing. I heard from below a woman's voice in salutation and, before the first sentences were completed, a wild rush down the stairs, accompanied by the strangled, piercing yell known to us all as "Duke's catcall." Then a stern "Down, sir! Shame on you!" and the noise of a scuffle. Before I could get to the door Duke tore past me in frantic haste to the far corner of the room, and prostrated himself on the floor, with his nose thrust hard into the angle formed by two walls. I stood transfixed until the colloquy below stairs was ended and the outer door closed upon the caller. Then the young man bounded up the stairs, three at a time, and flung himself upon his knees beside the dog, roaring with laughter.

"Poor old Duke! Was I cross with him? Oh, you clever, clever dog! You knew she was a cat, didn't you?"

He coaxed the culprit out of the corner and sat, drawing the silky ears through his fingers.

"He sprang right at her," he said, "and I had to catch him by the collar and fling him against the wall. She was terribly startled, but recovered herself to say that 'setters are

DUKE HAD BEEN DECLARED TO BE THE LATEST INCARNATION OF A FRENCH NOBLEMAN

the charge like the gallant knight he is. Few men have kept a pledge so faithfully."

In her walks he was her constant companion, marching beside her along city pavements, never yielding to the disposition natural to his race to dash up alleys and to peer down cellars, and comporting himself toward vagrant curs as the marquis—his imaginary prototype—might have borne his powdered head through a crowd of canaille.

His love of nature approximated passion. At the word from his mistress that released him from sentinel duty in country strolls, he raced like the wind over meadow, hill and dale, with his nose in the air, and with his whole body palpitating with delight. Indeed, he cast dignity so far behind him that he actually yelped as he flew, as any low-born pup might have done.

There was more in his pure ecstasy of happiness than mere animal enjoyment of liberty and space. His devoted sovereign's assertion that Duke had keen æsthetic appreciation of fair landscapes, running brooks and towering hilltops, if discredited for a while, became a fixed fact in the minds of the family as time went on. With intelligent zeal, he sought out high places and extensive views. Having gained the vantage ground, he would stretch himself out at ease, and with head erect and ears alert would turn his gaze from point to point with the air of a connoisseur in artistic effects.

I have seen him stand motionless on the bank of our pretty lake, gazing at the doubled glory of the crimson and gold of the sunset reflected in the placid sheet. It was a saying in parlor and in kitchen that "Duke would not leave a sunset for his supper."

A work upon natural history defines the color of the Irish setter as "a solid, dark-mahogany red." Duke's wealth of waving hair was of a rich auburn and silky in texture. We wondered sometimes whether his love of the beautiful ever moved him to look into the mirror and revel in what he saw there. I have caught ugly dogs surveying their images in the looking-glass with fatuous pleasure. I never detected a glance in that direction from our thoroughbred.

He was as hospitable as courtly. No matter in what part of the house he might be, he never failed to hear the doorbell and to run to

always treacherous.' She 'only hoped the beast would not turn upon my sister some day.' She 'had heard our best friends wonder at our keeping the creature in town.'"

I do not pretend to explain the phenomenon. It remained throughout Duke's life the solitary breach of courtesy and hospitality of which he was ever guilty. He never attacked the shabbiest and rudest of errand boys. His cool aloofness merely announced that the objectionable persons were out of his sphere of observation. So far as his lordship was concerned, they were not!

John Burroughs says, "It is interesting to

DRAWINGS BY SEARS GALLAGHER

I HAVE SEEN HIM STAND MOTIONLESS ON THE BANK, GAZING AT THE GLORY OF THE SUNSET

see how well these wild creatures are groomed. . . . Domestication changes all this; domestic animals become dirty and unkempt."

Duke was a notable exception. In the city he had his baths regularly and enjoyed every one of them. In the country his daily dip was invariable in all weathers; he swam as gracefully as he ran. When he emerged, dripping, he selected the cleanest and sunniest slope of the lawn as his dressing room. By and by, when he was reasonably dry, he would seek his mistress and the comb and brush. In walking he avoided muddy places. If he got his feet wet, he wiped them on the turf.

He had been with and of us three years when, at our annual migration to the country, he found that a big new kennel had been built under the oaks shading the barn and a new dog installed therein.

Shot was a mongrel. I think that Duke detected the plebeian cross at a glance. He bent one searching look upon him, walked round him once, and turned his back to gaze abstractedly on his beloved mountains.

The man from whom we bought Shot called him "a long-haired pointer," and hotly resented the imputation of a cross in the breed.

"If he ain't a pure pointer, I'll eat him!" he declared. "If he ain't got a nose as is a nose, I'll cut mine off!"

The prospective master took Shot on a month's probation. At the end of the time he paid the somewhat exorbitant price asked for the dog; the following incident is what decided him.

Master and dog were on the scent of a bevy of quails when Shot came to a dead point within three feet of a railway track. He had not held it twenty seconds before an express train tore down the track past the dog; the horrified hunter was sure the animal must have been struck. He ran up to find Shot still on the dead point, as motionless as stone.

"Scared stiff?" put in a fellow huntsman to whom the tale was repeated.

"Not a bit of it! He had not a thought in his mind except his game. When I spoke to him he looked for the order to flush, and when I gave it he was away like an arrow from a bow. I made up my mind that instant that he was worth twice the price asked for him. I haven't changed it!"

As Duke had been declared by the imaginative members of the household to be the latest incarnation of a French nobleman, Shot was traced back through his shaggy coat to a Scotch laird who held his mountain fastness for the Covenant against King Charles's lord lieutenant, Montrose. They would fain have

summer day beside some mountain stream. It is my belief that the dog recognized in the sport of fishing a branch of his own profession, and thought that his companionship in some way tended to success in the cast or troll; for he insisted upon going into the boat when pickerel and bass fishing were on hand. He had no stomach for pleasure sailing, even when his adored master was one of the party; but the sight of rod, line and bait pail set every hair of his rough hide on end with delight.

I have room for only one story to illustrate the passionate affection of the mongrel for his owner. I could fill the page with tales of his rugged loyalty and of his service done for love's sake.

At the beginning of Shot's fourth summer with us the family went abroad and the lakeside cottage was closed.

Duke was dead.

I digress for a minute to say that he was found, after a day's search, stretched at full length on the summit of his favorite hill, facing the sunset. It was some comfort to think that the dying eyes were filled with the beauty he loved to the last of a long and honorable life.

The younger dog was left in the care of my brother in Virginia. Himself an enthusiastic sportsman, he could be trusted to make good use of his charge. We were absent for two years. Every letter from Shot's guardian told of something new, if not strange, of the member of the family intrusted to him.

On the day of our return to my brother's house Shot was out of town for a few hours. We were all seated in the library about the fire when our host told of one of the many things that had endeared the dog to the household.

"I was in the next room, reading, and keeping one eye upon the baby, who was toddling about the floor. Presently he got out of my sight, and I followed to see that he did not get into the fire. That was just what he meant to do. He made straight for the grate. Shot was lying on the rug and, before I could reach the child, he had jumped up and made a fender of his body between the fire and the baby. The boy resented it hotly. He pounded the dog with both fists and tore at his hair. Not one inch would Shot stir, although his hide was positively scorching with the heat when I interfered. If he belonged to me, I wouldn't take a thousand dollars for him."

We were still talking of the narrow escape and the marvelous intelligence of the so-called lower animal, when Shot entered unexpectedly. His master sat directly opposite the door, and the dog's eyes went to him at once.

The returned wanderer leaned back in his armchair and surveyed his friend silently without stirring. The dog stood like a statue for a full minute by the clock, the ticking of which was the only sound in the room. His eyes were riveted in a wide, wondering stare upon the beloved face. Anyone might have thought him afraid to move lest the vision should vanish. Then he took a slow step forward, still without relaxing the intensity of his gaze. Then another and another, until he could have touched his master's feet. The dead stillness in the room remained unbroken. The man from his chair looked down into the yearning depths of the beautiful eyes and spoke not a word. Tentatively—the unutterable love and wonder deepening as he moved—Shot laid one paw upon the motionless knee and, getting no response in speech, raised the other paw to his master's shoulder, bringing his face to a level with that of the silent man. The master said afterwards that human language was inadequate to express the anguish of questioning—the rapture of dawning hope he read in the eloquent depths of the worshipping eyes.

Another minute and the man spoke: "Why, Shot, dear old Shot! Don't you know me?"

A cry so human that it thrilled the listeners to the heart convulsed the big frame. Then

SHOT CAME TO A DEAD POINT WITHIN THREE FEET OF A RAILWAY TRACK

made him akin to the Gordon setter to fit in all parts of the genealogy; but he was not black and tan, and the hide that discounted the pointer breed was as unlike the English browns and whites as it was dissimilar to the rich auburn that fringed Duke's sides and tail. Shot was big and ugly, and, decided the fastidious damsel who held her Duke to be the perfection of canine comeliness, "just plain mud color!" The "mud" was streaked sparsely with a dingy white that enhanced the general shabbiness of his appearance.

Of course he was always at his master's heels, as the man tramped with his rod all the

the dog buried his head under his master's arm and sobbed with joy.

Need I add there was not a dry eye among the group of beholders?

Many years after Duke and Shot were laid to rest in the orchard sloping down to the lake beloved by both, I read an epitaph quoted by a novelist who thought it not beneath her to write a dog's biography:

He died for his master!
Reader, forgive him! He was
only a Dog!

As I linger lovingly over this simple story

of the loyalty and unhuman devotion that have enshrined our "two dogs" in our heart of hearts, I remember a sentence from the letter written by Duke's first owner, the officer who presented him to his girl friend, when he heard of the death upon the hilltop:

"Dear, faithful comrade! I can but believe that, when I pass over the Silent Sea, Duke will be among the first to greet me."

Is it only the untutored Indian who in the words of Pope

... thinks, admitted to that equal sky,
His faithful dog shall bear him company?

THE PLATTSBURGERS

By Arthur Stanwood Pier
In Ten Chapters Chapter Three

TEN minutes for dressing was little enough when clothes were of a kind still unfamiliar; and it was an unwashed and frowsy Ted that tumbled out of the tent at the call of the whistle. Capt. Hughes was standing on a table at the head of the street; the men fell in and then were formed into columns of squads; then they took interval to left and right, and proceeded to go through the setting-up exercises. The captain led them, and all followed in unison,—"arms forward and back in two counts,—one, two, one, two,"—and so on through the various movements, for fifteen minutes. At the end of that time they were dismissed, feeling thoroughly waked up and breathing pretty hard.

After breakfast, as the day promised to be fine, orders were given that all tents should be rolled back and tied round the tent poles. Greiner, as corporal, naturally took command of the proceedings at tent 26. He detailed Ted and Stevens to loosen the guy ropes outside; Ted found the ropes too stiff for his strength. He struggled and strained, and presently Greiner came out to see what was the cause of the delay. He watched Ted for a moment, and then said in disgust:

"You're too weak for any use. Go and sit down somewhere."

He thrust Ted out of the way and, hauling on the ropes, freed them from the pegs, while Ted looked on, burning with mortification.

"Come ahead, now, see if you're strong enough to help roll this up!" Greiner called sharply; and Ted sprang forward and began to bundle up a section of the canvas. When it came to tying it, he was clumsy, and again brought down on himself rebuke and denunciation. The other fellows, who had finished the tasks assigned them, came to see what the trouble was, and their interested observation did not increase the efficiency of Ted's efforts; but Stevens and Gray stepped forward to his assistance, and soon the tent was fastened back, and the beds under it were fully exposed to sun and wind.

For an hour the company was drilled in squad movements and manoeuvres in the company street; then there was an hour of the manual of arms; and then they were marched a mile down the road to the parade ground of the army post. There they were given the first instruction in platoon movements; then back to squad movements and the manual of arms; then marching and counter-marching; and so the morning passed. When, well tired, they were finally started back to the camp, they were ordered to "double time" over the hard macadam road. In the jog trot Ted found that his rifle bounded more and more exuberantly from the same spot on his collar bone.

"Come down on your heels!" muttered Stevens at his side; and Ted tried it, and felt at once a most gratifying relief; the rifle no longer jarred so painfully on the collar bone. Nevertheless, he was not sorry when the command "Quick time!" was given, and the company settled down to the normal gait. While they swung along at route step, some one started to sing Tipperary, and immediately all the ranks joined in, and they were still shouting out the song when they marched in at the camp entrance and up to the company street. There they were dismissed, five minutes before the luncheon hour.

During the morning's work Ted had discovered who Bill was. He marched in the rank just ahead of him and seemed to be a cheerful, good-natured soul, with a voice and a repertory of songs. He was always the first in the neighborhood to strike up when route step was in order and singing was permissible, and already had achieved popularity in his squad. Ted could understand Greiner's desire to have such a person in the tent; he could almost sympathize with it!

Now, while Ted was washing up, Bill approached him, drying his hands on a towel and smiling pleasantly.

"Well, how did it go?" he asked.

"Oh, pretty well," Ted answered. "I tell you, your singing is great to march behind when a fellow's tired."

"Did you like it? When I'm bellowing like that, I don't feel quite so tired myself."

"If I could sing," said Ted, "I wouldn't

mind being such a puny runt and having everyone call me kid."

Bill laughed. "Don't you mind that. You're young. You'll grow. Probably this kind of life is just what you need to give you a start. How do you like the crowd in your tent?"

"Oh, first-rate!" Ted answered cheerfully. "Most of them seem to be mighty good fellows."

"Yes, I know some of them. In fact, I was rather hoping to get into the same tent with them. If ever you find you want to make a shift, let me know."

"I guess it wouldn't be of any use. We've been assigned to our places, and I suppose we can't change just because we may want to."

"Well, there'd be no harm in trying. But I'm saying this, you know, only in case you find you'd like to make a change."

"Why should you think I might like to? What makes you say it to me, rather than anyone else in the tent?"

Bill flushed under Ted's inquiring eyes, in which the twinkle revealed something more than suspicion.

"Well, I had reason to think that there were one or two that you didn't get on with," he confessed.

"There's no one that I can't get on with; if I don't like a fellow, I can let him alone. Now, if it were just a matter of changing places with you in order to oblige you, I might be willing to do it; but I don't choose to put myself out for the sake of doing a favor to Greiner or Carton. Besides, we're here to get military training and discipline, and I think the thing to do is to take what comes and not bother the officers with requests for transfers and reassignments."

"Right you are. I hadn't thought of that. Just forget what I've said, will you?"

"Sure. Look here, I don't know your name."

"Meade. I'm a classmate of a couple of fellows in your tent."

"I'm a freshman at Brampton—at least I've just got done being a freshman," Ted said.

"I thought I'd seen you before. Glad to have met you."

They shook hands and Meade returned with his towel to his tent.

The assembly call sounded; a few moments later B Company was filing in to mess. It was a hungry and thirsty crowd; bread and apple butter and beans and macaroni all tasted so good that Ted remarked to Stevens, beside whom he was sitting, that he had not known how well Uncle Sam fed his soldiers.

"He doesn't feed them as well as this," Stevens answered. "We're being fed for fifty cents a day, and the enlisted man is fed on twenty-six cents a day. I suppose this is about the equivalent of officers' rations. I oughtn't to eat too much, if I'm to get on a horse right after luncheon."

"You're taking cavalry?"

"Yes. What are you doing?"

"Signaling. I can't ride, so I couldn't take cavalry; I can't draw, so I thought I'd better not try map making; I'm poor at mathematics, so I thought I'd be no good at artillery—and signaling seemed to be about all that was left."

"I suppose, then, that you're a shark at electricity, wireless, physics, and all that kind of thing."

"Do you have to be to do signaling?" Ted asked in dismay. "I thought it was just wig-wagging, with flags."

"I guess you won't find it too hard. Probably

they won't do much more than show you the different kinds of field instruments. You can't hope to become an expert signaler in a month, any more than I can hope to become a crack cavalryman."

That this was true Ted very soon discovered. Half an hour after luncheon the details from each company for the different branches of optional work were called out; those men who had enrolled for signaling assembled on the lecture ground just below D Street. The army officer who addressed them explained that in the limited time available he could hardly do more than give demonstrations of the various types of apparatus for signaling and conveying intelligence that an army uses in the field. The wigwag system, the heliograph, the field telephone, the field wireless—these were the chief things that he would have to explain. He would begin with the simplest of all, the wigwag system.

Then he passed round cards showing the flag code, and a sergeant with a bundle of flags came forward and distributed these among the members of the class. The captain then told the men to pair off and try signaling the alphabet to each other. The sergeant gave a demonstration of the correct manner of waving the flags; then he and the captain walked slowly down the lane of signalers and criticized and advised each man. The recruits spent about an hour sending each other

crammed them into the pocket of his shirt, the other company calls rang out.

By the time he reached the head of B Street the company was assembling. Ted ran the length of the street, dived into tent 26, hastily put on his blouse,—for he had noticed that the men were now for the first time wearing the full uniform,—caught up his rifle, and elbowed his way into his place in the front rank just as the corporals at the top of the street were making their report—"All present"; "all present."

Greiner glanced along the line. "Ripley," he said savagely in an undertone, "get out and put on your bayonet!"

Ted ran back into the tent, satisfying himself with a glance that the bayonet and belt were indeed a part of the uniform for this drill. He had to affix the bayonet to the belt, and that delayed him; so he was still in the tent when he heard Greiner say with unpleasant distinctness, "Private Ripley absent."

"Where is he?"

"Right here, sir."

Ted answered in his own behalf as he hurried out to his place in the line.

Lieut. Wharton, who had asked the question, looked at him severely.

"I want you men all to understand," said Lieut. Wharton, addressing the company and speaking in a sharp voice, "that you are under strict military discipline, and that you are

expected to be always punctual in taking your places. We don't want any dawdling and sauntering; we don't want men coming in late just because it suits their convenience; furthermore, we won't have it. Attention!"

Ted's cheeks burned while he stood rigid and listened to the strains of The Star-Spangled Banner. In the manual of arms that followed he did not acquit himself with distinction; whether because he was flustered on account of the rebuke or because after so full a day his mind was working less quickly than usual, he did not come in promptly on the counts when the manual was being performed "by the numbers." The corporal on his right muttered a warning to him once, and Stevens on his left gave him a correcting nudge another time; and twice he had a glimpse of Greiner scowling at him along the line.

After a fifteen-minute drill in the manual of arms, the company was marched to the sloping field just below the camp and was there put through the evolutions in which it had been drilled that morning. The other companies were out there, too, marching, counter-marching; at the top of the slope were assembled numerous spectators who had come from the town or from the summer hotel near by, and who frequently applauded as the khaki columns passed. Ted felt that

he was entitled to no share in the applause. His squad led the marching, and when the order was "Right turn!" Ted was the pivot round which the three men in line with him swung.

"Hold that pivot! Hold that pivot!" bellowed Lieut. Wharton, and rushed down upon him. "You took a full step when you should have taken only six inches. You didn't wait for No. 4 to come up on a line with you. Remember what you're told—use your mind."

Having walked beside Ted while he shouted this criticism at him, Lieut. Wharton now dropped back to observe the others.

A few moments later Capt. Hughes, from his place by the middle of the column, shouted through his megaphone, "Squads right!" Each corporal repeated the command for the benefit of his squad. Then came the shout, "Ho!" and Ted pivoted. And this time Lieut. Wharton was down on him again. "When you pivot, you're not to take the half step. You're to mark time. For goodness' sake, pay attention and do what you're told!"

Ted was glad enough when the column swung back into the company street. There, before the men were dismissed, the first sergeant made an announcement.

"I am requested to state," he said, "that a member of this company has offered a prize, consisting of eight silver cups, for the members of that squad which, in the judgment of the officers, proves at the end of the encampment to be the best drilled, most efficient and soldierly squad in the company. You're all interested in this announcement, but it ought to be of special interest to the corporals. They're responsible for their squads, and to

DRAWN BY NORMAN ROCKWELL

"HOLD THAT PIVOT! HOLD THAT PIVOT!" BELLOWED LIEUT. WHARTON, AND RUSHED DOWN UPON HIM

be corporal of the winning squad will be an honor. Dismissed."

The company broke at once into a buzz of talk.

"I know one squad that won't be the winning squad unless there's a change made in it!" Greiner burst out. He shot a savage glance at Ted. "One man can put a whole squad to the bad." He went up to Meade. Ted, walking dejectedly to the tent, knew what was the theme of their conversation.

Carton followed Ted into the tent and maintained a disapproving silence. Then came the others; they put their rifles in the rack and unhooked their belts. Gray spoke a consoling word:

"I tell you what, I'm glad I'm not on the end of the line in the front rank."

"It's the meanest position in the whole company," said Stevens. "You see, Ripley, when you're on that end and we're in column of squads, the guide is right, and you set the pace and the alignment for the whole company. If you wobble and don't walk straight, the whole company wobbles and walks crooked. And if you do a thing wrong, it's seen, whereas any blunders in the middle of the rank are more likely to escape notice, and don't matter so much, anyway."

"Pity they didn't get some one who was less of a dub for such a position," Ted lamented.

"No one else would have done any better first time," declared Stevens. "Lieut. Wharton was pretty rough with you, but you've got to get used to that. Some officers think that's the best way to lick green men into shape."

The mess call cut short the discussion.

Returning from supper, Ted encountered Lieut. Wharton in the company street and brought his hand up to salute. The officer returned the salute, and then stopped him.

"You're bareheaded," he said.

"Yes, sir."

"Never salute unless you have a hat on."

"Yes, sir."

Ted was feeling resentful, when he caught the twinkle in Lieut. Wharton's eyes—a twinkle that intimated the curt manner of speech was only assumed. And then the lieutenant put his hand on Ted's shoulder and said kindly, "Of course we don't expect you fellows to know all these things by instinct. You'll learn after a while."

This made Ted feel better. But in a few moments he felt worse again. Meade and Greiner were talking together in front of tent 26, and as Ted passed and entered Greiner remarked:

"Just the same, I haven't given up hope yet. I'll get rid of him somehow."

TO BE CONTINUED.

fell he had a glimpse of Pedro almost directly beneath him.

He struck the bank with a force that drove the air from his lungs, and sent him sprawling down the slope to the smooth ice of the stream. He was dimly aware that Pedro, evidently taking this for some new form of play, was tumbling over him. Realizing that they were sliding with increased velocity toward the falls, Duncan tried to spread out his arms to retard his progress. Then suddenly he shot forward swiftly and the roar of the water filled his ears. Strength returned to him, and he pushed the palms of his mittened hands downward and felt himself gradually stop.

For a moment he lay gulping the air and then sat up. Five yards in front of him a curving rim of water rose from under the ice; beyond that was the sky, with the sun sinking through a white cloud streamer.

Pedro whined and snuggled close to his master.

"Lucky for us we didn't slide a few feet farther," Duncan said, patting the dog's black-and-white head. "Now let's get back to that gum tree."

He stood upright, carefully balancing himself, for his smooth moccasins threatened to slip from under him. He faced the left bank—a fifteen-foot wall of smooth rock covered with patches of ice that had formed when the thaw had sent the snow water trickling down. He turned to the right and saw a similar formation. The wall of the gorge rose straight; thin, transparent icicles hung from its rim.

"Good thing for us, Pedro, old boy, we haven't got to climb those walls," said Duncan, and, chirruping to the terrier, he started gingerly upstream.

A dozen steps, and he came to the cascade down which he had slid. It rose at a considerable angle where the stream flowed over the incline of its bed. It was as if he stood at the eaves of a gently rising and undulating roof—with the ridgepole as his goal twenty yards beyond. He moved over to the edge in the angle of the wall and started upward. Three steps brought him a fourth of the distance, but the side of the gorge had been worn smooth by the action of the water and he groped vainly for a hold. Suddenly his moccasins slipped, and, falling to his knees, he slid to the bottom of the incline with Pedro sprawling at his feet.

Again he tried the ascent, and this time he

the trapper, the woodsman, the roamer in the mountains, could not devise some means of escaping from this prison of ice. He felt through the pockets of his trousers. The contents—two or three yards of slender twine, a handkerchief, a leather wallet with six one-dollar bank notes, and a piece of gum that he had saved from the bag because it was shaped like a gun cartridge—were all pitifully useless.

He could see the gum tree plainly beyond the ridgepole of the ice roof. In the lower part, hidden from view, he knew that his knife was sticking, and near by lay his red-and-gray Mackinaw, with matches in the pocket, and the gum gatherer that he had flung from him as he fell. They were all as much beyond his reach as if they had been in his camp at Hemlock Ridge.

Pedro, snuggling against his body, roused him. The terrier was shivering, and Duncan for the first time realized that he, too, was shivering. His light jersey and underclothing were not much protection against the freezing wind that blew up the gorge. The sun had already set, and a dusky light that made the outlines of the trees merge into one another was over the forest.

Getting to his feet, Duncan beat his arms against his body. There must be some way out—there had to be! Impassable walls were on two sides, and an equally impassable roof of glassy ice was on the third. Duncan turned his back and faced the fourth. The rounding curl of water was there—and beyond it the sky still tinged with the rose glow of the fading sunset. The roar of the waterfall came up with a sullen, steady sound that suggested depth and coldness. Duncan turned away with a shudder, for he knew already the desperate chance that he must take if he was to live.

He was shivering steadily now, and his teeth chattered. He thought of making a rope, but there was nothing to which he could attach it even if he were able to make one. A dozen other thoughts rushed through his mind. In stories men had made their escape from glacier crevices by digging steps in the ice, but he had nothing with which to cut the steps. Circumstance had robbed him of everything. He broke off an icicle and, holding it in both hands, struck at the hard surface; but the thin finger of ice shattered into a dozen pieces and skittered away like splintered glass.

The terrier crawled over his legs into his lap and lay trembling. Straight before him was the waving fringe of water, and above and beyond that the big yellow eye of the evening star, shining steadily like a nugget of gum that had caught a glint of sunlight. Even in his misery Duncan saw the gray-blue beauty of the sky. It made life seem sweeter than ever. He loved the woods with its carpet of snow below, its canopy of cloud above. Its hills and valleys were his to wander among. He could not lie here in this chill dungeon until the frost laid its grip on the blood in his veins.

The brilliant orb of the evening star straight before him above the waterfall seemed like a beacon beckoning him to the path that he must take. He must do it now while yet there was strength in his body and the spirit within him to try.

His legs seemed strangely stiff as he rose, but he stamped them and thrashed his arms against his body. Then he took Pedro in his arms and crawled up the slope until he felt himself slipping. Like a flash he turned and ran toward the falls. At the last moment he threw himself on the ice, as a ball player who slides to a base. He touched the water that curled at the brink; in one breathless instant he was through and over. A vision of a shimmering, ghostly ribbon of ice winding through dark woods, a glimpse of a blackness flecked with white foam rising frightfully to meet him—then the shock and freezing chill of the plunge.

The water whirled him round and round, rolled him over, thrust him down to the bottom and held him there with its giant hands. He knew that Pedro was no longer in his arms. A relentless force was strangling and crushing him. He no longer felt the coldness.

With the feeble strength that remained in his body he gathered his legs beneath him and pushed upward. He left the bottom and for a weary length of time seemed to float in space. Suddenly his head came out of the water. Behind him roared the falls, beside him swam the terrier.

Somehow the two of them gained a rock together and drew themselves out into the freezing air. A pause meant death, and Duncan knew it. Rushing up through the spruces, he scrambled along the ridge and through the undergrowth to the big spruce and the Mackinaw coat and the matches.

Other men have frozen with the victory so nearly won; they have lain down to die in the snow; but Duncan lighted his fire while yet there was strength in his body, drew together the dry tops of a dead tree and stood close to the blaze. With the first glow of its radiating heat he knew that he and Pedro, from whose coat little circles of steam were beginning to rise, would sleep that night in their cabin on Hemlock Ridge.

THE PATH OF THE EVENING STAR

By Clayton H. Ernst

WALKING rapidly over the firm crust with his dog Pedro at his heels, Duncan Fraser skirted the tangled branches of a fallen hemlock and came to the edge of a narrow frozen stream that wound through the forest. A thaw followed by days of bitterly cold weather had crusted the snow and made ice ponds of glassy smoothness in every hollow. From down the slope came the monotonous roar of a waterfall.

Duncan stopped at a shaggy spruce tree and, gazing upward, scanned its bark with a practiced eye; he paused only a second or two before he passed on toward the falls. A moment later he examined a second spruce tree with equal quickness, but did not stop. Over his back and chest hung two ends of a rough cloth sack; his head was thrust through a slit at the middle. In one hand he dragged a trimmed pole of dry spruce, on the end of which was a cornucopia-shaped instrument of iron with a sharpened rim.

A hundred feet from the head of the waterfall a huge old tree, towering above its neighbors, leaned slightly toward a frozen pool; the pool led into a steep-walled gorge through which the stream under its covering of ice found its way to the waterfall. Duncan scarcely glanced at the gorge, but gave his whole attention to the old monarch of the forest. With one hand on its furrowed bark he bent his head backward and gazed straight up.

"Found!" he cried suddenly. "Pedro, we've found a gum tree!" And the terrier, understanding by the ring of his master's voice that something unusual had happened, rested his forepaws against the tree and barked.

Five feet above Duncan Fraser's head was the lower end of a deep slash made by lightning. It extended through the dead lower branches up and up until it was lost in the green foliage above. All the way its sides were incrustated with nuggets of amber-colored gum from the size of a pea to that of a hen's egg. In the level rays of the late afternoon sun they shone with a topaz light. This was an unusual find, and it meant dollars to Duncan Fraser.

Within reach of his hands was a scar in the trunk from which several nodules of "blister" gum had oozed and hardened. Taking his knife from the pocket of his Mackinaw coat, he quickly began to chip off the clear crystals and to put them into his bag. He dropped the best pieces into the end of the bag that hung over his chest and put the inferior gum in the end at his back. When he had gathered what was within reach of his hand, he thrust his knife into the thick bark of the tree and picked up his cornucopia-tipped pole. With this raised above his head he began to gather the nuggets. Each piece, as he dislodged it with the sharp rim, fell inside the horn. When he had filled the cornucopia, he lowered it to the ground and emptied its contents into the bag. Then he raised it for another load.

Duncan Fraser was a trapper, but this winter his traps hung on the walls of his cabin at Hemlock Ridge; it was an "off year" for fur. In November he had heard that the wholesale druggists in Portland were paying a dollar and a half a pound for first-class "amber" gum and eighty-five cents for the second grade. He had taken up his trap line, and since then had gathered two or three pounds of gum a day. Until this moment his fortune had been

only moderate; now, several pounds of the best quality gum were within sight, and Duncan could only conjecture at the amount hidden above.

When he had gathered the gum crystals within reach of his pole, he quickly slipped the bag from his shoulders and, putting one moccasin foot on a stub and reaching to another stub above, mounted with the pole in his free hand. In this way he gradually worked his way up the trunk of the giant spruce.

When he had filled the cup twice and

DRAWN BY GEORGE VARIAN

A SUCCESSION OF PANIC-STRICKEN ASSAULTS ON THE SLOPE BETWEEN AVAILLED HIM NOTHING

emptied it on the snow beside his bag, he clambered down and threw his Mackinaw over a bush; for, in spite of the zero weather, the strenuous work of climbing the tree and manœuvring with his gum gatherer had made his thick coat seem uncomfortably warm. Then, pole in hand, he climbed up again. Pedro made forays into the undergrowth, from which he frequently returned to gaze upward and whine at his master.

When Duncan had mounted fifteen feet, an unusually large nugget caught his eye. It had formed behind a knot in the bole of the tree, and to reach it with his gum gatherer he leaned outward. One leg was curled partly round the trunk, the foot of the other rested on a short dead branch; with his free hand he clung to the rim of the slash. It was hard to dislodge the gum crystal, and he leaned a little farther. In the same instant the bark at the edge of the slash tore away, and his weight suddenly shifted to the branch beneath his foot. It snapped, and Duncan found himself clawing the empty air. As he

fell before he had gone a third of the distance. Pedro whined and licked his master's mittened hand. Duncan crossed to the other side, but it offered no advantage. Not until after his third failure did he feel any fear, and then it took the form of vague uneasiness.

On hands and knees, with Pedro crawling close behind him, he tried to make his way up the middle, but in spite of all his efforts he slipped downward, and the dog speedily followed him. Thereafter for half an hour he tried in quick succession one place after another. A dozen attempts at the walls convinced him of the impossibility of escape in that direction. The thin, brittle icicles broke in his hands at the slightest pull. A succession of panic-stricken assaults on the slope between availed him nothing.

He had never realized how smooth ice could be—it seemed uncanny. He would place his foot firmly on the slope, but when he lifted the other the shifting of weight would send him sprawling. There must be some way out! It was impossible that he, Duncan Fraser,

FACT AND COMMENT

KEEP up and you will never have to catch up.

Coins are round and roll away;
Fertile Ground is there to stay.

HE who jumps at conclusions will land in confusions.

WHAT will you choose to do with time?
The alternatives are to use it or misuse it.

THERE is a real distinction between declaring war and declaring that a state of war exists. A government declares war when it purposes to make war on another country. It declares that a state of war exists, as the United States has just done, when another government has already attacked it.

"THERE is one word that we quickly learn in five languages," writes an American Red Cross nurse who is serving in a French army hospital. "It is the word that comes most often to the lips of sick or wounded soldiers when suffering or delirium wrings utterance from them. It is *mutter, mère, moeder, madre* and 'mother.'"

AVERMONT farmer, summoned to jury duty in a city eleven miles distant, walked back and forth every day through the snow, besides doing his chores before he started in the morning and after he got back at night. Such devotion to the public service is as praiseworthy as devotion to the tasks that war imposes, although jury duty is less spectacular.

ALTHOUGH the last of the opium plantations were swept away in 1916, the long effort to suppress the opium traffic in China is but now reaching its final stages. The treaty of 1911 with England enabled importers to carry opium from India under certain conditions. On March 31 even that trade came to an end, and after June 1 to smoke opium at all will be against the law.

EVENTS of the past few months have stirred many a pastor and many a church committee to place the American flag in their churches. The act is wholly fitting, for the flag in church is never out of place. Many English churches have long displayed not only the national colors but also the regimental flags under which the soldiers from that community fought in earlier wars.

SEVERAL times The Companion has spoken of the enlarged field of work that the war has given to the women of England, and of their zeal in stepping into it. That field, however, does not include the law. Only a few weeks ago the general council of the British bar not only stood squarely on its earlier refusal to admit women to the practice of the law but even refused to consider again the question of admitting them.

THERE is something very significant, something for German people to think about, in the deliberately chosen words with which President Wilson ended his war message to Congress. After summing up the reasons that had made inevitable the step that the country was about to take, he exclaimed, "God helping her, she can do no other!" Compare with them the words of a great German, Martin Luther, on a great occasion: "*Ich kann nicht anders! Gott helfe mir! Amen!*"

HOW many stirring stories, now officially suppressed, will be told when the war ends! The facts about the British campaign against the German submarine will be perhaps the most eagerly awaited. But there is also the story of Gordon Campbell. The British Admiralty refuses to say why he has received

the Victoria Cross and the Distinguished Service Order and been promoted over the heads of seven hundred lieutenant commanders; but it says that the deed was "one of the most gallant acts that a man ever performed," and that after the war the tale "will be read as one of the most thrilling stories ever told."

REFORM IN GERMANY

WHAT the German government really thinks of the Russian revolution and of the entry of the United States into the war may be gathered from the behavior of the Imperial Chancellor. So long as German arms were successful and Germans might still hope for a final victory, any Socialist who suggested that political reform within the empire was advisable was curtly told that no discussion of such subjects would be permitted until after peace had been declared.

When the news from Petrograd reached Berlin, Dr. Bethmann Hollweg hurried into the Prussian Legislature and promised that the government would put many of the desired reforms into effect just as soon as the fighting was over. When that promise failed to quiet the demand for immediate changes in Prussia, the Chancellor announced—the time was a day or two after the United States had entered the war—that the Emperor himself had promised far-reaching reforms in Prussia, including a direct and secret ballot in place of the peculiar class representation that now prevails there.

Our knowledge of the exact situation in Germany is so imperfect that we cannot tell whether for the present those promises will satisfy the Socialists and Radicals. It is clear that the war has immeasurably increased the strength of the Social Democrats, and that it has shaken the faith of the people at large in the wisdom of its princes and the validity of their military and political philosophy. A few years ago the Kaiser declared proudly that there was only one will in Germany,—his own,—and that "the will of the King is the supreme law." Nothing except a very deep and powerful movement among his people toward democracy could have induced him to make the concessions he has already made; for those concessions are each a step along the road that every Prussian statesman from Bismarck down has asserted would lead to the fall of the dynasty and the failure of Prussian ambitions. Count Reventlow, the spokesman of the true Prussian party, which is in turn the strength of the imperial organization, openly speaks of the danger of introducing the "spirit of liberty, which our enemies rightly regard as equivalent to the destruction of Germany as a power."

Of course he means the destruction of Germany as an imperialistic, militaristic, autocratic power. Nothing can prevent Germany from remaining a great power, unless it be the failure of its people to bring their government into some sort of agreement with the political and moral currents of the age. Even the Kaiser, who entered the war with far different hopes, begins to see that. But what becomes of him and his house and of the nation he still leads depends, after all, less on him than on the people themselves. They will shape the future of Germany; they will determine whether it shall go down, shackled to the corpse of autocracy, or live, a great and useful nation, to which its ancient freedom and sanity have been restored.

LATE AND MINOR COMBATANTS

ONE by one the nations that had no concern with the original occasions of war are being drawn into the conflict. Spain, Greece, Holland, the Scandinavian countries and Switzerland have long been the only countries of Europe that maintain even a nominal neutrality. The entry of the United States into the arena bids fair to be followed by similar action on the part of several other American republics; and should the war continue and the Germans still further extend their warfare in the Western Atlantic, the greater part of North and of South America may ultimately be drawn into the fight.

What can Cuba, what could Argentina and Brazil and Chile, contribute to the defeat of the Central Powers? "Nothing," the German press would say. Professing to rely on arms and battles to decide the issue, the Germans treat with contempt the hostility of governments that, like our own, have no armies to meet them in the field. But even the Germans themselves seem to be losing their hope of conquering the armies opposed to them. In none of the battle regions are they advancing; in most of them they are not even holding their own. They have transferred their hopes

to the submarine and to its success in cutting off the supplies of their enemies.

But it is precisely in the naval and the submarine warfare that the smaller and more remote countries of America could give the most effective service. They could aid directly by preventing the establishment on their coasts of bases of supply for hostile craft, and by refusing even limited hospitality to German war vessels. That alone would greatly diminish the radius of action of the ships, and correspondingly add to the effectiveness and safety of merchant vessels carrying supplies to England and France.

Moreover, all those countries are great producers of food, wool, hides, rubber and other commodities that all the countries of Europe greatly need. All would be at the service of the Entente, none would be at the service of the Teutons. Although that may be said to be virtually the situation now, yet in a state of war vigilance would be redoubled to make sure that none of the supplies should fall into the hands of the enemy.

It may be that those would not be important contributions to the success of the Allies, but the moral effect of abandoning neutrality and frankly and openly enlisting against a barbarous foe would be great and far-reaching.

AN UNOFFICIAL CENSORSHIP

MOVING pictures are so much a part of modern life that a general condemnation of them is out of the question. Nor is it desirable. When school superintendents are advocating them as a means of education, and ministers are using them in their work, and boards of health are employing them to drive home the fundamental facts of infection to people so ignorant that they will not read, the "movies" must be admitted to occupy a strong position.

They do, but the position is open to attack from several points. The bad moral effect of pictures that represent crime and violence was early perceived and has been vigorously combated. The chief influence against such pictures has been, however, not city officials or regularly appointed censors, but the mass of sound public opinion that, at least in the smaller cities and the towns, has chiefly expressed itself through the women's clubs and other organizations of women.

It is evident that women are just beginning to see how great and useful a field there is for that kind of censorship. It must be tolerant and wisely patient, but uncompromising in its final aim. Most of the people who regularly visit moving-picture shows want "action." That means usually a representation of the conflict between good and evil. No censorship can afford to neglect that desire: it can hope at first only to eliminate the worst; gradually it can raise the standard of taste.

After all, ridicule is the most effective weapon, and women have begun to use it. They are now calling attention to the absurd social examples that some of the moving pictures set. An invitation is cast on the screen: part of it is written in the first person, part in the third; the whole would be a social indictment against anyone so ignorant as to follow it. A woman supposed to be a lady calls on a lawyer at his office during business hours, wearing a décolleté evening dress and diamonds. A man who wishes to offer a lady his seat in a car taps her on the back to attract her attention.

Ridicule by women of the cheap and ignorant and vulgar, ridicule to which the local weekly or the daily newspaper gives publicity, helps to do away with the need of official censors.

TRAINING INDUSTRIAL LEADERS

THREE quarters of a century ago Thomas Carlyle, studying the industrial conditions of his time, made a revolutionary utterance. It was an age that exalted the doctrine of economic freedom for everyone; an employer was free to "hire" and to "fire" when and as he chose; the workman was free to shift from one job to another as often as he saw some immediate advantage ahead of him. To that generation Carlyle declared, "I am for permanence. Blessed is he that continueth where he is."

Within the last few decades many of our industrial leaders have come to see the wisdom of Carlyle's doctrine. Appalled by the expense and the loss of efficiency caused by the large annual "turnover" of help, they have racked their brains for measures to obtain some degree of permanence among their force of workers. Particularly desirable is it in a large industrial

organization that those who hold positions of responsibility should keep them. If the policies of the management are to be carried out effectively, they must be entrusted to men trained in the ways of the company, and serving it through loyalty as well as for wages.

An interesting illustration of the way in which a great corporation can put this principle into effect is found in the methods used by the Atchison, Topeka & Santa Fe Railway in choosing and training recruits for future officers of its mechanical departments. It takes boys into its shops as apprentices for a term of four years. Every boy works under the eye of a shop instructor, and from him learns how to do each operation or take each step of the trade that he has been indentured to learn. What he thus acquires is correlated with instruction in the apprentice schoolroom. His progress is carefully watched, and every effort is made to discover for what sort of work his natural aptitudes fit him.

After a boy has completed the journeyman apprentice course he has, if he has shown qualities of leadership, an opportunity to receive further training in the special course for graduate apprentices. There he serves for some months each in the boiler shop, the freight-car shop, the roundhouse; after that he learns to inspect and to run locomotives.

From that group a few are chosen to go to large establishments to study locomotive building, steel-car construction or the manufacture of air-brake equipment. Some have won scholarships that enable them to attend a school of engineering.

The results of the system amply justify it. Of the nine hundred graduates, nearly three fourths are now in the service of the road. It is building up a force of men remarkable for skill, resourcefulness and loyalty.

VOLUNTARY EFFORT AND DEMOCRACY

IN the last few years we have heard much about the inefficiency of the democratic form of government. Its disadvantages have been apparent, particularly in matters that appertain to war. But there is another side to the matter, which, although hitherto overlooked, has in the last few weeks shown itself with startling plainness. The American people are adaptable; they can come together for a common purpose, organize, and get to work almost in the twinkling of an eye.

There is in a democracy a supplementary means of government always ready in an emergency, and in the highest degree efficient. It interferes with no constituted powers; rather, it quickens into new life those powers that are already in existence. When the crisis of war has passed, it dissolves, and the regular forms of government go on as before.

So it was in the Civil War; so it will be now. National Defense Committees and Committees of Public Safety spring into existence everywhere, because in no other way can the recently aroused patriotism of our towns, cities and states find immediate and effective expression. Official action is clogged by bureaucratic methods, and not infrequently by inefficient agents. At a time when our salvation lies in the keen foresight and the power of prompt decision that the industrial world fosters, each community turns instinctively to its natural leaders. They respond at once, and give themselves unsparingly to the labor.

Nothing revives our confidence in democracy so surely as the voluntary activity of such committees of devoted and able citizens. They bring together all the varied elements of the community, which work shoulder to shoulder. Instead of despairing of the republic because its proper forms of government work so clumsily, we take new courage. Surely, if we can obtain the best at the season of greatest need, matters cannot be in such evil case as we had feared.

CURRENT EVENTS

CONGRESS.—By a unanimous vote the House passed the bill authorizing government loans amounting to seven billion dollars for the prosecution of the war. On April 17 the Senate also passed the bill unanimously. —The army bill was before the House Committee on Military Affairs, and the sentiment for an army of volunteers was so strong there that it was doubtful whether the bill would be reported as drawn by the administration leaders. —The so-called espionage bill was reported to the Senate, amended so as to make less drastic the section that forbids discussion of the measures for national defense. That section was held to restrict unduly the freedom

of the press. —A bill authorizing the President to take control of railway, telegraph and telephone lines and to draft into government service the employees of such companies was introduced in the House.

RUSSIA.—Mme. Catherine Breshkovskaya, the "grandmother of the Revolution," arrived in Petrograd on April 11. She was given an extraordinary popular welcome. —The troops in Turkestan are reported to have put Gen. Kuropatkin, the governor-general, under arrest, fearing that he was not in sympathy with the new government.

MME. BRESHKOVSKAYA

MEXICO.—In his address to the Mexican Congress on April 15 President Carranza declared that he would maintain a strict and rigorous neutrality in the world war. He also read a complete report of his activities as "First Chief," beginning with the Madero revolution of 1910. He declared that Henry Lane Wilson, American minister to Mexico in 1913, tried persistently to persuade him to recognize the Huerta government. He announced that "Constitutional order" would be restored in Mexico on May 1. —The Mexican government denied that it intended to put any embargo on the export of oil from Tampico.

LATIN AMERICA AND THE WAR.—Brazil had not, on April 18, declared war, but it had seized all the German merchant vessels lying in Brazilian harbors. There were serious anti-German riots in Rio de Janeiro. In Buenos Aires, the populace, aroused by the report that two Argentine ships had been sunk by a German commerce raider, attacked the German legation and the offices of two pro-German newspapers. The German minister demanded from the Argentine government an explanation of the note it sent to Washington, approving our action against Germany. —Uruguay, Paraguay, Nicaragua and Bolivia sent notes to say that they, too, are in entire sympathy with the course of the United States.

GREAT WAR COUNCIL.—The arrival of Mr. Balfour, the British Foreign Minister, accompanied by several representative officers of the British army and navy, and of M. Viviani, formerly Premier of France, accompanied by Marshal Joffre and other eminent French officers, was daily expected. These distinguished persons come to discuss with the President and with representatives of our army and navy plans for effective military and industrial coöperation between this country and the Entente Allies. Admiral Fletcher will head our navy representatives, and Col. Michie of the general staff and Lieut. Col. Cosby of the War College will head the army delegation. —The French government has appointed Capt. André Tardieu, former editor of the Paris Temps, high commissioner to the United States.

ANDRE TARDIEU

WOMAN SUFFRAGE.—Rhode Island and Michigan granted the presidential suffrage to women.

WAR PREPARATIONS.—The Army Department has asked for approximately 500,000 volunteers to recruit the ranks of the regular army and the National Guard to full war strength. These men need only volunteer for the actual duration of the war. That is of course quite outside the new forces that must be raised. —The Shipping Board has organized a \$50,000,000 corporation to build and operate a great fleet of wooden cargo vessels. The ships will be built in private yards on standardized plans furnished by the Shipping Board. Gen. Goethals will direct the work. The corporation intends to extend its capital to \$225,000,000 if necessary. —Col. Roosevelt placed before the President and leading members of Congress his plan to recruit a division or more to be sent to France at once and trained there with a view of getting to the firing line at the earliest possible moment. He believes the first troops could be sent abroad in three months. —Secretary McAdoo submitted to the financial committees of the Senate and House plans for new taxation to raise \$2,000,000,000 annually. They provide for cutting the income tax exemption in half, for heavy excess-profit taxes and special imposts on luxuries such as liquors, sugar, coffee, amusement tickets and automobiles. —Secretary Houston asked Congress to make provision for some kind of conscription for farm labor. A shortage of farm labor is the most serious handicap to the plans for a great food crop this year. —Canada has placed wheat and wheat products on the free list: automatically the same privilege will be

extended to Canadian wheat by this country. —President Wilson has appointed a Committee on Public Information to combine the duties of censorship and publicity. Mr. George Creel is executive chairman of the committee. —The President issued two proclamations during the week, one calling on the nation to devote itself to the united and effective prosecution of the war, and the other warning citizens and aliens alike against coming into conflict with the laws on treason.

THE GREAT WAR

(From April 12 to April 18)

The German front in Artois, in Picardy and in Champagne, was under constant assault during the week in spite of the constant snow or rainfall. The British made good their hold on the Vimy Ridge, repulsed all counter-attacks and pushed a mile or two beyond. They took Lievin and Cité St. Pierre, suburbs of the important city of Lens, and their advance troops were knocking at the gates of the town itself when this record closed. The Germans resisted desperately; they were said to be preparing a fresh line of defense through Queant and Drocourt, about ten miles behind the Lens and Arras line. Marshal Haig declared that his men had taken more than 14,000 prisoners and 166 guns in this sector. The British effort is to turn the northern end of the Hindenburg line, to which the Germans retreated last month. Success would mean the early capture of Lille, and if the French should be able to turn the other end of the line it would mean that the Germans would have to evacuate the greater part of France.

The British and French maintained constant pressure on the German front at St. Quentin and La Fère, but the chief activity of Gen. Nivelle was farther south, along the Aisne between Soissons and Reims. After severe artillery preparation an attack was launched along a 25-mile front on April 16. Paris reported that the French took all the German first positions on this line, together with 17,000 prisoners. A decisive victory here would turn the southern end of the Hindenburg line. Berlin declared that the French attacks were all checked.

Paris also reported artillery activity in Alsace, and said that the Belgians had taken the German first positions in Dixmude.

Artillery duels were in progress on the Russian, Italian and Macedonian fronts.

Gen. Maude reported that he had driven back a Turkish force that had opposed his advance north of Bagdad. It was this force that undertook to prevent the union of British and Russian forces on the Diala River. The Turks apparently occupy defensive positions among the Jebel Hamrin hills, about forty-five miles northeast of Bagdad. The British have also advanced to within ten miles of Samarra on the Bagdad railway.

Gen. Alexieff has been definitely appointed commander in chief of the Russian armies.

The Spanish government has sent a note of protest to Germany against the sinking of the San Fulgencio and the Tom, unwarned, by a German submarine. It grows increasingly difficult for the Spanish government to maintain neutrality, and the problem is made more difficult by the fact that there are strong pro-German and pro-Allies parties. On April 19 it was announced that Premier Romanones had resigned.

London announced the sinking of another hospital ship, the Gloucester Castle, and added that in reprisal an aerial squadron had dropped bombs on the German city of Freiburg. It admitted the loss of twenty-eight vessels by submarine attack during the week.

The Turkish government interned the U. S. S. Scorpion at Constantinople.

The U. S. destroyer Smith, engaged in coast patrol off Long Island, reported that it had encountered a German submarine, which fired a torpedo, but missed its aim.

Danish newspapers say that the submarine campaign against neutral commerce threatens Denmark with starvation.

There were renewed rumors of conferences between Socialists of different countries, and even of authorized overtures by Austrian and Bulgarian diplomats, intended to put an end to the war. The Scandinavian nations are known to be hopeful of serving as mediators.

The sittings of the Hungarian Parliament were suspended; it was understood that the step was taken on account of the strong demands of the party that opposes the Tisza ministry for a direct suffrage law. Two members of the Austrian Cabinet, both strong Germans, resigned.

The minority of the Socialist party in the Reichstag, led by Hugo Haas and George Ledebour, have broken with their colleagues and formed a party that is opposed to the war policy of the government.

On April 16 Amsterdam reported that some of the metal, wood and transport workers in Berlin were striking in protest against the latest food regulation, which reduces the bread ration throughout the empire by a quarter.

The British Parliament voted to extend its life until next November in order to avoid the disturbance of a general election.

"Never mind, Uncle, we have our Raynsters on"

Look for this label on your coat

Reg. U. S. Pat. Off.

THAT'S right, you don't have to mind a little rain, with a Raynster. Very likely "Uncle" has his Raynster on, too. These storm-coats are made for everybody—from big six-footers down to little three-footers. They just cover you up and keep you high and dry. No more damp clothes which bring on colds, then scolds.

Raynsters turn rainy days into happy days. They give you room to romp and run for play days. They give you neat and dressy appearance for Sundays.

All the family will soon be wearing Raynsters—why don't you be the first? Tell the folks about these wonderful storm-coats. Raynsters are made for boys and girls, men and women; many styles at many prices.

Remember the name, "Raynster," and see that it is on your storm-coat.

Raynster

GYPSY TIME

By Mary Carolyn Davies

PLACID hour and scented flower
And curtain-shaded room,
Peace and rest and quietness
And music in the gloom,
Book and game and needle,
And friends that each to each
Tell of little daily things
In sober, pleasant speech—
But oh, across the threshold
Are buds on branch and bough;
And past the hearth and past the door
A world is calling now!

Where the trail is overgrown, and forest-girt
The way,
The gypsies, the gypsies are journeying to-day!

Oak and ash for patteran,
To lead a lover's feet,
Wind upon the forehead, warm
With the clover-sweet,
Whistled answer to a bird
Swinging in a tree,
Light-heart laughter as a fire
Dances gallantly;
Sleep beneath a roving moon,
For roving gypsy men,
Dawn upon the open down
And then the road again.

Hearth and heavy door are good, but some-
where, far away,
The gypsies, the gypsies are journeying to-day!

Oh, to cross a patteran
Upon the trail for you!
To sit with you upon the grass
When journeying is through,
A ruddy camp fire leaping,
A song, and laughter low,
And, high between the tree tops,
Winds that come and go!
Smell of smoke, and touch of wind,
And scent of sod and earth;
Swift forgetfulness of pain,
Memory of mirth.

Where the feet of fairies press and vanish down
The way,
The gypsies, the gypsies are journeying to-day!

Oak and ash for patteran—
But if we left our door
And crossed the road, and crossed the
ridge,
And crossed the hill and moor,
What more of freedom or of joy
Within our grasp could be
Than each day bides within our house
And dwells with you and me?
For stars or lamplight, roof or sky,
In all and all the land,
The magic of the road is Spring
And two who understand.

And in our hearts and in our eyes, as well as
far away,
The gypsies, the gypsies are journeying to-day!

THE ANGLE OF REPOSE

THE landslides that have recurred so many times in the Panama Canal have brought to popular notice many interesting facts about the laws that govern such phenomena. In particular we have learned about the "angle of repose." In digging through ordinary soil, it appears, the workers find the angle of repose by sloping the ground back so that the top of the hill is distant from the canal twice its height—that is, in the ratio of two to one. Under some conditions, however, the ratio must be much more—possibly as much as seven to one. In the Culebra Cut even that may prove to be insufficient.

There is a parable in it about studying our own soils so that we may prevent the calm onward current of our lives from being dammed up by an unexpected obstacle some day when a most important cargo is waiting to go through. Most of our navigation, after all, is not on the great oceans, or even on the inland lakes, but on the canals that we ourselves dig for our own use as we go along. And it is usually a matter of our own choice whether our route runs in the right direction and leads to the great ports that we hope to reach.

When we have laid out our routes, and made every little lake or roaring torrent in our path help us on our way, there comes the question of soils and of how to treat them. Is there one place where a sudden outburst of temper is likely to upset the careful work of months? Then let us forget all about that ratio of two to one that will take us so easily through our ordinary channels, and dig back and back until we have found our "angle of repose"—a sure, unshakable angle of repose, even if it has to be twenty to one—before we go another step forward in our work. Do late hours, or fatigue, or overwork, or worry make us irritable and liable to sudden landslides of temper? Then we must cut them away with a ruthless hand as we slope back to find the safe angle.

Is there some special temptation to which we are liable? Then no matter how straight and clean we cut our walls when they pass through the living rock, which is the strength of our characters, we must dig at the shifting sand until we are so far away from the danger of temptation that there is no chance of our falling there. The canal might as well not be dug at all, if at some point it is full of loose soil that obstructs navigation.

For every kind of soil there is an ordained angle of repose. Once we find it, our canal is safe.

HER DAUGHTER

MANY stories told of children in the devastated regions of France and Belgium are too pathetic to be endured. Others illustrate the natural resilience of childhood, and teach us how a little joy may help in bearing a great sorrow.

Little Marie, in a ruined village "somewhere in France," had seen her crippled father, her mother and two little sisters killed when their cottage fell about them, knocked to pieces by a shell as if it had been a house of cards. With her aged grandmother and an aunt she fled to the fields, and spent a night of exposure and misery in a driving rain.

Before morning the grandmother was dead, and the aunt died of pneumonia soon afterwards. Marie herself, who had been slightly wounded, became very ill, and when the crisis of her sickness was over she still hovered feebly on the verge of death. She was a dear little girl, and the nurses in the hospital to which she had been carried were worried about her.

But one day there was a distribution of gifts and comforts from America, and Marie received a doll. It made another creature of her; the brightness returned to her eyes, the smile to her lips, a flickering color to her thin little cheeks.

"You are really better, Marie," one of the nurses said to her the next day. "I believe that dolly is going to cure you; she is better than doctors or nurses. We shall be jealous!"

"But it is quite natural," explained Marie a little anxiously, for she did not wish to be thought ungrateful. "Everyone has been kind to me, but I did not belong to anyone any more. I thought I had no one in the world,—no family at all,—and behold! Here is my little daughter!"

THE LOST WHEEL

WHEN Mr. Ralph Pulitzer returned to the French aviation field after a flight with an expert pilot, the day threatened to end in tragedy. As the aeroplane came to a stop a mechanic ran up with a pneumatic wheel.

He spoke a few sharp words to the pilot, says the author in *Over the Front* in an Aeroplane, and the pilot asked me to get out quickly. I jumped out; the mechanic scrambled into my place, carrying the pneumatic wheel, and with a rattle and a roar the aeroplane rolled across the field and leaped into the air again.

I joined some aviation officers and asked what was the matter. They pointed to a machine a few thousand feet above us and explained that in leaving the ground it had lost one of its pneumatic wheels. The aviator was ignorant of the mishap, and unless they warned him in time his machine would turn turtle and kill him when he tried to make his landing. My pilot had gone up to meet him in the upper air, and by waving the wheel at him indicate his predicament and warn him to land on the left wheel and the tail of his machine.

"Unless he understands before he lands he is a dead man," said the officer.

That was a dramatic spectacle—one aviator on guard high in the sky in complete unconsciousness of the death that awaited him; another, climbing nearer and nearer, then circling round and round in narrowing circles. Finally the first machine started down.

"He understands," said some one.

"No, he doesn't," said the others.

"Get the ambulance ready!" ordered the aviation captain; and the engine of the motor ambulance began to clug with a most sinister effect.

We all stood powerless and watched the machine spiral down. As the man made his glide, men stood in the field waving spare wheels at him to make sure that he would understand. But no. Instead of landing tilted to the left on the sound wheel, he made his landing leaning over a little to the right where the wheel was missing. As the great machine touched the earth it buried its nose in the ground; the tail rose and rose until it stood perpendicular, and then fell forward in a somersault, so that the plane was lying on its back.

"He's finished. Get the ambulance!" ordered the captain.

We all started at a run across the field toward the motionless aeroplane, with the motor ambulance following close on our heels. As we got to the wreck a figure crawled out and began to complain at not having been warned in a way that a sane man could understand. How the aviator escaped will always remain a complete mystery, but his escape made a thrilling ending to an unforgettable afternoon.

WHY SHOPKEEPERS GROW MORBID

A SMALL boy, whose head hardly reached the level of the counter, says the Philadelphia Public Ledger, entered the shop.

"Please, sir," he piped, "father told me to get him some oak varnish."

"How much does your father want, my little man?" inquired the smiling shopman.

"Father said you was to fill this," replied the little fellow, handing over a pint jar.

The shopman filled it and handed it back.

"Father will pay you next Saturday," said the child casually. But the face of the shopman grew dark.

"We don't give credit here!" he said. "Give me back the jar!"

Meekly the small boy handed back the jar; the man emptied it and returned it with a scowl.

"Thank you, sir," said the boy. "Father said you'd be sure to leave enough round the sides for him to finish the job he has to do, and you have, sir."

OBSTINATE GARDENERS

THE brother of Anthony Trollope, the novelist, T. A. Trollope, gives in his reminiscences a delightful portrait of one of his mother's friends, Lady Milman, a quaint and determined little old lady of the ancient régime. He was present one day when one of her neighbors, the wife of an important person, ventured to call earlier in the day than the recognized hour for visiting.

"Very glad to see you, my dear," said little Lady Milman, rising to meet her guest, a stately dame twice as large as herself, "but, you know, you must not do this sort of thing again."

At Pinner, her home, he was much amused at observing her inflexible determination that Abraham, an old, one-eyed footman who had lived in the family all his life, should kneel before the dining-room fire to warm her plate of pickled salmon. But if she could oblige the reluctant Abraham to compromise his dignity in such a manner, she met her match in her head gardener. He was hard at work pruning the peach trees as she came into the garden one morning.

"Oh, don't do that, Saunders!" said my lady. "I want to see those blossoms. And I shall never see them another year!"

"Must come off, my lady," said Saunders inexorably, as he sheared away the branch.

"He never will let me have my way!" grumbled the little old lady, as she resumed her trot along the gravel walk under the peach wall.

It was only a few years ago that another English lady had an encounter with her gardener over a more important matter. To an American guest, who admired the rose gardens for which her estate is famous, she told how, when a date had been set

for the marriage of her eldest daughter, she imparted the information to her gardener.

"A June wedding, McKae," she declared, "and the house full of roses! Roses everywhere!"

"Humph! I'm no so sure it's possible, my lady," rejoined McKae crustily.

"Not possible! What do you mean?" exclaimed the lady in astonishment.

"Well, it may do well enough after the exhibition," conceded McKae with deliberation. "But not before, my lady, not before. I cannot be cutting my best blooms for a lassie before showing them at the exhibition!"

It required a battle royal, which left both victor and vanquished on the brink of exhaustion, before the lassie's mother obtained the gardener's acquiescence in the precedence of a June bride over a June flower show.

MORE COLLEGE LETTERS

SEVERAL of The Companion's readers who read the article we published on this page about college initials that the students had cut upon the hillsides above several Western college towns have written to tell us of other letters that we did not mention in that article.

The Montana State Agricultural College at Bozeman is honored by a letter that its makers believe to be the largest in the country, for it is two hundred feet wide and two hundred and fifty feet high. It is made of pieces of limestone rock laid side by side, and the freshman class must whitewash it every year. The accompanying picture shows how it appears, high up on the side of "Old Baldy."

Between Los Angeles and the San Bernardino Mountains there are four such letters: O, for Occidental College; T, for Throop Institute; P, for

Pomona College; and R, for Redlands University. Some of these are merely clearings made in the chaparral that covers the range, and are most conspicuous when there is a light snowfall.

The University of Arizona has a more substantially built letter on Sentinel Peak, at an elevation of 2776 feet. It is of masonry, laid in trenches one hundred and sixty feet by seventy feet. It was finished about a year ago. At night the letter is sometimes outlined by burning bundles of oil-soaked waste, and then it can be seen for miles standing out sharply in the blackness.

In the original article The Companion spoke of a letter Y which it wrongly attributed to Brigham Young College at Logan, Utah. The letter was made by the students of Brigham Young University, near Provo, Utah.

MR. PEASLEE DISCUSSES ANIMAL OBSTINACY

WITH profound discouragement Mr. Gunney gazed at the Ayreshire cow in the far corner of the pasture.

"I don't believe, Caleb," he declared plaintively, "that it's humanly possible to farm that cow anything."

The animal in question stood with her head over the fence, bellowing softly from time to time. Mr. Gunney looked at her sourly.

"There she'll stand till old Towse comes down from the house and nips her gambrels a mite, and then she'll turn and put off up here to the bars hard as she can pelt. She knows here's the only place she can get out of the pasture, but she won't start to come 'thout havin' the dog after her. She makes me mad!"

Caleb whistled softly through his teeth and looked at the cow absently.

"Mebbe," he observed, "if you rigged up something down there that'd scare her a-plenty jest once, she'd quit. A good, solid jolt'll teach a critter sometimes when gentle doin's fail—or so Andrew Goss and I found out once, 't any rate."

"What time was that?" asked Mr. Gunney.

Mr. Peaslee settled himself comfortably. "I was thinkin'," he replied, "of the time we broke a habit in a boss that seemed jest as sot and stubborn as that cow—and he stayed broke, too!"

"'Twas a good many years ago, when Andrew and I might have been mebbe sixteen years old. Andrew's father, old Lansing Goss, had a boss that was all right in most ways—clever and a fair roader and not given to slyin'; but he had one bad fault. Sometimes he'd balk—not in the hardest pinches, but jest at certain places where he'd took notions to. One of them places was right at the foot of the hill after you come down from the risin' ground behind the Goss place."

"Wal," continued Caleb, "one day Andrew and his father and I was gettin' down some hoop poles from the ridge, and old Lansing was drivin' the boss. He had on mebbe a thousand loose hoop poles on a wooden-shod sled and had started down ahead of Andrew and me. We was two or three hundred yards behind with more hoop poles on another sled, and to haul the sled we had a couple of two-year-old steers that Andrew had started to break. They was as tricky as a couple of monkeys and quicker'n any two weasels, but we, bein' young and havin' no judgment to speak of, didn't let that worry us a mite—if them steers wanted to run away, we was willin' to let 'em, jest for the uproar it'd make, you know."

"There was mebbe two inches of light snow on the ground—jest 'nough to make a sled run easy. We got ready to go jest after old Lansing Goss went out of sight over the shoulder of the hill, and Andrew took a crazy notion to stand on the tongue and ride down, teamin' the steers from there with his voice. I was standin' on the tail end of the sled when Andrew started 'em; and when they started, they started! The first jump they made they all but shook me off, and 'fore they'd gone ten rods they was runnin' away as cheerful as any pair of cattle I ever watched; and Andrew, 'stead of tryin' to stop 'em, was puttin' the gad to 'em and urgin' 'em on!"

And every time the gad'd hit 'em, they'd blart loud 'nough to be heard a mile!

"From where I was on the tail of the sled I could jest see Andrew's head and shoulders over the top of the load; and all at once, as we rounded the last turn in the road, before we got to the foot of the hill, I saw him start and sort of stiffen all over, and I knew, 'thout seein' his face, that he was scared of somethin', so I riz up and peeked over the load to see what 'twas."

"Wal, sir," said Mr. Peaslee solemnly, "that boss had balked with that load of poles at the foot of the pitch, and had swung round quarterin' to the road, and there he stood as solid, 'parently, as any bluestone ledge that ever cropped out in a field. He never even canted his head round to see what was comin' and blartin' so—jest laid his ears back flatter and braced himself more solid."

"Wal," sighed Mr. Peaslee, not unhappily, "it was all over in a minute or less. The off steer struck him on the for'ard shoulder, and the near one back along his body somewhere, and what went on after that we could only see through a fog of hoop poles. Andrew had jumped clear and I'd rolled off behind when we saw we was bound to have a crash, and old Lansing, for all his years, went up a young juniper like a squirrel!"

"What we did see, when things got settled, was 'bout the scariest and least balky boss in Maine streakin' it for the barn with one runner of the sled hitched to him, and two of the mildest actin' steers that ever tried to run away tryin' to sort themselves out of a heap and tell which was which. Besides startin' a balky boss, they cured themselves of the notion of runnin' away, too."

"And from that time on," Mr. Peaslee concluded, "that boss never made any attempt to balk there at that place. When he'd come to that spot he'd poke his ears for'ard and almost pull his heart out, no matter what he was hitched to. And when he started to balk at other places—he tried it once or twice afterwards—Andrew or his father'd blart something like a steer, and the old boss would go into the collar fit to break the trace chains."

Mr. Gunney pondered deeply a moment. "I wonder what I can rig up to scare that cow?" he speculated. "Somethin' that won't do harm to her, I mean."

THE GOVERNMENT STAMP COLLECTION

IN the northwest court of the older building of the National Museum is a United States government stamp collection about which the general public knows very little. Up to 1906 the collection included only about twenty-five hundred stamps, but in that year the gift of a New York collector increased it by twenty thousand specimens.

In 1912, says the report of the United States National Museum for 1914, the Museum obtained by transfer the more essential parts of the large exhibition of the Post Office Department, which comprised the stamps, stamped envelopes and postal cards of all the nations of the world, to the number of nearly two hundred thousand. The original collection consisted chiefly of a large cabinet with sliding frames, in which the main series of stamps had been installed, including those printed for the United States by private firms and by the Bureau of Engraving and Printing, and the foreign stamps received through the International Bureau of the Universal Postal Union at Bern, Switzerland. The remainder of the collection included sheets of stamps, envelopes and postal cards mounted on swinging screens for various American expositions; many separate sheets of stamps and individual specimens; and several albums of stamps and of die proofs of United States stamps.

The installation of the collection, instead of according with the usual stereotyped alphabetical arrangement throughout, agrees virtually with that of the coins and medals. It begins with the United States, and the foreign nations follow in alphabetical order with the stamps of their colonies grouped together geographically. Ultimately, an alphabetical and numbered list of all the countries and colonies represented will make it possible to find any set of stamps without loss of time.

The total capacity of the two-hundred and ninety-six frames in the present cabinet is about seventy-five thousand stamps. The collection is by no means complete; it is in fact only the nucleus of a greater and more perfect representation of the stamps of the world that will be gradually rounded out. It lacks especially the rare specimens of collectors and common varieties of certain periods, particularly of foreign issues.

In general the mounting is of single stamps of each issue, but when necessary to serve a particular purpose they are mounted in pairs, strips, blocks or sheets. A selected series of the stamped envelopes of the United States follows the stamps of that country. In addition to the exhibition series there will eventually be a reserve series for the use of students of philately.

LODGING-HOUSE GEOMETRY

LEARNING is one thing and wit is another, but that does not prevent them from meeting at times in the same brain. One of the most amusing of those jests, which it takes a certain amount of scholarship to make or to enjoy, was the collection of Euclidean axioms that Prof. Stephen Leacock of McGill University wrote some years ago for Truth. Here is one of the cleverest of them:

If there be two boarders on the same flat and the amount of side of the one be equal to the amount of side of the other, each to each, and the wrangle between one boarder and the landlady be equal to the wrangle between the landlady and the other boarder, then shall the weekly bills of the two boarders be equal, each to each. For, if not, let one bill be the greater. Then the other bill is less than it might have been, which is absurd!

HIGHLAND LOGIC

WHEN Lord Tullibardine, son of the Duke of Atholl, was seeking election to the House of Commons he was accompanied by his Parliamentary agent, who introduced him to many of the voters. According to Pearson's Weekly, the agent said to one old Scotsman:

"This is Lord Tullibardine. Of course you know him?"

"Na, na; I dinna ken him," was the reply.

"At all events," continued the agent, "you know his father, the duke?"

"Oh, ay; I ken the duke. He's a gran' man, the duke."

"Then you will surely vote for his son?"

"I'm no so sure about that. It's no every coo has a caff like herself."

THE CHILDREN'S PAGE

HOW LITTLE BEAR SAW CHILDREN DANCE ROUND THE MAYPOLE

BY FRANCES MARGARET FOX

LITTLE BEAR wished to see the children dance round the Maypole on May Day. There was always much May-Day fun at Happyville, on the borders of the ancient forest where the Three Bears lived, and Father Bear and Mother Bear went every year to see all that might be seen from behind the trees and bushes. More than once Little Bear had begged and begged to be taken along; but both Father Bear and Mother Bear always shook their heads at the mere mention of such a thing.

"Son Bear," his father explained, "we should be glad to take you if you could keep still; but we know that if you heard the music and saw the children dancing round the Maypole, winding their long ribbons in and out, you would be dancing, too, and singing with the music. You would step on crackling twigs, and I am afraid you would shout for joy. No, no, Son Bear, unless you wish to live with us in a cage the rest of our lives, with a sign above us reading, 'The Three Bears of the Ancient Forest,' you had better stay at home on May Day."

"Yes, yes, Little Bear," agreed Mother Bear, "if you were to see pretty children dancing round a Maypole, you would not be able to keep still, and then we should be captured and put in a cage."

Said Little Bear one day, "If I can learn to keep still when I want to shout for joy, and you know that I want to shout for joy, will you take me with you to see the children dance round the Maypole?"

"Certainly," promised Father Bear. "If ever there is a time that you keep perfectly still when you want to dance and laugh, why, that will make us feel that it will be safe to take you to see the May-Day fun. You shall see the May Queen and you shall see children dressed like fairies and like Robin Hood and his Merry Men, and you shall see them dance round the Maypole." And then Father Bear winked at Mother Bear as much as to say, "That time will never come."

But not long after that, when Little Bear was out walking with Father Bear one morning, Father Bear suddenly stepped aside and said most politely, "I beg your pardon, sir!"

Little Bear looked round, saw no one, and laughed aloud. "Well, Father Bear," said he, "why did you say 'I beg your pardon!' when there is no one in sight?"

"Look more carefully," advised Father Bear, "and you will see Friend Whippoorwill, who catches our mosquitoes for us. I said 'I beg your pardon!' to him because I

it, Little Bear, because you never could keep your mouth shut long enough. You would wiggle and twist, and I do not believe you could keep from laughing."

"Let's try it this very day," suggested Little Bear. "I feel sure that I can do it."

"Very well," agreed Father Bear, "you

DRAWINGS BY WALT HARRIS

THE CHILDREN DANCED TO STIRRING MUSIC ROUND THE MAYPOLE

may go out to your playground and hide in plain sight as Friend Whippoorwill does. And Mother Bear and I will pretend that we do not see you. We'll say funny things on purpose to make you laugh as we hunt, and if you can watch us do all that and not move,—if you can listen to our jokes as we poke round pretending that we do not know where you are, and not laugh,—why, then we shall dare take you to see the children dance round the Maypole."

Little Bear was so delighted when he heard that promise that he turned three somersaults, one after the other, before he stopped. After dinner he ran to his playground and told the birds about his new game and how he hoped that he could keep from laughing, so he could go to see the children dance round the Maypole.

Now it happened that many, many birds loved Little Bear because he was always so kind to them in nest-building time; he had covered the bushes with strings and ribbons for the weavers, and he had provided mud for the plasterers, and searched the road for horse-hairs for the chipping sparrows. He had gathered baskets of down for soft nest linings, and was ever ready to do all that he could for the birds.

"We'll help you now, Little Bear, we'll help you now!" they promised him in joyful chorus.

"You lie down in the grass in the middle of the playground and curl into a ball, and remember not to open your mouth," advised the whippoorwill.

"And then we will scatter leaves all over you, so you will look like a little brown hill," suggested the robins.

Little Bear did as he was told, and soon all the birds in the forest were busy covering him with leaves and twigs and up-standing flowers, blue and yellow. Finally, in their wonderful fashion, the song sparrows wove dead grasses round him. Then came Father Bittern, who can stand in the marsh and look so exactly like a stick that no one can find him unless he chooses to be seen; along came Father Bittern with a bit of advice:

"Remember not to wink if Father Bear and Mother Bear seem to be looking directly at you. That is the great trick of the bitterns—to look steadily ahead without winking."

"I thank you," said Little Bear. "I will not wink. It will be easy not to wink."

MERRY MAY

BY FLORENCE M. PATTEE

When little April ran away,
Her brothers, Mud and Rain, went, too.
And then along came merry May—
"I'm very glad to be with you!"

"I'll smile at you all through the day!"
She cried to all the trees and flowers.
"And little birds from far away
Will come to praise the sunny hours."

"Don't you laugh!" warned the blue jay.

"Don't wiggle!" cautioned Jennie Wren.

Just then came Father Bear and Mother Bear tramping through the woods, talking and laughing about Little Bear.

"But where is he?" exclaimed Mother Bear. "I do not see him anywhere!"

"Neither do I!" answered Father Bear.

"No use trying to make him laugh until we see him," Mother Bear went on.

"We shall find him in a minute if he is here," added Father Bear, "and then we will tell our jokes and make him laugh."

If Father Bear and Mother Bear had but

A MERRY PETITION

BY CAROLYN WELLS

The Queen of May
One sunny day
Held court in a field of daisies;
Her gentlemen
And ladies then
Began to sing her praises,

When there came to the queen,
With a roguish mien,
A figure in garb fantastic.
'Twas the April Fool,
Serene and cool,
And he said, in a tone bombastic:

"To the Queen of May
I've come to say
I'm seeking a position;
And the fair report
Of this famous court
Has excited my ambition.

"Would the sovereign laugh
To see on her staff
A lackey who lacks not for fooling?
Would a trumpeter
Be of use to her
Who blows but his soup when 'tis cooling?

"Would the queen let me
Her gamekeeper be?
With the merriest games I'd supply her.
And might she not deign
In her suite to retain
A laugher instead of a crier?

"My skill is great,
I frankly state
Without reserve or shyness;
And," he gave a wink,
"I could be, I think,
Of use to Her Royal Highness."

The sweet queen smiled
Like a merry child
As the April Fool addressed her.
"Of use," said she,
"You can never be,
But stay as my court jester."

looked poking round through the grass," answered Little Bear. "I just kept thinking and thinking, 'Oh, how I want to see the children dance round the Maypole! Oh, how I want to see the children dance round the Maypole!'"

"You shall certainly go with us on May Day," promised Father Bear. "It is plain that we can trust you to keep still when it is necessary."

That is how it came about that on May Day, when the queen was crowned and children danced to stirring music round the Maypole at Happyville, on the border of the ancient forest, Little Bear was there with his father and mother, safely hidden from sight, where he saw all the fun.

THE WINDS

BY ADELBERT F. CALDWELL

The West Wind met the South Wind,
And cried out in surprise,
"How happens it you're blowing—
I can scarce believe my eyes!
Did not the North Wind bluster
He'd blow alone to-day?"
"Yes," gently said the South Wind,
"But he blew himself away!"

GAMES OF OTHER DAYS AND LANDS

BY HARRIET O'BRIEN

III. TRAPBALL

TRAPBALL is a game that has been played for hundreds of years. The drawing that appears here is copied from an old French manuscript of more than five hundred years ago, and the game as played then differed but little from the trapball that boys of France and England play in this generation. The game has been played in many ways. Sometimes one of the players must catch the ball as another player strikes the lever that throws it into the air. At other times the player who strikes it into the air has to hit it again with his bat before it falls to the ground, just as in the old game of tipcat.

Sometimes the trap is raised, as in the drawing, so that the player who strikes the ball away is in an upright position, and thereby ready to hit the ball again while it is in the air.

In the game as played in later years the trap rests on the ground, so that the player has to stoop low, and, therefore, finds it harder to straighten up and hit the ball before it falls. Sometimes the game is played with bounds, beyond which the ball must go. As a usual thing several players form sides, although two can play the game. The bat varies much. Sometimes it is only a stick; in that case it is much harder for the player to hit the ball than when the bat has a flat surface, as in the drawing.

WHERE CAN HE BE?

almost stepped on him before I noticed that he was there. Now, see if you can find him."

Little Bear looked and looked and looked, but he could not find Friend Whippoorwill.

"Please open your mouth, Friend Whippoorwill, or Little Bear will never find you," was Father Bear's request, as he stood watching the fun.

When a red mouth opened wide, Little Bear laughed and shouted, "I spy! I spy!" and was so amused that he rolled over and over and laughed and laughed. "How did you ever hide like that in plain sight, Friend Whippoorwill?" he asked.

Gladly the whippoorwill explained to Little Bear that his brown-and-white feathers look so much like the brown leaves and twigs on the ground that anyone passing by could seldom find him.

"I wish I could hide in plain sight," said Little Bear, "and see Father Bear and Mother Bear hunting and hunting for me, while I might be looking at them all the time. My fur is brown like dead leaves and I could stretch out flat on the ground the way Friend Whippoorwill does."

Father Bear smiled. "You never could do

A CHANCE TO BEGIN AGAIN

THE rattle of the train had died away, although the smoke of it still hung over the distant curve in the track. On the platform Ethel Grafton stood surveying the dusty road.

"This is encouraging," she said to herself. "Station closed—for repairs, I hope," with a disdainful glance at the dilapidated building. "Station master nowhere to be found; not a soul in sight. How mean! I've got to stay here in this broiling sun and keep watch over that trunk and hatbox till the Elmsville train comes in. And not even a place to sit down!"

"I suppose I could leave the trunk here," she went on reflectively, "and start on a search for the station master, but I don't want to leave that hatbox. Three hats, at twenty dollars apiece, and not paid for yet. Poor papa! And she laughed as she thought of the good-humored way in which her father would take her to task for her extravagance.

She decided to wait, but waiting was irksome business—especially with the July sun beating fiercely down upon her.

Suddenly she heard footsteps on the other side of the platform.

"Oh, please wait a moment!" she cried, as she caught sight of a young girl hurrying away.

The girl paused, blushed painfully, and except for a momentary glance kept her eyes fixed upon the ground.

"Can you tell me where the station master is? Do you know anything about the trains?" Ethel asked breathlessly, but conscious at the same time of the girl's beautiful, long eyelashes and clear-cut, attractive features, which not even her shabby and faded clothing could put wholly out of mind.

"No, I never take them," replied the girl, answering the last question first; "but here comes Mr. Jackson; he can tell you all about them." And she moved nervously away.

With a feeling of relief Ethel turned toward the man. "Are you the station master?" she asked anxiously.

"That's the way they've got me down in the company's books."

"Then will you please tell me what time the train for Elmsville gets here?"

"Elmsville? Why, there's no train for Elmsville from here! You ought to have got off at Lapham, ten miles back, and changed cars there."

Ethel sat down on her trunk with a despairing groan.

"The only thing for you to do now," the man went on, "is to hire a team to drive you back to Lapham. I'll go down to the village and send a man up. There ain't anything particular to keep me here just now."

"Thank you very much!" murmured Ethel as he turned away.

"It was kind of him to offer to do it," she thought, as she watched the figure of the station master trudging down the dusty road, and the reflection prompted a wish to pay him for his trouble.

She took out her purse, in order to have the money ready when he should return, and opened it. A puzzled expression came into her face, and quickly changed to one of anxiety.

She hurriedly opened one compartment after another, and emptied everything on the top of her trunk. Her ticket to Elmsville and all the crisp five-dollar bills that had given the purse such a fat look that morning were gone. Not a penny remained!

A feeling of helplessness came over her. She was at least a hundred miles from Elmsville, penniless among total strangers, unable even to telegraph for help. She could not pay the driver who was coming for her; nor even if he should be willing to take her to Lapham free, would she be any better off there.

"Wait!" she exclaimed suddenly, half aloud. "Where was it Cousin Jim borrowed money on his watch when he was in college and lost all his money—the time Aunt Clarissa scolded him so and said he had disgraced the family name? The pawnbroker's! Perhaps I can find one."

Down the road she started, half running, and stopped at the first house she came to, which, because of a display of showily trimmed hats in the window, she rightly judged was the milliner's.

There were three women in the shop when she entered. Two, one of whom was behind the counter, were elderly. The other was the young girl whom she had seen a little while before at the station.

"Good morning!" began Ethel hurriedly. "Can you—er—will you tell me where I can find a pawnbroker?"

At the sound of her voice the young girl turned quickly and dropped the half-trimmed hat that she held in her hand.

"A what?" asked one of the older women.

"A pawnbroker—a man who lends money on watches and things," repeated Ethel. "I've lost all the money I had with me and my ticket," she added, by way of explanation.

"I'm happy to say there isn't any such

place as that in this town," said the proprietor of the shop, with an air of severity.

Silence fell on the group. Ethel walked to the window to hide the tears that were slowly following one another down her cheeks. She tried to swallow the lump in her throat, conscious all the time of curious and suspicious glances passing between the women behind her back. The silence was broken by the young girl whom Ethel had met at the station.

"I guess, Mrs. Briggs," she said, "so long as Jessie Palmer spoke about it first, it wouldn't be fair for me to take it; and—well, maybe I'd better not do anything about a hat now, anyway."

The conversation gave Ethel an idea. "I don't want to interfere in any way," she said to the milliner, "but I have a lovely hat that I should like to sell; and if this young lady has decided not to take one of these, she might like to see it. It's at the station now, but I can easily get it."

A shy fit, similar to the one that had embarrassed her during her brief interview with Ethel at the station, now took complete possession of the girl. Her blush deepened, she cast down her eyes as before and edged nervously toward the door.

"Well, I declare, Alvira!" spoke up one of the older women sharply. "I never saw you act so much like a goose! If you can't speak, I'll answer for you." Then, turning to Ethel, she said, "Perhaps you better get the hat. We can talk it over."

In a few minutes a rickety carriage drew up at the door and Ethel alighted from it, with her hatbox in her arms. She had found the carriage waiting for her at the station and, depending on the proceeds of the prospective sale for money to pay the driver, had hired it at once.

One by one she brought out the attractive hats and tried them on the head of the diffident country girl. The last one, a creation of pink silk mull and roses, won immediate approval. Even the milliner admitted that it was "real becoming."

"How—how much is it?" asked Alvira timidly.

Ethel cast a glance at the girl's faded calico gown and shabby shoes, and hesitated.

"I will sell it for five dollars," she said at last. "It is perfectly new and I—I paid somewhat more than that for it," she added, in sudden fear that the sale might not be consummated, after all; and yet a pang of pity smote her when she took the money from the thin, hard hand, which had lost all its girlishness from rough work.

The driver of the carriage looked up as she appeared. "Say, miss," he drawled, "you oughter hurried. 'Tain't any use going to Lapham now. You've lost yer train by half an hour. There ain't another before to-morrow morning."

Clutching her purse in her hand, Ethel sank on the doorstep and stared at the man aghast.

"Come right along with us," said the woman who had helped Alvira in the purchase of the hat, and who proved to be her aunt. They had overheard the driver's statement through the open window, and now came out on the steps. "You can come as well as not, and there isn't a boarding house or a hotel in the village."

So, half an hour later Ethel was comfortably established in the north chamber of the little weather-worn Judd homestead, where Alvira and her aunt lived alone.

During the afternoon she had a glimpse of poverty and hardship such as never before had come into her easy and well-sheltered life. She found that this elderly woman and the young girl were carrying on their little farm with only the occasional help of a hired man.

"No wonder the poor thing's hands are red and rough!" she thought, as she watched Alvira hoeing in the potato field.

The supper was simple, but well cooked and neatly served. When it was over, the elder woman hurried the dishes from the table to the sink.

"I'll do them alone to-night, Alvira," she said. "You get out your dress and finish it up. Perhaps Miss Grafton will give you a few hints. You see," she added by way of explanation to Ethel, "there's to be a picnic to-morrow, and the dress and hat are for that. Alvira has been preserving fruit and doing odd jobs for the neighbors and saving the money for it. She's bought a beautiful muslin dress and—why, where are you going, Alvira? Aren't you going to finish your dress to-night?"

The girl had put on her hat and was walking rapidly toward the side door.

"No," she answered listlessly. "I'm not

going to the picnic. I'm not going anywhere again. I'm going to live and die right here."

There was an embarrassed silence in the kitchen for some minutes. Through the open door Ethel saw Alvira cross to an apple tree, lean her tired arms on one of its low branches and rest her head upon them, but she did not see the hot tears that were burning in the girl's eyes.

Mrs. Judd went on mechanically with her work.

"Alvira is queer at times," she said apologetically, "but there isn't a better girl anywhere. She's tired out, I guess. She's worked too hard earning that money. The reason she wanted to look nice at the picnic is that Miss Foss, who keeps the big dressmaking establishment over at Denton, has half engaged her to go to work for her. She has the name of being very particular how her girls look. She always likes to have them dressed stylishly, because it means customers for her. Miss Foss is going to be at the picnic, and she's to let Alvira know then whether she will want her or not."

ONE BY ONE SHE BROUGHT OUT THE ATTRACTIVE HATS

"It would be a great chance for her," she went on wistfully, after a pause. "She can't stand this rough work. It'll kill her. She's the last of four sisters, and all the rest of them broke down and faded away, one after the other. If Alvira could get this place and learn the trade—" She turned again to the sink, with a sigh.

"Mrs. Judd," said Ethel eagerly, "I can finish that dress for her. Do let me! I sew very well, really. It's in the little room at the head of the stairs, isn't it? I can find it." And in a moment she was gone.

The room she entered was small and bare, and she looked about her with pitying eyes, for the poor little attempts at girlish decorations touched her keenly. There were a few bright pictures cut from illustrated papers and magazines. Some faded ribbons held back the bit of muslin that served as drapery for the window. A cluster of white thistle puffs hung over the cracked mirror. The half-finished gown of snowy muslin was spread out on the bed, and beside it lay the new hat and a pair of cotton gloves.

Ethel fell promptly to work, and it was not long before the gown, under her skillful fingers, had become quite a model of fashion in a simple way.

"It ought to have a broad frill of lace to finish the neck properly," she said at last. "I believe I've got some that will do." And she ran down to the lower hall, where the driver had left her trunk.

In a few minutes she returned with a mass of soft, dainty lace in one hand and a delicate, rose-colored sash in the other.

"There," she said with satisfaction, as she laid them beside the dress, "if Alvira doesn't get that situation, I shall think Miss Foss doesn't know her business. As for myself, I guess I had better go to bed."

Half an hour later, as she was brushing out her long hair before the little mirror, the door was flung open and Alvira stood on the threshold staring at her with wide eyes. In her arms she carried the dress, the hat and the sash. Without any apology for the unceremonious way in which she had entered, she crossed the room and held out a roll of bank notes and a crumpled ticket.

"Here!" she said huskily. "This is yours. I found it at the station just after you dropped it. I picked it up, and then I saw you and knew you must have dropped it, because you were

the only person except the station master and me who had been there during the morning. But I didn't want to admit it. I kept saying to myself, 'Perhaps she didn't. Perhaps she didn't. I'm not obliged to ask.' And so I kept it."

Ethel was too thoroughly surprised to find words, and Alvira went on in a low, hopeless voice:

"You see, I'm no better than a common thief. No Judd ever stole before, though we've always been poor. I don't know what made me do it. I suppose it was because I wanted the money so awfully bad. I don't mind going to jail myself, but it's Aunt Helen."

But Ethel had found her voice at last.

"You poor child!" she said, and throwing her arms round the other girl led her gently to a chair. "Don't talk of jail or any such nonsense as that. There has been no harm done, and we'll never say another word about it to each other or to anyone else!"

"It won't make any difference," Alvira

interrupted, "if no one ever hears of it. I stole the money just as much as if I had gone into your room and taken it out of your purse. I heard you tell about losing it, and I said to myself, 'Well, what if it is hers? She's got a father who will give her all the money she wants, and she hasn't any aunt who is getting old and worn-out and who oughtn't to work much longer.' So I said to myself that I'd keep it. Then I came back here to the house and saw how you had been working to help me, and then it all came up before me how bad I was, and how nothing will wipe it out now, no matter what I do."

Ethel was an only child. She had always been tended and petted and was perhaps a little spoiled, but her heart taught her

what to say to this other girl. It was nearly midnight when Ethel's door opened and closed again softly and Alvira went back to her own room, with the hat and dress on her arm and a new light in her eyes.

Five years later the small gilt sign that so long had borne the words, "Miss Foss, Dressmaking," was replaced with a large one that reads, "Foss & Co., Modistes." And Alvira is the "Co." Draped above the glass in the trying-on room is a faded, rose-colored sash.

"There's nothing in the world I prize as I do that ribbon," Alvira tells Ethel, who always manages to stop over for a day whenever she comes anywhere near Denton. "I'd taken the first step downhill, and your giving me that in the way you did was what pulled me back again."

COURTESY REWARDED

NOT the least of the virtues is courtesy, and it is encouraging to see it suitably rewarded now and then.

I know a young New York fellow, one of our great business men likes to say, who has built himself a big business. He used to be a clerk in a department store. One rainy day, when customers were few, the clerks had gathered to discuss baseball. A woman came into the store. The baseball "fans" did not disband; but this young fellow stepped out of the circle and walked over to the woman.

"What can I show you, madam?" he courteously asked.

She told him. He got the article, laid it before her, and explained its merits intelligently. When the woman left, she asked for his card.

Later, the firm received a letter from a woman ordering complete furnishings for a great estate in Scotland. "I want Mr. —," she wrote, "to supervise the furnishing personally." The name she mentioned was that of the clerk who had been courteous.

"But, madam," wrote the head of the firm, "this man is not one of our most experienced clerks. Hadn't we better send Mr. —?"

"I want this young man, and no other," wrote the woman in reply.

Large orders impose their own conditions. So our courteous young clerk was sent across the Atlantic to direct the furnishings of a great estate. His customer that day had been Mrs. Andrew Carnegie. The estate was Skibo Castle.

\$1750
For this
Speedster Type

New Hudson Speedster

With Super-Six Motor—Seating Four

Here is the smartest Speedster you have ever seen. Also the best performer.

We shall not build many. There is too much demand for our regular models. But Hudson dealers in large centers have them. And any Hudson dealer can get them while they last.

We are anxious to scatter our output, and among the right owners. For this model seems to typify the Hudson Super-Six.

Looks the Super-Car

This Hudson Speedster is finished in Cobalt blue, with vermillion wheels. The body edges are beveled, and finished in black.

The body is low and comfortable, and suggestive of a speedster. The steering wheel is at a rakish angle. There are seats for four.

It is for men who want something distinctive—a car that stands out—in this type. The men who get them will have the raciest cars on the road.

The Record-Breaker

The Super-Six motor, used in this Speedster, holds all the worth-while records. That is, the stock-car records for speed, for endurance, for quick pick-up and for hill-climbing.

This stock motor in a touring car—under A. A. A. supervision—has maintained a speed exceeding 75 miles per hour for 100 miles.

This stock motor in a racing chassis has attained a speed of 102.53 miles per hour.

It has made 1819 miles in 24 hours, breaking the record by 52 per cent.

It has twice broken the ocean-to-ocean record, in one continuous 7000-mile round trip. And a special Super-Six, in the world's greatest hill-climb, made the best time against twenty special cars up Pike's Peak.

For All Lovers of a Matchless Car

But the Hudson Super-Six, in its various styles, appeals to more than speed lovers. It appeals to all who admire supremacy. And to all who want endurance.

In all the accepted tests for stock cars, it has proved itself the greatest car that's built.

And all this performance is due to super-endurance. All due to the fact that this invention has reduced motor friction to almost nil. It has nearly doubled endurance, and added 80 per cent to our motor's efficiency.

It has given to Hudson the top place among fine cars. Last year, no car above \$1100 equaled it in sales.

All our body styles are designed and finished and equipped to make the Hudson look the leader that it is.

Have you seen our latest bodies?

No. 00 CARTRIDGE PREMO

Make your own pictures of your sports and chums and parents—anything you care about. You can easily do it with this little camera, which has been especially designed for the use of boys and girls, and so carefully constructed and made in such large quantities that we are able to offer it to you for SEVENTY-FIVE CENTS.

Remember, this is not a toy, but a reliable, substantial camera that must pass the same inspection for quality as must all other cameras that come from the Eastman factories.

It loads in daylight with six exposure film cartridges, makes $1\frac{1}{4} \times 1\frac{1}{4}$ pictures, is covered with a good quality imitation leather, and is fitted with tested meniscus lens and automatic shutter for time or snap shot exposures.

Wherever you go for fun, take one of these little cameras with you.

NATURE & SCIENCE

DESERT-DRY INTERIORS.—In a recent bulletin of the Kansas State Board of Health Mr. S. D. Flora, observer of the United States weather bureau at Topeka, Kansas, makes it plain that the indoor air of our houses is drier in winter than the air of the average desert. A series of measurements of the humidity both of the indoor and of the outdoor air at the weather-bureau office in Topeka over a period of forty days of typical winter weather showed the indoor humidity to be on the average twenty-three per cent. That is the same average as that obtained in Death Valley, California, during the summer of 1891. The outdoor humidity in Topeka at the same time was on the average eighty-two per cent. The average humidity during the driest month of the year in Yuma, Arizona, is thirty-five per cent; in Santa Fe, New Mexico, twenty-nine per cent; and in Pueblo, Colorado, thirty-eight per cent. Observations on the humidity, or lack of it, in the residences of Topeka showed that all were as dry as the weather-bureau office—a steam-heated, well-ventilated room kept at an average temperature of about seventy-two degrees. Indoor air in heated houses and buildings in cold weather is therefore usually drier than desert air, and it is one of the leading causes of pneumonia, bronchitis, colds and grippe, and an excellent reason for observing "open-window week" the year round.

"WITCHING" FOR WATER.—The idea that a forked limb or branch, or diving rod, is useful in discovering minerals, finding water or hidden treasure, or detecting criminals, is a curious superstition that has been a subject of discussion since the middle of the sixteenth century, and that still has a strong hold on the popular mind even in this century. The fact is evident from the large number of inquiries received every year by the United States Geological Survey about the efficacy of the instrument, especially for discovering underground water. In reply to those inquiries, the Geological Survey has published a brief paper on the history of "water witching," with a bibliography that includes a truly astonishing number of books and pamphlets on the subject. It is doubtful whether so much investigation and discussion has ever been bestowed on any other subject with such absolute lack of positive results. It is difficult to see how, for practical purposes, the matter could be more thoroughly discredited, yet many still believe in it. Of course, not all persons who use a forked twig or other similar contrivances for finding underground water or minerals are intentional deceivers; but there is no doubt that many of the professional "finders" of water, oil and other minerals who take pay for their services or for the sale of their instruments are frauds, or that the total amount of money they obtain is large. The Geological Survey therefore advises all inquirers to spend no money for the services of any "water witch" or for any instrument for discovering underground water or minerals.

PAPER MILK BOTTLES.—The health commissioner of the State of Pennsylvania calls the old-fashioned milk bottle a pernicious germ carrier and a menace to health. Progressive dairymen in many communities are adopting the paraffin-coated cardboard milk bottle, which is thrown away after it has been used once. It not only is airtight but it also shuts out the light. Milk keeps better in the dark; in the paper bottles it stays fresh several hours longer than it does in transparent glass bottles. According to the Scientific American, a Western inventor has just perfected a machine that will manufacture paper bottles at the rate of five thousand an hour. The bottles are made direct from very cheap wood pulp, less than half an ounce of which will make one bottle. The process of manufacture is simple. A steel core is dipped into a tank of raw pulp and, by means of four clamps, the pulp is pressed round the core and into a seamless body, much as a sculptor would press soft clay into the desired shape with his hands. During the operation of moulding the bottle the material makes three complete revolutions, and the clamps press it three times to each revolution. Thus the paper and the bottle are formed in a single operation. The completely formed bottle next passes through a powerful drier and over a stencil that prints on it the name of the milk dealer, the capacity of the bottle and whatever else may be necessary. It is then removed from the core by a steel hand and deposited on a belt conveyor that delivers it to a machine that crimps the bottom and the top to the body. The bottle then has a paraffin bath that renders it impervious to moisture and acids, and is automatically packed in dust-proof cartons for delivery to the dealer. The operation is continuous. It takes about eight minutes to convert the raw pulp into the finished bottle.

VANISHING WILD LIFE.—In a recent address at Cornell University Mr. Louis Agassiz Fuertes, the naturalist and painter of birds and animals, said that more than twenty-five species of American birds and mammals have become extinct within the memory of persons now living, mainly through the wantonness of the American people. Furthermore, Mr. Fuertes believes that many other species are on the road to extinction, and that the animals that live in the open are sure to go first; those of the forests have a better chance to survive. Among those which he named as having been utterly destroyed during the past seventy-five years are the passenger pigeon, the last specimen of which recently died in the Cincinnati Zoological Museum; the great auk, the Labrador duck, the Carolina parakeet, the Eskimo curlew and a number of the macaws of the West Indies. Men now alive remember when passenger pigeons literally darkened the skies in their annual migrations up and down the Eastern States. The American buffalo, or bison, Mr. Fuertes regards as extinct in so far as its wild life is concerned; and he counts the prong-horned antelope as one of the plains-dwelling creatures that are sure to go in the near future. The extinction of the wood duck, too, he says, is imminent. It is a tree-nesting species and the most beautiful of all the American wild ducks. The woodcock also is in danger, and so are many shore birds that were formerly plentiful, even the well-known killdeer plover, or killdeer. To save the remnants of our wild life, Mr. Fuertes advocates that knowledge of the facts be spread as widely as possible; that the national migratory-bird law be loyally supported; that more game and bird refuges be established, and that public opinion place itself wholeheartedly behind the protective measures now on the statute books.

Boys: Here is the New
that any number can play.
Exciting, fast and interesting.

It's Cricket speeded up; it's Baseball that can be played in any size lot—More fun than One Old Cat.

START OF PLAY—Batter strikes Krikkit, throwing ball into air and batting it into field. (Rules tell the rest.)

BALL IN PLAY—Fielder has stopped ball and is throwing it into Wicket Net, putting out batter who is trying to get from Field Base to Home Base.

And you can buy the whole outfit—Bat, Ball, Bases, Krikkit, Net and Rules for only \$3.50 (West of Milwaukee and South of Louisville \$4.00), at best Sporting Goods or Toy Stores or from us prepaid.

NATIONAL TOY COMPANY.

270 CONGRESS STREET BOSTON, MASS.
Mfrs. Toys and Specialties. We make RASTUS.

RASTUS dances one hundred jigs and steps to music and can be put on or taken off all talking machines (except Edison) in 5 seconds. Price, \$1.00. We also make a pair of most amusing Boring Darkies that box on talking machines. Price, \$1.25. Combination Rastus and Boring, \$1.50. From dealers or from us prepaid.

STORM-TOSSED and battered, helpless in a raging sea, the crew unable to launch a boat—such was the plight of the Pío IX, on the night of December 5, 1916.

And here might come the tragic end of this story but for Antonio Oliver, one of the crew. He remembered his *Eveready DAYLO*,* strapped it to his wrist and with ten of his comrades went overboard, clinging to a ship's raft.

The light from the *Eveready DAYLO** attracted the attention of the S. S. Buenos Aires. After many failures a boat was launched and help sent to the exhausted crew. Thus were the lives of eleven saved by the light that did not fail—*Eveready DAYLO*.*

There are times in everyone's life when an *Eveready DAYLO** is invaluable. Get yours today. Prices from 75 cents up. At dealers everywhere.

THE YOUTH'S COMPANION is an illus-
trated weekly paper for all the family.
Its subscription price is \$2.50 a year, in advance,
including postage paid to any address in the
United States, \$3.25 to Canada, and \$3.00 to foreign
countries. Entered at the Post Office, Boston,
Mass., as second-class matter.

New Subscriptions may begin at any time during
the year.

Money for Renewals should be sent by subscribers
directly to this office. We do not request Agents to
collect money for renewals. Payment to strangers
is made at the risk of the subscriber.

Payment for The Companion, when sent by
mail, should be by Post Office Money Order or
Express Money Order. When neither of these can
be procured, send the money in a Registered Letter.

Silver sent through the mail is at the sender's risk.
It is liable to be stolen or to wear a hole through
the envelope.

Renewals. Three weeks after the receipt of money
by us, the date after the address on your paper,
which shows when the subscription expires, will
be changed.

Always give the name of the Post Office to which
your paper is sent. Your name cannot be found on
our books unless this is done.

Letters should be addressed and orders made payable
to

RHEUMATISM IN CHILDREN

ACUTE articular rheumatism is rare in
infants and in young children, yet it
sometimes occurs at that time of life,
and when it does it is likely to be more
serious in its consequences than when
it occurs in middle age.

The most serious aspect of the disease in the
child is its tendency to cause disease of the heart.
The heart trouble may occur at any time during
the course of the rheumatism, it may first appear
after the symptoms have subsided, or it may even
precede the actual joint symptoms. It may take
the form of inflammation of the lining of the
heart (endocarditis), of the heart muscle (myo-
carditis), or of the enveloping membrane (peri-
carditis).

The first is the most common and also the most
serious, since it leads to disease of the valves,
usually of the mitral valve, which permanently
cripples the heart. It is fortunate, however, that it
attacks the mitral valve more often than the aortic,
for disease of the latter is by far the more serious
affection. A person with a simple mitral lesion
may live to a comfortable old age, scarcely aware
that he has any heart trouble whatever.

Another rather frequent sequel of rheumatism
in childhood is St. Vitus's dance, or chorea, which
occurs in about one third of the cases.

Acute rheumatism in children is often not so
easily diagnosed as it is in later life. There may be
no swelling and no severe pain in the joints, and
the fever may be very slight. When the joints are
not involved the chief signs are likely to be found
in the throat—quinsy, stiff neck, and difficulty in
swallowing. Sometimes the only signs of rheu-
matism are a rapid and irregular pulse with some
stiffness of one or more joints. Those symptoms
are often so slight as to escape detection; the first
sign of trouble may be the heart affection.

The doctor's chief aim is to prevent the heart
from being involved in an attack. The child should
remain in bed, and he should not rise for any pur-
pose whatever until all symptoms of rheumatism
have passed. If any sign of heart trouble is found
at the end of that time, the period of lying in bed
must be extended.

PICTURESQUE GRATITUDE

WHERE is Roth of Rumisberg? He may be
anywhere in Europe. He may be—
most probably is—in the United States.
Wherever he is, Mr. Roth, eldest mem-
ber of the family of Roth, descendants
of Hans Roth of Rumisberg, is wanted
by the government of the canton of Solothurn,
Switzerland. It is a case of picturesque and per-
sistent gratitude on the part of Solothurn, which
desires to reward him for a service rendered by
a mediæval ancestor more than five centuries
ago.

In the year 1382 the enterprising Count of Kyburg,
finding his family coffers low and prestige some-
what impaired, planned to reestablish the fortunes
of his house by consecutively raiding and plunder-
ing the towns of Solothurn, Bern, Thun and
Aarberg. With the aid of Count Diethelm of Neu-
châtel, and of certain treacherous inmates of the
Abbey of St. Ursus in Solothurn itself, the pros-
pects looked bright for loot and massacre.

As the war party approached the city, hoping
to make a surprise attack, a farmer, Hans Roth
of Rumisberg, detected the sound of marching
feet. He crept nearer and listened, and from the
soldiers' talk learned the plan of the leaders. By
a short cut, a rough path that troops could not
follow, he raced ahead of them and arrived panting
and exhausted at the gates in time to tell the news
and help sound the alarm. The citizens were
aroused, the walls manned, and when the two
counts arrived it was so plain that their reception
would be a hot one that they departed without
even attempting an assault.

The grateful people of Solothurn voted to create
a fund from which should be provided, first for
Hans Roth himself and after his death for his eldest
male descendant forever, a yearly pension and a
robe of honor. A Roth of Rumisberg, the latest
recipient of both honors, has recently died child-
less, and Solothurn, unwearied by five centuries of
gratitude, is patiently seeking for the rightful heir
to his historic honors.

Men and women who in their school days used
to declaim Adelaide Procter's spirited poem, A
Legend of Bregenz, will remember an even more
quaintly picturesque manifestation of public grati-
tude for a warning that saved the city from sur-
prise and capture. In that case the messenger was
a young girl, and she had to take a long, hard, des-
perate ride through night and darkness, arriving
at midnight, spent, but in time. Her statue,
mounted on her galloping steed, was erected in a
public square; but a far more unusual and im-
pressive honor was accorded her. By order of the
city authorities, for many years every watchman
who called the hours helped to keep her deed in
the minds of the people:

"Nine," "Ten," "Eleven," he cries aloud,
And then, O crown of fame!
When midnight pauses in the skies
He calls the maiden's name!

Change Your Lenses They Are Blinding and Offensive and They Don't Light Turns

Your clear-glass lenses, as you
know, blind drivers and pedestrians.
And countless local laws forbid
them.

They do not light your nearby
roadside. They do not light your
turns. And dimmers make them
too dim.

In a single year 350,000 motorists
have changed to the Warner-Lenz.
Tens of thousands are now chang-
ing monthly. And 16 makers of
famous cars have lately made War-
ner-Lenz standard equipment.

176 Lenses in One

With the Warner-Lenz your full
light is legal anywhere. The road
is lighted clearly from 300 to 500
feet ahead. The roadside and turns
are lighted.

Warner-Lenz light is the
same in every position. Turning

of the lens does not affect it, nor
does rise or fall of the car.

The 176 lenses combined in one,
light a full half-circle ahead. And
they light it as daylight does.

Change Now

All Motordom is coming to War-
ner-Lenz as fast as we can make
them. After one night's use, nothing
could induce you to return to the
clear glass.

Adopt them now. You can make
the change in a moment. Then
night driving will be safe and pleas-
ant. No dark places will lie ahead.
Coming drivers can't be blinded.

In ordering, state the make and
model of your car. Your money back
if you are not delighted. Descriptive
illustrated literature on request.

COLGATE'S RAPID-SHAVE POWDER

TRADE MARK

WHEN you begin to shave,
begin with the plentiful,
softening, soothing lather of
Colgate's Rapid-Shave Powder.

Moisten the face, sprinkle a
little powder on the wet brush
—then lather. The beard is
softened quickly—the lather is
worked up on the face; no
mussy "rubbing in" is needed.

A little powder makes an abun-
dant, creamy lather—there is
no after-smart or burn, but a
soothed, comfortable feeling.
Colgate's lather does not cling
to the razor edge and is easily
rinsed from the face.

The same perfect lather with Colgate's
Shaving Stick or Colgate's Shaving Cream.

Sold everywhere—or a trial
size of our Shaving Stick,
Powder or Cream sent for 4c.

A New Book by the Author of Just David

The Road to Understanding

By Eleanor H. Porter

THIS novel has all the sweetness, inspiration and human appeal of Just David and is in addition a real love story. It is the story of the romantic courtship and marriage of a poor girl and a wealthy man, of their estrangement and the final happy ending brought about by their daughter.

In turning her remarkable talents as a story-teller into the love-story field, Mrs. Porter is sure to win an army of new readers.

The Boston Transcript says: The most vital interest in the novel lies in the girl Helen, and it is no exaggeration to say that the delineation of her character is quite the best thing that Mrs. Porter has accomplished in any of her books. From the moment when she first gains the reader's sympathy, she holds it to the very end—and holds it with a firmer grasp through each succeeding chapter.

This New Book Sent Free

Send us one new subscription (not your own) for The Youth's Companion and we will present you with a copy of Mrs. Porter's latest success, The Road to Understanding, sending the Book to you postpaid. This Book cannot be purchased anywhere for less than \$1.40 net.

NOTE. This Book is given only to present Companion subscribers to pay them for introducing the paper into a home where it has not been taken the past year.

Materials for Making this

Popular Indian Bag

THESE crocheted Indian Bags are all the vogue this season. Every woman and girl wants one. The design of our Bag is unique and very beautiful. The body is of poppy red and cream with points of green. The Roman stripes around the centre are of dark green, poppy red, light green, blue, black, dark yellow and

light yellow. The draw string and pendant are finished with Indian beads and tassels. When completed the Bag is about six inches in depth. Purchased at the stores, a handmade Bag of this quality would cost \$2.50 or more. With our Outfit, however, the Bag may be easily made at home in your spare moments.

Our Offer includes one Crochet Hook No. 6, one dozen balls of Silkatene in necessary assortment of colors, Indian Beads and full instructions.

OUR OFFER. Send us one new subscription (not your own) for The Youth's Companion and we will send you free of charge and postpaid a complete Outfit for making this beautiful Indian Bag. Or the Outfit will be sold for \$1.00 postpaid.

NOTE. This Outfit is given only to present subscribers to pay them for introducing the paper into homes where it has not been taken the past year.

The "8" Combination Aluminum Cooking Set

Eight Useful Utensils in One

HERE'S a Set of cooking utensils that will go a long way toward satisfying the desire of every housekeeper for a complete aluminum kitchen outfit. The Set consists of four pieces, so made that they fit together perfectly in various combinations to form eight different utensils such as are needed in the kitchen every day the year round. Each piece is of solid aluminum, which cannot flake or rust off like enamel. The Set is one of the most attractive as well as most practical articles we have ever offered. The Set will make

6-Quart Preserving Kettle	Double Roaster
6-Quart Covered Berlin Kettle	Colander
Covered Baking Dish or Casserole	2½ Quart Double Boiler
2½-Quart Deep Pudding Pan	Steam Cooker

The eight combinations made by this Set would cost at least \$5.00 if purchased separately. We are anticipating a very large response to our liberal Offer, and have contracted for a large number of these Sets so that no one may be disappointed.

How to Get This Fine Set

Send us one new subscription (not your own) for The Youth's Companion, with 50 cents extra, and we will send you one of these "8" Combination Aluminum Cooking Sets. The Set will be sent by express or parcel post, charges to be paid by receiver. If parcel-post shipment is desired, ask your postmaster how much postage you should send us for a 3-lb. package.

NOTE. This Set is given only to a present Companion subscriber to pay him for introducing the paper into a home where it has not been taken the past year.

BRIGHT MOONLIGHT FLOODED THE PLACE, BUT SHE COULD NOT SEE ANYWHERE THE CAUSE OF THE DISTURBANCE

THAT MYSTERIOUS "DAGUERREOTYPE SALOON"

By C.A. Stephens

AMONG the quaint objects that were to be seen in New England fifty years ago, few were more interesting than the itinerant "daguerreotype saloons"—those peripatetic studios on wheels, in which "artists" used to journey about the country taking photographs. Of course, card photographs had not come into vogue then; but there were the daguerreotypes, and later the tintypes, and finally the ambrotypes in little black-and-gilt cases.

Those "saloons" were picturesque little structures, not much more than five feet wide by fifteen feet long; they were mounted on wheels. On each side was a little window, and overhead was a larger skylight; a flight of three steps led up to a narrow door at the rear. The door opened into the "saloon" proper, where the camera and the visitor's chair stood; forward of that was the cuddly under the skylight, in which the photographer did his developing.

The photographer was usually some ambitious young fellow who, after learning his trade, often made and painted his "saloon" himself. Frequently he slept in it, and sometimes cooked his meals in it. If he did not own a horse, he usually made a bargain with some farmer to haul him to his next stopping place in exchange for taking his picture. When business grew dull in one neighborhood, he moved to another. He was the true Bohemian of his trade—the gypsy of early photography.

Every summer a "saloon," and sometimes two, used to come to the "Corners," near the old squire's farm in Maine; but although we were all familiar with the itinerant vehicles, we were none the less puzzled by the mysterious "daguerreotype saloon" at Dresser's Lonesome.

We came upon it in this manner: Catherine Edwards had for some time been carrying on a little industry that had proved fairly lucrative—namely, gathering and curing wild herbs and selling them to drug stores in Portland. Her grandmother had taught her how to cure and press the herbs. First, the girl dried the wild plants on the attic floor, then she pressed them in two-pound packages, bound them up tight in tough paper and put quaint labels on them. One season she sold more than seventy dollars' worth of them.

Catherine took many long jaunts to gather her herbs,—thoroughwort, gold-thread, catnip, comfrey, skullcap, pennyroyal, lobelia, peppermint, old man's root, snakehead and other herbs of

greater or less medicinal value,—and she soon came to know where all those various wild plants grew for miles round. Nature in Maine is not lavish in the matter of wild herbs; and so Catherine, who naturally wished to keep her business for herself, was rather chary about telling others where the herbs that she collected grew.

She had heard that thoroughwort, catnip and pennyroyal were growing in considerable quantity in the old pastures at Dresser's Lonesome. She did not like to go up there alone, however, for the place was ten or eleven miles away, and the road that led to it ran for most of the distance through deep woods; that road had once gone straight through to Canada, but it had long since been abandoned. Years before, a young man named Abner Dresser had cleared a hundred acres of land up there and built a house and a large barn; but his wife had been so lonely—there was no neighbor within ten miles—that he had finally abandoned the place.

At last Catherine asked my cousin Theodora to go up to Dresser's Lonesome with her and offered to share the profits of the trip. No one enjoyed such a jaunt better than Theodora, and one day early in August they persuaded me to harness one of the work horses to the double-seated buckboard and to take them up there for the day.

It was a long, hard drive, for the old road was badly overgrown; indeed we were more than two hours in reaching the place. What was our amazement when we drew near the deserted old farmhouse to see a "daguerreotype saloon" standing before it.

Its forward wheels were gone, and its front end was propped up level on a short piece of timber; but otherwise the "saloon" looked as if the "artist" might at that moment be developing a plate inside. On closer inspection, however, we saw that weeds had sprung up beneath and about it, and I guessed that the wagon had been standing there for at least a month or two; and on peeping in at the little end door we saw that birds or squirrels had been in and out of the place. All that we could make of it was that the photographer, whoever he was, had come there, left his "saloon" and gone away—with the forward wheels.

We gathered a load of herbs and drove home again, much puzzled by our discovery. The story of the "daguerreotype saloon" at Dresser's Lonesome soon spread abroad, but no one was able to furnish a clue to its history. Of course all manner of rumors began to circulate; some people declared that the owner of the "saloon" must be a naturalist who had

journeyed up there to take pictures of wild-animal life; others thought that the photographer had lost his way and perished in the woods.

When my cousin Halstead and Willis Murch passed along the old road in October that fall, the

mysterious "saloon" was still standing there; and lumbermen spoke of seeing it there during the winter. The following August, a year after we had first discovered it, Catherine and Theodora again went up to Dresser's Lonesome to gather herbs; the "daguerreotype saloon" was still there, unchanged.

Halstead carried the girls up on that trip. The weather had been threatening when they started, and showers soon set in; rain fell pretty much all the afternoon, so that the girls were badly delayed in gathering their herbs. When Halstead declared that it was high time to start for home, Catherine proposed that they stay there overnight and finish their task the next day. The roof of the old farmhouse was now so leaky that they could find no shelter there from the rain; but Catherine declared that the deserted "daguerreotype saloon" would be a cosy place to camp in.

Theodora did not like the idea very well, for the region was wild and lonely, and since the old squire was away from home that week Halstead would have to return to the farm. Catherine, however, was eager to remain.

"Why, this old saloon is just as good as a house!" she said. "We can fasten the door, and then nothing can get in. And we have plenty of lunch left for our supper."

At last Theodora reluctantly agreed to stay. After promising to return for them by noon the next day, Halstead started for home. After he had gone, the girls gathered a quart or more of raspberries, to eat with their supper. When they had finished the meal, they made, with the sacks of herbs, a couch on the floor of the "saloon." Then Catherine fastened the door securely by propping against it a long, narrow plank from the floor of the old barn.

For a while the girls lay and talked in low tones. Outside everything was very quiet, and scarcely a sound came to the girls' ears. All nature seemed to have gone to rest; not a whippoorwill chanted or an owl hooted about the old buildings. Before long Catherine fell peacefully asleep. Theodora, however, who was rather ill at ease in these wild and strange surroundings, had determined to stay awake, and she lay listening to the crickets in the grass under the "saloon." But crickets make drowsy music, and at last she, too, dropped asleep.

Not very much later something bumped lightly against the front end of the "saloon"

outside; the noise was repeated several times. Oddly enough, it was not Theodora who waked, but Catherine. She sat up and, remembering instantly where she was, listened without stirring or speaking. Her first thought was that a deer had come round and was rubbing itself against the "saloon."

"It will soon go away," she said to herself, and did not rouse her companion.

The queer, bumping, jarring sounds continued, however, and presently were followed by a heavy jolt. For some moments Catherine heard footsteps in the weeds outside; she told herself that there must be two or three deer. She was not alarmed, for she knew that the animals would not harm them; but she hoped that they would not waken Theodora, who might be needlessly frightened.

But presently she heard a sound that she could not explain; it was like the jingling of a small chain. Rising quietly, she peeped out of one of the little side windows, and then out of the other. The clouds had cleared away, and bright moonlight flooded the place, but she could not see anywhere the cause of the disturbance. Whatever had made the sounds must be out of sight in front; there was no window at that end of the "saloon."

Still not much alarmed, Catherine stepped up on the one old chair of the studio and cautiously raised the hinged skylight. At that very instant, however, the "saloon" started as if of its own accord and moved slowly across the yard and down the road!

The wagon started so suddenly that Catherine fell off the chair. Of course Theodora woke, but before she could speak or cry out Catherine was beside her.

"Hush! Hush!" she whispered, and put her hand over her companion's mouth. "Don't be scared! Keep quiet. Some one is drawing the old saloon away!"

That was far from reassuring to Theodora. "Oh, what shall we do?" she whispered in terror.

Catherine was still begging her to be silent, when a terrific jolt nearly threw her off her feet. In great alarm the girls sprang to the little rear door to get out and escape.

But as a result probably of the rocking and straining of the frail structure, the plank that Catherine had propped against the door had settled down and stuck fast. Again and again she tried

to pull it away, but she could not move it. Theodora also tugged at it—in vain. They were imprisoned; they could not get out; and meanwhile the old "saloon" was bumping over the rough road.

"Oh, who do you suppose it is?" Theodora whispered, weak from fear. "Where do you suppose he is going with us?"

"We must find out. Hold the chair steady, Doad, if you can, while I get up and look out."

She set the chair under the skylight again, and then, while Theodora held it steady, climbed upon it—no easy matter with the vehicle rocking so violently—and tried to raise the skylight. But that, too, had jammed. At last, by straining hard against it, she succeeded in pushing it up far enough to let her peer out over the flat roof.

There, in the moonlight, she saw a strange-looking creature,—a man,—who rolled and ambled rather than walked; he was leading a white horse by the bit, and the horse was dragging the "saloon" down the road. The man was a truly terrifying spectacle. He seemed to be a giant; his head projected far forward between his shoulders, and on his back was what looked like a camel's hump! His feet were not like human feet, but rather like huge hoofs; and the man, if he was one, wobbled forward on them in a way that turned Catherine quite sick with apprehension. All she could think of was the picture of Giant Despair in her grandmother's copy of Bunyan's Pilgrim's Progress.

Unable to imagine who or what he could be, Catherine stood for some moments and stared at him, fascinated. All the while Theodora was anxiously whispering:

"Who is it? Who is it? Oh, let me see!"

"Don't try to look," Catherine answered earnestly, as she leaped to the floor. "Doad, we must get out if we can."

She threw herself at the door again and tried to pull it open; Theodora joined her, but even together they could not stir it.

Meanwhile the "saloon" swayed and jolted over the rough road; to keep from pitching headlong from side to side the girls had to sit down on the sacks. Their one consoling thought was that, if they could not get out, their captor, whoever he was, could not get in.

They were a little cheered, too, when they realized that the wagon was apparently following the road that led toward home. But when they had gone about three or four miles and had come to the branch road that led to Lurvey's Mills, they felt the old "saloon" turn off from the main road. Whither was their unknown captor towing them? With sinking hearts they struggled again to open the door, until, weak and exhausted, they gave up.

Theodora was limp with terror at their plight. Catherine was more resolute, and tried to encourage her companion; but as they joggled and jolted over the deserted road for what seemed hours, even her own courage began to weaken.

At last they came to a ford that led across a muddy brook. As the horse entered the water, the forward end of the rickety old "saloon" pitched sharply downward; the prop that had held the door fast loosened and the door flew open.

Needless to say, the girls lost little time in getting out of their prison. Before the "saloon" had topped the other bank, they had jumped out and had run into the alder bushes that bordered the stream.

Their captor was evidently not aware of their escape, for the "saloon" kept on its course. As soon as it was out of sight the girls waded across the brook and, hastening back to the fork of the road, took the homeward trail.

About four o'clock in the morning the old squire heard them knocking at the door. They were still much excited, and told so wild and curious a story of their adventure that after breakfast the old squire and Addison drove over to Lurvey's Mills to investigate.

Almost the first thing they saw when they reached the Mills was that old "daguerreotype saloon," standing beside the road near the post office; pottering about it was a large, ungainly man—a hunchback with club feet.

A few minutes' conversation with him cleared up the mystery. This was the first he had heard that two girls had ridden in his "saloon" the night before! His name, he told them, was Duchaine, and he said that he came from Lewiston.

"Maybe you've heard of me," he said to Addison, with a somewhat painful smile. "The boys down there call me Big Pumblefoot."

Unable to do ordinary work, he had learned to take ambrotypes and had set up as an itinerant photographer. But his mother, who was a French Canadian, had gone back to

live at Megantic in the Province of Quebec; and in June the year before he had set off to visit her. Thinking that he might find customers at Megantic, he had taken his "saloon" along with him. He had followed the old road that formerly led through the great woods to Canada, but when he got to Dresser's Lonesome he found the road so much obstructed that he had left the "saloon" behind, and had gone on with his horse and the forward wheels.

An accident had laid him up at Megantic during the winter and spring, but a few days

before he had started down into Maine again. On the way down the old road from Canada he had got belated, and had not reached Dresser's Lonesome with his horse and wheels until late at night; but as there was no place where he could put up, and as the moon was shining, he had decided to continue on his way down to the Mills.

Thus the mystery was cleared up; but although the explanation was simple enough, Theodora and Catherine were nevertheless not inclined to laugh over their midnight ride in the mysterious "daguerreotype saloon."

THEN HE FOUND A SEAT ON THE SHADY SIDE OF THE AVENUE AND SAT DOWN TO WAIT FOR TRAIN TIME

FATHER'S SURPRISE

By Miriam Leonard Read

FATHER had been pondering the question for a week or more. To-day he had quite made up his mind, and after arranging things at the office he had hurried home to tell the family of his decision. It would be the first surprise that he had given them for years.

The Gordons were very busy getting ready for their annual summer outing at the seashore. They seemed scarcely aware of father's presence except when they asked him to write a check or to carve the roast. Father was such a busy man that the family had somehow got into the habit of not bothering him with such trifling matters as summer vacations. They just packed up and told him what time the train left; and father, duly grateful for their thinking of his valuable time, had always managed to reach the station in time to see them off.

But to-day father had other plans—plans that made his heart beat high with joyous anticipation. Outwardly, however, he was the same dignified, well-dressed gentleman who paid all the bills and who read the morning paper at the breakfast table.

As he stepped into the hall, mother, flushed and hurried in the midst of packing upstairs, looked down over the banister. With a little frown of surprise she informed him that luncheon was not nearly ready.

"You're dreadfully early, Howard," she said. "Go into the library and read a while. It's nice and cool in there."

Father opened his mouth, but before he could say a word mother had returned to her packing. He could hear her telling Josephine what to put into the trunk. He longed to rush upstairs and tell her to pack his things, too, but something held him back. As he stood irresolute, Josephine came tripping down the stairs and passed him on her way to the telephone.

"Goodness! How warm and tired you look, father!" she exclaimed. "Why don't you go into the library and rest? Luncheon isn't nearly ready yet."

Father heard her call a familiar number and inquire about the train. Why could she not have asked him? He felt suddenly very weary

and wretchedly disappointed. After all his sacrifice of time and business the family did not want him, it seemed. What Riley had said was true. Stepping into the library, father sank down into the depths of a big, comfortable chair and thought deliberately of things that Riley had said some ten days ago.

Riley was his bookkeeper—a little, round-faced man with a pleasant smile. He had asked father for a two weeks' vacation that he might go with his family on a camping trip.

"Of course I'll let you off," father had replied; "but see here, Riley, I don't understand how you can afford to take a vacation every year that way. I can't. I haven't had one with my family for fifteen years."

"Mr. Gordon," Riley had answered, "it's my opinion that we always afford what we want most. The companionship of my family is worth more to me than dollars and cents. I can't afford to risk losing it. Suppose I force them into the habit of doing without me now, some day they might prefer to do without me. See what I mean, Mr. Gordon?"

After Riley went, father began to think over what the little bookkeeper had said. And he had been thinking about it ever since. The result was that he had decided to take a vacation with the family.

He had thought that it would be such a joyous surprise all round. He had pictured mother rushing round excitedly hunting up his "second bests" to wear at the beach; he had imagined Josephine's girlish shout of joy and Burton's hearty, "Golly! Dad, that'll be great!" And instead of that, here he was moping in the library while the family prepared to depart without him. True, he had not yet told them about his plans. How could he when they did not give him a chance?

Presently the hall door opened and Burton came in whistling. Father's heart gave a little hopeful bound. Burton was almost a man. Why not tell him first? Burton and he had been great "chums" when they had lived in the little cottage over on Elm Avenue. Burton was five years old then and there were no silvery streaks in father's hair.

"Burton!" father called, with a note of

tenderness in his voice that Burton, in his boyish haste to find Josephine, did not notice. He paused at the library door—a fine, strong young fellow, happy and care free.

"Say! But it is warm, dad!" he exclaimed.

"Where's Jo? I want to tell her not to forget to pack my army shirt. What did you want with me, dad?" He said the last a little impatiently, and moved as if anxious to be off.

"Nothing," said father, "nothing much. Josephine is upstairs with mother."

He heard Burton go up, three steps at a bound. Then followed peals of merry laughter, which rippled downstairs and beat against father's ears. They were so happy—the family. And they did not need him. Riley had been right, after all. He had forced the family to do without him all these money-making years; and now—now the family did not need him. They wanted him to sit where it was pleasant and cool and read a book while they went off on vacations.

It was mother who called father in to luncheon and mother who insisted that he take his usual two cups of iced tea. Father had no appetite. He was wondering vaguely what he should do with his two weeks' vacation. He had told them at the office that he should be gone for that length of time. Of course he could go off fishing somewhere by himself. Or he might stay at home and mow the lawn and train the brier rose. But he did not want to do any of those things. He wanted to go with the family. Perhaps if he had mother by herself for a few moments, he might yet tell her about his plans.

The chance came at last. Josephine and Burton had left the table. Father sat facing mother, who was leisurely sipping iced tea.

"Mother," he began somewhat hesitatingly, "I've fixed things up at the office so—so I can —"

"You needn't mind about us," mother put in obligingly, quite confident that she knew exactly what father was going to say. "We're used to going by ourselves. You can just run down from the office at train time as usual. We'll manage fine without you." She smiled benignly at him and rose.

Crestfallen, father followed her into the hall. She had made it all too evident that he was in no way necessary to their happiness and comfort. He took his hat and went forth to join the busy noonday crowds. At a downtown store he bought a box of Josephine's favorite chocolates and from a news stand near by a magazine for Burton. He also bought a great bunch of fragrant violets for mother. Then he found a seat on the shady side of the avenue and sat down to wait for train time. And as he waited a new plan came to his troubled mind.

Mother, looking very handsome although a little warm in her new tailored suit, stood expectantly at the gate on the south side of the big station. Near her were Josephine and Burton, chatting with young friends who had come to see them off. Suddenly the great gate swung open. Mother's eyes swept the sea of faces round her.

"Burton, where's father, do you suppose?" Burton looked about him. "Why—I don't see him, mother! He usually gets here before the gate opens."

"He's here somewhere in the crowd," said Josephine, with easy assurance. "Father never missed a train or car in his life."

"Something has happened," declared mother, with conviction.

At that moment a messenger boy edged his way through the crowd and thrust chocolates, magazine and violets into mother's hands. "Compliments of Mr. Gordon," he announced briefly.

Mother gasped and paled. Never in all their married years had father done anything so unusual as this. "Is—is anything wrong with Mr. Gordon?" she asked.

"Nope—not as I could see." The boy grinned good-naturedly and went off whistling.

"Dad's all right, mother," Burton assured her, squaring his shoulders and leading the way through the gate. "Let's hurry up and find our seats." He seized mother's arm and fairly swept her into the car.

When they were all comfortably settled, mother, looking sadly at the violets, saw a small slip of paper in the middle of the bunch; she hastily drew it out. It merely said, "Good-by, Dear Ones," and was signed, "Father."

Mother handed it to Josephine and Burton. "Funny thing for dad to do," Burton said thoughtfully.

"Yes," Josephine admitted, "but maybe he was too busy to come himself."

"Maybe," said mother.

But in her heart she felt that it was not business that had kept father away. He might have been taken suddenly ill. She remembered that he had eaten very little at noon. And now that she thought of it, he had acted a little queerly, too. What if he should be taken sick with none of them at home to care for him! Mother hastily consulted her watch and then

looked out of the car window. The train was just passing the city limits.

"We can get off at Lakeside and ride back on the trolley," she said with decision.

"What for?" demanded Burton in surprise.

"To take care of father. If he comes down with a fever or —"

"Nonsense, mother!" cried Josephine. "Father is perfectly all right. Isn't he, Burton?"

"Sure," said Burton.

But mother was not convinced; she had made up her mind, and nothing they could say had the slightest effect. So they got off at Lakeside and rode home on the street car. It was not yet five o'clock when they stepped into the hall.

"Call up the office right away," said mother to Josephine.

The news that Josephine brought back from the telephone only increased mother's worries. They had said at the office that Mr. Gordon was not in—that he was away on his vacation and would be gone two weeks.

"There must be some mistake," declared mother. "Father never goes off on vacations, you know. And if he did, wouldn't he go with us?"

"Of course he would," Burton agreed. "They must have got things mixed down at the office. I'll just run down and investigate."

"And be sure to telephone us," said mother.

In less than an hour Burton called up. "He's sure gone," he said. "That is, he isn't here and hasn't been this afternoon. I'll try to find him if he's still in town. But don't worry, mother. Father is all right."

It was after seven o'clock when Burton called up again. Josephine hurried to the telephone. "Tell mother, Jo, I'm on father's trail. Young Jim Owens just told me he saw father about five o'clock. He and a couple of dirty-faced little kiddies were dining at Good Eats. They were eating strawberry shortcake and ice cream, so I guess father is all right."

Mother looked immensely relieved when Josephine gave her Burton's message. "At least he's not sick," she said. "But what do you suppose ever made him take a notion to—to do a thing like that?"

Josephine laughed. "I'm sure I don't know, mother. We always have plenty of strawberry shortcake at home."

Burton did not call up again, but about eleven o'clock he came home; he had failed to find father.

"The last anyone saw of him was about seven o'clock. Then he was getting on a street car with a whole regiment of little street urchins."

Burton laughed as he gave that piece of information, but mother failed to see anything funny in father's doing such queer things.

"Do you think he will come home to-night?" she asked anxiously.

"Of course he will. He's sure to come home if he's in the city. Why shouldn't he?"

Mother could think of no good reason why he should not, and so she sat and watched the clock and listened for father's step on the walk.

Meanwhile, father, making his way homeward, was thinking about the family and of how happy they would be without him. His steps dragged a little as he went up the gravel walk. He was somewhat surprised to see a light in the living room. He thought that Katie must have left it for him. Katie was staying to cook his meals while the family were away; but judging by the way he felt to-night, father was not sure that he should want any meals.

He had not yet been able to make up his mind what he should do with his vacation. Perhaps he would just go back to the office to-morrow and tell them that he had changed his mind. Somehow that seemed the easiest way out of his difficulties. Of what use was a vacation if you had to take it alone? If only the family needed him — But, pshaw! What did the family care about him?

Father turned the key and opened the door, and there in the glare of the electric light stood the family with outstretched arms. "Father!" they cried in one breath. "Father Gordon!" Their arms were about him.

"Why—why—what has happened?" he stammered. "Didn't the train—good gracious, what is wrong, anyway?"

"Nothing is wrong," replied the family in chorus.

"That is, nothing is wrong with us," mother amended. "It's you, Howard. To think of your getting a vacation without saying a word to any of us, and going off like—like you did. O Howard!"

"There, there, mother, don't cry!" said father happily. "I took a bunch of little fellows to the circus to-night; but to-morrow I'm going to take my family for a vacation. I was just planning to surprise you."

"And instead, we surprised you, father, didn't we?" cried Josephine, laughing.

"You certainly did," said father.

NODDIES FLYING OFF BIRD KEY, FLORIDA

THE TRIBULATIONS OF NODDY

By Charles Frederick Holder

The late Charles Frederick Holder was an eminent zoologist and a prolific and entertaining writer on zoological subjects. He was especially interested in all forms of marine life. He wrote much for The Companion, and readers will remember his article, The Wild Turkey, in last year's volume. He died on October 11, 1915.

I BECAME acquainted with Noddy under peculiar and romantic circumstances. I was drifting over one of the most interesting coral reefs that I had ever seen. It reached out or spread away in every direction from Garden Key, the central point of the Tortugas group of islands that lie in the Gulf Stream west of the Florida Keys. Standing in the stern of my boat, I was pushing her along with my long spear or "grain pole." The water was six or eight feet deep; the bottom was a rich olive-green mass of coral into which wound lanes of pure-white sand, where the great conch lumbered and radiant angel fishes poised.

As I drifted slowly along I came suddenly upon a long black object that lay on the bottom, half buried in the sand. Anchoring my boat to the coral on one side, I dived down and scraped away enough sand to discover that the object was a cannon.

Several days later I found the spot again; I had brought several men with me, and we managed to scrape a hole under either end of the cannon and to pass a rope under it; with the aid of a derrick we hoisted it up and carried it ashore. It proved to be an old Spanish gun of a century or more ago; some pirate ship, perhaps, had been wrecked there, and the gun alone was left to tell the story.

FINDING NODDY

THAT ancient cannon was the indirect means of my first landing on Bird Key and finding Noddy. The key was a few yards away, and as we passed slowly in we saw few birds. But when I leaped overboard and waded ashore thousands of birds, uttering wild cries, rose into the air; they made the loudest continuous noise I had ever heard. Yet when I shouted, for a single second the uproar was hushed, to come on again a moment later with tremendous and astonishing volume.

As we passed into the bush of mangrove and bay cedar, the eggs were so thick on the sand that in places I could have filled a bucket almost without moving, and the terns were so savage that they made menacing passes at us

sat one of the most beautiful birds I had ever seen—the noddy of this truthful if not exciting tale. She was a remarkable contrast to the other terns, most of which were white with black heads; her body was a beautiful brown, and she had a whitish head, and plainly enough was altogether a different bird.

The terns were active, fierce and seemingly vituperative, but Noddy was tame—so gentle, in fact, that she did not object to my touching her. She merely looked at me with eyes that were dark, expressive and very friendly. Round her in the bay cedars were other noddies nesting in the very heart of the tern colony. Perhaps there were a hundred of them—a very small number compared with the multitudes of terns. The latter made no nest, but deposited their speckled eggs anywhere, whereas the noddy built a nest of twigs in the trees—a mere apology of a nest, it is true, yet strong enough to bear the egg and later on the young.

The noddies interested me so much that I visited the colony every few days, when we went on egg-hunting expeditions to replenish our larder, and in that way I became familiar with the tribulations of Noddy. After collecting two or three bushels of the speckled tern eggs, and packing them in a barrel, I often crawled through the brush to the noddy community and there lay on the sand and watched them. The young were about two weeks old at that time; they were so robust and so ravenously hungry that the parents were kept on a continual hunt for food, which consisted chiefly of the small flying fishes that abound in the Gulf.

One day I was lying on the beach watching the birds. My coming had disturbed hundreds of terns, but gradually comparative silence had settled down on the key. The sand crabs came out of their dens and eyed me, and it was not long before three or four of the dovelike noddies appeared. One I imagined was my especial friend who had let me touch her when she was on the nest.

The noddies flew off in different directions, and presently I noticed one coming directly toward me. When she was within a few hundred feet of the shore, I saw that she had a large fish in her bill. But some one else had made the discovery at the same time—for up from the beach rose a large laughing gull. He made straight for Noddy and intercepted her just at the beach.

Noddy, rising in hurried flight, made a splendid manoeuvre upward as silent as a greyhound, and directly after her came the piratical gull. Up they went in great curves until the gull gained the ascendancy and plunged downward. Noddy dodged repeatedly, and at last dropped the fish. After it shot the laughing gull, seized it almost as soon as it reached the water and, with loud *Ha! ha's!* of bird laughter, foolishly announced his success to several fellows near by.

But Noddy was not without an avenger, for as the thieving gull rose with the fish a

black, rakish bird with a gorgeous red pouch, one of the greatest pirates known, appeared and gave chase. The laughing gull will at times catch sardines or mullets, but the man-of-war hawk, as this buccaneer of the skies is called, makes no pretense at earning his living; he steals from the gulls in an atrocious and barefaced manner.

Uttering loud, raucous cries, the laughing gull rose with beating wings; he was repeating exactly the manoeuvres of the gentle Noddy a few moments before. The man-of-war bird is an extraordinary looking creature—very slender, with legs short and almost useless, but with long wings that give him a remarkable spread of flying surface. His beak is long and hooked, a powerful weapon, and beneath it is the vivid vermilion pouch, which contrasts with the jet black of his body. On the wing he is a marvel of marvels—a living aeroplane.

The following is a good illustration of the powers of this black pirate. On the coral key where we lived was a lighthouse. When a heavy "norther," or windstorm, came along, and all other animal life, gulls included, sought shelter, this black thief of the seas would poise in the air a hundred feet above the lighthouse, and there would ride the gale for hours without moving wing or feather—so far as we could discover through a powerful glass.

Such was the weird creature that now took a hand in the adventures of Noddy. Up into the air, with powerful and splendid sweep of wing, swung pirate and prey. At last they began to fight for the upper position, exactly as warring aeroplanes would, wheeling round in great circles, up and up until they grew smaller and smaller—a white, glistening spot in the dazzling tropical sun and always above it a jet-black spot like a long streak of smut against the blue.

ROBBING A ROBBER

SUDDENLY the black streak made a great swoop upward, poised a moment, and then seemed to drop like a solid shot out of the sky. The glistening spot saw it coming and also dropped—a white meteor fleeing from a black one.

It was a wonderful sight—that race through the air, that stupendous dash, that charge of a highway robber on one of the same trade. How could they stop? It seemed impossible; but just as the man-of-war bird was ready to dash into the laughing gull, the latter dropped the flying fish and, sheering off with wild and angry cries, lumbered away to rob some other bird.

The man-of-war hawk dashed down, caught the fish fifty feet above the water, not in his claws, as might an osprey or an eagle, but in his beak, and, rising gracefully, flew inshore. He alighted on a bay cedar tree not one hundred yards from the nest of the young noddy for whom the much-fought-for fish had originally been caught.

How many times the noddy tries to bring in a fish and is robbed no one knows; but often,

of course, she escapes the vigilance of the man-of-war bird or of the laughing gull and, dashing in, places the flying-fish dinner on the nest before her young. I have observed the subsequent proceedings many times, as I lay in the brush not many feet away. The mother bird comes in, poises in the air a moment scolding at me, and then alights; at once the hungry young begins the repast.

There are crumbs from this table; pieces of the fish are jostled off and fall upon the sand. For a few moments nothing happens; then out from some brush appears a big purple-and-red-backed crab. It sidles up to the bits of fish, seizes one and starts off, only to run into the shell of a trochus, now the stolen abode of a hermit—or soldier—crab. The hermit crab charges at once, seizes the morsel, and a fierce contest occurs for possession of the prize.

SAVAGERY OF THE CRABS

ONE afternoon, when I had seen this not uncommon quarrel over the scraps take place, I saw a purple-backed crab start up the bay cedar tree in a menacing fashion. Then a hermit crab appeared, and in less than half an hour six or seven of those pirates were fighting their way up the tree. I use the word "fighting" advisedly, for they contested with one another every foot of the climb; time and again two crabs clinched, lost their hold and fell upon the sand below. At last, after repeated struggles, two or three of the crabs reached the nest. Like hounds they seem to have scented the game and by some extraordinary crab instinct to have run it down.

I now came out and took a position where I could see the end. The old noddy, uttering

A YOUNG NODDY, EIGHTEEN DAYS OLD

NODDIES ON THEIR NEST

with their sharp bills as they shuffled away. The hot air seemed to be filled with birds, and the beating of their wings as they rose stirred up a dust that enveloped us like a disagreeable and gritty fog.

When I had literally fought my way half-way across the island, I came upon a small clearing in which were several bay cedars perhaps seven feet high. In one of these on a nest

frantic cries, was hovering overhead. The young noddie was braced back, in a rage, I assumed, and was pecking alternately at the invaders and at the fish. The crabs stood not on the order of going; they charged on the host and the dinner, seized the flying fish, and, paying no attention to the young bird, were soon tearing the fish to pieces. In one such dinner party I saw five or six crabs get mixed up in so savage a battle that they all rolled off and fell to the ground.

During the excitement the mother bird never to my knowledge interfered, although what she might have done had I not been on the ground as a noncombatant I do not know. I think the crabs loot the nest and rob the young with impunity; indeed in the Falkland Islands the crabs carry off not only young birds but rabbits; hence it is not impossible that these bands of tree-climbing crabs may at times not only steal the dinner of the bird but carry off the young noddie as well.

By the time the young noddie gets a full repast the flying fish that constitutes it has been fought over in a remarkable manner. A book could be written on the trials and tribulations of the mother noddie and the antics of

the piratical bands that prey upon her, and I cannot resist giving one more experience to end the story—one that I have witnessed many times.

When the laughing gull had lost his booty to the man-of-war bird he doubtless went flying away disgruntled, disappointed and hungry. As he sails alongshore a big brown pelican rises into the air, turns downward and plunges headfirst into a school of mullets. He has stretched his mouth literally from ear to ear and engulfed the small fry that cannot see what is coming overhead. In a word, the pelican has caught his game in his scoop-net pouch. So far so good; but the pelican, to swallow his prey, has to go through a rather troublesome performance. He must toss his beak upward and open it, and thus throw the fishes toward his throat.

Just after the pelican has made his catch, along comes our disgruntled gull. Taking in the situation, he alights on the pelican's back, and as the pelican tosses his head and opens his bill the laughing gull reaches forward, inserts his bill into the pelican's pouch, snatches the mullet and with loud *Ha! ha!* rises into the air. He has at last got his breakfast.

"Yes, of course. Use your mind before you make a blunder, not afterwards. Then you won't make so many."

There was a subdued snicker in the neighborhood of Squad 16, and Greiner flushed and compressed his lips.

A few minutes later it was Ted again who drew Lieut. Wharton's fire.

"Mark time there, Mr. Ripley, on the pivot!" he called out in his usual rasping tones. "Don't think, because you're the pivot, you can stand like a wooden squaw!"

Ted wanted to explain that he had misunderstood the command of execution, "Ho!" and had thought "Halt!" had been ordered. But he had learned to remain silent under criticism; and after the lieutenant had concluded by saying, "Now, for goodness' sake, pay attention and don't mess up these movements any more!" he listened with all his ears for the captain's commands. And when the order came, "Stack arms!" it was with a sigh of relief that he added his rifle to the stack and unslung the pack from his shoulders.

He and Stevens dropped on the ground together and lay watching the other companies march and counter-march. The one nearest them was halted, and a private singled out for special instruction. "It's fine," Ted remarked to Stevens, "to lie here and see some one else bawled out. I wish I could do it the rest of the morning." But after a few moments Gray and Bradford suggested that they stroll over to the barracks and investigate. Ted sprang up and started to go between the stacks of rifles in front of him.

"Hi, there!" Lieut. Wharton shouted. "Don't go through those stacks, Mr. Ripley. Come back here! Don't you ever go through the stacks. Always walk round them. Mind that."

"I get bawled out even in recess!" muttered Ted to Stevens. "That man has his eye peeled for me. He even knows me by name, I'm so rotten."

The others laughed.

"Why shouldn't you pass between the stacks?" asked Bradford.

"You might bump against them and knock them down," replied Stevens. "Anyway, it's one of the things that you're not to do."

But the "bawling-out" process was not yet terminated, so far as Ted was concerned. He and the others had gone but a few steps across the parade ground, when Greiner came up from behind, and called sharply:

"Look here, Ripley!"

Ted stopped and turned, and Greiner broke out immediately, not waiting for the others to get out of earshot:

"You're making the whole squad ridiculous. If you can't keep your end up, you'd better get out. We have a good squad, if it weren't for you. If you're not strong enough to do things the way they ought to be done, you oughtn't to handicap the rest of us. Lieut. Wharton is always jumping on you; it gives the squad a black eye. No squad in the company would stand a better show for the prize than ours, if it weren't for you."

"I'm doing the best I can," replied Ted quickly, "and I've as much right to take this

military training as you have. I'm not going to quit unless the captain makes me."

"I shouldn't be a bit surprised if he heeded out the incompetent and unfit," retorted Greiner. "It's a shame that the work of the rest of us should be slowed up and balled up by one man."

Ted turned and walked away without further words. He rejoined his friends, who were both indignant and curious.

"We heard part of it," said Gray. "What else did he tell you?"

"He wants me to drop out and give the squad a chance—all that kind of thing. I know I pulled several bone-head plays, but, considering that he got called himself, I think he might have kept still."

"As a corporal he's the worst ever," remarked Stevens. "Why, it's a corporal's job to help a fellow, not just try to make things hard for him!"

"He makes me sick," said Bradford. "I wish we could get some one else in his place."

"Why couldn't we?" asked Gray. "If we all went to Lieut. Wharton and told him how we felt, he might do something. If we told him Stevens was the man, Lieut. Wharton would probably be glad to know it."

"Don't you make any such mistake," Stevens replied promptly. "It's better not to butt in on the officers with suggestions."

"You feel so because you're too modest," said Gray. "What do you say, Bradford?"

"I'm willing," Bradford answered. "I've got so that when Greiner comes into the tent I want to look the other way."

"You'll join in a protest, of course, Ripley," Gray continued. "I wonder if we could get Adams and Howland to come in with us."

"I'd just as soon ask them," said Bradford. "They seem like pretty good fellows."

"Now, I tell you, you'll make a mistake if you try to tell anything of this kind," declared Stevens. "A private is expected to put up with what comes; you get in wrong if you make complaints."

"Oh, of course in your position you're bound to talk like that!" Gray said airily, and Bradford laughed.

Ted suspected that Stevens might be right, but he was none the less ready to join in any effort to have Greiner deposed and Stevens promoted. It had become more and more apparent that Stevens was better qualified than Greiner to be corporal; he was more alert in executing orders, more soldierly in the performance of the manual, and more interested in helping the less efficient members. So, in promising to support Gray and Bradford, Ted was animated as much by loyalty to Stevens and the squad as by a human desire to even the score with Greiner.

Before the call to the second period of drill sounded, Bradford had an opportunity of interviewing Adams and Howland. They were seated together in the shade of a tree, and Bradford dropped down beside them. Ted and Stevens and Gray walked on, and presently Bradford rejoined them.

"Nothing doing," he reported. "They were both willing to admit that Stevens would probably make a better corporal; but they said they had nothing against Greiner and didn't want to be trouble makers."

"They're mighty sensible," remarked Stevens. "Now, you'd better let the thing drop. You're only a minority of the squad, anyway."

"Just the same, Adams and Howland aren't opposed to you; they don't want to take any active part, that's all."

Stevens laughed; he felt that his too-zealous friends were now sufficiently discouraged. He did not realize how tenacious of purpose they were.

The morning grew hot and the drill became more arduous. The captain and the lieutenant were trying now to substitute whistle signals and gestures for spoken orders, and the sergeants and corporals had to be more constantly alert than ever. Twice Greiner led his squad into the wrong movement and received a rough reproof from the lieutenant; twice also did Ted offend and likewise endure rebuke; and both Gray and Bradford were scolded for talking in the ranks. The heat, hard work and criticism put many of the company into an ill humor, but nearly all of it vanished on the noon march back to the camp at route step. For Meade started a chorus; and, as Stevens remarked to Ted, "There's nothing like a good song when you're tired."

For Ted the afternoon was a period of relaxation and, physically at least, of rest. The officers in charge of the instruction in signal-service work did not enforce any rigorous drill; their tone, instead of being sharply dictatorial, was pleasantly conversational; they even cracked jokes and told stories to illustrate their points; and they let the students practice with the various instruments. On this afternoon Ted was allowed to use the heliograph, and he flashed a message to an observer stationed on an island in the lake. This observer was a professional operator, and returned a reply so rapid that only the sergeant standing beside Ted could read it. "He got you, all right," said the sergeant. And then he added encouragingly, "Some day maybe you'll be able to receive as well as send."

An afternoon of such placidity, followed by

THE PLATTSBURGERS

By Arthur Stanwood Pier

In Ten Chapters

Chapter Four

THE next morning, when breakfast was over and the order had gone out to roll up the tents, Greiner assigned tasks to each of his tent mates with the exception of Ted. To him he said, in the presence of Carton and Stevens:

"You don't seem able to loosen a rope or to tie one, but you might make yourself a little bit useful. You can go to the post-office tent and ask for my mail."

"I certainly won't," Ted answered.

"You'll obey orders. I'm your corporal."

"That doesn't make me your body servant."

"If you don't mean to obey orders, you can get out of the tent and the squad."

"You haven't any right to give such orders."

"No," struck in Stevens, who had listened with indignation, "of course you haven't."

Greiner turned on him angrily. "What do you know about it?"

"I've had a little experience in the militia, and I know enough to know that."

"Well," said Greiner, after a moment of hesitation, "of course I don't mean to exceed my authority. Come on, now, and let's get this tent rolled up."

A few minutes later Ted had an opportunity to express his gratitude to Stevens for the support that he had given.

"That's nothing; we couldn't let him put across anything like that," said Stevens.

"He's pretty well swelled up with his importance as it is. I was glad you talked right back to him. Has he got it in for you specially, for some reason?"

"I think he feels I'm the worst one in the squad, and he has a friend in the next squad and the next tent that he'd like to see in my place."

"So he's trying to run you out. That's a nice way for a corporal to behave! Don't you care; the rest of us will back you up any time that it's necessary."

There was no doubt that already among his tent mates Greiner had made himself unpopular, wholly by reason of his attitude toward Ted. Both Gray and Bradford, who had been witnesses of the last bullying attempt, expressed their indignation to Ted, and declared their regret that they were so unlucky as to have such a corporal.

Greiner himself was soon aware that in the tent Carton was his only admirer and supporter and that the others were at best refractory subordinates; he evened the score by attaching to himself the two other members of the squad, who lived in tent 25, on the opposite side of the street—Adams and Howland. They were both as green in the handling of a rifle and in all military knowledge as was Ted, but they were well-set-up fellows who showed promise, and Greiner paid them special attention. He helped them to clean their rifles and he coached them at odd times in the manual of arms, and because he treated them with such special consideration of course they liked him. It was easy for him and Carton, by dropping small derogatory remarks, to prejudice them against the four others; and so within a very short time Squad 16 was a squad of two factions, one in favor of the corporal, the other hostile to him.

Ted got pretty discouraged in the next few days. It was not merely that he was repeatedly being called to account by Lieut. Wharton and scolded and scorned by Greiner; what troubled him more than all this was the fact that he seemed so very stupid. When Squad 16 was leading the company column, as it did half the time, Ted in these first few days had to set the step and act as guide for the column. At the end of the first week, a sergeant took this

responsibility from him, but during that week it seemed to Ted that he was always being told by Lieut. Wharton that his step was too slow or too fast, or that he was wandering from one side of the road to the other instead of walking in a straight line. Then, during the drill on the first parade ground, where the morning's work in close formation was always performed, Ted's conspicuous and responsible position in the line caused him to be still further subjected to criticism. It seemed to him that he learned a thing one day only to bungle it the next; when the order was, "Left oblique!" Lieut. Wharton told him not to walk sidewise like a crab; he often got confused between the orders "Right turn!" and "Squads right!" and marked time when he should have been taking the half step, and *vice versa*. Lieut. Wharton was always copious in denunciation.

It seemed to Ted that the second half of the company, which was looked after by the lieutenant, was much more roughly treated than the first half, which was under the captain's immediate supervision. Yet there were occasions when he was satisfied to have it so—for Greiner was not infallible, and sometimes the lieutenant's whistle would call a halt in the movement that was being executed and the lieutenant's rasping voice would cry out in exasperation, as for example:

"Mr. Greiner! The command was 'On right into line!' Why did you order your squad 'Forward'? Don't you know that's the order when the command is 'Right front into line'? Now, what order should you have given?"

"Right turn," Greiner replied in sulky tones.

DRAWN BY NORMAN ROCKWELL

AS THEY APPROACHED LIEUT. WHARTON'S TENT GREINER EMERGED FROM IT

the customary swim, put Ted into a less rebellious frame of mind. He returned to the tent a few minutes before the hour for retreat and was surprised to find no one else there. The order was passed from tent to tent, "Uniform for retreat, blouse and belt!" Ted arrayed himself, and was wondering what had happened to the other members of the squad when, sweating and breathless, they came crowding in.

"Gee, but I'm sore!" panted Gray, and dropped down on his bed.

"How much time before retreat?" asked Stevens.

"Less than five minutes," Ted answered.

Bradford groaned. "I'm all in. I had a tough horse to-day to handle. I'd like to lie right here till supper time."

"It was a dirty trick to make us work all the afternoon and not give us a chance to swim!" grumbled Carton.

"Have I really got to get up and drill?" asked Gray in mock despair.

"Yes, and you'd better get a move on," returned Greiner tartly. "This is no place to be doing the baby act."

"Oh, who's doing the baby act?" Gray cried, enraged; he rose from his bed and with a black face went about his preparations.

That evening, after the usual lecture, Ted went to the post exchange and was there regaling himself upon an ice-cream cone, when Gray and Bradford came up. The three treated one another to sarsaparilla and ginger ale and ice cream; the heat and the hard work of the day had given them an almost insatiable craving for these cooling things. Then Gray proposed that they seek out Lieut. Wharton and suggest to him that he change the corporal of Squad 16.

"I'd almost rather go to Capt. Hughes," objected Bradford. "The lieutenant can be so ugly."

"Yes, but he's the one for us to see; he has charge of our section of the company," Gray said. "I'm not afraid of him; I'll do the talking. All you fellows need to do is to give me your support."

Bearing in mind Stevens's warning, Ted was doubtful of the wisdom of the undertaking. But if it should succeed, it would certainly be a fine thing both for Stevens and for the squad, and therefore Ted marched along with the others willingly.

As they approached Lieut. Wharton's tent Greiner emerged from it. He passed them, gave them a surly look, and said "Hello!" in an unfriendly tone. "He seems even more grouchy than usual!" muttered Gray. "I hope the lieutenant has been giving him a call down for something. All the better chance of his listening to us if he has."

Lieut. Wharton was sitting on a little camp chair reading by the light of a lantern. A wooden floor and a chest of drawers, together with the solitary camp chair, distinguished the habitation of a commissioned officer from that of a private.

The lieutenant looked up inquiringly as the delegation appeared at the entrance.

"We wanted to see you about a little matter, lieutenant," Gray said. "Could you give us a few minutes?"

"Come in," Lieut. Wharton remained seated and allowed them to stand before him.

"We're from Squad 16," Gray proceeded, "and we want to ask if it wouldn't be possible to make a change of corporals."

"Why?"

"We think that Stevens in our squad would be a better man for the place than the present corporal. He's had more experience; he's been in the militia. We feel we'd do better under him."

"Did Stevens know you were coming to ask for this change?"

"Yes, and he told us not to. He didn't want us to do it. But we're sure it would be a good change for the squad."

"How is it that the other members of the squad aren't with you?"

"Well, one of them's such a close friend of Greiner's that of course he wouldn't be in favor of a change," admitted Gray. "And the two others didn't feel that they wanted to come in with us on this, though I'm sure they would find Stevens a better man to work under."

Lieut. Wharton looked at them in silence.

"You're Ripley," he said at last to Ted. "Who are you, you other two?"

"I'm Gray, and this is Bradford."

"Well, Gray and Ripley and Bradford, I'll tell you for your benefit that you've committed a most unmilitary act. It's not your business to advise your company officer what man would make the best squad leader. Moreover, it takes a good deal of cheek for you three men to come to me and ask me to make a change to suit your own preferences. You're not even a majority of the squad. Cheek, pure cheek, that's what it is. Now you three fellows go about your business, and be ashamed of yourselves."

"Of course we didn't mean—" began Gray.

"I don't want to hear any excuses. Go on!"

The command was peremptory, and without more words the three boys made their exit from the tent.

TO BE CONTINUED.

DRAWN BY ROBERT AMICK

"THEN HARRY AND I HIT HIM LIKE A CYCLONE"

THE "YARN" OF THE HORSE "RUSTLER"

By M. Hennion

THE ranch foreman and the Easterner were driving through the six-mile horse pasture of the XW Ranch. A man could ride all day straight across the XW Ranch without once coming to another man's fence.

Sam Carleton, the ranch foreman, had been in New Mexico for twenty years. He had twinkling blue eyes, which had a gentle look in them when he smiled, but which could harden to steel and bore straight through a man.

As the two men drove through the pasture, the foreman pointed out certain horses in the little bunches of blooded animals that they passed.

"Ever have horse thieves out here?" asked the Easterner.

"Well," drawled the foreman, "I've never run up against a sure-enough horse rustler but once, and then he ran against me."

"How was that?" said the Easterner.

"I was alone one night at my shack, when he turned up afoot and looking like he'd come that way from the horizon."

"How do, stranger?" I said. "You look like you're afoot on a long trail."

"I am afoot just at present, and it may be some distance to the end of my trail," the fellow answered. "But I need a horse and saddle, and I need them bad. The best thing you can do is to rustle me one pretty pronto."

"I'm not sure there's a horse here for you right now," I had been running my eye over the fellow and knew what I was up against by that time.

"Probably you don't know who I am," the man went on. "You've heard of Jesse McCarty? Well, I'm him."

"I'd heard of Jesse McCarty, all right. He was a rustler and a bad man, and the sheriff wanted him for half a dozen reasons. I guessed that he'd just got away from the sheriff and had ridden his horse to death doing it."

"I have no horse for you," I said.

"Well, he looked me over, and, as he did so, he let his hand drop down to his six-shooter. I was unarmed. I never did go round carrying guns like some of these coyotes out here do. This fellow was loaded enough for two: he carried one gun at his hip, and another stuck in his belt in front."

"Afraid? No! You see, I had turned all the horses out to pasture the day before, and hadn't kept one in, as we usually do; you can't go out afoot, you know, and cut out a horse from a bunch in the pasture. He couldn't get a horse by shooting me, and I figured that he wasn't wanting any more sheriffs after him while he was afoot. So I didn't worry much about his potting me."

"I noticed a pretty good outfit of horses as I came through the pasture," he said. "You'll

find 'em gone some mornin' if you don't treat me right."

"Well," I said, pretty mad, "any time you feel like taking horses from this ranch, just fly at it! But it'll be the worst take you ever made."

"He went on fingering the butt of his gun thoughtfully. Finally he said, 'If you won't give me a horse, you won't refuse me a night's lodging, will you?'"

"Now, you know this country isn't the East. We go off and leave the ranch for days and never put a lock on anything, and the chuck is any man's who comes and wants it."

"You're as welcome as any other stranger to stop here for the night," I told him.

"So we went into the 'dobe; and while I cooked supper he sat at the window, playing a tune with his fingers on his six-shooter."

"He didn't say anything more and I didn't, either—until supper was over and I had washed the dishes. Then he said he was tired and guessed he would turn in. I told him to help himself to my blankets in the other room and to make himself a bed on the floor. I wasn't wasting any more words on him than I had to. I sat round and read for a while and then I started for the bunk room myself."

"As I opened the door, that critter raised up with a gun in each hand. I stepped back. 'Now,' I said, 'I wish you wouldn't make any more moves like that while you're staying with me. I'll not interfere with you; but you scare me, and I'm afraid one of those guns might go off.'"

"Without answering he laid the guns down beside his pillow. I took my watch out of my pocket and started to wind it. It was a pretty good watch that I had got the last time I was in Chicago. I don't believe in cheap outfits."

"Let me see your watch," said the rustler. "I need that watch myself," I answered, and kept on winding it.

"Just let me see it a minute."

"I bought that watch for myself, and I don't intend to give it away." And I dropped the watch back into my pocket.

"We went to sleep pretty soon; at least I did. The next day we passed on good terms, apparently, but I reckon neither of us made a move that the other didn't know about. The rustler tried every scheme he could think of to get hold of a horse, and I stayed round to see that the scheme didn't work."

"By night we were both a little raw under the saddle; and then Harry Crawford rode in from town. Harry was my partner in a bunch of horses run on the company's range. I went out to the corral to meet him."

"Hello, Sam!" he said. "I see you have company."

"Yes," I answered, "if that's what you

call it. I've got something back there in the shack, and I'm mighty glad you came. I was about ready to quit the ranch."

"He's coming out," said Harry.

"He wants the horse," said I.

"Harry was unsaddling when the rustler came up. He looked Harry over pretty close to see whether there was a gun sticking out anywhere."

"Guess I'll borrow that brone of yours for a few days," he said at last. "You can put the saddle back on again."

"Harry threw the saddle on the ground and started to the corral gate to let the horse out. He hadn't more than turned his back when there was a pop from the rustler's gun. That sound turned me fairly sick, and I couldn't see anything for a second. Then Harry turned round, wiping a little blood from his ear."

"You skunk!" he began, with his eyes blazing.

"Put that saddle back on!" the rustler cried, holding his guns so that he could pop either of us.

"Well, there was nothing else but to do what he said. So the saddle went back."

"Cinch her up tight," said the rustler. "Take her down to the house and hitch her to the post by the door."

"All of which we did, while he followed on behind with his guns."

"Now," he said, "get me some supper."

"Well, I saw that we must do something pretty quick, because he'd likely cripple us both before he started out. So while Harry was getting supper, I sat round pretending to read, but really watching for a chance."

"The chance didn't come till after supper. Then the rustler sat down on a bench by the window, picking his teeth, and feeling mighty well pleased with himself."

"I've potted a man for a poker chip," he bragged, "and did you boys think I wouldn't for a horse? I ain't through with you yet, either." He gave an ugly little laugh. "I'm going to fix you so that you won't follow me."

"I guess you've got things all your own way," I said careless-like, picking up a newspaper and sitting down alongside of him.

"He looked at me pretty sharp and moved a few inches away; but I made out that I was mighty interested in the paper, and in a minute he went back to his toothpick. All the time I was watching him from the corner of my eye."

"Harry brought in a pan of hot water and began to wash the dishes at the corner of the table nearest me. He kept his back toward me, but I noticed that the pan was steaming more than usual and that he was handling the dish-cloth with a fork instead of with his fingers. Harry and I, when we got in a tight place together, could usually understand each other without saying much of anything."

"Pretty soon the rustler began to chuckle. 'You're treating me white, after all, boys,' he said. 'That little brone you're making me a present of will keep me ahead of the sheriff for a while; but I reckon I'll just lay you up with a plugged leg apiece.'"

"He put up one hand to brush a fly from his nose; his other hand was still busy with the toothpick. The next instant both his hands were clutching at the open newspaper, which I had flung full into the fellow's face."

"Before you could breathe, Harry's pan of hot water struck like a cloudburst on top of that, and then Harry and I hit him like a cyclone."

"Harry jerked one of the fellow's arms back. I grabbed the other arm, and then my partner pulled the steaming paper from the rustler's face as you'd peel a pancake from a griddle. His face looked almost hot enough to be a griddle itself."

"Now," I said, giving his arm a little shake, though he was quiet enough—he didn't need a very penetrating mind to see that his game was up,—"I'll take that six-shooter you've got stuck in your belt, and I'll take that gun from your holster, too; I may need 'em."

"I dropped a six-shooter into each hip pocket, and then Harry let go his hold on the fellow. I can tell you that I was breathing a lot freer than I had been during the last twenty-four hours."

"I'll look after these guns now," I said. "I'm not subject to nerves as you are, and they're not so likely to go off with me. You can camp with us to-night; but in the morning you had better hit the trail and hit it hard."

"And did he hit the trail in the morning?" asked the Easterner.

"Well, no," drawled Sam, "not in the morning. You see he went loco that night, thinking, I suppose, about being afoot and without a gun, with the sheriff hunting him."

"First thing I knew—I was sound asleep—there was a noise like the shack was tumbling down, and then the saddle that hung over the bed hit me. That locoed skunk was hitting round promiscuous with the long-handled frying pan, trying to get a swipe at me; but I was safe enough under the saddle."

"I sure was glad that I had the guns, and I bored a couple of holes through the wall just to remind him that I had 'em. After that it took Harry and me about three minutes to get the shack clear of him."

"No, he didn't hit the trail in the morning. He thought he'd better not wait that long."

FACT AND COMMENT

KEEP your boat from the lee shore, if you would have it keep you from the windward reef.

He rarely hits the Mark or wins the Game
Who says, "I know I'll miss!" while taking Aim.

THE advice that Attorney-General Gregory gives to alien enemies is brief and to the point: "Obey the laws, and keep your mouth shut."

IT was certain that Japan would not be slow to apply improved methods in producing its great staple crop, rice. Because of greater care in selecting seed and better methods of cultivation, the crop last year reached 298,466,706 bushels, which is far the largest ever raised in the empire.

SPEAKING of odd firm names, a subscriber who has been much pleased with Rush & Doolittle and Chase & Kilpatrick asks if we ever heard of the firm of Walkup & Settle. We never did, but we think it would be tactful of them to take in their sign during the first ten days of every month.

THE five battle cruisers now building will perpetuate names that have inspiring associations in American naval history. They are Constitution, Constellation, Saratoga, Lexington and Ranger. The historic vessels that bear the first two names on the list—one safely berthed at the Charlestown Navy Yard, the other at Newport—will henceforth be known officially as the Old Constitution and the Old Constellation.

POOOR roads are very expensive things for country communities. The farmer who thinks that improved highways are mainly for the benefit of those who drive automobiles should reflect on the results of a recent investigation by the Department of Agriculture, which finds that the cost of hauling farm produce over ordinary country roads is twenty-three cents a ton mile, whereas over hard-surfaced roads it is only thirteen cents.

IN 1888 Roman Shivicki, having decided that he would not stay in New York with other newly arrived immigrants, took a job at eight dollars a month on a Connecticut Valley truck farm. A few years later he had a farm of his own. In 1901 he made a net profit of seven thousand dollars on his onion crop; his business is still growing. The native-born farmer or the immigrant laborer who thinks that Shivicki's success is the result of luck should do a little serious thinking.

THE writer remembers that once when he was a small boy he went up to one of his teachers and asked, "Is there going to be any Taylor to-day, Mr. exercise?" Such absurd transpositions of words the learned call metathesis. On another page The Companion has an amusing article on the subject. Mistakes similar to those therein recorded have probably been made by many of our subscribers. The Companion will be grateful to anyone who will send in a really amusing case of metathesis.

ONE of the most interesting effects of the war is the revival of various old trades and industries, especially in England. Charcoal burners are busy making fuel for use in the trenches; long-disused sawmills are getting out timbers for dugouts; foresters are making tent pegs; clog makers are fashioning wooden shoes; owners of willow plantations are cutting osiers for fascines and shell baskets; but most interesting of all is the revival of flint knapping, perhaps the oldest industry in the world. It is said that the flints are used to strike a light in the trenches.

THE flag is a symbol. As it waves from the taffrail of the battleship, or from the great flagstaff of the army post, it is a formal symbol of the power and dignity of the national

government. As it floats above the schoolhouse, the village common, the city street or the house door, it is a spontaneous symbol of the loyalty of the people to that government. To increase and make more effective the use of the flag by neighborhoods and private families The Companion will print on the Family Page for May 17 an article, Raising the Flag, that tells how to display the flag and that suggests an effective ceremony to be used in raising it.

AS THE UNITED STATES ENTERS

THE United States comes into the war at the beginning of the fourth great campaign. Many believe that it will be the last campaign of all. Scarcely anyone expects more than one other to follow. It may be interesting therefore to sketch briefly the course of the war up to this moment, in order that we may the better understand precisely the situation that faces us as we in our turn enter the fight.

The military power of Germany reached its height—relative if not absolute—in the fall of 1915 at the close of the second campaign. The German army had met severe checks at the Marne and at Ypres, and had learned that it could not hope for the swift and crushing victory, first on one front and then on the other, for which the early plans were laid; but it held almost all of Belgium and the most valuable parts of northeastern France, and it had successfully fought off every attempt of the Allies to break its line of trenches. It had smashed the Russian line again and again, and overrun Poland and Lithuania. With the help of its allies, it had also conquered Serbia and Montenegro. Under German officers the Turks had bloodily repulsed the Allies at Gallipoli, turned back the British at Kut, and actually threatened the safety of the Suez Canal. That was the high-water mark of German power, yet no one dared to say that the flood would not rise higher still and give the Kaiser the final victory, of which he had been basking at the Marne.

Verdun proved to us that there was no real chance of that. Since that colossal failure, Germany has been on the defensive—for even the Roumanian campaign was a defensive stroke. It strives to keep what it holds, and to force a peace by the submarine war on all commerce—a desperate chance indeed, since its first result is to drive almost all neutral nations into hostility to Germany. It can no longer stem the steady advance of the Allied arms in the west or stiffen its Asiatic ally against still greater reverses in Armenia and in Mesopotamia.

We are told that Berlin regards the entrance of America into the war with contempt, because we have no army ready for service. That is true enough for the moment, although if this summer does not end the war we shall have an army that will no more be negligible than the newly raised and newly trained British army, which even the Kaiser's generals grudgingly praise. But in war there are moral influences that, although Berlin constantly underestimates them, are as important as material forces. The Russian revolution, President Wilson's message and the response of self-governing nations everywhere to those two epoch-making events are defeats for Germany quite as real as that at the Marne or at Verdun or at Lens. They may even be more serious, for defeat in the field often rouses patriotic devotion and solidifies national feeling. Those other reverses make people think—and nothing is more dangerous than that for an autocratic government.

It would be foolish, however, to assume that the exertion of moral and financial pressure by the United States will be enough to bring the war to a close. The German army, if it is no longer the mighty instrument of offense that it was in 1914 and in 1915, is large enough and desperate enough to make a long stand on the defensive lines that lie between the Somme and the Rhine. Meanwhile the submarines are constantly busy, destroying the food and the wealth of belligerent and neutral alike, striving to hamstring the enemies of Germany, since it is impossible to conquer them otherwise. It is by finding means to cope with the submarine menace, by building ships to replace those that are sunk, and in the end by throwing our own weight of men and metal into the firing line, that the United States can assure the triumph of democracy.

There is, indeed, a chance that the Germans themselves may put an earlier end to the war by revolt against the dynasty and the leaders that drove the nation and the world into this Armageddon; but we dare not count on that. Since 1848 German Liberalism has lacked leaders, and it lacks them to-day more than ever.

There is quite as much possibility that reactionary or socialistic influences will so shake the new Russian republic as to paralyze its military efforts, and to throw on us the duty of stepping into the place of Russia in the Entente. Nothing less than the greatest effort of which the United States is capable will be worthy of the occasion, which is unspeakably momentous in the history of the world.

THE VISIBLE WORLD

I AM a man for whom the visible world exists," said Théophile Gautier. It might be supposed that Gautier was uttering a truism and that all of us who are endowed with the faculty of sight are men and women for whom the visible world exists. Yet a little reflection will convince us that we walk through the world without seeing it, or at least without seeing much of it. We see it, as it were, in the abstract. A tree is a tree, a horse is a horse, a man is a man. As to the difference between one tree and another, nine tenths of us do not see because we do not observe. So with the difference between one man and another. We get a general impression, but, unless our attention is particularly called to the matter, we do not distinguish eyes or hair or features, not to speak of the soul behind them. That is true not only of the dull but often of those whose intelligence is exceptionally fine. They live in an inner world, moving among the delightful, shifting, changing sights and sounds of nature and humanity outside as if for them the visible world really did not exist.

Even those who have keen and vivid sight, who are by nature exact observers, are likely to fix their attention on one thing or set of things, and to disregard other things quite as important. Some persons can always describe the eyes of people whom they meet, but rarely their hands or their gait. There are women who have the keenest vision in the world for every little detail of dress, but who, when it comes to those gestures and expressions which indicate character, make no note of them whatever.

Men of science, whose business it is to observe with the minutest care, often remark the special limits of their vision. Bradford Torrey, so well remembered by readers of The Companion, used to say that when he went out to look for birds he never saw flowers, but that when he started on a botanical expedition the birds escaped his eye entirely.

Undoubtedly, there are persons for whom the external world exists too much—people, that is, who give their lives to observing trivial details, without relating them to larger interests, and who in weaving this endless web of idle curiosity too much forget the inward welfare of their souls. But for many, perhaps for most of us in this busy, preoccupied America, there is something soothing, something restful in letting eyes and ears take in more and ever more of the beautiful, fascinating, audible, visible world. Let us realize how little it exists for us and then drink health and joy from widely increasing its existence.

"BUSINESS AS USUAL"

ONE of the leading objects of the mission of British and French statesmen and officers to this country is said to be to put us on our guard against the blunders that sad experience had taught Great Britain and France to avoid. A most worthy and useful object! But there is one blunder that the British in particular have committed and adhered to with characteristic stolidity, from which no outside advice can save us. We must learn for ourselves, and must face and overcome, the danger of saying, acting or thinking, "Business as usual."

The nation is at war. Every citizen is at war. No one is exempt from the duties or the dangers that the situation imposes. The more thoroughly we understand those facts and regulate our daily lives by them, the more nearly shall we meet the demands of the country, and the shorter will be the time that those demands will last. Whatever have been our own personal interests, we must subordinate and, if need be, sacrifice them to the national interests.

There are no exceptions. It is a superficial view to suppose that we have done our duty when we have hung out the national flag, tried to persuade others to join the army or the navy, borne our heavy taxes uncomplainingly, and approved the measures that Congress and the states have taken or may take. We must give our thought, our time and our effort to the active and aggressive work of carrying the nation to victory. From the very first—from

now—we should assume that the war will last a long time; that it will require the whole service of everyone who can do anything to help, either in the ranks or behind them, and that we may eventually have to endure hardships and to make sacrifices as great as those that the other belligerents have endured and made.

How we are to do all those things and bring ourselves into subjection to the demands of the national crisis the President, in his address to the American people, has pointed out with startling clearness. The farmers first, for they have it in their power to meet and solve almost unaided the most pressing problem of the war, the food supply. But there are millions of others who can contribute their bit by raising on their little household lots a few pecks of potatoes or a few quarts of beans for their own use, and so releasing in the aggregate many shiploads for export. All of us can and should be truck farmers, if only on the smallest scale.

But, as the President has shown, food is not the only thing needed. The miners can increase their output, the factories can speed up their machinery and work their men in double shifts, or in three shifts; the railways must be ready to handle all the freight that the cars can hold, the shipyards to lay down every keel that their space permits; and then, besides all that, each one of us must stop the waste in the kitchen, the pantry, the refrigerator, the coal bin and the wardrobe. So shall we win, and win in the shortest time and with the least suffering.

WHY THE COST OF LIVING RISES

WHAT we commonly speak of as the "rise in the cost of living," which means, of course, the increase in the price of food, clothing, household utensils and other necessities or luxuries of life, has been going on in recent months at a rate that the world has very seldom seen. Flour has sold this year at nearly double the price of last summer. Wheat last October, at \$2.02 a bushel on the Chicago market, brought the highest price since 1869, in the days of inflated paper money that followed the Civil War. This year it has sold higher still. Corn usually sells at between 40 and 70 cents a bushel. Until last fall it had not sold above \$1 in the United States since 1868; it has now risen far above that price.

A bale of cotton last November cost more than it had brought since 1872; its price this year is 40 per cent higher than that of August, 1914. We must go back to 1873 to find as high a price for iron as the market of the past month has offered; it was more than twice as high as the price of January, 1916. The price for copper this year has been 50 per cent higher than at any time in the quarter century that preceded 1916, and more than double the average price in any years of that period except two.

The greater part of this extraordinary rise in prices has occurred during the European war, and largely as a consequence of it. The London Economist has for many years compiled a monthly "index number," which it makes up by adding together the prices, at given dates, of all the important commodities. During the first five years of this century the average of those monthly numbers was 2200. At the end of July, 1914, it was 2565. It rose to 2800 at the end of 1914, to 3634 at the end of 1915, to 4908 at the end of 1916, and to 5072 last February. Until this war, the highest average that the monthly "index numbers" made during any of the seventy years in which the Economist has made its calculations was 3787 in 1864.

Two questions concerning present conditions demand answers: Why should the war have had so great an influence on prices, and how will the advance hereafter be checked or forced back? The war has used up iron, steel, copper and other metals in unheard-of quantities for ammunition at the battle front—an abnormal demand that has competed with ordinary buying for peaceful commercial purposes. Except so far as need of those metals for replacing shattered cities, bridges, railways and ships keeps up the demand, prices for such materials will fall when peace returns.

The war has influenced the price of food less directly. Russia, which produces nearly one fifth of the world's wheat, has been cut off from the export market ever since 1914. Europe has raised no crops on the land that the armies are trampling. Submarines have sunk shiploads of wheat. On top of all, came a world-wide shortage in the crop last fall. The resultant high price for wheat threw part of the consumers back on other foodstuffs, and prices for other grains and for meat went

up accordingly. The rising cost of labor, partly owing to the diversion of European workmen to the armies, has also had its effect. The return of peace should cause a great readjustment in all of those directions.

CURRENT EVENTS

CONGRESS.—The great loan bill was signed by the President on April 24.—Army bills were under discussion in both houses. In the Senate the general staff bill was reported, and seemed sure to pass. In the House the Committee on Military Affairs reported a bill that authorized the government to try the volunteer system at first, and then to proceed to conscription if that failed.—The Senate amended some of the censorship provisions in the espionage bill, so as to penalize only the publication of forbidden matter, but it did not finally pass the bill.

THE RAILWAYS.—On April 19 the Interstate Commerce Commission granted permission to the railways to file increased freight tariffs, effective on June 1. The propriety of the increases, which amount to about fifteen per cent, will be investigated by the commission before it makes the order final.

THE WAR COUNCIL.—After landing at Halifax, the British commission headed by Foreign Secretary Balfour journeyed to Washington, where it arrived on April 22. The members were most cordially received, both by the officials of our government and by the people of Washington. On April 25 the French commission headed by M. Viviani and Marshal Joffre reached Washington. The first session of the war council was fixed for April 27.—A commission from Italy headed by the Duke of the Abruzzi is expected soon.—The United States is to send a commission to Russia to consult with the new republican government. Mr. Elihu Root has been asked to go as chairman.—The first loan authorized by the war loan bill has been made to Great Britain. It amounts to \$200,000,000.

LATIN AMERICA AND THE WAR.—There were great popular demonstrations in Buenos Aires to show the sympathy of the people with the Entente Allies. The government sent to Berlin a note threatening to break off relations with Germany if immediate satisfaction was not given for the sinking of the Argentine ship Monte Protégido.—A number of South American nations have signified their approval of the plan of Argentina for a conference of American republics to be held at Buenos Aires.—Chile is determined to maintain neutrality, although it is in sympathy with the general course of Argentine policy.

JAPAN.—The elections resulted in the success of the parties that support the ministry of Count Terauchi. Apparently they hold 217 seats to 164 for the opposition. Count Terauchi stands for a government responsible not to the majority of the Diet but to the Emperor.

SPAIN.—The new Premier is Marquis Prieto. Count Romanones retired because he believed continued neutrality weakened the prestige of the nation and prevented it from defending properly its legitimate interests at sea. The new ministry has dispatched to Berlin another urgent protest against the submarine policy of Germany.

WOMAN SUFFRAGE.—Nebraska has passed legislation that gives presidential, county and municipal suffrage to women. It is the nineteenth equal-suffrage state.

"AMERICA DAY."—On April 20 London celebrated the entrance of the United States into the war with a great service in St. Paul's Cathedral, which the King and Queen attended. Bishop Brent of the Philippines was the preacher. The American flag was everywhere displayed, and it even floated from the tower of the Parliament building. Two days later there was a similar celebration in Paris, of which Ambassador Sharp's speech at the Hôtel de Ville was the central episode.

THE GREAT WAR

(From April 19 to April 25)

After several days of quiet, apparently devoted to consolidating positions and bringing up ammunition, the British resumed their offensive in Artois. The advance was less rapid than at the beginning of the movement—it was made in the face of fierce German resistance. The chief attacks were made in the direction of Douai and Cambrai, with the intention of creating salients that would force the Germans out of Lens and St. Quentin, as the salients at the Somme obliged them to abandon Bapaume and Péronne. By April 25 the British advance had reached the St. Quentin

Canal, midway between St. Quentin and Cambrai, and farther north was in front of the new "Wotan" line, which runs from Drocourt to Queant, defending Douai.

Along their front the French were less active. Paris reported the repulse of several German counter-attacks on the Craonne plateau between Soissons and Reims. Berlin professed to believe that the offensive in this direction was already crushed, but the indications were that it was being methodically pressed, although the French are obliged to be as economical of human life as possible, and depend a great deal on their big guns.

In Mesopotamia the British drove the Turks out of Istabulat and then out of Samarra, which is seventy miles north of Bagdad, and is—or was until recently—the northern rail head of the Bagdad railway. At Gaza, in Palestine, the final defensive positions of the Turks were under artillery fire.

Turkey, by the way, has officially broken off relations with the United States. There is some uneasiness about the safety of the American missionaries in Turkey, of whom there are about one hundred.

There were no important engagements reported from the other fronts, although the Germans were reported to be increasing their forces near Riga, perhaps with a view to a movement against Petrograd.

The submarines continued their deadly activity. The amount of shipping sunk was greater than at any time since February 1, for the weekly report from London spoke of 55 British vessels destroyed. The American steamship Mongolia reported sinking a German submarine

A NEW FRENCH LARGE-CALIBER GUN

in British waters on April 19. The Germans sunk two more British hospital ships, the Donegal and the Lanfranc. About seventy-five men are missing, including a number of Germans. The British now carry a certain proportion of German wounded prisoners on all hospital ships. The international committee of the Red Cross sent an energetic protest to Berlin against the repeated torpedoing of hospital ships. A Belgian relief ship, the Kongsli, was sunk, whether by mine or torpedo is uncertain.

A squadron of German destroyers raided the English Channel on April 20. They were driven away from Dover by the British patrol boats, with a loss of two vessels. Berlin said they sunk two British ships; London denied the assertion absolutely. Later those or other German destroyers shelled Calais, and killed or wounded a few civilians.

There were reports of strikes, riots and revolutionary demonstrations from several countries. Three hundred thousand German workers are said to have been out on strike at one time, in protest against the food regulations, and the government finally took control of several munitions plants. The strict censorship makes it impossible to get all the facts. There were also reports of great unrest and food riots from Hungary. It is certain that there were demonstrations in Stockholm, occasioned by the scarcity of food, but led chiefly by Socialists or revolutionaries. May Day, the annual Socialist festival, was awaited with uneasiness in a good many European capitals.

The Austrian Emperor, against the advice of the ultra-German party, has determined to call the Reichsrath, which has not met since the war began. There were unconfirmed reports that Count Tisza, the Hungarian Premier, had resigned.

The King of Greece has offered to appoint a cabinet favorable to the Entente, if those powers would promise not to dethrone him or support a movement to dethrone him. Otherwise, it was hinted, he would make war. It is probable that this was one of the momentous questions discussed by Mr. Lloyd George, M. Ribot and Signor Salandra, when the three premiers met at St. Jean de Maurienne in Savoy on April 19. The United States was considering whether to recognize the Venizelos government in northern Greece.

Petrograd reports that the peace movement among the Russian Socialists had lost ground since a German submarine sunk the steamer Zara on which a number of Russian political exiles were returning to their native land.

The State Department made public a report sent last January by Mr. Brand Whitlock, our minister to Belgium, concerning the deportations of Belgians into Germany. He declared that the affair was "one of the foulest deeds that history records," and that it was carried out with a cruelty so monstrous that German soldiers wept in executing their orders. He placed the responsibility for the policy on the shoulders of Marshal von Hindenburg, and said that the late Gov.-Gen. von Bissing, who has been executed for his conduct of the deportation, was actually censured for his mildness by his military superiors.

Cars That Differ In a Hundred Ways

The Mitchells differ from other cars in nearly every point you consider.

In equipment, etc., there are 31 features which nearly all cars omit. In finish and luxury, they excel rival cars at least 25 per cent.

The body styles are exclusive—designed by our experts, built by our own craftsmen. And they combine in one model nearly all known attractions.

In the chassis, all vital parts are built to the standard of 100 per cent over-strength. That is twice our former margin of safety, and it means a lifetime car.

This year's output of Mitchells, if we omitted these extras, would cost us about \$4,000,000 less.

Astonishing Values

When you analyze all these extra values, they seem almost impossible in cars at Mitchell prices. And they would be impossible in any ordinary shop.

But this mammoth plant—covering 45 acres—was built by a famous efficiency expert. It contains over 2,000 machines, all designed to build this one type economically.

These Bate efficiency methods, in the past few years, have cut our factory cost in two. This year we apply them to body-building, too, at a vast additional saving.

The millions of dollars which we save in these ways pay for all of these Mitchell extras.

See What We Add

See what we have added in strength and endurance. See what we add in beauty, comfort and equipment. See if you think cars strong enough without them, or handsome enough, or complete.

You will find here at least 20 per cent extra value, as compared with other high-grade Sixes. Please learn how much these extras mean, in a lifetime car.

MITCHELL MOTORS COMPANY, Inc.
Racine, Wis., U. S. A.

Mitchell
SIXES

TWO SIZES

Mitchell—a roomy, 7-passenger Six, with 127-inch wheelbase and a highly-developed 48-horsepower motor.

\$1460 F. o. b. Racine

Mitchell Junior—a 5-passenger Six on similar lines with 120-inch wheelbase and a 40-horsepower motor— $\frac{1}{4}$ -inch smaller bore.

\$1195 F. o. b. Racine

Also 6 styles of enclosed and convertible bodies. Also new Club Roadster.

THREE MOTHERS

By McLandburgh Wilson

THREE mothers by your cradle stand:
One mother who has given birth,
And one of them is Motherland,
And one of them is Mother Earth:
Three mothers must you have in all,
And two are great and one is small.

Your Motherland is strong and dread;
Her shield your sure protection makes;
She spreads her law above your head,
But even while she gives she takes.
Her arm is strong, her word is true,
But she may ask your life of you.

From Mother Earth by toil you wring
Or feast or crust at her caprice,
The shelter for your journeying,
Though brief at best will be the lease.
And at the end she gives you bed
But cares not where your soul has sped.

The Mother who has borne your flesh
Through good or ill will hold you fast,
Will guide you through the world's dark mesh,
And so will save your soul at last.
Three mothers shall you have in all,
And one is great and two are small.

THE BURGLAR'S PRAYER

"YOU will be shocked, Aunt Lucy," said Nancy soberly, "but I've about lost my faith in prayer."

Aunt Lucy's face looked sympathetic rather than shocked.

"Tell me all about it, Nancy," she said, with her kindly smile. "Is it because of some particular prayer that you've lost faith?"

Nancy nodded. "Yes," she said, "and I've prayed it and prayed it for a long time! And I had heaps of faith to begin with, too; just heaps."

"And you're sure the thing you're praying for would be good for you?"

"Perfectly sure. Really, Aunt Lucy, there's no reason at all why God shouldn't give it to me."

Aunt Lucy smiled at her niece's positive tone.

"And you are sure that it would be good for everyone else that you should have it?"

Nancy hesitated a little. "Well, I don't see why not," she said at last. "I wasn't thinking about that when I was praying, but it's no one else's affair. It is a very personal thing, Aunt Lucy."

"I wonder," mused Aunt Lucy, "if that is the way the burglars felt about their prayers."

Nancy started. "The what?" she demanded. "What have burglars got to do with prayers, I'd like to know?"

Aunt Lucy laughed. "It does seem rather a strange combination, doesn't it? But I read about it yesterday in the report of a speech by Sir Herbert Risley about the castles in eastern Bengal. Wait a minute and I'll read it."

"This is what it said. 'A curious system of religious worship prevailed among a caste who were professional burglars. They made a space in the ground, and a man then cut his arm and prayed that there might be a dark night and that he might succeed in obtaining great booty and escape capture.' What do you think of that, Nancy?"

"I think it's funny," said Nancy, "but I don't know why I should remind you of that. I'm not thinking of stealing anything."

"No," answered Aunt Lucy gently, "but you admitted that yours was an entirely one-sided prayer. And I've been thinking about it for myself since I read that paragraph. I'm not sure the prayers of those ignorant burglars are any more ridiculous in the eyes of the Lord than some of the one-sided prayers that I myself make to Him."

"It reminded me of one time when I was a small girl in the country. All the farmers were longing for rain to break a long season of drought, but I prayed fervently that anyway it might not rain for two more days, because I wanted to go to a picnic and wear my new bronze shoes, and rain—even on the day before—might interfere with the latter part of my programme. And I was frankly furious when my wish was not granted. Jovial old Uncle Ezra roared with laughter when I expressed my feelings at the breakfast table, but Grandfather Miner, a sweet old friend, patted my hand gently."

"Little daughter," he said, "thee must begin at the beginning with thy prayers, as thee does with thy schooling in earthly matters. First of all, thee must learn to say from thy heart, 'Lord, teach me to pray!'"

"So before we laugh too much at those burglars, Nancy, perhaps we'd better find out if we really know how to pray right ourselves."

"I'm going outdoors to think," said Nancy. "It begins to seem a little different."

MOUNTAIN TOPS AND VALLEYS

AUNT MARY listened very anxiously for Molly's step. Molly had been with her for two months now—ever since her father's death. Aunt Mary, whose one little daughter had been buried twenty years before, could not quite get used to the joy of having Molly to watch over and plan for and dream about. When at last Molly came in—a quarter of an hour late—and went straight to her room without even stopping at the door, Aunt Mary's face darkened with disappointment. "But, of course, I couldn't expect her to get over things all at once," she said to herself as she went downstairs to make some of the cream biscuits that Molly especially liked.

Molly ate several biscuits, but she did not talk at supper. When Uncle James asked if she had lost her place or her heart, she shook her head, and the tears came into her eyes. It was thoughtless of Uncle James to say things like that! Uncle James tried to keep up a conversation with Aunt Mary, but it was not successful. It rarely is when a third person sits silent and with tearful eyes.

The next day, however, the trouble seemed to have passed. Molly began chatting on the stairs, and she chatted all through supper.

In the weeks that followed, the same experiences were repeated half a dozen times. There seemed to be no especial reason for the "blues"; Molly simply felt so. Neither was there any especial reason for the rose-colored times; Molly felt those, too. Finally, one evening, when Aunt Mary had gone to a sick neighbor's, Uncle James asked Molly about it.

"Why, it's the way I'm made," Molly declared.

"I feel things so hard. I'm always up on the mountain top or down in the valley."

Uncle James nodded. "Why don't you take it in hand?" he asked.

"Take it in hand!" Molly repeated.

"Well, then, stay up on the mountain top, if you like that better. It would be satisfactory to us. But I do hate to see you Aunt Mary worrying over the moody times. Besides, it isn't good business."

"Good business!" Molly seemed equal to nothing except echoes.

Uncle James nodded again. "No employer likes to have a moody girl about; in the long run, she is never the most capable one. Her fingers may be disciplined, but her mind and will are not. Get a grip on yourself, little girl. You don't have to act blue even if you do feel so. And when you stop acting so, half the feeling will disappear. That's modern psychology. You think it over a little."

Uncle James went up to his room. Molly, hurt and indignant, yet honest, sat thinking it over.

CAPTURING AN ALLIGATOR

IN spite of the fact that reptiles have small and dull brains, the alligator appears to have acquired a craftiness in eluding hunters that is comparable to the same quality in the bear. The big reptile has gradually retreated from the rivers where it was exposed to hostile observation, and has taken up its abode in swamps that are remote and not often disturbed.

To capture an alligator alive requires skill in approaching the reptile's haunts. The climax of the hunt is often a desperate and exciting struggle; that was certainly the case when Dr. Raymond L. Ditmars caught a big alligator in the cypress swamps of the Savannah River. He tells the story in the New York Times:

The alligators were very shy. In making our way toward the pools we had to move with the utmost care, in order to avoid brittle twigs or rustling leaves. One day, when we had stealthily approached a bayou, we observed an alligator about eleven feet long sprawling on the bank, with a dozen smaller specimens, ranging in length from two to four feet.

As we crouched behind an enormous cypress trunk smothered in vines, one of the party, sinking in ooze, threw out an arm to save himself. On the instant it seemed that every alligator in the bayou had received an electric shock. The big alligator went into the water with a crash, sending up a geyser of muddy spray. The rush of the smaller reptiles was simultaneous, and it was followed by the appearance of many infant alligators that had been prowling about among the cypress knees. They came from all directions, running like frightened chicks, for the protecting water.

On another day we saw an alligator dive into a water hole that was not more than six feet in diameter. When we sounded this hole we found it to be five feet deep, with an underwater tunnel that ran off at a sharp vertical slope to a distance of twelve feet. Our collecting wagon was only a mile away, and we returned there for a steel alligator hook, an axe and a coil of rope.

When we returned we cut a slender young cypress and attached the hook to it. A half hour's maneuvering enabled us to hook the reptile in his underground retreat. It remained motionless until the hook was firmly caught, then it began to struggle furiously. To drag it out was a herculean task, but we finally brought it to the surface and threw a noose over its jaws. Then we got the noose round and behind its forefeet and thence over the jaws again and tied it to a cypress tree. The struggles of the alligator were vigorous. We worked on a platform of bark hastily torn from a decaying tree, which prevented us from sinking to our knees in the swamp. Between showers of mud thrown by the alligator's tail we looped the creature's jaws in a way to form a rope muzzle, with about ten feet attached for pulling.

After hauling our captive a full quarter mile out of the thicker part of the swamp, we brought in the wagon. Lifting the animal, we bound him to the floor upon padings of Spanish moss, and then drove ten miles over corduroy roads to the pine-lands where our collecting base was.

We had rented a house as our camp and, having no cage for the alligator, were in doubt what to do with him until morning, when we could build a shipping crate. Our troublesome specimen was eight feet long and about two hundred pounds in weight. He was threatening to destroy the wagon and causing us no little anxiety when we conceived the idea of locking him in our best bedroom.

With much prudence we moved out furniture and baggage before the alligator went in. His initial struggles with his new surroundings shook the house, and a blow from his head loosened the door fastenings. But the room held him, and the next morning we built a crate in which to ship him north to the Bronx Zoological Garden.

TONGUE TWISTERS

METATHESIS is the grammarian's term for a perversion of language, usually accidental but occasionally intentional, effected through the transposition of words, syllables or sounds. Most instances of metathesis are merely slips of the tongue. There is no more complete and amusing example than the famous query of the indignant churchgoer who found a stranger in his place.

"Sir, are you aware that you are occupewing my pie?"

A recent writer has collected a few less-known but authentic specimens. If they bring no more than a smile when read in cold print, some of them must nevertheless have sounded overwhelmingly funny when they were spoken. It is easy to imagine the hilarious enjoyment of the class in addressing such an unfortunate professor, commenting on Macaulay's Lays of Ancient Rome, referred to the "Great Twin Brethren," Castor and Pollux, at the Battle of Lake Regillus as "that immortal pair of twining shins!"

"Kelley and Sheets," whom a professor of poetry casually mentioned in his discourse, must have evoked a response almost as gleeful.

The halls of law, like those of learning, are not exempt from the tricks of metathesis. The collector gives several, of which perhaps two, one accidental, one by design, are the best. A distinguished lawyer, at the close of a pathetic plea in a case involving a father against his sons, endeavored to quote the tragic words of King Lear, "How sharper than a serpent's tooth it is to have a thankless child!" What he really said, in moving tones and with immense, although unexpected, effect was, "How sharper than a serpent's thanks it is to have a toothless child!"

Finally, a lawyer son of Charles Dickens once had recourse to metathesis to discomfit neatly

an annoying opponent. He found himself pitted against a lawyer named Willis, who irritated him and the court by indulgence in a repeated and apparently intentional little cough. At last Mr. Dickens's patience became exhausted, and he quietly remarked:

"An illustrious relative of mine has immortalized the words, 'Barkis is willin'.' Perhaps I may be allowed in present circumstances to say, 'Willis is barking.'"

IN THE STUBBLE FIELD

"Ah! This reminds me. I meant to get shaved!"
—Thomas Maybank in the Passing Show.

MR. PEASLEE ON "FACULTY"

SOME folks," observed Caleb Peaslee, mildly, "feel's if they had some call to look down on Ursula Baynes 'count of her bein' a wilder, and pity her for not havin' a man to look out for her and do things. But I d'know; mebbe she makes out 'bout as well as other folks, and better'n some."

Deacon Lysander Hyne appeared to ponder the matter for a moment.

"M—well," he said at last, "I d'know's I ever noticed but what she got along all right, but bein' without her husband can't help bein' a hardship. I never give it much thought, but now you've mentioned it I do wonder how she makes out as well's she does. How d'you s'pose she does it?"

"She does it by bein' more facultated than most anybody else here in Dilmouth," replied Mr. Peaslee, promptly. "I d'know anybody, man or woman, that turns things to 'count as well's Ursula does. Most anyone can make things go well as long as they don't have misfortune, but it takes faculty to turn a sprained ankle to 'count."

Mr. Hyne turned a questioning face toward his friend, and Caleb settled himself easily into his seat.

"I'm goin' to give you this jest as Ursula told it to my wife," he began, "and she didn't tell it as anything wonderful, you understand; jest told her in the way of talk, same's women do when they git together."

"It seems, 'cordin' to what Ursula tells my wife, that she'd got pretty well ketchup with her fall work, but there was some little things that she'd got to do to feel completed—things that really needed a man to do, like nailin' up places round the bulldin's, and such chores as that. But she didn't feel as if she ought to afford hirin' a man, so she was goin' to try to do 'em herself—and right at that p'int she slipped on that shelvin' stone at her back door and sprained her ankle!"

"Sho, now!" said Mr. Hyne with gruff sympathy. "That was a hardship, and no mistake."

"Twa'n't any hardship at all," contradicted Mr. Peaslee, "and you'll find out so if you gimme a chance to tell you 'bout it. Mebbe 'twould have worked a hardship on a woman less facultated than Ursula,—I don't want to say as to that,—but she sot to work and turned it to 'count."

Mr. Hyne looked puzzled. "I don't see how—" he began.

"I'm tryin' to tell you how," Mr. Peaslee interrupted, somewhat tartly. "There she was, with all this work laid out to do—work that would take her the greater part of a week to do, even s'posin' she had the use of her limbs—and now she couldn't stir a foot to help herself. She had a right to feel discouraged. I would've if it had been me!"

"But it wa'n't me," Mr. Peaslee went on dispassionately; "it was Ursula, and it ain't any part of her creed to set down with her hands folded and complain 'bout hard luck. She jest sot her mind to it and found a way to get her work done by swappin' work—same's you'n I might change off if we had work that was too hefty for either of us."

"She sent word to Norris Waning and Jim Elder and Clem Bidnot that she wanted they should call jest as soon as they could make it handy to do it. She figgered like this: she knew Jim's wife either wouldn't or couldn't cook punkin pies, and Jim liked 'em. And she'd seen how out at the elbows and lackin' buttons Clem Bidnot's clothes was. Since his mother died there ain't been anybody to take a stitch for him, you know. And she'd heard Norris Waning say that he wished his wife'd knit him some good yarn mittens, 'cause nothin' else seemed to come anywhere near keepin' his hands warm in real cold weather."

"Well, when they got there it turned out jest as Ursula had figgered—they was glad to turn to and help her and let her do the things she could to pay. She got the punkin stewin' right off, and she sent Clem home for all the clothes he had that needed mendin', and in the meantime she took up the stitches for a mitten for Norris. And then she sot 'em all to work at jobs that she needed done—Jim shinglin' the henhouse and Clem gatherin' them sweet apples behind the barn and Norris cleanin' out the cellar and pickin' up the yard—and by night them three men had done work that it would have took her more'n a week to get done, even s'posin' she could have done it at all."

"And," she says to my wife, 'I got the pies done for Jim to take home with him that night and most of Clem's clothes mended. And I've got one mitten all done for Norris except knittin' in the thumb, and the other one most down to the narretid's. I can finish it easy 'twixt now and supper time.'"

"It's real easy to get work done if you figger a

little,' s'she. 'I declare I b'lieve I could get my house painted if I wanted to take the trouble to sprain my other ankle.'"

THE WAR KITTENS

THE officers of the famous German commerce raider Emden did not realize how much amusement a cat that found its way on board the vessel at Tsingtau was to provide for them during their long and adventurous voyage.

Not long after their momentous trip began the cat had a litter of kittens, whose adventures Lieut. Capt. von Mücke of the raider describes in his book, Emden. One day, he says, as I was lying in my hammock, I saw Lieut. Schall sleeping soundly upon his mattress directly under me, and just beside him on the same couch lay the old cat with all five kittens. After I had quickly awakened the sleeping officers near by, so that they, too, might enjoy the little domestic scene, some one roused Lieut. Schall. He, however, not fully sharing our pleasure, got up and hurried away.

After that the cats were the acknowledged property of the officers' mess, and we made a little kennel with accommodations for all of them and put it in the room in place of an old sofa. Thanks to the anxious care of the officers and their attendants, the kittens thrived. In a short time they had grown so that they were able to make excursions in the vicinity of their home. From then on the men could walk only with the greatest care, for the little animals were accustomed to swarm round the places where one was most likely to set his feet. Especial care was needed after dark, and because manœuvres occurred almost nightly the kittens' quarters had to be locked as a protection for the inmates.

To tell them apart we put colored ribbons round their necks, and one day we had a christening ceremony. The captured steamships were selected as godparents, and immediately a little Pontopporos, a little Lovat-Indus, a Cabinga and a King Lud began to run round on the table. It was more difficult to name the fifth kitten, for it was different from the others. Its little scrawny body wabbling round on spindle legs was provided with an exceptionally large head with big, gleaming eyes. Some one suggested the name Diplomat, but we finally called it Little Idiot.

Frequently we allowed the kittens to play in the sunshine on the cabin roof, and the officers who were off duty constituted themselves as a corps to guard the animals and see that they did not fall overboard.

In spite of our watchfulness, Little Idiot played us a trick one day. At the noon meal hour he was missing, and a most diligent search failed to reveal his whereabouts. The officers of the "kitten watch" were positive that he had not fallen overboard, but still we could not find him. We were all very sorry, but at the evening rounds were relieved when some one discovered him in the storeroom for shells, sleeping quietly behind a box of ammunition. He had made his way into the room by a dangerous jump of about eighteen feet from the cabin through the ammunition hoist, and had landed safely. Several days later, however, he injured himself severely, and his career ended.

TESTING THE DENTIST

TO illustrate Oriental habits of thought, Lord Cromer tells, in the Quarterly Review, this story of Ismail Pasha, Khedive of Egypt. It once happened that Ismail was suffering from toothache. He sent for a European dentist, who told him that he ought to have the tooth out. Ismail said that he was afraid it would be very painful. He was informed in reply that, if he would allow the dentist to administer laughing gas to him, he would feel nothing. He still doubted, but told the dentist to bring his apparatus to the palace and he would then discuss the question.

The dentist complied, and explained the process to the Khedive. Ismail then summoned an attendant and told him to send up the sentry who was at his door.

When the man arrived the Khedive ordered him to sit down in a chair, and requested the dentist to take out a tooth on either side of his jaw. Ismail then asked the man whether he had felt anything, and the man told him that he had not. But Ismail was not yet satisfied. He said that the sentry was a young, strong man, and that he would like to see the experiment tried on some one of weaker physique.

Accordingly he summoned a slave girl from the harem and had the dentist extract two of her teeth. Finding that she did not show evidence of extreme suffering, he then consented to have his own tooth out. It is related, although possibly that part of the story is apocryphal, that the dentist then received an order on the Egyptian treasury for one thousand pounds.

AND NO TIME LOST

IF old Garge Jones was the most inquisitive man in the village, Sandy Morton, according to Answers, was certainly the surliest.

One afternoon, as Garge perambulated slowly along the one narrow street, he paused at Sandy's garden fence and gazed inquiringly over at Sandy, who was busily nailing a very large box together.

"Afternoon, Sandy!" said the old man genially. "Whatever be 'ee puttin' that great box together for?"

Sandy paused in his hammering long enough to retort curtly:

"To hold all your questions, if so be as it's big enough!"

Garge eyed him in pained silence for a few moments. Then he took an empty match box from his pocket and threw it over to Sandy.

"Then that'll do for yer civil answers, if so be as it's small enough!" he retorted quietly.

RURAL SARCASM

A FARM hand who had worked hard in the fields from dawn until darkness day after day, and had been obliged to finish his chores by lantern light, went to the farmer at the end of the month and said:

"I'm going to quit. You promised me a steady job of work."

"Well, haven't you got one?" was the astonished reply.

"No," said the man, according to the Boston Transcript, "there are three or four hours every night when I don't have anything to do except to fool my time away sleeping."

THE CHILDREN'S PAGE

A RIME OF RAISINS

BY M. B. BANKS

A lot of little raisins stirred up in a cake!
Put them in the oven, for now the cake must
bake.
While the cake is rising not one of them must
drop,
But every little raisin should try to reach the
top.
Ring a rime of raisins when the cake's begun!
Ring a rime of raisins when the cake is done!
When the cake is open how many will there be?
Some for Jill, and some for Lill, and some for
you and me.

BERT DOW'S VICTORY

BY IRVING PALFREY

THE victory that Bert Dow won was not of the kind that people cheer from a crowded grand stand, nor did it carry with it any ribbon or medal. It was not that kind of a victory at all. Nevertheless, it was a victory well worth winning, as you shall see. It happened not long before school closed for the summer vacation. It was the day when the circus came to the city where Bert lived—the circus that the boys had been talking about ever since the big colored posters appeared on the billboards a month earlier. All the boys had saved their money and made their plans, but no boy had thought more about it than Bert had. Bert's home was on the edge of the city, not far from the field where the circus always pitched its tents. On the morning when the circus came he meant to get up early and watch the men unload the train and raise the big tents. But his alarm clock did not go off, and before he got to the field most of the work was done. That was the first disappointment of the day. The second disappointment came at school, when no recess was given while the parade was passing down the avenue near by. Usually the school closed at that time and allowed the pupils to go over to the avenue to see the gilded chariots and the open cages and the camels and the elephants. But for some reason the school board had not given the teachers permission to close school this year, and the teachers did not dare to do it without

DRAWN BY BERTHA C. STONE

BERT MOVED A BIT CLOSER AND LISTENED

permission. The music of the bands came floating in through the open windows, but that was all the fun that the boys and girls got from the morning parade. During that hour the lessons suffered sadly. Bert found the third disappointment waiting for him when he hurried home to eat a luncheon before going to the circus grounds for the afternoon performance. There was only one session at his school, and the afternoon was going to be all his own—at least so he thought; but just then disappointment number three came along. "Hurry up, Bert!" called his father, when Bert came into the yard. "I want you to drive mother and me over to Aunt Martha's. They have just telephoned that she is very sick. I have borrowed Mr. Greene's horse and carriage, but he must have them back to-night, so you will have to go along to drive it home. Mother and I will have to stay all night."

A host of little raindrops hurried out one day;
A host of little sunbeams followed them in play.
When Miss Polly saw them frolicking together,
"Mother, look!" she cried. "What lovely rainbow
weather!"

A MAY FROLIC

BY ANNA M. PRATT

A host of little raindrops hurried out one day;
A host of little sunbeams followed them in play.
When Miss Polly saw them frolicking together,
"Mother, look!" she cried. "What lovely rainbow
weather!"

DRAWN BY L. J. BRIDGMAN

THE FROGVILLE PICNIC

BY JOHN MORRISON

The frogs who live in Frogville
One sunny morn in May
Set forth with many grunts and
peeps
To have a picnic day.

They gathered from the valley
Beyond the woodsy hill;
They hurried from the little pool
Below the noisy mill.

They came by pairs and dozens
From marshes near and far;
Some came afoot and some in
boats
And some by trolley car.

Some brought along their banjos
And thrummed a tinkly tune;
And some, bass horns that boomed
away
Through all the afternoon.

Some brought along their easels—
For sketching is such fun
When lounging bathers linger near
To see how it is done!

And there was fancy diving
And swimming in the pool
For those who would improve
their art
By lessons at the school.

And what an endless feasting
That merry picnic knew!
The pickled flies, the beetle
pies,
The hot mosquito stew!

And so in fun and frolic,
Until the fall of night,
They passed away their picnic day,
And every heart was light.

Yet when they started homeward
What sound the echoes woke?
It was the solemn, mournful
call,
"I croak! I croak! I croak!"

"But the circus!" cried Bert. "Can't I see it, after all?"
"Sure enough, I hadn't thought of that," said Mr. Dow.
"But you can go to the evening performance. You will get back in plenty of time for that."

So it was settled that Bert should go to the circus in the evening, and on the whole he was well pleased with the change in his plans. It was a beautiful ride of ten miles over the hills to Lanesboro, where Aunt Martha lived. Bert enjoyed the drive home all alone, and was able to return the horse and carriage to Mr. Greene's stable long before the sun had set. "Now for the circus!" he cried, as he rushed from the house after he had hurriedly eaten the supper that his mother had left on the table for him.

A few moments later he was on the circus grounds. It was long before the hour of the evening performance, but the crowd was already beginning to gather, and Bert mingled with a thousand others who stared at the great pictures in front of the side shows and listened to the strange sounds that came from the animal tent.

Bert bought a glass of lemonade—for it made him thirsty to see so many others drinking—and a bag of hot peanuts that he ate as he rambled among the tents. Soon the ticket office would be open, and then he would go inside so as to have a long time in the animal tent before the big show began. In his rambles he found himself near a high board fence that bordered one side of the grounds. When he was passing the fence he heard a sound that made him stop in his tracks. Was it some one sobbing? It sounded like that. Bert moved a bit closer to the fence and listened.

The sobbing was plain enough now. Some one was in trouble, and perhaps he could be of help. He ran to an open place in the fence a little farther on, and then back, on the other side, to the spot where he had heard the sobs.

A woman with a little child in her arms was sitting under a tree near the fence. She looked up with red eyes when Bert paused before her.

"Perhaps, ma'am—" Bert began. "Is there anything I can do?"

"Oh, I don't know," said the woman. And then, as if eager to tell her troubles to some one who showed a friendly interest, she went on: "You see, I came to the city this morning with some friends. They went home after the afternoon performance, and I went to a cousin's where I expected to stay all night. But the cousin has moved away. I don't know a person in the whole city, and I don't know what to do."

"Where is your home?" asked Bert.

"In Vernon," she answered. "That is almost twenty miles from here, and if any other Vernon people came to the circus, they have gone home long ago."

"There is an early evening train," said Bert. "Why don't you go home on that?"

"But I haven't any money," said the woman. "I lost my purse while I was hunting for my cousin. There was not much in it, but it would have taken us home."

Bert thought hard, as he felt the silver in his pocket. There was a lump in his throat. Could he give up the circus after all the disappointments that he had suffered that day? The battle in his mind was brief, however.

"How much is the fare to Vernon?" he asked.

"I think it is seventy-five cents," she said, "but I don't know a person here to ask for money—and I'm afraid Baby is going to be sick."

That settled the battle for Bert. Of his dollar of circus money he had ninety cents left. He gripped the coins tight in his hand, but there was no lump in his throat when he spoke again, for he felt like a man now.

"Just come to the station, ma'am," he said. "We have no

time to spare. I'll manage it about the ticket to Vernon. You and the baby are going home all right."

Then the woman tried to thank Bert; but she cried again instead of saying what she wanted to say, and the long and short of it was that she boarded the train to Vernon a little later, holding in her hand the ticket that Bert had bought.

Then Bert walked slowly home and went to bed in a house that seemed uncommonly big and empty. Now that his circus money was gone, and his mother and father were ten miles away, there seemed nothing else to do. Before he went to sleep he thought long and sadly of the lost circus, but for some reason he could not really feel that the fourth disappointment of the day was wholly a disappointment after all.

"She will send back the money," he said to himself, "and there will be another circus along next year. Of course, I am glad that I happened along just in time to help her."

THE SUMMER COTTAGE

BY EMMA ELLEN GLOSSOP

BUSY Johnny
chanced to peep
Within an ancient
rubbish heap
That held the things
they cast away
Behind the barn on
cleaning day.

"These grown-ups,"
said he, "are not
wise;

They often throw away a prize.
Now here is something! This, mayhap,
Will make a sling; perhaps a strap."

High on a broken cherry limb,
In sheltered corner known to him,
He hung his treasure out of view—
A battered, broken, worn-out shoe!

Then by and by, with merry song,
Came Mistress Jenny Wren along.
"Why, husband, dear," she called out thus,
"Who built this handsome home for us,

"With floor, and sides, and roof of leather,
To fend our household from the weather?
Besides a door that opens wide,
Here is a window at the side!"

"Why, bless me, yes!" said Mr. Wren.
They got the furniture, and then
This jolly couple, free from care,
Took lodgings for the summer there.

THE YOUTH'S COMPANION is an illustrated weekly paper for all the family. Its subscription price is \$2.00 a year, in advance, including postage prepaid to any address in the United States, \$2.25 to Canada, and \$3.00 to foreign countries. Entered at the Post Office, Boston, Mass., as second-class matter.

New Subscriptions may begin at any time during the year.

Money for Renewals should be sent by subscribers directly to this office. We do not request Agents to collect money for renewals. Payment to strangers is made at the risk of the subscriber.

Payment for The Companion, when sent by mail, should be by Post Office Money Order or Express Money Order. When neither of these can be procured, send the money in a Registered Letter.

Silver sent through the mail is at the sender's risk. It is liable to be stolen or to wear a hole through the envelope.

Renewals. Three weeks after the receipt of money by us, the date after the address on your paper, which shows when the subscription expires, will be changed.

Always give the name of the Post Office to which your paper is sent. Your name cannot be found on our books unless this is done.

Letters should be addressed and orders made payable to

PERRY MASON COMPANY,
The Youth's Companion,
Commonwealth Ave. and St. Paul St., Boston, Mass.

ACIDOSIS

THIS term, which is beginning to find its way into papers and magazines, means a condition of increased acidity, or rather diminished alkalinity, of the blood and the tissues. That condition arises from the too rapid excretion of alkaline salts or from a diminished excretion or increased formation of acids within the body.

Acids are constantly being formed in connection with the processes of nutrition, but in health the excretion through the lungs and kidneys keeps pace with the formation so that they do not accumulate. If the lungs or the kidneys are gravely diseased, however, excretion is interfered with and part of the acids remain in the body; and, if the processes of nutrition become deranged, more acid forms than the body can get easily rid of, and again an accumulation takes place.

Any further attempt to elucidate the subject would involve a discussion of complicated chemical changes concerning which physicians themselves do not fully agree. Acidosis occurs in kidney disease and in diabetes; it also results from prolonged vomiting, from starvation, or from a diet that contains too much meat and fat and not enough starchy food and sugar. It is not uncommon after surgical operations in which chloroform, or sometimes ether, has been given as the anæsthetic.

One of the chief and early symptoms of acidosis is shortness of breath, and associated with that is a fruity odor of the breath; headache is frequent, and so is vomiting. Vomiting is a particularly unfortunate symptom, for it increases the acid condition of the body. The patient is usually very restless; if he is a child, he may have convulsions. The final stage, if the condition is not treated promptly, is unconsciousness.

The chief treatment consists in giving alkaline salts of glucose, the latter more commonly in the acidosis that follows a surgical operation. Although shortness of breath is one of the most constant symptoms of beginning acidosis, everyone who suffers in that way is not the subject of acidosis. If a person should make his own diagnosis and dose himself with sal soda or some other alkaline salt, he would probably make himself worse and perhaps ruin his digestion. If he is troubled by shortness of breath, he should consult a doctor and let him prescribe the remedy.

CENTRAL

"I TAKE it," the doctor said, "that your voice is somewhat valuable to you, Miss Central?"

"It is worth," the young woman said hoarsely, "exactly fifty dollars a month. And if I should lose that fifty dollars I'd come on the town, and your taxes would be increased to help support me."

"Precisely." The doctor's eyes were twinkling. "But you needn't go into it in such detail, considering that I've just put you under vows of silence for three days. Laryngitis isn't a thing to play with, young lady—not when it's your voice that earns you a living."

"But, doctor, you don't understand!" Central remonstrated.

"What don't I understand? It's dangerous to insult a doctor's vanity like that."

"I'm really pleased to death at the idea of staying at home for three days—"

"Then why are you objecting?"

"Because it's giving way to myself. I want to stay home and I want to have a good cry—so now!"

The doctor smiled down at her. "Go ahead, young woman, if it will make you feel better. I'm laying no injunction upon your eyes, just at present. I only stipulate that you shall not cry with your throat."

Central drew a long breath, which she stopped in the middle because it hurt.

"I'll take it all back," she said. "You do understand. Thank you."

But he did not really, of course. Central, leaning back in the big chair and luxuriating in the unwonted sense of leisure, felt a lump come into her throat that was not caused by laryngitis. She had joked about it, but really she was "blue"—clear, downright "blue." And it was because it was a lonely business, being a getting-toward-middle-age young woman. She had planned to do something with her life, and had been, somehow, side-tracked into a village telephone central. There were times when that seemed a warm and happy place to be, but not to-day, with Miriam Chandler's letter before her telling about the lectures she had been asked to give at the state college. Of course she was glad with all her heart for Miriam, but—"You might as well cry and get it over with, you know," she said to herself, disgustedly.

A week later she was back at her switchboard. It was a leisure time just then; so she called up Mrs. Skinner and asked about Bennie.

Mrs. Skinner answered eagerly.

"Well, there, Miss Field, Bennie will be that tickled. He's half fretted himself sick. He wanted to tell you that he'd seen two bluebirds, and old Mrs. Kane says nobody's called up, and she's missed your little chat so! And Emily Bowen was saying yesterday that she never had realized how

nice you were about a heap of little things till we had some one else. Folks'll be calling up; you just wait!"

It was true. All day her friends were "calling up." Central never had realized before. At home that night she smiled at Miriam Chandler's letter; after all, she had her audience, too—and she belonged to it!

THE EXUBERANT LORD BILL

SOLDIER, sportsman, Irishman, wit, man of the world and boy who never grew up, Lord William Beresford—Lord Bill to everyone who loved him, and most people who knew him did—was a man of whom hundreds of anecdotes have been related, all amusing and most of them true. He entered with equal and unflagging zest all his life into the hardest kind of work and the hardest kind of play. His dare-devil exploits resulted in so many accidents that his brothers were wont to declare that Bill had broken every bone in his body at least once, and some of them several times. In a recent volume of reminiscences his relative, Mrs. Stuart Menzies, tells some new anecdotes and relates anew some old ones:

Dare-devilry has no superior in its claim on Irish admiration, and the Beresfords never stuck at anything demanding fun or courage. Bill was once driving a party of friends through the district when he halted to do some shopping, as he called it, and hoisted up into the drag what proved to be a sack of potatoes. These, it turned out, were for shying at the passers-by, and a running skirmish ensued for miles, with plenty of miscellaneous missiles in return. But the local folk were not to be beaten; they wired along to the next village, and this turned out with brickbats to meet the potato faction in style.

At another time Lord Bill was challenged to drive his coach down the steep steps that lead from Cork barracks, and he did it royally, tobogganing the clumsy vehicle down the bumpy slope, with himself tied on to the box, and the wheels stowed away inside!

Lord Marcus Beresford and Lord Charles—the present admiral—were merely a shade less turbulent and audacious than Lord Bill; one would imagine that the mother of such a family must have become pretty well inured to shocks. Still, they spared her feelings when they could.

Lord William had one of his many accidents while driving a fast trotter named Hugh from Leatherhead. The only other occupants of the vehicle were Lord Marcus and the groom, Tommy Ryan, who came from Curraghmore. The night was dark and wet, but they were thundering along at a very rapid pace when Hugh shied violently and upset them. When they began to collect themselves Tommy was missing.

"Tommy! Tommy! Where are you?" his master shouted.

From the other side of a wall came the answer, "I'm here, my lord, on my head in a ditch."

Lord Bill's head, although he was not standing on it, had received the impact of something harder than ditch mud; it was so severely cut that he had to appear at breakfast the next morning heavily swathed in bandages.

His mother asked anxiously what was the matter; but she was quite calmed and satisfied when her ingenious son assured her coolly that the day was the anniversary of an important Indian victory in which he had had a part, and that he always commemorated the event by wearing a turban!

A DELICATE SITUATION

THERE are times when quick thinking and a bold front are essential at whatever cost. One such occasion occurred, according to the New York Times, in the silverware department of one of the great New York stores, where most of the patrons seemed to be exchanging Christmas gifts rather than making purchases. Mrs. A. stood at the counter.

"These pepper shakers and salt shakers were a Christmas present from a friend, but I don't like them," she said to the clerk. "Can you credit me with the cost of them, so I can get something else?"

The clerk turned away to speak to the floor-walker about the matter, when, by chance, Mrs. B., the donor, approached, and the following conversation took place:

"Good morning, Mrs. A. Are you exchanging the shakers? I'm so sorry if they weren't suitable! My husband and I thought they were really quite pretty."

"O dear, no!" quickly replied Mrs. A. "They're perfectly lovely, but I needed two more to complete my table." Then, speaking to the returning clerk she said, "Don't say you haven't any more, for I must have them."

The astonished but competent clerk never moved an eyelash, but produced two more shakers of the same pattern, which Mrs. A. purchased. When she had received two or three coins in exchange for a ten-dollar note, she left the store with a smile of apparent delight.

THEY SPARED THE NONCOMBATANT

AMONG a small party of war correspondents that recently visited the front at La Bassée, France, was Mr. A. H. Griffith, who was private secretary to the late Lord Stratheona. He became exhausted, says Mr. W. G. Shepherd in Everybody's Magazine, and he fell behind in full view of the German snipers.

They saw a large gentleman, dressed in golf costume, take off his golf cap, wipe the perspiration from his forehead, lean like an exhausted man against the pile of sandbags that formed the entrance to the trench, and settle himself contentedly for a rest. Mr. Griffith's unridicled body is testimony to the fact that the Germans "played cricket," as the English call it, that day. Scores of them had a chance to kill the man in the golf costume, but some Teutonic phrase ran along the line that gave him his life.

JUSTIFIABLE TEMPER

A CONTRIBUTOR sends The Companion this touching verse, which he believes has never appeared in print:

There was a man who owned a clock;
His name was John B. Mears;
And every night he wound that clock
For five and forty years.

But when at last he found his clock
An eight-day clock to be,
A madder man than John B. Mears
You would not care to see.

Add Golden Hours
To Your Vacation
by riding a
Columbia
Bicycle

THE bicycle brings everything nearer to you—the country club, tennis court, ball grounds—the village, picnic grove, mountains, lake and river. It shortens your errands—and provides long, glorious hours of healthy recreation.

You will be missing much of the fun of these summer days if you do not ride a bicycle—you will be only half enjoying yourself without one.

Look over the new, graceful, beautifully finished Columbia models. You can find no better. Columbia bicycles have been ridden for 39 years—longer than any other on the market. They are bicycles to be proud of. There are numerous handsome models for boys and girls. See them in the bicycle store—visit the Columbia dealer to-day.

OVER THE MOUNTAIN

IN southern Colorado a spur of the Wet Mountain Range stretches out toward the plain like a curving arm, terminating in a giant fist. The fist is the Cuerno Verde Peak, which rises, snow-covered, to a height far above the timber line. Sheltered in the western hollow of this colossal arm lies a wide valley called, somewhat inappropriately, Huérfino Cañon.

In a rude adobe hut that stood upon the warm slope of the cañon, Antonio Bacu, the old Mexican sheep herder, lay one February evening tossing and moaning in half-delirious pain. His wife knelt over him, weeping, while the twelve-year-old grandson, Juan, crouched in a corner, terror-stricken at his grandfather's agony.

That afternoon Cosme, the pony, usually so sure of foot, had stumbled among the rocks and gone down, throwing Antonio heavily. Juan, guided by Felipe, the sheep dog, had found the old man lying unconscious, with a long, bloody gash in his head and one arm doubled limply under his body.

"It is nigh forty miles to the doctor at Rye," said Señora Bacu, between her sobs, "and you are the only one to go, Juan. The trail is rough and long, but when the morning comes you must take Cosme and go.

"Oh, if it were only summer and you could use the mountain trail!" her wail went on. "It will be two whole days before the doctor can get here—two whole days! Oh, my Antonio, what will happen to thee in that time! Thou wilt die—die, and I, thy wife, cannot save thee!"

She sank down in a huddled heap by Antonio's side, and, in her weeping, did not notice when Juan crept out of the hut.

The clouds, which had obscured the sky for some hours, were vanishing before a brisk cold wind, leaving the night brilliantly starlit. The snow-covered top of Cuerno Verde loomed above Juan until it seemed to him the sky must rest upon it. From the tiny corral, Cosme, the offending pony, gave a low whinny of recognition as the boy drew near.

A sudden purpose was forming in Juan's mind. "By the mountain trail," he thought, "Rye is but fifteen miles. I crossed with the herders in summer, and Cosme came that way from the plains. If I should start to-night and should not lose the way, many hours, perhaps grandfather's life, would be saved."

To Juan, overwhelmed with anxiety for his grandfather, whom he knew to be very dangerously hurt, the thought and action were almost as one. Saddle and bridle were at hand. The boy put them on Cosme, led the pony out of the corral and prepared to mount.

"But I must tell grandmother that I go," he said to himself, "or she will worry for me."

Slipping the bridle rein over his arm, Juan hurried to the cabin door and opened it.

"Ho, grandmother!" he whispered. "I do not wait for the morning. I go at once for the doctor."

Señora Bacu, busied over her still unconscious husband, hardly heard him; but Juan took her silence for consent, and a moment later he was in the saddle cantering easily up the trail.

"If the snow is not too deep, and I do not lose the way," he thought, "grandfather shall have the doctor before to-morrow night."

The landmarks of the path showed plainly enough—a blasted tree, a jutting crag, an isolated patch of jack oaks. Up, still upward, toiled Cosme, with courage as unflinching as that of his small brown rider.

An hour passed. The trail entered a dark forest of cedars. Juan remembered having heard his grandfather say that here in early spring—it was almost that now—the bears, newly wakened from their winter sleep, came to feed on the cedar berries.

A moment afterwards the boy's heart seemed to jump into his mouth. Behind him, nearer, nearer, came a soft *pit-a-pat! pit-a-pat!*

Juan, sick with terror of the lonely way and the still night, dared not turn his head; but the pursuer was only Felipe, who had followed the pony's trail. Juan cried out with pleasure and relief, whistled the dog to him and hastened on.

In another half hour Juan's teeth were chattering with the cold. The frost-laden air nipped savagely at his bare feet and legs. Suddenly Cosme stopped before a small log house, and the boy knew he had reached the Quillian horse ranch, deserted in the winter and early spring.

Juan wondered if the Quillian boys might not have left behind some old garment with which he could cover his half-frozen legs. Rolling stiffly from the saddle, he found the cabin door and entered. The reassuring presence of Felipe gave him courage to investigate; and he was rewarded by finding in a corner an old pair of wolfskin leggings or *chaparajos*.

How warm they were! When Juan was again in the saddle, they hung down, covering his aching feet.

It was only a few minutes after leaving the cabin before Cosme was stumbling among the bare shale rocks above the timber line. Juan was reeling in his seat, dazed with cold, when they entered the snow fields. The icy blast seemed to flay the skin from the boy's stiffening fingers. Felipe growled and whimpered at the pony's heels.

Juan thrust his right arm down inside the *chaparajos*, which were drifted so full of snow that they were as stiff as coats of icy mail. With his left he held to the reins.

"For grandfather!" he muttered. "For grandfather! Hurry, Cosme, hurry!"

The trail winds for some miles among the rocks, bogs, precipices and snow fields above the timber line. Then begins the abrupt eastern descent. Here the way ceased to seem long to Juan. He could not have told how he came there, nor why the arm that held the bridle no longer pained him.

Cosme, faithful pony, bent his head to the storm and plodded on, keeping the faint trail with a certainty no human being could have possessed; Felipe followed close at his heels. The rider clung half unconsciously to the saddle while the snow beat upon him and bitter cold crept, crept into his very bones.

Yet, even in the moments when Juan was delirious from suffering, he did not forget his errand, but held faithfully to its performance.

Jacob Mariner, landlord of the Wayfarer's Hotel in Rye, was accustomed to sit up late. It was after one o'clock when he put his newspaper down, stretched his arms above his head and yawned. The yawn was abruptly strangled as he saw a horse and rider cross the moonlit square in front of the hotel and stop beside the gate. Close at the heels of the pony followed a shaggy dog.

A minute afterwards Mrs. Mariner was roused by her husband's imperative call. When she came into the office she found him standing with an apparently lifeless form in his arms.

"It's a little Mexican boy, Sarah," he said. "The Lord only knows where he came from, but I guess he's done for. The left hand is frozen stiff."

But Juan was not unconscious. No sooner had Jacob Mariner laid him down than he staggered to his feet.

"I—want—doctor, señor!" he whispered.

"Of course you do, you poor little fellow!" said Mrs. Mariner. "Lie down now, and Jacob'll fetch him."

"No—no—for grandfather—at Huérfino Cañon. He must—hurry—hurry!"

Juan fell back, quite unconscious at last; but his message was given, and Jacob Mariner was not a man who needed to be told a thing twice. Within half an hour old Dr. Murgatroyd was at Juan's bedside, and his son, the young doctor, was galloping toward Huérfino Cañon.

When he came back, six days later, he hastened to the hotel and asked for Juan. He found the boy bolstered up in bed, wrapped in bandages. But his left arm had ceased to pain him. It was gone! The knife had been the only cure.

When the doctor entered, Juan sat up in bed with a great cry.

"My grandfather! O señor, were you in time?"

Dr. Murgatroyd strode across the room and took the remaining hand in both his own.

"I was in time," he said, "just in time. You are a brave boy, Juan."

ROYAL AND PRESIDENTIAL TRAINS

THE special train that the Czar of Russia used to travel in, with its twelve cars providing apartments for the Czar, his suite and guard, a real Russian bath, kitchens, a chapel and all the comforts of a palace, was formerly the most elaborate owned by any European ruler. The train of the Emperor William of Germany has seven partly armored cars and a locomotive designed to withstand even bomb and shell attacks. Everything that makes for efficiency is provided, including a library car, on the walls of which hang hundreds of military maps.

The train of the President of the French Republic, although not the most luxurious of the official trains of Europe, has perhaps the most interesting history of them all, says the Railway Age Gazette. It has figured in more important political events than any of the others, and has carried at some time nearly all of the great men of the world, including, possibly, France's greatest enemy, the Emperor William himself.

President Faure ordered the train hurriedly built in the autumn of 1896 for the purpose of carrying to Paris the Czar of Russia, whose visit at that time cemented the alliance between France and Russia. The whole train was built in thirteen days. So hastily was the private personal car built that not until the tenth day did it occur to anyone that the Czar might wish to take a bath. So the roof of the car was promptly cut open and a space made large enough to allow the lowering of a huge silver bathtub into a corner of the car. The tub is there after all these years, and so is the patch in the car roof. The train has its own great special housing shed at Villeneuve St. Georges, some miles out of Paris, but of late it has been as frequently out of its shed as in.

One of its most important trips since the war began occurred in October, 1915, when it conveyed the King of England to the French front, where he reviewed in company with President Poincaré fifty thousand of the troops that had taken part in the battle of Champagne.

Unlike the Imperial trains, the French President's train is not armored, and it has no protection whatever against bullets and shells. It was built at a time when no one thought that necessary. The four cars are elaborately upholstered in red and yellow silk velvets, and are of wood. They are not of the typical French construction, but look more like American parlor cars, except that the roofs are not fully rounded at the ends. The interiors resemble somewhat the tourist cars used on the Western railways of the United States, and are not divided into compartments like most English and Continental cars.

Although they are thoroughly comfortable, it is apparent from their fading curtains and upholstery, and their clumsy and ponderous arrangements, that they have outlived their time. They remind you of the old palace at Orléans, the magnificence of which is falling into decay, because no one can afford to live in the place.

MAKING STEEL HELMETS

THE steel helmets adopted by the French and British weigh from one and a quarter to one and a half pounds each. The materials used, says the Sphere, consist of plates of steel for the convex helmet and for the visor and neck piece, leather and cloth for the lining, and aluminum for the waving plaquettes that form the springs between the lining and the interior surface of the steel.

The rolled-steel plate has to be supplied enough to be worked cold, as heating would lessen its resisting qualities. That requirement compels the manufacturers to use a special steel obtained from very pure castings that are free from phosphorus or sulphur.

The helmets are coated with a dull gray similar to that used on the 75-millimetre gun, which is difficult to distinguish even at a short distance. In painting them, the manufacturers use a spraying process that has the advantage of being very rapid and of giving no inequality of surface. To add to the permanence of the paint they suspend the helmets on bars in a gas drying oven.

The lining consists of a cloth cap, to which is fixed a segment of black glazed leather cut in a particular form. One sheepskin provides about five linings; for making three million helmets about six hundred thousand skins have been used. The lining projects a little below the helmet, so that the metal in no place comes into contact with the wearer's head.

WHAT THE AMERICAN VOICE IS GOOD FOR

A RECENT dispatch from London to the New York Sun records the fact that an American physician visiting in that city has discovered that American voices are better adapted to the use of the telephone than the British voices. To this defect in the British vocal cords he ascribes the fact that the telephone service of London is much maligned, and says:

Americans do not have soft voices, but their vocal cords are tuned correctly for telephoning. English voices are not. They seem to lack the timbre necessary for carrying over the wires.

It is often remarked that American women are given to talking loudly in restaurants and other places. As a matter of fact, they do not talk any louder than their English sisters, but their voices have a carrying quality that is sometimes rather trying. However, it makes telephone using a pleasure for Americans, whereas for Britons the telephone is always more or less an instrument of torture.

SAFELY ACROSS

SANDY McLEOD and his donkey, says the Pittsburgh Chronicle, were well known in the country that gave them birth, and the two were on very friendly terms. Sandy would not have exchanged his "cuddy" for the best thoroughbred in the land.

One day, when he went out for a ride, he resolved to make his donkey jump a stream. He applied the whip, and the animal galloped to the edge of the bank and then stopped so suddenly that Sandy sailed through the air to the other side of the water.

When the Scotsman had sufficiently recovered from the shock, he rose and looked the donkey in the face.

"Verra weel pitched," he said, "but hoo are ye gaun tae get ower yersel'?"

To insure Victor Quality, always look for the famous trademark, "His Master's Voice." It is on every Victrola and every Victor Record. It is the identifying label on all genuine Victor Records and Victor Records.

Every kind of music for everybody

Your kind of music for you! The kind of music you like best!

Do you prefer to hear magnificent operatic arias, portrayed by Caruso or Farrar or Melba? Or are your favorites the charming old songs of yesteryear—the ballads so sweetly sung by Gluck and McCormack?

Or it may be that your tastes run to instrumental solos—the exquisite renditions of Elman or Kreisler or Paderewski. Then again, perhaps, you would rather hear Sousa's Band play some of his own stirring marches, or enjoy Harry Lauder's inimitable witticisms.

No matter—you can hear them all on the Victrola. It is the instrument for *all* kinds of music. It has not only gathered to itself the greatest artists in the world of song, but the most celebrated bands and orchestras, the famous instrumentalists, the leading comedians.

The Victrola is supreme in all fields of musical endeavor. It is *the* instrument for every home.

Hear your favorite music today at any Victor dealer's. He will gladly play any music you wish to hear, and demonstrate the various styles of the Victor and Victrola—\$10 to \$400.

Have You Heard of Peanuts Winning Prizes?

YOU'VE heard of prize pumpkins, of course; and prize corn and potatoes. But have you ever heard that prizes are given each year for the best crops of peanuts?

You have tasted some of these prize peanuts too—if you have ever eaten Beech-Nut Peanut Butter.

For only the choicest peanuts grown are good enough for Beech-Nut. So each year we send lecturers through Virginia and North Carolina to tell the farmers how to grow peanuts. And then we award prizes to the farmers whose crops are judged the best.

When you taste a Beech-Nut Peanut Butter sandwich, you are eating the largest, plumpiest and most delicious peanuts grown.

WHAT'S YOUR WAY OF EATING PEANUT BUTTER?

Most boys and girls love Beech-Nut Peanut Butter spread on bread, crackers or toast. Maybe you have found some new way to eat it. If so, write us a letter about it. We would like to hear from you.

Ask your mother to get you a jar of Beech-Nut today.

TWO DOLLARS A YEAR · FIVE CENTS A COPY

"I HAD it from her own lips," said Mrs. Tupper impressively. "This very afternoon at the Sewin' Society she said it. What more do you want?"

"Beats all how smart you are at makin' things!" says Miss Snippet to her,—"I do believe she'd go down on her knees, that woman, and kiss the ground Mis' Barclay walks on,— 'make your own bonnets,' she says, 'and your own frocks, and the tea cakes for the Society'— 'Yes,' says Mis' Barclay quick as a flash, 'and the beds of a morning, and Mr. Barclay's sermon Saturday nights.' Just like that—and laughin', too!"

Mrs. Tupper quivered with indignation. Her husband's ponderous bulk expressed even more capably the outraged majesty of the church.

"If that's a fact," he said, shaking his gray head solemnly, "the standing committee ought to know of it! Mr. Barclay is a very young man; but I will say he ought to write his own sermons. His wife is young, too, and worldly-minded, from all I hear."

"Why, she's no more than a child! And such frocks and furbishin's and table fixin's! Not that I've been to the house yet, but I've heard tell. Those Eastern girls are so set-up with their education—think they're smart enough for anything, even to writin' their husbands' sermons, I do suppose! What sort of spiritual sustenance are we likely to get from a little chit that spends half a day trimmin' a bonnet! And we payin' for a minister in good and regular standin'!"

"Scandalous!" exclaimed the deacon. "If I had had my choice—"

Deacon Tupper had been out of town when the Rev. William Barclay was called to the pastorate of the First Church of Lounsbury, Illinois; and he had not yet recovered from the shock of finding that a minister had been chosen without his help.

"If all that is true," he said again, "I shall have to inform the standing committee. They'd ought to consider it. Unless—" He hesitated.

"Unless nothing!" snapped Mrs. Tupper emphatically—with such vehemence indeed that the deacon at once decided to follow the alternative course that had presented itself to his slow-moving mind.

"Out 'n' out's the best way," he observed, reverting to a favorite maxim.

If by a direct personal suggestion he could turn the Rev. William Barclay from the error of his ways, well and good; if not, he would deliver him into the hands of the standing committee, to be dealt with as they should see fit. Thus reasoned the deacon, as he rose from the supper table and prepared for the long walk from his farm to the centre of the town.

The Rev. William Barclay, as it happened, was at that moment engaged in the serious occupation of pronouncing a verdict upon one of the very bonnets that Mrs. Tupper had so severely denounced. The triumph of millinery was poised airily for his observation on his wife's slender finger tips.

"Charming, my dear," he said, with hesitation. "But—a trifle large, is it not, for you?"

Mischief danced in Lucy's eyes.

"Do you think so?" she asked, and set the structure demurely on her own little head.

"O William!" she cried, dimpling with mirth at his perplexed face. "It isn't mine; it's for Mrs. Phipps, the doctor's wife. She came to me yesterday, and told me that I always looked so well in my things—she supposed it was my Eastern taste; and wouldn't I trim her a bonnet like mine, to wear to church!"

"Eastern taste, indeed!" said the minister, smiling at the picture of Mrs. Phipps's fat

Drawings by EMLEN MCCONNELL

"A WHIFF OF SALT!" SHE CRIED, STRETCHING OUT HER ARMS IN A CHILDISH GESTURE OF APPEAL AND LONGING

STORIES OF A MINISTER'S WIFE

By Margaret Johnson

II. A WHIFF OF SALT

and florid countenance under one of his little wife's bonnets.

"They all seem to want things like mine," said Lucy pensively. "I cut out a cape for Mrs. Bentley yesterday, and a skirt for Miss Robbins the day before. They will be asking me to make Sunday waistcoats for the deacons next."

"What about the house?" she asked presently, with her fingers still busy with bows and feathers.

"The Grays moved out Thursday. I think that the Martins will take it. They were there to-day; the parlor blinds were open when I went by."

Bending lower over her work, Lucy tried not to see the vision of the parlor that his words brought up.

"I must call on the Martins to-night," he went on. "They live not far from the Stone farm."

"You are going out to-night?"

"Calls, Lucy—always calls, you know." He bustled cheerfully into his overcoat as he spoke.

"Always calls," she repeated; "and we so seldom have a cosy evening together. Oh, well, that's what it is to be a minister's wife! It is a raw, cold night, William. Wrap up well. On a gray day like this, do you know, it seems—it has seemed so to me all day—as if there must be a whiff of salt in the air."

Her voice tried to be gay, but it broke a little, and there was an expression

in her eyes that her young husband did not care to see.

"The Stones have a sick child, and I must go to see them," he said. "Maria is in the kitchen; you are not afraid?"

"Oh, no!" she said, smiling; and he kissed her rather hurriedly and went out.

As the door closed behind him, Lucy sprang to her feet and ran to the window. Mrs. Phipps's bonnet fell forgotten to the floor.

"A whiff of salt!" she cried, stretching out her arms in a childish gesture of appeal and longing. What did the words not mean to her! The East—the home, the friends, the life she loved and longed for!

When the Board of Foreign Missions had rejected William Barclay, because he had some weakness of the eyes that was thought to make him unfit for the work to which he had meant to consecrate his life, he did what

was in those days the next best thing in the way of devotion and self-sacrifice—he went West. Of course his young bride went with him.

They were ten days on the journey to their new home, and at first the New England girl's heart almost broke with homesickness and longing for all that she had left behind. She visited in the families of professors—for Lounsbury was a college town; she boarded with various members of her husband's flock, and tasted the hearty hospitality and the varying fare of many a would-be home; but not

"YOU'RE A SMART LITTLE WOMAN," SAID THE DEACON

until she moved with her husband into a house of their own did she cease to feel herself a stranger in a strange land.

That house was a new and pretty cottage that the trustees of the church built for them; William gave them notes to cover its cost, and hoped soon to call it his own. Lucy, always winsome and charming, and ready to hide with a smile the sadness in her heart, blossomed into a new dignity and grace as the little mistress of the manse.

Her husband smiled to see her bloom like a flower among his sober people, knowing that her girlish gayety was only the sparkle of a jewel in the crown of her true womanhood. His work prospered, and Lucy began to rejoice in her hard-won content.

Then came a night when, watching with a mother at the bedside of a dying child, she saw, wondering, a glow burn redly in the eastern sky; and when her husband came in the morning to take her home, he told her that half the poorer end of the town had been swept by fire in the night, and that scores of people had been left homeless and forlorn.

They must do their share to alleviate the suffering—nay, more than their share. The minister must lead by example as well as by precept. With this new drain upon their slender pocketbook, they could not meet the notes except by renting their house. So Lucy, brave and laughing, moved her household gods into what she merrily called the "shanty"—

a tiny house composed of two rooms, a lean-to and an attic.

The change was hard to bear, but not so hard as the faint breaths of criticism that began to disturb the cordial relationship between pastor and people; for Deacon Tupper, a man of undoubted influence, returning to town, slighted and disapproving, threatened to sow a seed of discontent and discord where all had been harmony and good will. Lucy's homesickness came back; and to-night, standing at the window and stretching out her arms to the winter night, she wondered whether all the labor and the sacrifice had been worth while.

The very country itself, flat, dusty, muddy,—not a hill, scarcely a pebble within miles round,—made her feel discouraged and discontented. Her eyes ached for a sight of the sea, beside which she had been born and bred; her lips yearned for the taste of the salt spray. What was there here in this waste to encourage her for the life of work and deprivation?

Her hand went up to her eyes—and was stayed by the sound of a thundering knock on the door. She ran to open it, and in came a gust of wind, a whirl of snow—and Deacon Tupper. Lucy was astonished, for he had never called before.

"Parson in?" he asked, blinking at Lucy in the warm light of the cosy room.

"Why, no!" she said. "He has gone to make some calls, Mr. Tupper. But you will come in and wait a while, won't you? He won't be out late."

She smiled at him with a radiant and eager welcome, which he found it singularly hard to resist; and before he knew it, he was divested of his greatcoat and seated in a big chair at one side of the fire, while the minister's wife sat opposite and busied herself again with Mrs. Phipps's neglected bonnet.

The deacon felt that this sort of treatment put him at a painful disadvantage, and wished that he might have met the minister, as man to man, alone. However, it occurred to him that he might approach the subject of his visit delicately through the

minister's wife first. "H'm! Your husband is out a good deal, Mrs. Barclay?"

"Yes," said Lucy. "There are so many calls to make, Mr. Tupper."

"And when he is at home he is generally in his study, I suppose?"

Lucy laughed brightly. "This is his study. You have no idea how many things this room is. It's our parlor, library, dining room, Mr. Barclay's study and my sitting room; and on Wednesday and Friday evenings we move all the furniture out and have the Bible class here and the weekly prayer meeting."

"You're a smart little woman to do so much with one room," said the deacon. He had not meant to say it, but the words slipped out.

Lucy laughed. "It's a milliner's shop sometimes, too, you see. Look! This is a bonnet I am trimming for Mrs. Phipps."

The deacon smiled rather grimly. "New business, isn't it, for a minister's wife to be trimming bonnets for the congregation?"

"I think anything that helps along is a minister's wife's business. She can't do her husband's great work, and so she ought to be ready to do any little thing she can. Besides, I'm—I'm a little lonely sometimes, Mr. Tupper, and I like to trim bonnets."

The deacon met the frank, confiding look of her wistful eyes, and felt a queer sensation somewhere—he was not sure whether it was in his boots or under the muffler that bound his throat. His face softened. His big figure in the big chair had a kind and fatherly look to Lucy just then, and her heart overflowed at the touch of a sudden impulse.

"You see," she said, "at home I am one of a big family, Mr. Tupper, and I miss my brothers and sisters and my old friends, and the life here is all so strange and new. Oh, the people are kind,—I never knew such kind, good neighbors and friends,—but it isn't quite home, yet! And my husband and I see a good many sorrowful things among our people, so that it isn't always easy to keep the bright side uppermost. So, when I begin to be down-hearted or—homesick, especially since we moved here, I just sit down to some homy, pretty piece of work like this, and—it amuses me."

She smiled at him, gayly but earnestly. The deacon felt as if he had contemplated depriving a lonely little girl of her doll or her kitten. Such a brave little girl, too! Such a sunny-hearted little girl, making the best of the trying conditions of her life!

"Trim away!" he began heartily. "The more bonnets the better." And then he remembered his errand.

Lucy did not notice the change in his face. She had crossed to a desk in the corner, and now came back with some papers, which she laid on her workbasket.

"The next thing," she said, "is to make my husband's sermon."

The deacon almost fell out of his chair. What! Before his very eyes! He watched her, speechless, as she threaded her needle and got out her little scissors. Three triangular clips she made in the crease of each folded, closely-written sheet,—sermons were long in those days!—drew a thread back and forth through the folds, and then, gathering all these threads together where they appeared in the clips, sewed them firmly. Thus she bound the manuscript into a neat book, which she touched with the pretty reverence of a young wife for her husband's sacred work.

While her fingers were busy, she talked; but the deacon did not hear.

"And that's what you call making your husband's sermon?" he asked suddenly.

"Yes," said Lucy, innocently. "My sister Mary taught me how. She always made Dr. Thorne's sermons for him."

"I—vum!" said the deacon.

He might have known that Mrs. Tupper had made a mistake! In the extraordinary reaction of his feelings, he came near letting the cat out of the bag, but he controlled himself in time; and as big and stubborn men sometimes do, under the influence of such a reaction, he deserted all his past convictions and went squarely over to the other side. He looked upon his little hostess with compunction and with new respect, and, with his doubts forever set at rest, gave himself up to the charm of her frank and winning ways.

As for Lucy, she felt the warming of his big heart toward her, and threw herself confidently upon the kindness that seemed to open strong arms to her out of the dreary night. In the next half hour she told him more of her husband and herself and of their struggles and hopes and trials and joys than she had ever told anyone in Lounsbury. The heart knows instinctively when and where to find its comfort. When Lucy and the deacon parted, they were fast friends.

"If ever you get lonesome again, and don't know what to do," he said, with a twinkle under his bushy eyebrows as he bade her good night, "let me know, and Mrs. Tupper shall send you a bonnet to trim."

As he went out of the little house, cherishing a certain resolution no less firm than that with which he had entered, he met the Rev. William Barclay just coming in; the deacon shook him by the hand with a fervor that sent the young minister, wondering and astonished,

into the parlor. "What have you been doing to Deacon Tupper, Lucy?" he demanded.

"Showing him Mrs. Phipps's bonnet," said Lucy, demure and smiling.

As before, the deacon did not delay in acting on his resolution. So it happened that on New Year's Eve the "shanty" was invaded by an unexpected throng of guests, who came bringing gifts and greetings.

Lucy had never seen a donation party before—perhaps had rather dreaded the thought of such a thing; but she had not realized how clearly it might express the appreciation and affection of a people for their minister and his wife. It seemed to her that every good deed that she had done came back to her now fourfold in love and kindness.

The professors and the teachers were there; Mrs. Phipps was there, resplendent in her bonnet, and Mrs. Bentley in her cape. Mrs. Tupper was there, half jealous still of the "frocks and furbishin's," half eager to know for herself the woman whom everyone loved.

As the minister and his wife stood together, —the centre of a crowded group,—Deacon Tupper, after warmly shaking the young man's hand, presented him with a long envelope.

"A little token, Mr. Barclay," he said, not

without a pleasant embarrassment, "from the congregation, for you and your wife. Long may she live to make your sermons for you, sir, and you to preach 'em!"

William did not altogether understand that remark; but Lucy did, and she caught the old man's hand in hers with a look and a smile that he never forgot. The envelope contained William's notes for the debt on his house, duly canceled, together with an invitation to a housewarming there the following month. When the last guests had gone, shouting out their New Year's greeting upon the frosty air, Lucy stood alone in her little parlor and stretched out her arms after them; her face glowed with pride and tenderness and gratitude.

"How rosy you are, my dear!" said her husband, coming back and putting his arm round her with a glance of tender drollery. "You look almost as if after all you had had your whiff of salt."

"Oh!" she cried, lifting her dewy eyes to his. "The salt of human kindness, William, of human love! There is nothing like it in all the world! And it is ours. A whiff? Why, the whole air is full of it! How can I ever complain again, my dear, while, East or West, I have this air to breathe!"

says that she has complete confidence in my open mind and sense of justice."

"Your mind is open enough," said Ida, dryly. "You always side with the last person who tries to persuade you."

"Well, if that's true," said Lucile triumphantly, "of course I have to keep out of her way. It would be a case of subjecting my judgment to undue influence, you see. She says that everything now depends on my decision, because the third member of the class, Ellen King, is a mush of emotion where Miss Kline is concerned. For myself, I'd rather be a mush of emotion than an icicle of selfishness—that's what I think."

Lucile turned upon Ida with a sudden change of manner.

"Ida, it worries me so that I can't sleep. I don't want to sign it. Ellen doesn't want me to. She says that Miss Kline can't stay at college next semester unless she has this class, because so few have elected math. She says it means an awful lot to her. I almost promised I wouldn't sign it; but Kate is going to make me do it. She won't let me say no."

Ida saw a nervous quiver of Lucile's lip that told of tears very near the brim.

"Let's make a game of it," she said. "I've been dreading this vacation, with only a dozen girls or so drifting like lonesome ghosts round the big, old, empty place. I've been feeling creepy along my spine at the mere thought of these long, dim, silent corridors at night; but now this will be some fun. We'll pretend that you and I are in a citadel besieged by the enemy. We'll plan all sorts of stunts: ambushes, sallies, forays for food—"

"I'm hungry!" wailed Lucile. "It is time to make a foray now."

"All right. I'll scurry down to the store and capture provisions while you throw up fortifications or something. Don't you remember how Caesar used to do things in the Commentaries? Good-by!"

After reflecting for a moment, Lucile began to prepare the fortifications by locking her fire-escape window. Then she joyfully drew out the wicker tea table and arranged dishes round a spirit lamp, which she lighted, after making a rapid expedition to the water cooler at the end of the corridor. The kettle had plenty of time to boil before the sound of light, swift steps and a triple tap! tap! tap! proclaimed Ida's return. Lucile opened the door with a great show of caution, and as soon as Ida had squeezed inside clicked the key in the lock. When she swung round to survey the provisions, her face fell.

"You didn't get very much," she said.

Ida let her medley of small parcels slide down on the couch.

"Some of it broke," she said. "I had my arms loaded and was just reconnoitring round the elevator, when Ellen King came gliding out of nowhere. She said that I was just the person she wanted to see, and asked me whether you had left college; it seems she has been to your room three times since coming back last night, for she is extremely anxious

to speak to you about something important. She looks pretty white and sort of worried. I was quite cool and sweet and polite, and kept edging away while she followed along. All at once she burst out and asked me whether I knew how you felt about that course in mathematical astronomy."

"What did you say?" demanded Lucile. "I said—I said—Oh! And then my bundles all slipped. I didn't mean to drop the eggs or the sugar, but I happened to hold on to the wrong bag. Two eggs, Lucile, at five cents apiece! I was so mad to see the yellow oozing round in the sugar!"

"She ought to trust me," declared Lucile. "I almost promised her that I wouldn't sign that old petition. I told her that I would do my best to help keep Miss Kline at college."

"Two eggs!" mourned Ida. "Two whole, real eggs absolutely wasted!"

"Cheer up!" Lucile pounced upon a loaf of bread. "Where's the butter? Come along and eat."

The two girls were scarcely seated at the table with their cups of cocoa sweetened by the remnant of sugar rescued from the torn bag, when the quick thump! thump! thump! of determined heels entering the alleyway struck them motionless. With their eyes on the open transom, they listened. A loud and resolute double knock was followed by a

GIRL-AFRAID-TO-SAY-NO

By Julia Augusta Schwartz

STANDING in the middle of the study, with a finger at her lip and her head on one side, Lucile listened intently to the rapid footsteps that were retreating from her door. As each firm step sounded unmistakably farther away than the last, her brow smoothed, her hand dropped, her worried eyes cleared. Chuckling, she tiptoed toward the door.

Opening it, she peered cautiously down the long tunnel of the deserted corridor. Yes, that distant figure marching on with a resolute swing of the square shoulders was certainly Kate Norton. Even the sway of that old gray skirt as she rounded the corner had a determined air. Kate was not the kind of person to be balked of her purpose many days longer.

Lucile gave a rueful little shiver, and then laughed again, for, after all, the situation was amusing from a disinterested point of view. Here already she had wasted three precious days of the winter vacation in scuttling out of Kate's path. And, worse than that, Ellen King might turn up at college any hour now. Then Lucile would have a lively dance of it to avoid falling into the clutches of one or the other of her pursuers.

What is an amiable and obliging young person to do when one friend is bound that she shall sign a petition and another friend is begging her not to do it? If she hates to say no to Kate and cannot bear to say no to Ellen, of course she has to keep out of sight, even if she starves in the process. She was starving now. Here was her chance to scurry down to the basement storeroom and lay in a supply for an indefinite siege. She dared not risk appearing for meals in the dining room. Opening the door wider, Lucile slid one foot over the sill. What was that?

It was a swish of petticoats and a patter of feet as some one came lightly into the corridor from the fire-wall stairs, which were only a dozen steps up the passage. Lucile gave a little cry as she turned round. She could not help it, although she was instantly aware that this butterfly approach could not possibly portend that Kate had doubled on her tracks, for Kate was a person who moved with ponderous energy.

"O Ida, you horrid girl! I thought you were she."

"Well," said Ida composedly, "I am certainly not he."

Lucile giggled at that mild joke so hysterically that Ida looked at her with concern.

"You're nervous," she said accusingly. "You don't laugh like that generally. It's the middle of holiday week, and I don't believe you've stirred outdoors for exercise all the while I've been away. Have you, now?"

"I don't dare to. Kate Norton is after me. She fairly haunts this corridor. She's been

DRAWN BY FLORENCE STORER

"HUSH! SOME ONE'S COMING!" BOTH GIRLS STOOD PETRIFIED

here to-day about forty-seven times already. I keep my door locked, and I go to bed at dark, because if I light the gas she will know I am here. I haven't had anything to eat since yesterday except two pickles and one lemon and some cheese and a box of crackers. It is lucky that you've come back to save me from perishing utterly. She's sure to catch me if I even peer out to smell the dinner."

"What does she want you to do?" asked Ida.

"Sign a petition. And I don't want to. It's an unkind petition. There are only three of us who have elected mathematical astronomy. As soon as Kate heard that it is to be given next semester by an assistant of the math department instead of the regular professor, she got up this petition to protest against Miss Kline. And Miss Kline is so dear and sweet and diffident and cares such a lot! And you ought to see the way she smiles when I meet her. I won't sign it. I won't!"

"Why not tell Kate so?"

"Tell her so?" echoed Lucile, almost aghast. "Why—why—why—I don't like to. Kate is so sure she is right! She talks and talks and talks about not letting sentiment interfere with conviction. She says that the standards of the institution are at stake. She says that her entire future career depends on the thoroughness of her training in that particular course. She

RICE-GROWING IN MANY LANDS

By Beverly T. Galloway, Dean of the New York State College of Agriculture

THE chief physical concern of mankind is food, and the world-old problem is where to get it and how to get it with the least expenditure of energy. We may truly regard rice as the great staple food of the world. History does not record when it first came into use, but it was probably a staple article of diet long before many of the other grains—such as wheat, oats and maize—had been tamed by man.

The widespread use and cultivation of rice in thickly populated Old-World countries is doubtless owing to the fact that it is a water crop. Water is its life, and when combined with proper heat, sunlight and rich soil makes it yield enormous returns. If wheat responded as readily to water as rice does, we could feed the world from the prairies of Nebraska and Kansas.

In the older countries, where the struggle for existence is keen and where the cheapest of all labor is man labor, a prodigious amount of human energy is spent in growing rice. Almost one half of the land capable of cultivation in Japan is planted to the grain. Handkerchief gardens would perhaps best describe the little rice fields, many of which are no larger than a tennis court, are equally flat, and are surrounded by rims of earth to hold the water when the fields are flooded. The average rice field in Japan is about one acre and a half in size, but, large or small, each field must be leveled, and each must have its rim or dike; then there must be a system of canals to bring water to the fields, and another system of ditches to take it away when it is no longer needed.

If the land were fairly level the preparation of the ground, which is all done by hand, would not be so hard nor would it require such vast amounts of human labor; but Japan is a mountainous country. Terraces must be cut from the steep hillsides, and so leveled that they will hold the water at a uniform depth over the small fields.

It is said that there are twelve thousand square miles of rice land in Japan, the greater part of which has been prepared with an almost infinite amount of labor. That area of land cultivated in rice virtually feeds a nation of fifty million people.

The little fields are usually permanent, and frequently a farmer owns three or four scattered fields. That further increases the work of caring for his crops. In recent years, however, the government has tried to consolidate the holdings of farmers by a process of land exchange.

TRANSPLANTING THE RICE

BUT if it is laborious to get the fields ready, it is equally hard work to plant the crop. The Japanese first sow the larger part of their rice crop in little beds, where they can give the most scrupulous care to enriching the soil, to putting on the proper quantities of water, to weeding, and to controlling insect and other pests that may attack the baby plants. They sow the rice seed very thick, sometimes at the rate of twenty to twenty-five bushels to the acre, and then cover it lightly. In a short time the seedlings begin to sprout.

When the plants are from six to eight inches high they are ready to be transplanted to the fields. The farmers have previously enriched the soil of the fields, and have turned it over to the depth of eight inches or more; they have also run water in until the soil is about the consistency of mortar. Into that muck men, women and children wade, carrying handfuls of the seedlings from the nursery beds. Toting with bent backs through the slimy mud, the workers place one seedling in about every square foot of ground. In that painstaking, laborious way they plant twelve thousand square miles—7,680,000 acres—of land.

But that work is only the beginning. The crop must be weeded, protected, harvested, threshed and cleaned before it is ready for use. Virtually all of the work is done by hand; and when we consider that enough rice must be grown to furnish about a pound a day for every man, woman and child in the empire, we get some idea of the magnitude of the work.

Methods of growing rice in China do not differ essentially from those used in Japan. China produces enormous quantities of the

RICE SEED BEDS IN JAPAN

crop, and by the judicious use of water and a rigid system of preserving all the natural resources affecting the fertility of the land is able to produce on the same acreage twice as much of the grain as we do of wheat.

ON THE TERRACED MOUNTAIN SIDES

THE tropics, with continuous growing weather and abundant rainfall, offer every opportunity for the intensive methods of cultivation to which rice readily responds. On the island of Ceylon the growing of rice has resulted in some of the most wonderful pieces of agricultural engineering in the world. As the train climbs from the more or less dry lowlands of the coast into the mountainous interior of the island, where tropical downpours are frequent, one sees the remarkable mountain terraces where the natives grow their rice. These terraces are built along the sheer sides of the mountains and range one above the other frequently for many hundred feet. In most cases the terraces are not more than forty or fifty feet wide.

For centuries the natives have built the terraces—always by hand. From a mere view of the terraces through the car window, you would suppose that the first torrential downpour would completely destroy them. They are so strongly and ingeniously built, however, that they can withstand any number of heavy rains. Part of the water, of course, passes over the terraces and down the mountain side; the walls retain only the proper amount for the rice crop.

Under the wise direction of the Dutch government, the natives of Java, like the rice growers of the Philippines, are coming more and more to use animal labor and machinery in producing their rice crops. It is not uncommon to see groups of natives with teams of water buffaloes, or carabaos, leveling and preparing the ground and making it ready for flooding.

Because of the continuous growing season in Java, rice is planted and harvested during almost every month of the year, and the harvesters, therefore, have to work with a great deal of care. Most of the labor is done by women and children. With a small knife the worker cuts one head of rice at a time, and when a large bundle is cut carries it out to the bank; then he returns to cut and carry out another bundle, and so on. Since rice ripens unevenly, the harvesters must determine from the appearance of the head whether it is ready to cut.

Rice-growing in the United States has become important. Of course the rice crop does not as yet begin to compare with the wheat crop or the crop of maize; but when America learns the value of rice as a food, the use

of it will undoubtedly be widely extended. Our total crop of about four hundred thousand tons is small compared to the estimated sixty-five million tons that are raised in China.

Rice was first grown in the United States near the seacoast in the Carolinas. The ground was prepared by hand, the seed was hand sown, and the grain was reaped with a sickle and threshed with a flail; but with the disappearance of cheap labor in the South, and the discovery that the flat prairie lands of Louisiana, Texas and Arkansas were available for rice culture, the industry underwent a complete change.

The first rice planters who tested the prairie land—it was then worth from two dollars to two dollars and a half an acre—raised heavy crops and made large profits, and presently there was an influx of grain farmers from the North. Very soon the planters hit upon a system of rice farming that has yielded most excellent results. Because of the level land and the abundant supply of water they found it practicable to lay out the fields in blocks of thirty-five to forty acres, instead of in little garden patches such as are found in the Orient. Round those large fields they built levees and brought the water in by means of canals and ditches.

THE METHOD IN TEXAS

IT takes about one hundred and thirty-five days to grow a crop of rice. Early in the spring the ground must be prepared, and to that end no water is permitted on it during the winter months except what comes as the result of rain. The ground is therefore fairly dry and can be ploughed in much the same fashion as in the Northwest wheat sections. In many parts of Louisiana and southern Texas the planters use gang ploughs, which turn from three to five furrows at a time and are drawn either by mules or by traction engines. After the ploughing, or coincident with it, large gang-disk or spring-tooth harrows

put the soil into thorough shape for planting.

Then comes the seeding, which is done by means of large forced feed drills, or sometimes by broadcast seeders attached to the rear of an ordinary wagon and worked by means of a chain and sprocket. A single farmer in Louisiana or Texas, working with machinery, can produce as much rice as three hundred to three hundred and fifty Chinese or Japanese farmers working by hand. After the rice has been drilled or sown, the success of the crop depends on letting in the proper amounts of water. For about three months water remains on the field.

In Louisiana, Texas and Arkansas, water usually has to be pumped into the rice

fields, and some of the largest pumping plants in the world are situated along the streams near the plantations. The water does not have to be lifted very high, but it is needed in enormous quantities. Since the discovery of oil in the South a great deal of the pumping is done by means of oil-fed engines, but there are many elaborate and extensive pumping plants that are run by electric power. It is found very economical to have a central power plant, and to distribute the electric power to the various pumps by means of overhead wires. The pumps are used not only for lifting the water into the rice fields but also for drawing the water back into the canals.

In harvesting their crops the planters use a twine binder drawn by from six to eight mules. Several weeks earlier they draw the water off and let the ground dry out. Owing to the low levees and to the arrangement of ditches and canals the harvesting machinery can run without obstruction. That method of harvesting could probably not be used anywhere else in the world; it is practicable here because of the nature of the soil, which dries out and hardens between the draining off of the water and the ripening of the grain.

The planters cut and shock the rice very much as they would wheat. After it has thoroughly dried out in the shock they sometimes collect it in one central place and stack it. Usually, however, they thresh it in the fields by means of giant steam threshers that turn out hundreds of bushels an hour. The rice grain is covered with a closely adhesive hull. Before it goes to market, therefore, it must be sent to the mills, hulled and cleaned, and prepared for sale.

WORTH MORE THAN CATTLE

THERE is an interesting true story about the beginning of rice culture in Texas. After the crop had been successfully grown in Louisiana for a number of years some efforts were made to introduce it into Texas. Big ranchers there, however, were conservative, and had little confidence in anything except raising cattle on an extensive plan.

One enterprising man, however, a trusted employee of one of the large ranch owners, had faith in the future of the country as a home for the small farmer. He wanted to see the region broken up into comparatively small farms instead of being retained as a mere range for semi-wild cattle. He visited Louisiana, became interested in rice-growing in the southern part of the state, and decided that he would try to introduce the crop into Texas.

Although his employer gave him no encouragement and told him that "ranching with a plough" would not succeed in Texas, he did give the young man permission as an experiment to plant rice on a fairly big tract of land, in the lower part of the cattle range.

That crop was one of the most successful ever grown in the South. The young man, wishing to impress on his employer the value of the crop, engaged all the teams that he could find. They all assembled at the rice farm on a certain day, and when they were loaded started toward the railway station by a road that led past the rancher's house.

About sunrise they began to pass. After they had continued to go by for an hour or two, the ranch owner, who had not been near the rice field and who had indeed forgotten that he had ever given permission to make the experiment, became curious, and asked where the wagons came from and where they were going. He then learned that they were loaded with the product of a crop from his own land.

That one crop of rice brought him more than all his cattle. Thereafter he was willing to let his young assistant plant to rice all the land he wanted; and he also let him sell off land for small farms. That was virtually the introduction of rice-growing into southern Texas. Now the rice crops cover many thousands of acres and bring excellent profits to the planters.

The rice industry has already had a profound influence on Southern agriculture, and it is undoubtedly destined to bring still greater changes to that part of our country.

RICE TERRACES ON A MOUNTAIN SIDE

vigorous rattle of the door knob. In a few moments the sound of a scratching pencil came to them, and they knew that the visitor was leaving a message on the note pad. Then there was a second resentful rattle of the knob, followed by the thud of firm steps retreating from their citadel.

Lucile lifted her cup.

"Saved!" she said.

"She's left a note on your pad. Aren't you going to read it?"

"Not till I feel somewhat stronger, thank you. Did you by any chance purchase anything so strengthening as cheese?"

"No," Ida answered shortly. "See here,

Lucile, I am going to get that note. It may be something important."

"What Kate has to say is always important."

Ida opened the door, tore the scribbled sheet from the pad and carried it to Lucile.

"Read it, please," said Lucile.

"All right. Listen!"

"Lucile Howard, I must say that it is most peculiar that I can't find you or any trace of you in any part of the college, although the records show that you are supposed to be spending the holidays here. Such a mysterious disappearance is undoubtedly a case for the authorities. Moreover, I smell your spirit lamp. I shall expect to see you in my room

before nine o'clock to-night, as I have a most important communication to make to you. Otherwise, I'll have everyone in college on the search for you to-morrow."

Ida glanced at Lucile, then read the final sentence:

"In fifteen minutes, exactly, I propose to return to this door, in order to make sure that you have read this note."

Lucile's agitated hands flew into the air.

"Did you tear it off the pad? Oh, where's the mucilage? Paste it back quick. Quick, oh, quick, Ida! She'll think I haven't seen it, if it is still hanging there on the door. Hurry!"

"But how about to-morrow?"

"Oh, never mind about to-morrow! An earthquake may happen before then. This is to-day. I can't speak to her. I can't, I tell you. I won't! She bulldozes me!"

"Why—not—say—no?"

"Because"—Lucile was searching frantically in her desk—"because—oh, where is that mucilage? Because I don't like to, I tell you. She is so sure she is right. She says she knows I am above being a narrow-minded, emotional, irrational feminine creature who is swayed by feeling instead of principle."

"Lucile, don't be a coward."

"Wh—what?"

"Don't be a coward. I'd hate to oppose

Kate Norton myself. It takes some backbone and grit; but let's not skulk any longer. Let's fight out in the open. Don't paste that note back on the pad. Please don't! When she comes back, let's tell her frankly —

"Hush! Some one's coming!"

Both girls shrank petrified.

The double patter of steps in the alleyway announced the approach of two persons. Some one knocked gently once or twice, and then the girls heard the footsteps pass on down the hall, mingled with low voices.

"I am sorry that she's out," they heard one of the visitors say. "I wanted you to meet her before you leave. She is one of my most interesting girls. Perhaps it's because she is so full of possibilities. She is really charming, but sometimes I doubt whether she has any backbone at all. She —"

The voices ceased.

"She says I haven't any backbone!" cried Lucile in astonishment. "It was Miss Kline."

Ida opened her mouth, then closed it.

"Why, I thought she liked me!"

"She does," said Ida. "She always has."

"But she says I haven't any backbone!"

"Well, have you any backbone?" said Ida. "Have you really? What if she were right!"

Lucile gasped. Then her anger flamed up.

"She talks about me like that to a stranger! And you know how much I have endured to protect her. I guess if she doesn't bother about my feelings, I needn't worry about hers!"

"What!" exclaimed Ida.

"You heard how she talked about me. I shall go straight and sign that petition. I wish Kate were here now."

"Here she is," said Ida slowly, and, turning away, walked to the window.

Lucile gave one look at the slender figure standing there with drooping shoulders. She knew how Ida's eyes looked when they were filled with tears.

"Ida!" she said.

There was no answer. Snow was falling silently against the pane. Lucile cocked her head. Yes, that was Kate's step coming down the corridor. She flung the door wide open and ran across the little room.

"Ida!" she cried. "Ida, you've got to come and stand by me. Come quick and hold tight to my hand. I'm going to say no."

some discomfort, they were quite certain it was not equal to theirs. They tugged and tossed, first with one rope, then with another, all the while growing more chilled and more desperate. Another flash illuminated the street for them, and showed it empty; evidently all those who had been in a similar predicament had adjusted their flaps and were once more warm and snug under shelter. To feel that they alone were incompetent aggravated the unpleasantness of the situation. Gray grew excited and out of temper, and began to denounce the perversity of the ropes and the animosity of the rain and wind; his voice rose with his irritation and his vocabulary became more violent. The result was sarcastic encouragement from Greiner and laughter and applause from the two neighboring tents, mingled with such cries as, "Oh, cut it out! Can't you let a fellow sleep?"

These appeals had the effect of restoring Gray's good nature. "You lazy boobs!" he called out in reply. "Why don't you get up and help a fellow? There are men being drowned in their beds, and I can't save them."

Laughter greeted the remark, which struck Ted as so funny that he went on chuckling and snickering even after the others had ceased. His appreciation was contagious; at least it caused Gray to chuckle and snicker, too, even while he continued his efforts with the rope.

"Say, you two lobsters think you're awfully funny!" Greiner's voice was raised in annoyance and exasperation. "I believe you're just

"Our corporal says your tent shouldn't have got in his way!" Gray called to the complainants. "Wait a second; I'll see what I can do for you."

He and Ted thrust in the uprooted stakes as far as they were able. "Got an axe or a mallet, anyone?" Gray asked; and some one shoved an axe out from under the A Company tent. In a few moments he had driven the stakes in solid and made the guy ropes fast. Then he and Ted heaved on them, and the afflicted neighbors expressed their thanks, and also their opinion of the clumsy corporal.

"Now, then, come here and tend to business!" ordered Greiner, whose temper was not improved by the taunts and maledictions. "Ripley, you take this rope and carry it round that way. Gray, you take this one and follow Ripley. If the thing catches, with either of you, don't jerk and yank; toss it up and try to loosen the flap gently. I'll handle this rope myself."

But the efforts failed; the flaps seemed lashed securely in place.

"Confound it!" exclaimed Greiner. "What kind of a mess have you two made of these ropes since you've been out here? I don't see how we're going to get that hole closed. I'm going in to keep dry the best way I can."

"You fellows have a corporal that's a quitter, haven't you?" came a voice from the A Company tent.

"Quitter nothing; it's not my job to keep other people dry!" Greiner answered. And then, to justify himself to the listening hostile ears, he addressed Gray and Ripley:

"You fellows got those ropes tangled up so they won't work; it's up to you to fix them."

"You certainly are a bird!" ejaculated Gray.

But Greiner ducked into the tent and there announced to the others, "You fellows will have to keep yourselves dry the best way you can. There's nothing to be done about it."

"There's one thing I'd like mighty well to do about it," said Gray, who, with Ted, had followed Greiner inside. "I'd like to lead a mutiny with anyone to put you and your bed under the drip."

"There's nothing I'd like much better than to have you try it," retorted Greiner.

There was a morose silence while in the pitch-black darkness of the tent the three fellows dried themselves and hunted for clothing. The rain beat, the wind battered, and the torrent poured in through the hole in the roof, splattered and splashed, and formed pools and rivulets in the sandy ground.

"I wonder," said Stevens, who had been lying in bed without speaking through all the controversy that had raged, "I wonder if it wouldn't be possible for one of us to shin up the pole and fix those flaps? I guess I'll try it."

He made the effort, and got up about two thirds of the way before he slid back.

"It's so wet and slippery," he explained; "but I think I can make it."

"Let me try," suggested Ted. "I'm much lighter; just give me a back to start with."

"All right."

Stevens stood close to the pole; Ted mounted from a bed to his shoulders and then sprang upward. He was a good climber and he did not have very far to go, but the pole certainly was slippery. He clung and scrambled, and at last succeeded in getting a hand on one of the ropes at the top of the pole.

"Good boy!" cried Stevens. "Now can you manage the flap?"

Ted worked away with his free hand. "I think I've got it now!" he called after a moment. "Only some one will have to go outside and carry the ropes round before I can fix it in place."

"I'm your man," said Gray, and dashed out at once.

A little manipulation by Ted and some corresponding manœuvring by Gray, and the flap was closed and the rain shut out. Ted slid down the pole, Gray ran back into the tent, and each of them received the warm congratulations of the other occupants, with the exception of Greiner.

"Now, for goodness' sake, let's cut out the talk and get to sleep!" said the corporal.

The next morning the sun was shining bright and warm. After the setting-up exercises the fellows spread their wet garments and bedding on the sunny slopes of the tent. Some members of A Company came strolling round out of curiosity, and stood grinning while the clothes were being arranged.

"Which is Corporal Greiner?" asked one, and the others all laughed. The question was

THE PLATTSBURGERS

By Arthur Stanwood Pier
In Ten Chapters Chapter Five

THE lieutenant's denunciation affected the three culprits differently. Ted felt mortified, Gray was indignant, and Bradford was inclined to see some humor in the situation.

"Whew, what a call down!" Bradford said. "Wouldn't it have been nuts to Greiner if he'd been listening outside!"

"Wharton's a narrow-minded, petty tyrant!" Gray declared hotly. "He's the only officer of the kind in the whole camp. No other company has an officer that bawls the men out and is always sarcastic and disagreeable. Greiner and Wharton are two of a kind—lobsters, both."

"What do you suppose would happen to you if you told Wharton that?" asked Bradford.

"He'd probably order me to be shot at sunrise, and put Greiner in charge of the firing squad. I'll bet anything Greiner's been sniping to him; I'll bet that's what he was doing in his tent. And he's getting away with it, too. Wouldn't it make you sick!"

"I hope, anyway, the lieutenant understands that Stevens didn't put us up to this," Ted said anxiously.

"We made it clear enough to him, but it would be just like the lobster to be prejudiced against Stevens in spite of it."

"I say we keep this thing to ourselves," suggested Bradford; "we don't want it to get to Greiner's ears."

"No, that's right," said Gray. "I'm sore in body and soul; that saddle took most of the skin off me this afternoon. I think I'll go to bed."

Some time in the course of the night Ted was awakened by a peal of thunder. Then he was instantly aware that rain was pouring down on the tent and that a high wind was driving it in under the rolled-up flaps. He began to undo the sustaining ropes near his bed and lower the flaps there, and soon everyone in the tent was awake and busy at similar tasks. The storm increased in violence, lightning flashed and thunder pealed at frequent intervals, and the rain not only pelted furiously upon the walls of the tent but came cascading in through the opening at the peak. Stevens and Bradford moved the rifle rack out from under the stream; others rescued the clothes, which, hanging against the tent pole, had been receiving the full benefit of the deluge.

"We've got to have that top closed," said Greiner from his comfortable pillow. He had finished letting down the flaps along the side of his bed, which was in no exposed position. "Some of you fellows will be drowned out."

"For once you're right," remarked Gray. "The foot of my bed is getting soaked."

"Then I guess you're elected," remarked Greiner, with a chuckle of satisfaction. "It's usually a two-men's job to get that top closed. If you find you can't do it alone, let me know, and I'll send Ripley out to help you."

"Oh, sure, you'd send some one else, all right!" said Gray, getting out of bed. "You're the most helpful little corporal I know. One thing," he added, and he began to strip off his pyjamas, "I'm going to keep these dry, anyway—the only dry things I own."

"I'll go out with you; I'd rather go than

DRAWN BY NORMAN ROCKWELL

"WERE YOU ASKING WHICH IS CORPORAL GREINER? THERE HE IS—THE FINE-LOOKING, DARK-COMPLEXIONED FELLOW. THE ONE YOU'D PICK RIGHT OFF AS A LEADER OF MEN"

be sent," said Ted, and he followed Gray's example and divested himself of his pyjamas.

"If you need a third, just give a call," remarked Stevens.

"Maybe if I did, Greiner would beat you to it," answered Gray, and with this parting shot he dashed out into the rain. Ted followed, and gasped as the cool, driving rain slapped against his bare skin.

"Wow!" said Gray. "Look, everyone's doing it!" And he burst into a laugh.

Ted looked up the street, which at that instant was illuminated by a flash of lightning. About almost every tent naked or half-naked figures were capering, tossing ropes or running with them. After the flash the forms could be only faintly seen, and the voices of advice, command or irritation were all drowned in the ensuing roll of thunder.

There were three ropes, each attached to a separate flap, to be dealt with, and the problem was to get hold of the right rope first, as the flaps had been folded back one upon another. Ted took what seemed to be the right one and started to walk round the tent with it, stepping over the guy ropes as he did so; but the flap at the top remained pinned down, and, although Ted shook the rope in the most persuasive manner, it was without result.

"Get over on the other side," suggested Gray, "and I'll throw the rope over to you, and then I guess you can pull the flap across."

Ted clambered over the guy ropes and waited. But after a time Gray called to him, "It's no use; every time I throw, the wind beats the flap back!"

"Hurry up, you two!" came Greiner's voice from within. "We're all getting wet now."

"That's the best news I've heard," responded Gray.

But the rain came pelting down and the wind blew with increasing violence; and although it was a satisfaction both to Gray and to Ted to know that Greiner was suffering

holding those flaps open so as to flood us—not trying to close them at all."

"Say, old top, how did you guess it?" was Gray's disrespectful response; and again came laughter from the other tents and indeed from that of the sufferers.

"I'm coming out to see what you're up to!" shouted Greiner, thoroughly angry. "If you're putting up a game on us, I'll bat your heads together."

"Who's the grouch?" asked some one in the adjoining A Company tent.

"Corporal Greiner," responded Gray. "Corporal Greiner, Squad 16, finest little corporal ever was seen."

The impromptu rime was rewarded with another burst of laughter, and some one in the A Company tent asked, "Who's the wit?" Before Ted or anyone else could make reply, Greiner, stripped to the skin, came rushing out, crying, "Now, what's the matter with you two dubs?" He seized and jerked the ropes from Gray's hands and started to circle the tent with them, stumbled on the guy ropes and fell with his full weight against the A Company tent. The consequence was that two of the stakes were wrenched out of the ground and that the side of the A Company tent was suddenly flattened inward by the force of the wind and rain, while the occupants howled out imprecations and demands for instant remedy.

"Haul that tent off my head!" "You clumsy chump, what do you think you're doing out there?" "Stay in your own street, can't you?" Those were but a few of the remarks that the aggrieved A Company men addressed to Greiner.

"Oh, shut up! I've got troubles of my own!" answered Greiner. And he proceeded to haul on the ropes of his own tent without trying to redress the damage he had done.

The complaints and demands of the A Company men grew more insistent, but Greiner, fussing and muttering over his own problem, paid not the slightest attention to them.

unnecessary, for the chevrons on Greiner's sleeve identified him. He flushed and turned his back.

Gray, however, came up to the group of visitors and with an air of great innocence and in a loud voice said, "Were you asking which is Corporal Greiner? There he is—the fine-looking, dark-complexioned fellow. The one you'd pick right off as a leader of men."

The visitors seemed amused. Greiner turned and called sharply:

"Gray!"

"Yes, mon corporal."

"Go in and make up your bed; it's a disgrace to the tent."

"And not the only thing that is," observed Gray, as he sauntered off to obey the order.

The visitors laughed again, and one of them said to Ted, who had been standing by, highly amused by the interchange:

"What's that fellow's name?"

"Gray—Charles Gray," Ted answered.

"Peach, isn't he?"

"Pretty good, you bet."

"You and he are the fellows that fixed up our tent for us when Corporal Greiner there tried to knock it down, aren't you?"

"Gray did most of it," Ted answered.

"We're much obliged to you, anyway. Tell that clumsy corporal of yours that, if he wants to visit us again, he's not to try to come in through the roof."

Greiner pretended not to hear; he proceeded to make up his pack with an air of nonchalance. The A Company visitors returned to their street, and Ted set about making up his pack not far from where Greiner was at work. It was called the "forty-pound pack," and, although that description of it was slightly excessive, it was heavy enough to be a most irksome burden after a fellow had carried it for a while. It contained half of a shelter tent, five tent pins and the jointed wooden tent pole, a condiment tin, a blanket and a poncho. Lieut. Wharton had told the company that a soldier not only carried his pack on the march, but went into battle wearing it—that to the soldier lying prone and firing at the enemy the pack afforded protection against shrapnel, and that it was not even thrown away before a charge; so the sooner the company got used to the burden the better. He had also advised that each man get another to help him in rolling up the pack, as one man could not make a neat job of it.

Ted saw that Greiner had his pack ready for rolling.

"Do you want a hand?" he asked.

Greiner admitted rather grudgingly that he did, and so Ted helped him. Then Greiner offered to give Ted a hand with his pack, and even helped him to slip it over his shoulders. It was the first gracious treatment that he had accorded his subordinate, and the subordinate was quite overcome by it. "I guess all that roasting has made Greiner ashamed of himself," thought Ted.

That Greiner was feeling sensitive over the humiliation that he had undergone, his bearing that morning indicated. He was more quiet than usual and, in fact, did not once address a sharp word of criticism or correction to a member of the squad—not even to Ted. And it was the first day when the corporal of a squad was given real responsibility in the field, for it was the first day of extended order work. In deploying, the corporal led his squad; he saw to it that the members of it kept their distances; in the battle practice, when the men were lying prone and firing—or rather making believe to fire—at the imaginary enemy, the corporal watched them, to see that they did not fire too fast or too slow. There was plenty of opportunity that morning for Greiner to snap out some sharp correction, but he showed instead surprising self-restraint.

That may have been owing partly to the talk that Lieut. Wharton addressed to the company during the first intermission in the morning's work. The lieutenant stood down near the foot of the line, and his remarks seemed particularly intended therefore for a squad of the third or fourth platoon.

"Some of you fellows," said the lieutenant severely, "don't yet seem to have even the most rudimentary idea of military discipline. Now there's one thing that has got to stop, and stop absolutely, and that is this intriguing that's been going on among some of you. There's to be no more of this underground work, trying to get men that some of you don't happen to like transferred to other tents or to other squads, trying to get corporals that some of you don't like ousted from their jobs and others appointed. Last night I'd no sooner got done kicking a corporal out of my tent who'd come to request the transfer of a man from his squad than I had to kick a bunch of men out who had come to request the transfer of a corporal. What do you men think this camp is? A young ladies' seminary, where you go round tattling on one another? I want you all to understand that such practices are to cease. If there are to be any changes made in the organization of the company, they will be made by the company commander, without assistance or suggestion from any of you."

After the lieutenant had walked away, the members of the company expressed considerable bewilderment and indignation. They did

not know what he had been talking about, and they resented being taken collectively to task for the misdemeanors of a few.

But Ted and Gray and Bradford understood clearly enough the reference to the men who

tried to get corporals ousted. And looking at Greiner's reddening face, they thought they understood also the reference to corporals who tried to get men transferred.

TO BE CONTINUED.

AT SHALE CLIFF BREACH

By George C. Lane

JED ALLYN'S trip down the beach for kelp was not proving so satisfactory as he had hoped it would. In the first place, the tide was not so low as he had expected to find it; the surf, which was unusually high, even for December, was still running up over the firmer sand, and in the softer sand near the cliff the wheels of the heavy cart sank in considerably over their rims. Notwithstanding that there had been a big easterly blow, Jed found only small patches of the weed here and there. Furthermore, the horses were giving him a good deal of trouble; they were fretful at the wash of the breakers about their feet, and would not stand still.

After a while he noticed that, instead of receding, the surf was continually advancing farther up the beach toward the foot of the cliffs that flanked the shore for several miles. Puzzled, he looked at his watch. Unless Couch's almanac was wrong, there should be another half hour of the ebb. He decided to trust the almanac and to stay long enough to fill his wagon. At high tide there would be ten feet of water at the base of the cliffs; but he thought he should be safe for two hours longer at least.

Presently a big batch of kelp, swashing back and forth at the edge of the water, caught his attention. He began at once to fork the wet, heavy stuff into his cart. He was glad that he had kept on. Jed worked at the Whipple farm, and he had no desire to face the ridicule with which the other hands would greet him, if he returned from Shale Cliff Breach after an easterly storm with his cart only half filled with kelp. More than anything else he dreaded to be thought incompetent.

A breaker higher than the rest presently forced him to retreat a little way up the beach. The horses started ahead nervously. The next wave drove him back still farther, and the backwash buried the broad wheel rims eight inches deep in the white sand.

As he started the horses ahead, he began to believe that his suspicions of half an hour before had been well founded. Notwithstanding the almanac, the tide had turned. In both directions the cliff presented high walls up which there was no way for a team to climb. It was three miles back to the "breachway," a narrow opening in the cliff through which the water poured on its way to and from a tidewater pond. But unless the tide was too high a team could cross the "breachway." Nearly a mile beyond it the cliffs fell away and a road led up from the beach to higher ground. It was a good hour's pull for the horses with their load of kelp.

Keeping them down close to the edge of the water where the sand was hard, Jed started them back at a fast walk. The tide appeared to be rising fast now; evidently the heavy wind was driving the sea in toward the land. Jed and the horses were forced farther and farther back under the shadow of the cliffs, and the going continually became harder.

In alarm Jed chirruped to the horses, and they broke into a trot. But the pace soon began to tell on them, and after a little Jed let them slow down to a walk again. The roar of the surf frightened them, and they kept shying away from the waves. Jed had all he could do to hold them to a straight course; he would have given a good deal to be safe past the "breachway."

The surf slowly pushed them back one yard after another toward the cliff. In spite of the raw wind, the horses, a strong, well-mated pair, were sweating freely. Jed no longer urged them on, for he knew that they were doing the best they could. At last he dropped the reins over the seat and, seizing the pitchfork, began to throw out the kelp.

The menace of the surf grew more alarming. Although his arms and his back ached, he worked furiously; after a while he was glad to see that, now that the load was lightened, the horses were increasing their pace. But the

"breachway" was still a mile and a half distant. By the time they should reach it the water would be pouring through six feet deep and the team might not be able to cross.

Seizing the whip, he lashed the horses into a run. Unused to that means of persuasion, the animals bolted wildly ahead. But Jed could hear their heavy breathing even above the sound of the surf, and reluctantly had to admit that the pace was too fast for them. The tide had forced them back to within a few yards of the cliff, and here in the sifting sand the footing was bad.

"It's no use," he told himself at last. "The boss will have to lose a good lumber wagon if he expects to save the pair."

Jumping down from his seat, he unhitched the horses from the wagon.

"Now, Bess," he said, as he mounted one of the pair, "you've got to quit that nonsense and take a little deeper to the water."

With the small end of his whipstock he gave the mare a smart blow across the rump. Breathing loudly, the pair leaped ahead, and their plunging hoofs drenched Jed in a blinding shower of icy spray.

"Come on, Hal! Now, Bess!" he cried. "I've got to get you back to the farm, and you've got to run, both of you!"

And run they did, as if they had fully realized their danger. They were showing better speed now, for Jed had driven them to the firmer sand and was keeping them there as well as he could.

But little by little the giant combers crowded them closer to the wall. Jed swallowed hard as he wondered whether the horses would be able to make the "breachway." He had long since given up all thought of reaching the cliff road, a mile beyond it. His only hope was to swim the horses through the breach instead of across it, and to guide them to the shore of the big pond behind the cliffs.

He was using the whip freely now, for Bess was lagging. "Poor girl, I know you're almost winded," he said, "but just a little better, old girl."

At the rate at which the tide had been rising it would cover the beach within five minutes. Jed knew that once the full strength of the surf struck them there would be a brief struggle in the powerful breakers—and then the end of all of them!

The surf grew higher and higher as they neared the "breachway." The water at last covered the whole width of the beach; the big combers were breaking dangerously close, and the horses, panic-stricken by the roar and the fury of the waves, ran as they had never run before.

As they approached the mouth of the "breachway" a towering comber reared itself directly in their path. Jed tried with all his strength to turn the pair in from it; but, regardless of their danger, they plunged madly on. The comber broke a few feet away from them. Bess stumbled, and Jed went sprawling clear of her head into the surf. The rush of the water carried him out from under the horses' hoofs, and the next moment he realized that Bess had scrambled to her feet and that the pair were pulling him through the water toward the "breachway." The loop end of the reins that he had thrown over his arm had held.

He tried to get to his feet, but the horses were dragging him too fast for that. Seizing the reins in both hands, he managed to get his head above the water and to draw a full breath. Sand and water filled his eyes and ears and for a moment he could neither see nor hear.

A glance soon told him, however, that the horses had reached the "breachway." The next moment they had plunged in over their heads. Taking fresh hold of the reins, Jed clung to them with

all his strength. The horses came to the surface, and, although the swift current was carrying them toward the pond, they headed for the opposite bank of the "breachway"; they evidently meant to cross over and try to reach the road up the cliff, a mile farther on.

Jed strove desperately to turn them in toward the pond. He knew that, if they once gained the other side, he could never turn them back; and they could not reach the cliff road—the tide was already too high.

His head went under again, but he kept his hold on the reins and fought desperately to regain the surface. The icy water was taking his strength fast, but even as he struggled to reach the surface an idea occurred to him.

In spite of the danger of being struck by their hind hoofs, he began to pull himself hand over hand along by the reins, toward the horses. As he came abreast of Bess the bank was only a few yards away. Using all the strength he had left, he grasped her bridle and began to splash water into the eyes of the two animals.

It was too much for them; they had to close their eyes and turn their heads. But at the very moment when Jed was swinging them in, another breaker surged into the "breachway" and buried them all beneath its crest. Jed's grasp was wrenched loose of the bridle, and he came choking to the surface a few feet ahead of the struggling horses. Once more they were headed toward the bank.

Realizing that his life as well as the lives of the horses depended now on his heading them off, he stroked frantically against the current. He knew that he had not enough strength left to swim the length of the "breachway." Inch by inch he gained on the current and at last grasped Bess's bridle again. He began once more to splash the blinding spray into their eyes.

Slowly, but surely, he forced their heads round until they were facing straight up the breach. A moment later it was too late for them to turn back. The current had carried them in until the high walls of the cliff cut off any chance of their landing. The tide, increasing as the breach narrowed, carried them on at a tremendous rate. Several times the powerful swirls and eddies of the current pulled them under.

Jed grasped Bess's hames for surer support. Numbed as he was and weakened by the icy water, he had all he could do to cling to the horse. He knew that he had reached the limit of his endurance, and he feared that the animals would never win their way through in time to save him.

But at last they rounded a curve and Jed could see the water of the pond stretching out before them. A few minutes later he succeeded in guiding the panting horses out on a sandy slope that bordered the pond.

Half an hour after that, Mr. Whipple and one of the men were rubbing down the horses.

"There, now, you never mind about the wagon, Jed. I reckon you did mighty well to save the horses. You just get into the house now and let the missus tend to you, unless you want to have pneumonia."

It was a dilapidated wagon that Mr. Whipple found the next day half buried beneath the sand at the foot of the cliffs. The wheels, he decided, were all that was worth saving; but he considered himself as fortunate in having two sound horses and a helper who had had the pluck to save them.

PANIC-STRICKEN. THEY RAN AS THEY HAD NEVER RUN BEFORE

DRAWN BY W. F. STECHER

MARSHAL JOFFRE, AFTER LANDING FROM THE MAYFLOWER AT WASHINGTON

FACT AND COMMENT

THE only thing you can afford not to pay is a grudge.

An Ounce of Aid is worth a Ton of Sorrow;
So help him Now—don't pity him To-morrow.

IN a national crisis the "sentiment" that counts is the kind that justifies its anagram, "It sent men."

IF the flour manufacturers agree to the request of the government and mill only whole-wheat flour, as they seem disposed to do, it will not only save about sixty million bushels of wheat in the coming year but also make more wholesome flour.

"THE soldier of the commissary" is a happy phrase that President Wilson used in his appeal to all classes to do their duty in the present crisis. Every boy who works faithfully in the fields this summer will be doing his part—and a very vital part it is—as truly as his friends on the patrol boats or in the training camps.

AS a part of the campaign to reduce the number of accidents among railway workers a "safety-first car" is going from station to station along the Canadian government railways. It remains at divisional and terminal points a week or more, and by means of motion pictures teaches the men the safest way to do their work.

THE word "conscription" stirs a resentment that is not justified. Our public-school system virtually conscripts every boy and every girl at a certain age; the jury system conscripts a large part of the male population. If it is the word itself that is objectionable, let us call it "selection" or "selective military draft."

NEW YORK follows the example of Pennsylvania in establishing a state constabulary. The force, which will consist of 237 men, will do much for the greater safety of life and property in country communities. The Pennsylvania force, which was organized in 1906, and which is about as large as that of New York, is composed almost wholly of former soldiers in the regular army.

CUBA is no half-hearted ally. Its navy of more than twenty war vessels, which is to be reinforced by fifty submarine chasers now building, is patrolling the coasts of the island to make sure that Germans do not establish a U-boat base there; and President Menocal is earnest in his desire that at least a part of the army, which now numbers about thirty-five thousand men, shall carry the Cuban flag into battle in Europe.

IT is good news that the rice crop of India, as well as that of Japan, of which we spoke last week, is exceptionally large. Rice is one of the few articles of food that have not been soaring in price of late. As a result the use of rice is increasing. If you are one of those who appreciate the excellence of that cheap food, you will be interested in the article by Dr. Galloway on another page, which deals with rice-growing in many lands, and in the receipts for cooking rice that were printed on the Family Page for April.

THE peanut is ceasing to be the butt of jokers. Last year the value of the crop in the United States was \$36,000,000, which is about five times its value ten years ago. The South is finding out that there is more money in an acre of peanuts than in an acre of cotton. Although we think of peanuts as peculiarly an American product, the United States in 1914

imported 44,549,789 pounds of peanuts and 1,332,108 gallons of peanut oil. The war has shut off the importations. That fact, with the growing knowledge of the food value of peanuts and the discovery that cottonseed mills can be used to make peanut oil, has brought about the remarkable growth of the industry. Last year in Texas alone 200,000 acres were devoted to the crop—an increase of a thousand per cent over the acreage of the year before.

FINANCING THE WAR

THE vote of Congress, by which the United States is authorized to issue bonds in the enormous sum of \$5,000,000,000, and the proposal to raise some \$1,750,000,000 more by taxes, have awakened the American people to a new conception both of the enormous cost of modern war and of the ability of the country to meet it.

The largest previous loan that our government ever placed was the \$800,000,000 6-per cent issue of the Civil War, put out at intervals during 1864 and 1865. But when last February England made a single bond issue of \$5,000,000,000, and Germany, by the subscriptions of September, 1915, raised \$3,000,000,000 in one month, we began to see what our own participation in the war might require of us.

The cost of modern wars is met in varying proportions by borrowing and by increased taxes. That the whole cost should be paid by increased taxes, when the expense is so entirely out of proportion to ordinary public expenditure, is manifestly impossible, unless taxes are to be so heavy as to crush the people and so put a stop to business; but all well-managed governments try to pay a large part of their war costs in that way. It is said that our Revolutionary War is the only war in British history that the government paid for wholly by loans. In the long war with Napoleon, Great Britain met nearly 40 per cent of its expenditure by taxes. Only about 25 per cent of what the present war is costing Great Britain is covered by new taxation; but if we take only its own war expenditure, and do not include its loans to its allies, the percentage met by taxation is considerably larger. France has met only about 14 per cent of the war costs by new taxation, and until this year Germany paid a much smaller part in that way, and for a time levied no war taxes whatever.

The bond issue bill lately passed by Congress prescribes that of the total \$5,000,000,000 to be borrowed our government shall lend \$3,000,000,000 to our European allies, and that they shall deposit in exchange bonds of their own that bear the same rate of interest. On its face that might seem to be a needless operation, especially since our allies are already raising money on their own bonds; but the particular reason for the plan is that the Allied Powers are paying for their large purchases of material in the United States by selling bonds to American investors on terms very disadvantageous to the Allies.

Their American purchases have lately amounted on the average to nearly \$10,000,000 a day, and the bonds that they sold in the United States to get money to pay for them have lately had to pay interest at the rate of from 5½ to 6½ per cent. The new United States bonds will pay only 3½ per cent, for here at home the credit of our government is naturally higher than that of other borrowers. The transaction therefore really means that the United States will lend its credit to its allies. It is believed that since the war began the British government has lent in similar fashion \$4,400,000,000 to its poorer allies, Russia, Italy, Belgium, Serbia and Roumania.

It is not yet known how much of the \$5,000,000,000 that we purpose to borrow will be called for in a single year. If we should raise the whole amount in that time, and if the new taxes should produce \$1,750,000,000, we should then be paying by taxation about 26 per cent of our total war expenditure, including the money that we are to furnish the Allies; but if the loans to the Allies are not included, we should be raising 47 per cent by taxation.

It is frequently said that we are going to borrow \$7,000,000,000, because Congress has also authorized an issue of \$2,000,000,000 in "certificates of indebtedness," to run only one year; but the purpose of that loan is merely to pay current expenses until the new long-term bonds can be sold or the new taxes are collected.

Most encouraging is the certainty expressed by our most experienced bankers and financiers that, if the taxes are wisely distributed and the whole amount of the loan is not asked for at one time, the United States will be able to

raise the money without difficulty, and at the same time to provide for its home industries and for the needs of neutral countries.

THE WOMAN'S PART

WOMEN play an enormous part in every war. Nothing in America has been more notable since this country entered the great conflict than the good sense, as well as the unselfish patriotism, that our women have shown in preparing to do their part. There has been, of course, some of the spectacular, notoriety-seeking sort of patriotism that sets women to posing for their pictures in the act of aiming a revolver or of crouching behind a machine gun in a trench; but that has appeared in negligible quantity. The real women know the seriousness of what they have to do, and are going about it with a straightforward common sense that no body of men could surpass.

Take, for example, the "war letter" that the Massachusetts Woman Suffrage Association has issued to its members. The suggestions in it are as useful to women in other states as to residents of Massachusetts, and to those who oppose the franchise for women as to those who favor it. The keynote of it is organization. Do not try to do alone what you can do better through cooperation with others; and do not duplicate machinery. Join some organization already in existence, and work with it.

Do not seek the spectacular work, like driving a motor ambulance. A few women of wealth and leisure can attend to that. The important things are enlarging the food supply, eliminating waste and preserving the public health.

The best way to enlarge the food supply is to get advice from the state agricultural experiment station and from practical farmers, and then to create the local machinery for establishing supervised back-yard gardens, supervised boys' and girls' gardens and supervised gardens in vacant lots ploughed by the community. To make an individual back-yard garden does not require any machinery—only will power and work.

Eliminating waste falls naturally under three heads: saving in food, saving in clothes and saving in material. You can save food by studying the markets and buying chiefly those things that are in season; by purchasing only what you need and not hoarding; by efficient cooking; by canning fruits and vegetables, and by sending nothing to the garbage pail that can be made palatable for the table.

In clothing, the chance to save is almost wholly personal, and in large part a matter of temperament; but proper economy in clothes will add more to the sum available for worthier uses than saving of any other kind.

The saving in material touches waste paper, old clothing, shoes, rubber, bones, and all the other things that make junkmen as a class so large in girth and so cheerful.

In the days of chivalry when knights went forth to war the châteline stayed at home and kept the castle. Time has changed neither the necessity nor the relative value of the service; and, to paraphrase Stevenson, here is room for all that a woman has of fortitude and delicacy.

COÖPERATION

IN every previous war of ours except the Revolution the nation has fought single-handed. Now we are late comers to a conflict that includes on one side or the other nearly all of the civilized world. We are of course allies of the Entente, yet we have entered into no alliance with the members of it. We have the power to make formal and permanent alliances, for that power exists and must reside in every sovereign state. We have not divested ourselves of it by disuse, and it is not forbidden by the Constitution. Nevertheless, the traditional policy of the government is against using it, and the time has not yet come to reverse that policy.

Between this country and the Allies, who have just sent over to us a commission of their most eminent men, there will be no binding alliance, but only what may be called an international gentlemen's agreement. All the Allies, ourselves included, are seeking the same end; but some of them have aims and ambitions of their own in which we have no share, and which we may not support in the final peace conference unless incidentally they promote the cause that all of us have in common.

Meantime, the one object—for we have already modified the President's phrase—is peace by means of victory. As each country must organize itself to perform the most efficient service to that end, so all the countries must

organize the grand campaign by assigning to each the task that it can best undertake. That is the purpose which has brought to America the members of the distinguished mission. To them the whole problem is familiar. Similar conferences of the leaders in France, Italy, Russia and Great Britain have been frequent, and undoubtedly fruitful of good. In many respects the possibilities of our being able to help efficiently are as great as those of any one of the Allies. The men to whom we have given such a hearty and enthusiastic welcome know what they need most, and what we can give them most abundantly. They also know what errors our inexperience may cause us to commit, and are ready with a timely warning.

The attitude that we should take toward them and their advice should be anything but that of standing on our dignity, raising obstacles to the form of assistance that they suggest, advancing alternative plans of our own, which may not fit in with theirs, and persisting in blunders that they know to be useful only to the enemy. That is not the attitude of the people, and they will pardon no man in office, high or low, who muddles the situation by ill-timed contrary-mindedness. About the matter in hand, Mr. Balfour and his associates are wiser than we are. The best way to show our wisdom is to follow their advice.

advancing alternative plans of our own, which may not fit in with theirs, and persisting in blunders that they know to be useful only to the enemy. That is not the attitude of the people, and they will pardon no man in office, high or low, who muddles the situation by ill-timed contrary-mindedness. About the matter in hand, Mr. Balfour and his associates are wiser than we are. The best way to show our wisdom is to follow their advice.

OUR NEW FRIENDSHIPS

NO one who has even the rudiments of an imagination can have missed altogether the significance of the rapturous joy with which our new allies welcomed the entrance of the United States into the war. It was not a sigh or a shout of relief that went up, although it is easy to fancy their enemies gloating over the manifestation as proof of their despair of winning without assistance. Britons and Frenchmen took our action, and had a right to take it, as a moral justification, an acceptance and a championship of their cause as one based on humanity and justice, and opposed to dynastic greed, oppression and wrong. Even when we held aloof they had no misgivings. They are not more confident of their ground now, but they will bear their heavy burden with greater courage and cheerfulness because this great democracy has stepped to their side, holds out the hand of fellowship and undertakes to ease them of a part of that burden.

What a dramatic revolution we have seen since the time, even now not so remote, when our cheap politicians delighted to twist the lion's tail and when the lesser, untraveled British writers found little in America that did not incite them to sneers and contemptuous misrepresentation! What can be more thrilling to Americans than the sight of the Stars and Stripes floating from the flagstaff on the Parliament Building at Westminster; or the King and the Queen, with a great throng of men and women of both countries, listening to a sermon by an American bishop in St. Paul's Cathedral; or the governments of all the Allied Powers hailing our action as setting the supreme seal on the righteousness of their cause? On our part we respond with a popular energy, a call for instant and effective participation in the conflict, that expresses itself urgently but impotently in impatience at departmental delays and legislative hesitations.

It is the strictest truth that we enter the war with no wish for gain of any sort. We covet no territory, we shall demand no money indemnity, we shall exact no commercial advantages. It is universally and enthusiastically admitted by all neutrals, as well as by our new allies, that our course is one of unprecedented national unselfishness. Yet we shall undoubtedly profit by it. Had we remained merely onlookers until the end of the war, the conclusion of peace would have left us friendless among the nations. We have already incurred the deep hatred of the German government and the German people. We should have been attacked whenever it might have suited the Kaiser's purpose; and the British and the French, calling to mind that we had withheld our hand in the great struggle that they have all along maintained is as much in our interest as in theirs, would have looked on at our distress with cool and cynical indifference.

That attitude has now become impossible. When the war ends, as it will end, in victory for those with whom we have cast our lot, the

ARTHUR J. BALFOUR, ON HIS ARRIVAL IN AMERICA

position of the United States on this continent will be secure. International friendships are not so strong or so lasting as international hatreds, but this new friendship is one of the enduring kind. If we need help, we shall have it. Moreover, there is a new warmth of feeling toward us on the part of our sister republics in this hemisphere—a warmth that has replaced long misunderstandings not of our making.

CURRENT EVENTS

CONGRESS.—In spite of the opposition of Speaker Clark and of other influential members of the House, the bill that provides for raising the new army by means of a selective draft passed by a vote of 397 to 24. The amendment that provided for a preliminary trial of the volunteer system was voted down, 279 to 98. The Senate also passed a similar bill by a vote of 81 to 8. The two bills differed in the ages between which conscription was to be applied, and the matter was accordingly sent to conference. The House bill made all men from 21 to 40 subject to draft; the Senate bill fixed the ages at 21 and 27.—The Senate passed a resolution authorizing the President to take over and use ships owned in whole or in part by Germans, and lying in American harbors.—The House considered the espionage and censorship bill and also a resolution giving the Secretary of Agriculture broad powers over the sale, distribution and conservation of the nation's food supply.

LATIN AMERICA AND THE WAR.—Word came from Mexico City that the Mexican government was convinced of the necessity of supporting the other American republics in their protest against German methods of warfare. Measures have been taken to quiet the pro-German propaganda that has made considerable headway in Mexico, and it was believed that President Carranza might go so far as to break relations with Germany.—On April 28 Guatemala gave the German minister his passports and offered the United States the use of its ports and railways for the common defense.—Brazil has decided to remain neutral, at least for the present, although it has ceased diplomatic relations with Germany.

CONSPIRACY TRIAL.—Capt. Franz von Rintelen, a German naval officer, former Congressman Fowler and Buchanan of Illinois, former Attorney-General Monnett of Ohio, David Lamar, Herman Schulteis and H. B. Martin were on trial in New York, charged with conspiracy in the interest of a belligerent power to instigate strikes in munitions factories and in other ways to interfere with the lawful trade of the United States. It was in evidence that Rintelen brought over \$500,000 to this country to finance his plots.

THE WAR COUNCIL.—Arrangements were made for this country to supply \$200,000,000 to Italy and France out of the money to be raised by the great bond issue. Further advances will be made to the Allied nations as necessity demands.—The French and British commissioners impressed on the President their desire to have an American armed force in France at the earliest possible moment; they believe that the moral effect of such a force would be even greater than the material assistance it could give. On May 1 it was announced that the government had agreed to this plan, and would dispatch a force of perhaps 20,000 men at the earliest possible moment.—On the same day the French commission visited the Capitol and received an enthusiastic welcome in the Senate Chamber.—The Italian commission was said by the newspapers to be already on its way to the United States.—Mr. Root consented to lead the American commission that is to go to Russia. Through that commission the United States is to offer to the new government unstinted aid in the task of establishing republican institutions firmly in Russia and of carrying on the war against Germany.

MAY DAY ABROAD.—The labor holiday was celebrated with some disorder in Petrograd. During one street fight a bomb was thrown, and Gen. Kashtalinski was killed. Berlin declared that there were no strikes or other demonstrations in Germany. Reports from other sources spoke of serious strikes in the Rhine district and among the munitions workers. There were impressive but orderly demonstrations in Sweden.

IRELAND.—In a speech at the Guildhall, London, Mr. Lloyd George declared that Britain could not fight a victorious war unless Ireland were won by the just and generous settlement of the home-rule issue into cheerful, loyal cooperation. The Canadian Parliament has passed a resolution urging Great Britain to settle the question at once, and some two hundred members of our own Congress sent a similar message to Mr. Lloyd George, pointing

out the added enthusiasm America would bring to the conflict if it could feel that Great Britain and Ireland had come to an amicable and honorable settlement of their long differences.

THE GREAT WAR

(From April 26 to May 2)

The British and French continued their tremendous battering at the German lines; the British chiefly between Arras and Douai, along both banks of the Scarpe River, and the French north of the Aisne along the front between Reims and Vailly. Both armies reported gains by their infantry following the terrific artillery preparation that precedes all such attacks, but the gains were not significant. The Germans have poured thousands—probably hundreds of thousands—of reserves into the threatened areas and are dislodged from their positions slowly if at all. They have made a good many counter-attacks in force, but have retaken no important position. The fighting is desperate everywhere along this battle front.

Paris reported that the Germans were deliberately shelling the cathedral at Reims with their biggest guns, and that the collapse of the famous building was feared.

GEN. PETAIN

Gen. Petain, who commanded at Verdun during the critical stage of that great battle, has been appointed chief of staff to the French army. That will give him command over the entire conduct of the war so far as France is concerned, and it is believed that he will have some measure of control over the British forces also, in order to make the cooperation of the two armies more effective. Gen. Nivelle remains in command of the French troops actually at the front.

Gen. Maude reported that the Turks had been driven back into the Jebel Hamrin hills between the Tigris and Diala rivers. Constantinople announced that the Russians had evacuated Mush in Armenia. Apparently the disorganization within the Russian army following the revolution has made it impossible for it to cooperate with the British advance in Mesopotamia.

British attacks and Bulgar counter-attacks were reported from the Lake Doiran region in Macedonia. From the official communications it did not appear that either side had gained any important successes.

Artillery was active along the Italian front. England was stirred by the increasing losses of merchant vessels by submarine warfare. The government refused to make public any further details concerning the situation, but it admitted that the losses of shipping were serious, and Lord Charles Beresford in Parliament referred to them as "appalling." Berlin declared that 1,000,000 tons of shipping had been sunk by submarines in February and March, 1,000,000 tons of it British. The United States Shipping Board heard that 300,000 tons were sunk in one week in April. German officials regard the submarine campaign as a complete success, and sure to force a victorious

UNDERWOOD & UNDERWOOD

MOUNTAINS OF PROVISIONS, SEVENTY FEET HIGH, BEHIND THE LINES IN FRANCE

peace this summer. The weekly report from London mentioned 51 British vessels destroyed. From Christiania came the news that 23 Norwegian ships had been sunk in one week.

Among the vessels sunk during the week were the American ships Vacuum and Rockingham. Thirty-six men from both crews, including several naval gunners, are missing and probably lost.

German destroyers bombarded Ramsgate, England, but were driven off by the land batteries.

The Russian government removed a number of officers for incompetence or disloyalty; twenty-three generals were among them. Disorders in Petrograd were reported as a result of the activity of the Socialist leader, Lenin, who is agitating for a separate peace with Germany. The government permits him complete freedom of speech, although he is believed to be in the pay of the German government.

The conference for international affairs, recently called by the Chinese government, recommended that China declare war on Germany, and Parliament will probably do so.

Geneva heard a rumor that King Constantine of Greece meant to abdicate in favor of his son, Prince George. It lacked confirmation.

The genuine always bears this trade-mark.

Hard On Stockings

(But Holeproofs Can Stand It)

Easy For Mothers

(Who Buy These Double-Strength Hose)

Don't blame the children for holes in their stockings—the fault is usually due to inferior hose.

Boys will climb and girls will romp. Health demands play and play demands Holeproof Stockings.

Children's styles are ribbed and extra elastic. When strained in play they don't tear like other hose.

That's because we use only fine-spun yarns and knit them double-strength where wear is greatest.

Holeproof Hosiery

FOR MEN, WOMEN AND CHILDREN

Try Holeproofs on your little ones—you'll be surprised. They will win you to Holeproof styles for yourself and the men folks.

Children's, 35c per pair and up; Men's, 30c and up; Women's, 40c and up

Any obliging dealer will supply you if you request Holeproof. Don't accept inferior substitutes. We'll ship direct, charges paid, if you can't get the genuine nearby. Write for free descriptive book today.

ANSCO

CAMERAS & SPEEDEX FILM

Fine! Take your Ansco Vest-Pocket No. 0 to the ball game. You'll find good pictures there. Carry it with you *always* as you do your watch—in your pocket—for there's no telling when a prize-winning picture will bob up.

Such pictures can't take you by surprise, for this compact little camera actually *jumps into action* when you press the buttons. It's the only self-opening camera made. The 1½ x 2½-inch pictures it takes make sharp, clear enlargements.

See this dandy little camera at the Ansco dealer's. It's a wonder. Ask him for a catalog or write to us for one.

Ansco Vest-Pocket No. 0. Equipped with single achromatic lens, \$7.50; with focusing device, Actus shutter and Modico Anastigmat lens, F 7.5, \$16; Extraspeed Bionic shutter and Ansco Anastigmat lens, F 6.3, \$25.

Press the buttons and the camera front springs out—ready to "snap."

THE VILLAGE LIGHTS

By Martha Haskell Clark

THE little twinkling village lights, they hem me round like bars;

All night I lie and know them there like warders to my feet;

And ever till the dawn-light comes to dim their quiet stars

I hear the winds of all the world that walk the sleeping street.

The hill wind wanders, still and cool from fir-pricked northern sky

With knotted sash of sunset flame that sets the dark alight;

I catch a breath of hemlock scent, a loon's far, wailing cry,

And hear the trappers' paddles dip across the silent night.

Or else across my window drifts the reek of wet bamboo,

Of sandalwood, and orchid bloom, and night-sweet jungle moss,

As softly 'twixt the jutting walls the south wind tiptoes through,

His velvet mantle starred with gems from out the Southern Cross.

Or sudden as the beat of hoofs that top the grassland's fold

The west wind brings the breath of sage, and sun-shot prairie skies,

Till on each village lintel stone the plains' dust shimmers gold,

And lean and sun-browned riders pass before my eager eyes.

And off with swoop of sea gulls' wings that brush my darkened pane

The sea wind's coming fills the air with fragrance salt and keen,

With echoed tramp-ship jargon, and a chantey's wild refrain,

And, under pile-propped docks, the slow tide-waters, surging green.

The little twinkling village lights, they hem me round like bars;

All night I wake and know them there like warders to my feet;

And ever till the dawn-light comes to dim their quiet stars

I hear the seeking comrade winds that walk the sleeping street.

STORAGE RELIGION

THE day was rainy, and Mrs. McLean had sent Betty and little Judith to the attic to play. A trunk, full of old dresses, trinkets and papers, first attracted the children's attention. They gradually unpacked it, and dressed themselves in their mother's out-of-date finery. But after a while this pulled on them, and Betty began to read some of the old letters in the bottom of the trunk. Finally she found a letter of dismissal from a church in the Middle West where her parents had lived seven years before. Waving the letter, she hurried downstairs to her mother and cried:

"O mother, mother! I found your religion upstairs in a trunk!"

A look of sadness came over her mother's face as she remembered the happy days that she and her husband had spent as loyal workers in the little Western church.

When they came East they had made friends of a different sort—pleasure-seeking men and women who ignored the church and what it stood for. The McLeans had gradually drifted into the same ways. But the training of years could not so easily be broken. A secret feeling that all was not well kept gnawing at the mother's heart. It grew more intense as she saw her husband's moral fibre slackening.

This new life had been vastly more exciting than the old life in the sleepy little Western town with its narrow outlook and simple, sturdy adherence to religious ideals; but she knew it was shallower, meaner and more commonplace. And now her own child had risen up to challenge her thinness of soul, to condemn her faithlessness.

That evening she and her husband had a long talk. He was slower to admit the mistake they had made, but at last he came to the conclusion that his wife was right—right so far as their own lives were concerned, right in a deeper sense when he considered how they had been starving their children's religious natures. The McLeans began to go to church again the following Sunday.

The new life was not so exciting as that they had been living, but it was immensely more rewarding. The old moral ideals began to loom upon the horizon of their lives again like mountain peaks climbing out of the mists, their consciences stiffened to duty, and the inner peace that they had long lost came back; a peace and a sense of right living that pleasure-seeking cannot give.

TWO WAYS TO KILL A CAT

IT was three days before Christmas. In many departments of Bolivar & Clark's great store girls with tired eyes were trying, usually with patience, to serve the never-ending line of customers. In the gingham department, however, the clerks were having an easy time. Few persons buy gingham at Christmas time. The girls, grown careless, were talking together, taking it for granted that any chance visitor to the department was on her way to the silk department beyond.

So it happened that two women stood for several minutes in front of the seersuckers without being noticed. Presently one of them walked across to the group where Madge Harkness was graphically describing the Christmas that she would have if she had a thousand dollars to spend. Her voice cut sharply through Madge's gay tone.

"I want to see seersuckers, and I have no time to waste. Will one of you come and wait upon me, or shall I call a floorwalker?"

A hot color flamed in Madge's face. She turned at once and began taking down seersuckers. She answered every question distinctly; there was not a thing with which her customer could find fault, and yet her whole manner radiated antagonism. When she took the order she shrugged her shoulders behind her customer's back.

"The old cat!" she said to Minnie Dixon, as her customer left. "I'd like to fling the seersucker at her head. I'd like to put her behind the counter to

wait upon herself. Wouldn't she be a sweet one? She'd be fired at the end of the first day."

Just then the other woman stepped up to the counter. She was a little, white-haired, old lady, but there was a twinkle in her eyes. She smiled into Madge's sullen face with a warm-hearted friendliness.

"I hope you won't mind my saying it," she remarked, "but what pretty girls you have at this counter! Old ladies love to see them, you know."

For a moment Madge stared. Then she began to laugh, and the old lady laughed with her.

"Of course, I'd have to give you anything you want, for that," she said.

"Of course," the old lady agreed, twinkling again. "I expected you to. But all the same," she added, when her order was taken and she was turning away, "I meant it, too."

"Tally!" Madge exclaimed as she went back to the others. "But I believe she did mean it. Anyway, it made you feel good. Who'd have thought an old lady like that would be so foxy!"

The old lady herself was smiling as she went toward the elevator, but it was a tender smile, for she really loved girls.

And the interested bystander who had seen it all went on her way smiling, too.

WHEN THE "ETERNAL SNOWS" BREAK LOOSE

NATURE in a mood of wild destruction is an awe-inspiring sight. Man thrills at the tremendous spectacle and feels as never before his own insignificance. In the Rocky Mountains of central Colorado, Mr. Enos A. Mills, who was acting as government "snow observer," witnessed the violence and grandeur of a large snowslide at thrillingly close range.

The slide broke loose and "ran"—more correctly, plunged—by me, down a frightful slope, says the naturalist. Everything before it was overwhelmed and swept down. At the bottom of the slope it leaped in fierce confusion from the top of a precipice down into a cañon.

For years this snowy mass had accumulated on the heights. It was one of the "eternal snows" that persons far below and far away could see all summer long. Perhaps a century of winters had contributed to its pile. A white hill it was in the upper slope of a gulch, where it clung, pierced and anchored by granite pinnacles. Its icy base, like poured molten lead, had covered and filled all the inequalities of the foundation on which it rested.

Time and its tools, together with its own height and weight, at last combined to release it to the clutch and the eternal pull of gravity. The expanding, shearing, breaking force of forming ice, the constant cutting of emery edged running water and the undermining thaw of spring sent thundering downward with ten thousand varying echoes a half million tons of snow, ice and stones.

Head on the vast mass came toward me. It threw off masses of snowy spray and agitated, confused whirlwinds of snow dust. I was watching from the top of a precipice. Below, the wide, deep cañon was filled with fleecy clouds—a bay from a sea of clouds beyond. The slide shot straight for the cloud-filled abyss and took with it several hundred broken trees from an alpine grove that it wrecked just above the precipice.

This swift-moving monster disturbed the air, and cyclonic winds flung me headlong as the snow tore by with rush and roar. I rose in time to see the entire mass of wreckage deflected a few degrees upward as it shot far out over the precipice. A rioting acre of rock fragments, broken trees, shattered icebergs and masses of dusting snow hesitated momentarily in the air; then, separating—rocks, splintered trees and snow—fell whirling, hurtling and scattering, with varying velocities, into the white bay beneath. There was no sound as they fell into and disappeared beneath the agitated sea of clouds. How strange that noiseless fall was! A few seconds later, as the wreckage reached the bottom of the gulch, there came from beneath the silent surface of mist a reverberating but muffled crash.

TWO OF LINCOLN'S CALLERS

IN The Everyday Life of Abraham Lincoln, Mr. Francis F. Browne tells an entertaining story that illustrates the wide range of callers that Mr. Lincoln received while he was President and the diversity of the errands on which they came.

Two tall, ungainly young men—"suckers," as they were called—entered Lincoln's room one day while he was engaged in conversation with a friend. They lingered bashfully near the door, and Lincoln, noticing their embarrassment, rose and said, good-naturedly:

"How do you do, my good fellows? What can I do for you? Will you sit down?"

The spokesman of the pair, the shorter of the two, declined to sit, and explained the object of the call. He had been talking about the relative height of Lincoln and his companion, and had asserted his belief that they were of exactly the same height. He had come in to verify his judgment.

Lincoln smiled, then got his cane, and placing the end of it upon the wall said, "Here, young man, come under here!" The young man came under the cane, as Lincoln held it, and when it was perfectly adjusted to his height Lincoln said, "Now come out and hold up the cane."

Lincoln now stepped under, and after rubbing his head back and forth to see that it worked easily under the cane, stepped out and declared that the short man had guessed with remarkable accuracy—that he and the tall young man were exactly of the same height. Then he shook hands with them and sent them on their way.

The next caller was a very different person—an old and modestly dressed woman who tried to explain that she knew Lincoln. As he did not at first recognize her, she began to recall to his memory certain incidents connected with his rides upon the circuit, especially his dining at her house at different times. Then he remembered her and her home. Having fixed her own place in his recollection, she tried to recall to him a certain scanty dinner of bread and milk that he once ate at her house. He could not remember it; on the contrary, he only remembered that he had always fared well at her house.

"Well," said she, "one day you came along after we had got through dinner, and we had eaten up everything, and I could give you nothing but a bowl of bread and milk. You ate it, and when you got up you said it was good enough for the President of the United States."

The good woman, remembering the remark, had made a journey of eight or ten miles from the country to relate to Lincoln this incident, which in

her mind had doubtless taken the form of prophecy. Lincoln put her at her ease, chatting with her of old times, and dismissed her in the most happy and complacent frame of mind.

THE WELSH EISTEDDFOD

THE Welsh national eisteddfod, or, to give it its full title, "The Royal National Eisteddfod of Wales, the Chair of Gwynedd, Mon and Manaw, and the Gorsedd of the Bards of the Isle of Britain," to which Mr. Lloyd George attracted much attention last year by a brilliant speech that he made there, is an annual event of long standing.

The object of the gathering is to promote interest in the music, bardism and literature of Wales and to preserve and foster the Welsh language and national spirit. During the ascendancy of the druids, gorsedd, or assemblies, used to be held periodically, and they served the purposes of a modern

CROWNING THE PRIZE WINNER

congress. After the destruction of druidism the gorsedd lost all political importance and it was revived merely as a sort of Welsh bardic order, under the auspices of which the present eisteddfods are held. A national, week-long eisteddfod cannot be convened unless the gorsedd issues a proclamation to that effect a year and a day before the intended meeting.

The first eisteddfod to be held with the present purpose was in the sixth century. The peculiar feature of this one was the offer of reward that the presiding prince made to bards and minstrels who should swim over the Conway. He maintained that vocal music was superior to instrumental, and proved his claim to his own satisfaction in that way, for when the minstrels reached the farther bank of the river their harps had been rendered useless by the water, while the voices of the bards were, of course, unimpaired.

During the last century eisteddfods have been held nearly every year, and have steadily increased in interest as more of the old customs, costumes and rites are discovered and introduced. In the presence of huge crowds the participants read poetry, make speeches and perform musical selections. There are prizes for the best prose composition, the best vocal and instrumental music, and sometimes for the best specimens of handicraft.

The chief event is the presentation of the bardic crown to the author of the successful poem. The laurel-crowned, white-robed leader stands close to the "Maen Llog," which is a sort of druidic stone altar. Distinguished delegates, some clad in brilliant plaids and capes decorated with jeweled brooches and symbolic embroidery, some in long, white, flowing robes and black caps, form in a circle round the altar and add an air of ancient romance to the scene. Amid a general hush, the leader announces the name of the winner of the highest honor that a Welsh poet can receive, and the fortunate person comes forward to have a fine, beaten copper crown placed upon his head.

GOLDEN HAIR

"LAND o' Goshen, Solomon, what you got there? Looks like your best girl must be a hair-restorer lady. Here—don't go handlin' it right over that box of fancy crackers. Customers are mighty particular nowadays."

Solomon Fearing obediently whisked a wavy and very golden tress of hair in a different direction; and the forelegs of every chair in Lem Stanford's grocery came down with a thump as the occupants leaned forward to inspect it.

"Found it this mornin', back of the cushions in the hack," explained Solomon, with mild enjoyment of the sensation. "Done up neat in a parcel 'twas, and kind of worked under; might ha' been there days and days; mightn't ha' found it at all only for a fool mouse gettin' in overnight and startin' to make a nest. The critter run out just as Mis' Dudley Cairns sot down, and of course she give one jump through the door, and wouldn't git in agin till I'd hauled out every cushion and whacked it agin the wheel so's to be sure the animal hadn't raised a family. I found this then, and when she said 'twasn't hers I opened it; but I'll be whipped if I know whose 'tis."

"What other womenfolks ye kerried this week, Sol?" inquired Uncle Eli Emmons. "I should think 'twould be easy, askin' 'em in turn."

"Well, it ain't," declared Solomon with feeling. "I ast one or two, and they most bit me! Why, Mis' Peters—"

"Mis' Peters has a red head, and a temper to match," chuckled Uncle Eli. "Ye might ha' known the thing wa'n't hers."

"Real golden hair, this is," assented Uncle Si Bonney. He added reminiscently, "Sally Sillo-way's hair was that color, but Sally's dead—thutty years, ain't it, Eli? And Elmina Tarvin's was, but she's gone, too. Shucks, what are we thinkin' of! Ye kerried Minnie Wimble to the train yestiddy, didn't ye? Well, Minnie's hair's yellor. Did ye ask Minnie Wimble?"

"I don't remember Minnie Wimble's mother," remarked Solomon mildly, "and I don't seem to recollect jest what Minnie's hair was like as a gal; but it's sort of dull and streaky now, ain't it?" "Is it? I hadn't noticed," murmured Uncle Si.

"I had," snapped Uncle Eli. "Where's your eyes, Si Bonney? Gray as a badger, Minnie Wimble is. How 'bout Della Veasey, Sol? Kerried her quite a few times lately, ain't ye?"

Solomon flinched. "I didn't ask Della right out," he confessed. "I was skereed to, after Mis'

Peters and Tilda Mottram jumpin' on me so. But I hinted round, and she—she looked so threatnin' I didn't press her. I'd been most sure it must be Della's, too."

"Course 'tis!" cried Uncle Eli. "But ye won't git Della Veasey to own up, and have it all round town hern are the kind she plin on mornin'."

"Well, but what am I going to do?" demanded Solomon plaintively. "I can't keep the consarned thing. Mis' Dudley, she says they cost a lot."

"Wrop it up in a bundle and hang it on Della's door knob," suggested Uncle Eli, with the light of adventure dawning in his eye. "Ring and run! She'll take it in, and no more said, ef it's hers—and ef it ain't, there'll be plenty said, and no mistake about that!"

Solomon glanced desperately around the circle from man to man. "What ye tryin' to let me in fur?" he demanded. "I won't do it, anyways; that's flat. Not if Della Veasey goes bald to her grave, I won't!"

"Dretful ongallant of ye, Solomon," reproved Uncle Si Bonney, gently. "Why not ask Lem here to turn it over to Mrs. Lem, and she'll find the owner easy. It ain't a man's job, anyway."

"Gosh!" remarked Solomon, mopping his brow, "I wisht I'd thought of that before."

AN ARMY AVIATOR'S LUCK

ANY an aviator among the fighting nations owes his life to miraculous good fortune, like the British air man whose escape is described in Tales of the Flying Services by Mr. C. G. Grey.

An officer went out on a bombing expedition and met a German machine. In order to save weight he had left his small arms behind him, but he thought it was a pity to pass by a good target, and so he decided to drop a bomb on him. But dropping a bomb on a swiftly moving mark is not the same as firing at a fixed point. So he missed the German. Unfortunately for him, he also exposed himself to the fire of the enemy, and received a rifle bullet in the thigh.

To be strictly accurate, the bullet struck his trousers pocket, hit a five-franc piece, broke itself and the coin, and distributed the assorted pieces of metal about the lower part of his body.

Feeling that he was badly hit, the pilot shut off his engine and dived for the ground from a height of about six thousand feet. When he was a thousand feet from the ground he espied some aeroplanes in a field, and, not knowing whether he was over German or French territory, he made up his mind to land among the aeroplanes, certain that if they did happen to be German machines, he would be well treated by the flying corps.

Two hundred feet aboveground he completely lost consciousness, but in some curious subconscious way he made a perfect landing—right alongside a British motor ambulance. So well did he land that for some minutes no one troubled about him. When they did go to look they found a badly wounded officer in a state of collapse.

He was promptly put into the ambulance and sent off to the hospital. There it was found that the bullet had cut a large artery and that the pilot would have bled to death in a few minutes if the bullet had not also cut a muscle, which had sprung back and wrapped itself like a piece of elastic round the artery and formed, as it were, an automatic tourniquet.

A MAID FROM "EGYPT"

IN all ages of the world and in all communities the servant problem appears to have been unsolved if not unsolvable, says the Rev. Dr. Lyman Abbott, describing in his Reminiscences his life in Terre Haute, Indiana.

There were in Terre Haute in 1860-65 some peculiar difficulties in this problem. The city had no intelligence office to which servants could go to find a place or housekeepers to find a servant. If a lady wished a maid, she told her friends; the report of her need was circulated, and if any friend of hers knew of a maid, or any friend of a maid who was seeking a place happened to hear of this lady, the information was given. This process sometimes produced singular servants, and, I presume, it also produced singular mistresses.

I happen to remember one maid whose perpetual surprise furnished us with perpetual amusement. She had come from southern Illinois, popularly dubbed "Egypt." She looked on with wonder when my wife rolled the dining table to one side to sweep, for never before had she seen a table "on wheels." When, in dusting the piano, the keys struck the wires and some notes were sounded, she expressed her bewilderment by the phrase:

"Why, the critter speaks, doesn't it?"

When my wife lighted the gas, she fled in terror halfway across the room from the magic that brought a flame of fire from the wall.

UNCLE MOSE'S CONGRATULATIONS

A YOUNG planter in Mississippi had an old servant called Uncle Mose, who had cared for him as a child and whose devotion had never waned. The young man became engaged to a girl of the neighborhood who had a reputation for unusual beauty and also for a very violent temper. Noticing that Uncle Mose never mentioned his approaching marriage, the planter said:

"Mose, you know I am going to marry Miss Currier?"

"Yassuh, I knows it."

"I haven't heard you say anything about it," persisted the planter.

"No, suh," said Mose. "'Tain't fo' me to say nothin' 'bout it. I's got nothin' to say."

"But you must have some opinion about so important a step on my part."

"Well, suh," said the old negro with some hesitation, "yo' knows one thing—the most p'izest snakes has got the most prettiest skins."

AN EXCELLENT REASON

NOT every maid combines the aptitude for blundering and the talent for ingenious explanation that characterize the young woman about whom the United Presbyterian tells this diverting story:

"What do you suppose has come over my husband this morning, Sophia?" exclaimed a conscientious little bride to the new servant. "I never saw him start downtown so happy. He's whistling like a bird!"

"I'm afraid I'm to blame, mum. I got the packages mixed this morning, and gave him birdseed instead of his regular breakfast food, mum."

THE CHILDREN'S PAGE

A WOODLAND QUARREL

BY N. T. HATCH

REDDY SQUIRREL was having an afternoon nap in his cosy home, deep in the heart of an old chestnut tree. Mrs. Squirrel was out for a little airing, and had left Reddy to mind the babies while she was gone. The little fellows were sleeping so quietly that there seemed no good reason why Reddy should not have a nap, too. His sleep had been badly broken of late by one of the babies that was having trouble with its teeth. So he curled up in a fat red ball and in seven winks was sound asleep.

Rat-tat-tat-tr-r-r-r-rt!
That was the noise that made Reddy Squirrel wake up with a sudden start. He raised his head and listened hard. What could it have been? A moment later he heard it again.

Rat-tat-tat-tr-r-r-r-rt!
Then Reddy Squirrel knew very well what the noise was. He had heard it many times in

"GO AWAY!" CHATTERED REDDY SQUIRREL

the forest. It was Downy Woodpecker drilling a hole in the bark of the old chestnut. Reddy Squirrel was very cross when he jumped out of bed and ran to the door of his house.

"Go away from here!" he chattered, as he pushed his head outside. "What do you mean by such noises on the trunk of my tree?"

Rat-tat-tat-tr-r-r-r-rt! answered Downy Woodpecker, as he pushed his long, barbed tongue into a hole in the bark and pulled out a choice morsel.

"Go away, I say!" chattered Reddy Squirrel, louder than before. "You will wake up the babies!"

"You seem to be the only one to wake up so far!" retorted Downy Woodpecker, and his tones were just as unfriendly as those of Reddy Squirrel. "And don't bother me, for I'm busy getting dinner."

"Well, aren't there trees enough for you without trying to knock mine to pieces?" asked Reddy Squirrel.

"This is not your tree," replied Downy Woodpecker. "One of my cousins used to have a home here long before you came along. Moreover, you come to my tree for nuts when you feel like it, and only the other day you

frightened my family almost out of their wits when you were climbing round there."

So they scolded and argued, but they got nowhere at all. And meanwhile the baby squirrels woke up and cried, and Downy Woodpecker made no further progress toward getting his dinner. It was Reddy Squirrel who finally put an end to the quarrel.

"I'll tell you what I'll do," he said at last. "If you will not come to my tree to drill for your dinner, I will not go to your tree for nuts or to harm your family. In that way things will be much more pleasant all round."

"Agreed!" said Downy Woodpecker. "That is a sensible arrangement. Why not go further than that? Why not get all the squirrels and woodpeckers in the forest to live up to the same arrangement? There are trees enough for all of us."

"Very well," agreed Reddy Squirrel. "I will see all my cousins at once, and you must explain the plan to all the woodpeckers. My, it will be fine to sleep in peace hereafter!"

That is the way the quarrel between the squirrels and the woodpeckers, a quarrel of very long standing, came to an end in the big forest. If you ever hear a squirrel and a woodpecker scolding away at each other you may know that one of them has broken the agreement, and that the council of the wood folk will punish him for it.

THE OCEAN

BY MARY BULL

How very big the ocean is!
I like it so—and yet
I think I'd like it better still
If it were not so wet!

O-M-E-H

BY FRANCES KIRKLAND

"O-M-E-H," Dilly said the letters over and over to herself. "O dear! I can never make you spell anything," she thought, as she looked down at the black letters on their squares of yellow cardboard. "Aunt Hannah said if I put you together right you'd make a word, but I've twisted you and turned you and you won't spell a thing! Of course if you didn't have to make a four-letter word, I could spell 'hem' and 'me' and 'he,' but I can't think what you can be when I have to use all the letters!"

Dilly was bending over a beautiful, shining mahogany table in a room where all the colors were soft and rich, and where a silver-voiced clock struck the quarter hours. Aunt Hannah's room was very still, even when she was in it, and now that she was gone Dilly longed to hear some sound.

She thought of the noisy nursery at home, and how she wished she were there! But Billy had measles, and Dilly must stay at Aunt Hannah's until he was well.

O-M-E-H—the letters stared up at her, and she looked back at them in bewilderment, for somehow they seemed to be speaking to her in tiny friendly voices.

The big round O spoke first, making Dilly a funny little bow. "My dear Dilly," he began, just as if he were much older than she, "I have known many little girls in my day, and I must say I never knew one with whom I would rather play than with you, Dilly, my dear. If it were possible, my friends and I would rise from our pasteboards and join you in some game, but we are hard workers, hard workers. We must always be busy in books and papers. Did you ever think how very, very many times we letters are used in a day? It is words, words, words, until there is seldom any rest for us. We should like to tell you the word you are trying to make of us, but that would be against the rules. Instead, we shall tell you some of the stories we make in books."

The big O began at once with Old Mother Hubbard, told in a new and wonderful way; then the big M followed with a delightful tale of the garden of Mary, Mary, Quite Contrary. The E had been used so often in the story of The Old Woman Who Lived in a Shoe that he knew the names of all of the old woman's children, and he repeated them so fast that Dilly laughed merrily. At the very last the H told Dilly all about the hill where Jack and Jill had their famous tumble; he had been there and had seen the well. Just as Dilly was imagining that she was looking down into its cool depths something seemed to touch her, and there was Aunt Hannah lifting Dilly's head from the table, where it had fallen when she went to sleep! Aunt Hannah's jeweled hand turned the letters about until a beautiful word lay before Dilly's wondering gaze.

"Yes, Billy is well, and you shall go tomorrow," said Aunt Hannah.

Dilly smiled, for the word Aunt Hannah had given her was H-O-M-E. What friends those letters had come to be!

"GO TO WORK AND MAKE YOURSELVES SOME"

BY CLARA INGRAM JUDSON

IN a great yard at the edge of a city stood several pine trees and three big maples. All winter long the pine trees had worn their pretty, warm green dresses, while the maples stood shamefacedly by, bare and cold in the bleak wintry air. Finally, when the warm spring sunshine began to work its wonderful magic in the air, the maples could stand their bareness no longer.

"I'm so ashamed!" cried the biggest Maple. "This sunshine makes me feel queer!"
"I think we ought to get some new clothes," suggested the middle-sized tree.
"Yes, everyone has new clothes for spring, and we ought to have some, too," added the smallest Maple Tree.

"You're quite right," said the biggest Maple, and he looked over the yard and saw the fresh green of the lawn, the bright crocuses here and there, and the tulips by the walk. Even the people passing on the street looked fresher and brighter than during the cold winter storms. "Yes, we must have some new frocks."

"Let's ask the Pine Tree; her dress is always fresh and green. Maybe she can tell us how to get some new clothes," suggested the middle-sized tree hopefully. "Oh, Friend Pine Tree, can you tell us how to get some pretty green frocks like yours?"

"That I can," replied the Pine Tree cheerfully. "Go to work and make yourselves some." But the maples did not like that advice. "We don't want to work so hard or wait so long; we want dresses right away," they said.

"Let's ask the South Wind; maybe she knows where to get clothes," suggested the biggest Maple. So the next time the South Wind blew through the yard they asked her.

"To be sure I can tell you where to get new dresses," laughed the South Wind. "Go to work and make yourselves some."

"That same advice!" grumbled the Maples. "Let's ask the Sunbeams." So bright and early the next morning they asked the Sunbeams their question.

"New clothes?" laughed the Sunbeams. "Go to work and make yourselves some."

And then the Maples began to notice and to think. "Perhaps, after all, we shall get them just as soon if we make our own clothes," said the middle-sized Maple. "Let's try." So all three maples set to work.

Soon the South Wind blew by. "Oh, are you working?" she asked. "Do let me help you!" And quickly she blew a dozen warm breezes through the bare branches.

And the Sunbeams, when they came visiting, cried, "Oh, if you are making clothes, we want to help!" And they bathed the trees in golden light.

Even the raindrops, up on a cloud, saw those busy trees and came tumbling down to help all they could. And so, in no time at all, or so it seemed, those maples were dressed in new frocks of green.

"Just look!" exclaimed the smallest tree, as she settled her new gown with a dainty rustle. "We made them so quickly, and everyone has been so kind, and —"

"That's because you worked, yourself," whispered the South Wind. "We all like to help workers." And away she blew to find another busy tree.

DRAWN BY BESS GOE WILLIS

AN AFTERNOON STROLL

BY OLIVETTE MORRIS

Miss Squealy P. Grunter is out for a walk;
She's the belle of the town, you know;
And the people all stare and the people all talk
Wherever she happens to go.

She bows to them all with a ravishing smile,
And nothing can matter at all,
Since she knows she is dressed in the latest style
From sandals to parasol.

"Oh, Isn't she queenly!" and "Isn't she sweet!"
And "Isn't she fair as a rose!"
You will hear them murmur when down the street
Miss Squealy P. Grunter goes.

PUZZLES

1. NUMERICAL ENIGMA

I am a word of eight letters. My 41753 is a color; my 4265 is a high wind; my 265 is a liquor; my 6237 is a narrow way; my 23476 is a divine spirit; my 4128 is a color; my whole is a large lake in Maine.

2. RIDDLE

They cross unfathomed deeps of foam,
Unforded gulfs of brine,
They touch great cliffs and stony steepes,
And many a danger line.

By them men go from land to land,
Without them trade would die,
And yet, they never stir an inch
Between the earth and sky.

3. ANAGRAMS

Duet sits neat. Ha! Sting a fan. Rang in ate.

4. ACROSTIC

I'm found in cramp, not in pain;
I'm found in loss, not in gain;
I'm found in gram, not in sand;
I'm found in arm, not in hand;
I'm found in flake, not in snow;
I'm found in boat, not in row;
I'm found in prayer, not in pray;
My whole is with us every day.

5. EIGHT ATES

To set apart; to proceed from; to urge; behind-hand; idle talk; ecclesiastical official; to invoke.

Ask any questions you wish about the contents of this page. They will be gladly answered.

The BOYS' PAGE for MAY

Address your letters to THE EDITOR OF THE BOYS' PAGE, THE YOUTH'S COMPANION, BOSTON, MASS.

BASE RUNNING

AFTER you have read about batting in the Boys' Page for March, and have practiced the methods described there, you of course wish to know how to get the greatest possible advantage out of the hits you make.

Base running consists principally of running and sliding, but there is a good deal more that a base runner finally comes to know about it. A year ago, in one of the games between two prominent schools, a player made a long hit to deep centre field that everyone believed from the moment the ball left the bat was a home run. The batter began his circuit of the bases by taking a long, loving look after his hit. Then he ran to first as fast as he was able, still watching the ball, crossed the bag, ran in a wide arc toward second, passed the middle sack, got his turn at deep shortstop, still watching the ball, charged past third in the direction of the bleachers, rounded toward home and made a dashing slide for the plate. He was out. He had made a home-run hit, and was a fast runner, yet he had circled the bases in slower time by several seconds than the slowest man on any professional team would have circled them.

Where did he lose his time? In the first place, the lingering look after that mighty hit cost him

If the pitcher is woolgathering or has begun his pitch to the plate, then you have a good flying start, and the steal should be comparatively simple. The difficulty in the manoeuvre is in getting back to first after a false start, for it requires nimble wit and quick action to change direction. Moreover, it requires good judgment to choose the right moment to start. But if you are clever both in watching the pitcher and in getting back to the base when that is necessary, it is undoubtedly the best way of taking a lead.

What you should watch as signs of the pitcher's being about to throw are his shoulder—preferably his elbow when it is exposed—and the knee of the leg that is farthest from you. Both must move when he begins his delivery. Of course every pitcher knows that, and often tries to deceive a runner by false movements. But there is a difference. After a little experience in watching the shoulder and the knee, you will not mistake the false for the true movement.

RETURNING TO THE BASE

About returning to a base on a throw from the pitcher there is this to be said: If your lead is short and you have plenty of time, do not slide. It is less tiring to run back. But when you have a full lead, it is better to make the hook slide, come to the feet quickly, and turn into the field of play as you do so. A great many ball players do not come to their feet properly after a slide; they turn their backs to the baseman and their faces to the ground. After a slide you must get to your feet with your eyes always on the play. With practice that easily becomes a habit.

Make a slide to second with reference to the position of the player who receives the throw. If he is in front of the bag, make your slide behind it toward the outfield. If he is over the bag or behind it, slide in front.

Remember that the hook slide is a hook slide, and that the hook should come quickly at the moment when you strike the ground. The slide loses much of its effectiveness if you allow the hooking foot to trail along two or three feet before it reaches the base. A quick movement of the foot from one side or the other is an important detail of the correct form.

Many ball players have sprained an ankle or broken a leg by making a poor slide—by starting to slide and then changing their minds because the throw was wide. Cleats stick in the ground, and something has to give. Most of such injuries are unnecessary. They are caused by the base runner's failing to obey the precept, "Always finish a slide." There is little if any danger in sliding to bases when you are thorough about it, but there

BALANCE LIGHTLY ON YOUR TOES, READY TO GO IN EITHER DIRECTION

overthrow, and out of any danger of getting tangled up with the baseman.

OFF THIRD

The lead off third should be conservative. It is no part of the game to take needless risks when you are so near a score. Moreover, a quick-throwing catcher often "nabs" a runner who takes a long lead toward the plate. A short lead increased two or three steps on the pitcher's delivery is correct. But you cannot hold the increased lead after the instant when the ball hits the pocket of the catcher's mitt. A retreat is then in order. This retreat should be inside the base line, so that you obscure the catcher's view of third base. This action makes the catcher's throw to the base a difficult one, and often discourages him about attempting it.

When you are at third, you have a chance of scoring on an infield grounder if you have a good lead and make your dash for the plate when the play is made to first. The chances are decidedly against you if you start when the ball is hit. If you are driven back toward the base by the threatening motions of the fielder, you cannot make the plate on the play to first. Here again comes in the advice: a full lead and stand still. The chances are that the fielder will not throw to third unless you are far up on the base line. If you will only hold your long lead and then go on the throw to first, you will have a little more than an even chance of scoring; but because of the risk the chance is seldom taken until after one man is out.

A delayed steal is made on a throw from the catcher back to the pitcher. Its success depends upon circumstances. If the baseman ahead is not near his bag, if the pitcher is not alive, and if the catcher has failed to notice the long lead that you have taken or is careless about throwing back to the pitcher, then the chances are favorable. It cannot be depended upon, however, as a set play. You must see your opportunity and take advantage of it without a signal from the bench.

Advancing a base after a fly ball is caught is good baseball. If you are on third you should be able to make home on a long fly to any outfield. The runner on second can make third on a long fly to right and sometimes on a deep foul. When you are on first, you prepare to advance on the catch only if the fly is a long foul fly handled by a fielder with his back to the diamond. On any ordinary outfield fly you have no chance to beat a throw. In all cases when one of your team mates knocks a fair fly ball while you are on first take a big lead and be ready to go if the fielder drops the ball. That, of course, applies before two are out.

CAUGHT BETWEEN BASES

Occasionally you will be caught between bases in spite of yourself. Then it is not a dodging game that will save you. If anything will do the trick, it is this: Keep the eyes on the man with the ball and work back to about twenty feet or so from the base; then slide suddenly and scramble for the bag, if you have not made it on the slide. Sometimes a quick slide, made before the fielder expects it, will get you back safe. Merely running in the opposite direction from the throw scarcely ever works out successfully.

If you are the first one to be put out on a possible double play, never slide for a base. It is harder for the baseman to throw round a runner who is standing up than over one on the ground. By not sliding you assist your team mate who is going to first. Always remember the runner who is coming behind you. If you get caught between bases, prevent yourself from being tagged until the other man has caught up. On the other hand, if there is a runner in front of you, remember that your job is to "follow the leader." Advance a base when the leader advances. The play under ordinary circumstances is to catch the runner nearest the plate, and so the pursuing

IF THE BASEMAN IS IN FRONT OF THE BAG. MAKE YOUR SLIDE BEHIND IT

runner generally is at liberty "to take everything in sight." Many a time with runners on first and on second the man on first has watched his team mate go to third, and quite forgotten that he should be taking second at the same time.

"TOUCH ALL THE BAGS"

Be wary of being entertained by your opponents. An opponent does not make diverting remarks merely from the goodness of his heart, but rather with quite different intentions. The magician at the theatre fascinates us with his sinuous motions so that we shall not detect some mechanism that helps him perform his trick. Likewise, on the baseball field, the amusing antics of shortstop or second baseman are not what they seem. The runner has his own business to attend to and nothing else.

"Touch all the bags" is the shriek of the first-base coach on a long hit. There is no better warning for you as you start the circuit. But remember, also, to be a sprinter; toe in, not out, and run.

That daring base running is dependable may seem like a paradox; but the policy of taking chances on the bases—of putting the game up to

the other fellow—cannot be questioned. Daring base running may sometimes lose a game, but more often it is the means of setting the ball rolling (literally), and bringing about the break in the play of the opponent that makes the difference between a win and a loss. Nothing puts a team on the ragged edge more quickly than the feeling that it must stem a base-running tide.

Base running is one of the most satisfactory parts of baseball. It is the last word in offensive play. Not even the feeling of having made a hard catch or a clean hit quite equals the satisfaction of coming to your feet after a successful slide and grinning at the baseman.

A SIMPLE METHOD OF LEARNING THE PLANETS

AN article on the Boys' Page for April told how you can find out about the principal stars. You will naturally want to learn something about the planets at the same time. For this you can use the star map and compasses described in the first article.

The planets, perhaps, will mystify you a little. They are not "fixed," like the stars, but are bodies similar to the earth and, like the earth, move in great orbits round the sun, and, as compared with the stars, are so near us that we can easily notice their movements among the stars. There are only eight major planets, including the earth, but four of them are usually so bright that they are sure to attract the attention. If some night you see a bright "star" that you cannot discover on your star map, you may be sure that it is one of the planets. Astronomers know the orbits of the

IF THE BASEMAN IS OVER THE BAG OR BEHIND IT, SLIDE IN FRONT

planets, and therefore, of course, know when and where each planet will appear. The amateur astronomer can tell the planets only by reference to an almanac, although Mars can always be distinguished by its ruddy color.

It is interesting to plot on the star map the orbit of one of the planets. With your compasses, or even with your eyes, you can observe each night the exact spot that the planet occupies among the stars, and mark it with a pencil. If, when you have done that for several weeks, you connect the pencil points, the line will represent the path of the planet among the stars. In the same way you can plot the orbit of the moon. You will then discover that its actual movement is east, although the motion of the earth makes it appear to travel west like the sun.

CUBAN REVOLUTION STAMPS

WITHIN the past seventy years nearly every revolution that has accomplished its purpose, and also many unsuccessful political upheavals, have been accompanied by new issues of postage stamps. The struggle between the North and the South is an example, and in recent years Mexico has supplied many others. The Boys' Page has described the stamps that the provisional government of Greece put forth. We may be sure that stamps for the new government in Russia will soon appear.

Notwithstanding these philatelic precedents, it was with genuine surprise that collectors received the news that a series of stamps was an outcome of the short-lived revolution in Cuba during February and March of this year. The territory that the rebels occupied was so small and their reign was so brief that collectors did not expect any special postal labels to appear. However, during the revolutionists' control of the province and town of Camaguey, letters came to the United States that bore stamps of a provisional issue.

One of the letters brought what was regarded as authentic information that the rebels had seized two thousand of the one-cent green, three thousand of the two-cent red and three hundred of the three-cent violet of the current issue bearing the map of Cuba, together with three hundred of the ten-cent dark blue special delivery stamps that picture an aeroplane, and that they had surcharged these in red letters.

The surcharge on the stamps that paid postage on this letter from the occupied part of the island republic reads, 1917 GOB. Constitucional Camaguey. This overprint is in three lines. "Gob." is short for *gubernacion*, or government. The writer of the letter offered to supply a few of these provisional stamps at from ten dollars to fifteen dollars each. The future will tell whether that is a fair value.

TRAPPING TURTLES

IN slave-holding days in the South, the negro fishermen used to have an ingenious and simple way of trapping fresh-water turtles. Any boy to-day can use the same method with the same effect.

Turtles have favorite sunning logs. Beside one of the logs sink a water-tight box two feet long and a foot and a half wide. The open top of the box should stand about an inch above the water. Nail the box securely against the log in such a position that it will catch the turtles that fall from the log. After the trap has been set, leave the pond or lake for a time. On returning, approach the log quietly from the side opposite the box. If there are any turtles on the log, frighten them suddenly. They will pitch off hurriedly into the box.

HE SWINGS OUT OF LINE A LITTLE, HITS THE INSIDE CORNER OF THE BAG AND STRAIGHTENS AWAY TOWARD SECOND

at least a second; then in his rush round the bases he traveled 450 feet instead of 360; finally, he was unable to run his best while trying to see how good a retriever the centre fielder was. Probably he lost in all three or four seconds.

THE RIGHT WAY

For the sake of contrast, consider what a good professional does when he makes a "homer." At the crack of the bat he is off like a race horse. He does not even know where or how far the ball has gone; there is a coacher to tell him that. As he nears first base he swings out of line a little, hits the inside corner of the bag and straightens away toward second. Twice again, near second and third, he turns out of line before he reaches the base, treads the bag on the inside, and is away on the path without running an extra foot. Moreover, not once has he comforted himself with a look after his hit, except a quick glance as he passed first. All the rest of the time he has had his eyes on his running and his coachers, who alone are responsible for his progress. In the circuit he runs as close to the minimum of 360 feet as is possible, and he makes time all the way because he has his eyes on his own work and not on that of his opponents. He covers the distance in fifteen seconds, whereas the other player took eighteen at least.

At the crack of the bat a player has just time enough to understand whether he has hit to the infield or to the outfield. That determines his course to first base. If he has hit to the infield, he sprints inside the line all the way and overruns the bag. If he has hit to the outfield, he sprints on the outside of the line, swings out before reaching the base, hits the inside corner of the bag and takes his turn toward second. Whether he continues or not depends upon the coacher and upon the player's glimpse of the situation as he crosses the base.

Some runners slide for first on an infield ball that is being fielded for a close play, but they waste a precious fraction of a second in getting their feet out in front of them. It is true that a base runner who does not slide frequently has to break his stride in order to touch the base, and so loses a precious moment; but if he runs evenly all the way, he touches the bag in slightly quicker time than he would have done had he slid. On the whole, therefore, it is better to cultivate a stride that is accurate and unbroken and not to make a practice of sliding to first.

STEALING SECOND

To steal second take a lead off first of eight or ten feet, according to the quickness of the pitcher. There are not many pitchers who will allow a lead of ten feet to go unchallenged, but there are few who can catch a runner if he is on his balance, even when he has taken as long a lead as that. It is not necessarily a long lead, however, that brings success in stealing bases. The quick get-away or flying start is more important.

Take a lead that is safe and then get on your toes ready for a quick dash the instant the pitcher begins his motion. It is bad form to dance up and down on the base line with the expectation of annoying the pitcher. It is too easy to get off balance and too easy for the pitcher to throw you out in the meantime. The very first thing that a base runner has to learn is to stand still when he has a full lead. The proper lead is straight toward second, not back toward right field, and just as much more than eight feet as the pitcher will allow you. Balance lightly on your toes, ready to go in either direction on the instant.

Another way of getting a good start for second is to take a short lead, wait until the pitcher seems on the point of delivering the ball to the plate, and then make a quick dash from the base. If the pitcher sees and hesitates, you must get back without any loss of time; but

THE LINE OF DASHES SHOWS THE PROPER COURSE IN RUNNING BASES. THE DOTTED LINE SHOWS THE WRONG METHOD

is a very great risk of injury if you become careless about finishing a slide every time you begin one. Do not forget to wear a sliding pad. If you cannot get a tailor-made pad, use a towel so folded that it covers the thigh completely. The theory of using a double cloth is that much of the rub of the slide is taken up by the friction of one surface against the other. Nothing is more annoying than a sore made by sliding, and it is dangerous, for it easily becomes infected, and at best heals slowly. A description of sliding pads that you can make at home was printed in the Boys' Page for May, 1914. You will find a picture and description of the best pads to buy in the article on Equipment, published in the Boys' Page for March, 1916. Write to the Editor of the Boys' Page if you have any questions to ask about pads—or about anything else that has to do with the game.

OFF SECOND

The lead off second should be somewhat longer than that off first or third; but it is not wise to take daintily long leads, for there are plays to catch foolhardy runners. Rather take a moderate lead and increase it on the pitch. Because either of two men may take the throw to second, your base-running job is a little more complicated than it was at first base. You need to watch three players, who are somewhat widely separated.

When you lead off second, nearly face the bag, so that you have a view of the pitcher and of the second baseman, and cannot fail to get a glimpse over your left shoulder of the shortstop should he go to cover the base. Increase your lead with the pitch, so that you can make third on a sacrifice or home on a good single.

The thing to watch when sliding for a base is the baseman's hands. That is especially true when sliding for third. When the baseman's hands are low it means that you should slide behind the base to avoid a tag; when high, that you should slide in front. In the second case you are probably safe anyway, and you will be three feet nearer the plate in case of an

BLUE STREAKS

TRADE MARK REG. U. S. PAT. OFF.

THE money you save on a pair of Goodyear Blue Streak Bicycle Tires will buy an electric lamp for your bicycle. And, remember, Blue Streaks are unusually good bicycle tires, too.

WHY PAY MORE?

Many good bicycle tires sell for as high as \$5.00 each. But Goodyear Blue Streaks cost you only \$3.25 each, even in these days of high material costs.

So you may save as much as \$3.50 per pair by buying Goodyear Blue Streaks. And remember, in Blue Streaks you are getting wonderful tire quality and value. That's what Goodyear's square deal bicycle tire policy means to the bicycle rider.

HOW WE DO IT .

Goodyear is able to make these big savings for you, *first*, by cutting out the extra profits which you pay on other tires. Goodyear sells *direct* to the dealer in your town and eliminates needless profits between the factory and you.

Second, Goodyear makes only one bicycle tire—the Blue Streak. By making only one tire we cut down factory costs. That's doing one thing at a time and doing it well. These savings come to you in a tire just that much better.

YOU'LL BE PROUD OF BLUE STREAKS

Goodyear Blue Streak Bicycle Tires are tires you will be proud to have on your wheel. They are handsome, durable, rugged, strong, skid-proof and easy riding.

Goodyear Blue Streaks have tough, rugged treads with two reinforcing strips of fine fabric under the tread. This makes them long-wearing and trouble-free. The stout, two-ply tire body is laid in lively rubber, which makes the tire quick and elastic and, therefore, easy to pedal.

Blue Streaks have superior non-skid advantages. The tread is made of blocks of rugged rubber which come together and bite the ground to prevent side-slipping.

MAKE THESE SAVINGS YOURSELF

Ride around to the Goodyear dealer in your town. If you can't find him write to us. You have a right to make these savings yourself. The money will come in very handy when prices of everything are so high. And it will please Dad. You can prove to him you're a good business man.

So look for the Blue Streaks on the tire. Be sure you get Goodyears. Then see how much better your bicycle will look. And how much easier riding it will be.

THE CAMERA IN NATURE STUDY

AS an accurate means of recording observations, the camera is an invaluable aid to the student of nature. The details in a good photograph admirably supplement written notes in regard to form and structure, to say nothing of helping to fix the facts in the memory.

But to obtain the greatest educational advantage from such use of a camera, the pictures and the notes should go together. The nature lover who wishes to collect mementos of pleasant rambles abroad rather than to follow up closely any special course of study would enjoy a nature diary. If that is the purpose you have in mind, get an album that contains a number of flexible, light-toned leaves. Mount the prints as you make them, in regular order upon the left-hand pages, and on the opposite pages note the date, color, weather conditions, locality, and any other interesting details.

The student who wishes to file her prints so that she can readily refer to any subject will no doubt prefer a loose-leaf album or a portfolio, in either of which prints can be grouped and classified in whatever way is most useful, and fresh material inserted without disarranging the rest. The album is perhaps the best for home or library, and a portfolio for classroom use. Coloring the prints greatly increases their usefulness.

A series of comparative studies is usually of greater value than one print of each subject. For example, a picture of a birch tree taken in winter will show its structure; another in summer, the mass effect of the foliage; and close-up views of a small branch will reveal the shape of the leaves and how they are attached, the character of the bark, the blossoms, and so forth.

The same condition holds good with plants that you wish to show in different stages of growth from bud to seedtime. When taking the pictures, try to arrange a few specimens to show front, side and back views of different parts.

You can do simple work with a film camera, but by far the best outfit for nature-study work is a folding plate camera with enough bellows extension to allow you to make a large-sized image by focusing at close range—within twelve to eighteen inches—in order to show the details. The main advantage in using the plate camera lies in the opportunity it gives for focusing accurately by seeing the image on the ground-glass screen. Four by five is, however, an excellent size, and most convenient for field use. A rapid rectilinear lens of good quality is quite capable of giving first-class results, for it is generally necessary to stop down,—that is, use a small diaphragm opening,—no matter what kind of lens you use, in order to get depth and sharpness.

Color-sensitive plates, preferably the nonhalation kind, are best; or if you must consider weight, you can substitute film packs in an adapter, since they do not prevent you from using the focusing screen.

When possible use a ray filter to improve the rendering of various colors in truthful light and shade. A tripod is of course essential for most of the subjects. Other useful accessories are a cheap vise that you can clamp to a board or a table, to hold cut branches, and sheets of gray paper—some dark, some light—to use as backgrounds.

You will get the maximum detail and surface texture in outdoor studies when the light falls from one side and is sufficiently diffused to prevent harsh contrasts. Usually the most favorable time is the early morning or mid-afternoon hours on days when mist or fleecy clouds soften the direct rays of the sun.

Small plants require especially careful arrangement to avoid a confused effect. Rocks, smooth tree trunks or bare earth may afford satisfactory contrast, but it is often a good plan to provide a plain background by pinning a sheet of paper to a couple of stakes driven down a foot or so behind the specimen.

To attain the best definition, get a general focus first with the lens wide open, then stop down until you see good detail in all important parts. As a rule the background had better be a little out of focus to help concentrate attention on the rest. When you use a ray filter, always place it over the lens before you focus.

When you want to get details of structure and the like rather than views of the subject in its natural environment, it is usually easier to do the work indoors where the lighting is under full control and no blurring from wind need be feared. In such cases it is best to let delicate plant specimens stand in water an hour or so before you use them, to prevent possible drooping during the exposure. A window on the shady side of the house—north, preferably—gives the softest lighting. You can further regulate the contrast by moving the subject toward or away from the window.

A few trials will prove the best guide for estimating the length of indoor exposures, but as a rough guide to start with, you may allow as many minutes as you would seconds outdoors. Remember, however, that full timing is needed to preserve soft gradation and good detail in the shadows, and that in developing you must take care to hold back the high lights.

Homemade Bathing Shoes.—Anyone can make a satisfactory pair of bathing shoes from a pair of stockings and two pairs of shoe soles, such as are used for knitted wool bedroom slippers. Place

one of the soles inside the foot of a stocking and with heavy black shoe-button thread sew it to another—and a slightly larger—sole on the outside of the stocking. That gives double protection, and saves the bother that goes with putting on and taking off ordinary bathing shoes. In order to accommodate soles of the proper size and allow room for stitching, the stockings should be larger than the wearer's regular size.

ANALYSIS OF THE DRAGON FLY

MAKING AND APPLYING DESIGN

IV. Appliqué Embroidery

THE French word "appliqué" means "laid on," and appliqué embroidery is made by cutting decorative figures from one material and sewing them on another. The method gives a wide opportunity for introducing several colors, covering large surfaces, and for producing interesting effects by combining varied weaves and textures as well as colors. The design may be completed or enriched by stitches of silk, linen or cotton, or of gold thread. You can use appliqué embroidery successfully in decorating a great variety of articles, such as curtains, table covers, scarfs, sofa cushions, and so on.

Like every other method of decoration, appliqué embroidery imposes certain restrictions. Since you must cut out your design before you sew it on the material that forms the groundwork, the design should not be too intricate. But neither should it be heavy or clumsy. Since you are putting one material on another, you must consider carefully their relation to each other. For example, a heavy, rough material would be inappropriate if sewed on a delicate foundation material. And you will do well not to cut your design from material that ravel easily.

Various methods can be used to outline the figure—that is, to cover the edges of the form that you put on the foundation material. You can sew the edges closely over and over, you can use a close buttonhole stitch, or you can sew on a cord, a braid, or a strand of silk or thread. Couching—sewing down a cord or strand with stitches over it far enough apart to show the strand between—is a good method.

If parts of your design are too intricate to be cut out you can indicate them by stitches. For a line the crewel stitch is often the best—stitches set diagonally on the line, close together.

The illustration shows a slip cover for a book decorated by appliqué embroidery with a design taken from the dragon fly. The dragon fly was chosen as the subject of the design this month to show that you can get the forms of your design not only from flowers and plants but from animal life, too. For this purpose it is desirable to study the insect from a specimen that you have caught and mounted. But remember that in conventionalized design you must always express character. Therefore, you must observe the dragon fly in motion and in repose. In studying your subject you will notice the jointed segments of its body, the gauziness of its wings, the unswerving watchfulness of its great eyes, the general lightness of its movement as it darts about. In making a design from a plant you observe the movement of the plant—whether it climbs, sways, droops or winds. Likewise when you take animated nature for your model, you must observe whether your subject springs, soars, darts or crawls.

If it is important in a decoration based on plant life that the design be conventional and not realistic, it is doubly important in a decoration based on animated nature. A design that should imitate a real dragon fly or a real butterfly on a pillow cover or a curtain would be thoroughly artistic.

The analysis shown with this article gives several studies of the dragon fly and some units of

design derived therefrom. The combination of the three dragon flies is used on the slip cover. Although it is true to the subject in character, it is highly conventionalized.

The materials used on the slip cover are green linen of a rather broad, coarse weave for the foundation, a finer tan linen for the wings of the dragon flies and brown linen for their bodies, brown sewing silk, and brown and yellow twisted embroidery silk.

When you have cut out your design, touch it lightly round the edges with a little glue or paste to keep it from raveling. Then baste the wings on the green linen. Next baste the bodies in position over the wings. Overcast the forms on the green linen with small stitches of brown sewing silk all round the edges. Hold a strand of the brown embroidery silk on the edge of the form and sew it over and over with stitches of the same silk a short distance apart. In doing that, carry the outline of the wings slightly over on the body by stitches laid close together without the underlying thread.

The foundation material should be eighteen and three quarters inches by eight and five eighths inches. Fold it three and one quarter inches from each end to form the pockets into which the covers of the book are to slip. Turn down the edge of each pocket a quarter of an inch and stitch it, on the right side of the material, with brown embroidery silk. Turn down the top and bottom edges of the outside cover and of the pockets a quarter of an inch, and sew them over and over with the brown embroidery silk. Sew the turned-down edges of the cover in the space between the pockets with stitches of the same silk taken through from the right side, as in the edges of the pockets, but this time with the stitches close together.

The ties are also appliqué. They are made of strips of tan linen folded, with the narrow edges turned in. The ties should be basted on the green linen an inch and three quarters from the top and from the bottom of the slip cover and sewed on with over-and-over stitching of brown embroidery silk along the edges. On each tie, at intervals, should be worked a group of close-set over-and-over stitches that reach across the whole width of the band. Stitches in yellow embroidery silk may be set diagonally along the ties.

A LITTLE GARDEN OF SWEET HERBS

A PART of a certain garden that never fails to interest visitors is a sunny corner devoted to old-fashioned herbs. Whatever the visitors say or think about the flowers, the most apathetic of them wake up at sight of the herb patch.

"Mint!" one says, breaking off a leaf and nibbling it. "That reminds me of the time when I was a child"; and another, "Why, here is lavender! Mother always had that"; and so on. Even when the plant stirs no especial memory, the aromatic fragrance of the leaves often wins attention; and many of the herbs have a practical value for seasoning and dressings.

As a rule they are easy to cultivate; but for the best results the beds should be in a sunny place and the soil fairly rich and mellow, broken up fine and kept well stirred about the plants during the growing season. Some, like sweet basil, last only one season; of those, the seeds must be sown every spring; but others, once started, become fixtures in the garden, and renew themselves from the root year after year.

Of the latter kind are the two mints, peppermint and spearmint. The best way to raise them is to plant pieces of the creeping rootstock, dug from some wild patch, by roadside brook or meadow runnel. Lavender can be started from seed; but for the novice it is better, if possible, to get slips from established plants, preferably stems of one full season's growth with a "heel" of older wood, and to set out the cuttings either in late autumn or in early spring.

In the particular garden that has been mentioned, the clump of sweet marjoram—always an herb of romance because in ancient Greece and Rome its aromatic branches were woven into bridal wreaths—had its beginning in a root division given by a neighbor; but, if you are not in a hurry, it is interesting to start the herb from seed, being careful to keep the young seedlings shaded until they are well established, for they are very sensitive to the direct rays of the sun.

Sage, the herb that is associated with thoughts of sausage and roast duck, is raised either from root divisions of an old plant or from slips. If the second method is followed, the cutting can be made either from mature wood in the spring, or later from the soft stems just before they produce the blossom buds.

English thyme is also quickly grown from root divisions, but it may be started from seed. Rosemary, which is loved not only for its own sake, but for its pretty name and its association with old walls and cliffs of southern France, has drooping branches that often root where they touch the ground. From them the plants can be quickly raised; but if you cannot get the branches, young plants can be had from nurseries, or they can be raised from seed.

Catnip should not be forgotten in the herb corner, and, since it grows wild by so many roadsides, roots can readily be taken up and brought home. To enjoy the fragrance of the herb garden through the winter days when the snow and ice cover it, make clippings from the plants just before the blossoms are ready to expand. Do it on a fine, dry day, and at an hour when there is no dew on the leaves. Then tie them in bunches and hang

them in a shed or garret in a draft of warm air so that they will dry quickly.

YOUR NATIVE TOWN

A GAME that affords fun and an interesting test of wits is Your Native Town. At a party it will tide over any dull moments that threaten. Provide the players with paper and pencil, and ask them all to write the place of their birth. Then give them a limited time in which to make a sentence consisting of words that begin with the letters in the name of the town, and that follow the same order.

For example, if the city is Baltimore, then the sentence might be, "Behold a large town in Maryland, old, rich, enterprising!" The more aptly descriptive of the town, the better is the sentence. At the end of a specified time have the players read their sentences, and, if you wish, award a prize to the best one.

CROCHETED BUTTONHOLE EDGINGS

A PLEASANT change from the old tedious method of making buttonholes is here shown. The idea is carried out in crochet, and offers an attractive combination of buttonholes and ornamental edging for underwear, house dresses and children's clothes. Any kind of button

FIG. 1

can be used with this form of buttonhole, but the crocheted variety suits best. The edgings are easily made, and add a distinctive touch to even the finest lingerie blouses. Use mercerized cotton in a medium weight, No. 60 is fine enough for delicate fabrics, and No. 50 coarse enough for the heavier materials.

To make the plain-loop closing shown in Fig. 1, fold over the edge of the material one eighth of an inch and cover the folded edge closely with

FIG. 2

single crochet. Make buttonhole loops at regular intervals as you go. The loops are made exactly like picots except that a longer chain is used—sixteen or more stitches, according to the size of the buttons. Be careful to make allowance for the fact that the loops will shrink when they are washed.

A row of machine stitching on the folded edge will give a firmer foundation for the crochet edging and add strength to the closing. If a hemstitched

FIG. 3

effect is desired, draw three or four threads at a distance of one eighth of an inch from the folded edge before you cover the fold with crochet. The upright threads in the drawn space will be divided into groups by the crochet stitches.

The scalloped design, Fig. 2, provides an especially good closing for a blouse of linen or other firmly woven fabric. Fold and stitch a hem of the desired width. Stamp or mark the scallops on the right side of the hem, and outline them with a row of machine stitching. Cut away the surplus material and cover the edge evenly with single crochet. Make a loop at the highest point of each scallop.

To make the third closing, shown in Fig. 3, cover the edge of the hem with single crochet, chain five and turn. * Miss two s. c., d. in next s. c.; chain two, miss two s. c., d. in next s. c.; picot in top of d. just made; * three times; chain two, d. in next s. c. twice; in top of d. last made make a buttonhole loop; chain two. Repeat from beginning.

CANDY MAKING WITHOUT COOKING

IN warm weather, when the heat makes it a disagreeable task to work over a stove, the ordinary kind of candy making is not a pleasant occupation—the results seem hardly worth while. The following receipts are for sweetmeats that can be made without heating any of the materials.

Mock Oranges.—Mix a tablespoonful of orange juice with the finely grated outside yellow rind of one orange, being careful not to grate into the white part, for that gives a bitter taste. Stir in the unbeaten yolk of one egg, and enough confectioners' sugar to make a paste that is stiff enough to handle. Form it into balls about as large as a hazelnut, and insert at one end of each a bit of grass or tiny flower stalk. Place the candy on waxed paper to dry.

Mock Lemons.—Use the grated rind of lemon, and mix the sugar with the white of the egg. Add a trace of the yolk to give a faint yellow tint. Form the paste into miniature lemons.

Smothered Dates.—Stuff dates with nuts and wrap them in the following paste: two tablespoonfuls of softened butter, two of powdered cocoa, two of water, and enough confectioners' sugar to stiffen the mixture.

Peanut Butter Whirls.—Mix a teaspoonful of melted butter and a few drops of vanilla with one pound of confectioners' sugar, and add enough milk to bring the mixture to the consistency of stiff dough. Roll the paste into a sheet a quarter of an inch thick, spread a thin layer of peanut

butter over it, and make it into a miniature jelly roll about an inch in diameter. Slice the brown and white roll neatly into thin wheels or "whirls."

Tea and Coffee Balls.—Steep either tea or coffee in twice its volume of water—for example, two tablespoonfuls of either in four of water. Drain off the liquid and stir in confectioners' sugar to make a paste. Form it into balls or cut it into squares. This confection is refreshing and stimulating on a journey or a long tramp.

MONEY FROM CANARIES

[The fourth in The Companion Series Earning Money at Home]

THERE are few more interesting occupations by which girls can earn spending money than raising canaries for market. To supply the demand for good singers, between four and five hundred thousand birds are brought in normal times into the country every year, chiefly from Germany. The Harz Mountain canaries are the most popular, and of those the St. Andreasberg birds are the most highly prized. The German peasants devote much time and attention to making fine singers. They do not regard color or size so long as the male can be taught to sing sweetly with a variety of notes.

The girl who plans to raise canaries should start with a carefully selected pair. The male must be a good singer and the female strong. It does not matter whether the birds are of a clear canary color, or have greenish or grayish tints or are crested.

It is a wise plan to get a breeding cage with two compartments, so that the two birds can be kept

apart for a few days until they become acquainted with each other. If they fight when first put together they should be separated for a while; it does not take them long to learn to live amicably together. The nest, which always comes with a breeding cage, can be prepared by putting a little cotton into it. If the female bird is ready to hatch her broods she will spend a good deal of time on the nest; but if she scorns it, as is

sometimes the case, take it out for a week or two and then give her another opportunity.

During the breeding season it is well to feed the birds with hard-boiled egg mashed fine. The egg, however, should not be allowed to remain in the cage more than a day, for it spoils quickly.

The eggs will hatch in from fifteen to eighteen days. The mother will feed the youngsters herself, mother-bird fashion, until they are old enough to eat birdseed. Sometimes the father resents the advent of the young and kills them. To prevent such a tragedy he should be kept in another cage or else in the separate section of the breeding cage until his temper becomes less savage. But if from the first he does not manifest any hostility, he may be left with the brood.

After the young birds are two or three weeks old, the cage, which during the hatching should be kept in a quiet place, may be taken into the living room. At all times it must be protected from drafts.

If there are any males among the birds they will attempt to imitate the singing of their father. The peasants use various musical instruments when they teach the birds new songs, and they repeat the same notes over and over with great patience until their feathered pupils begin to imitate. Girls who have a similar stock of patience and who can whistle can get a good deal of fun out of training the young canaries to repeat after them a favorite call or trill.

When the birds have learned their song they are ready for the market. The girl's next task will be to find purchasers for them. Good singers sell at retail prices that range from two dollars upward, but not every canary will bring so much as that. If the young owner sells direct to her customers, she will get better prices than if she sells to dealers, and at the same time will be making a reputation for her stock. After she has raised one brood of birds and taught the singers, it will be easy to increase the number of breeding pairs and the number of singing pupils.

If she lives in a fairly large town or city, she may add to her profits in summer by taking canary boarders. One girl put an advertisement in a local newspaper that read like this:

If you have a pet bird that you want well cared for this summer, communicate with Miss Anna Brown, North Hilton. She understands all about birds. Terms reasonable.

She told her friends, also, and in a little while she had fifteen canaries to board at two dollars a month. They thrived, and not only brought their "landlady" a good profit, but also won her several new customers for other times of the year.

PROGRESSIVE CROQUET

IF you live in a neighborhood where there are several lawns suitable for croquet not separated from one another by any great distance, you can arrange a progressive party that will be different from the ordinary summer evening entertainment. It will interest a surprisingly large number of persons. Even those who consider the good old game of croquet as quite "gone by" will be glad to play it under these conditions.

Five or six croquet grounds, one lighted by red Japanese lanterns, another by blue lanterns, a third by yellow, and so on, are the tournament fields. The players progress from one ground to another, as from table to table in a progressive indoor game. A small prize for the winner will increase the interest.

Progressive refreshments go appropriately with the game. Serve them at small tables on each croquet field—sandwiches on the first, salad and wafers on the second, fruit on the third, and so on, with cake and ice cream at the last. Those who finish their games first will have the longest time at the refreshment tables.

Of course you can have the same sort of party, except for the lanterns, in the afternoon, but the "atmosphere" will not be quite the same.

The Preacher of Cedar Mountain
By Ernest Thompson Seton

THIS is Mr. Ernest Thompson Seton's first novel. Mr. Seton's books about animals have had so wide a sale that his readers will be glad to know he has written a novel as good in its free and stirring open-air feeling as any of the talks about his four-legged friends.

... Imagine a man of Herculean build and Celtic temperament, powerful for all things, yet impotent without the guiding hand of the right woman, and you have a thumb-nail sketch of Jim Hartigan, the young preacher of Cedar Mountain.

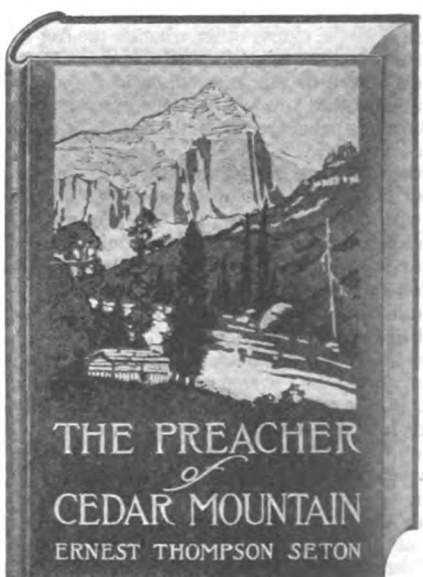

... The story deals with the conversion and later fortunes of this engaging character in a little frontier town. Always by his side, guiding, encouraging, restraining where necessary, the great motive force in his life, stands Belle Boyd, a woman who has the knack of taking life and the gifts of fortune on her own terms.

... Mr. Seton as a novelist draws upon his intimate knowledge of wild life. Very fine and thrilling are his descriptions of the Indian reservation and the throbbing excitement of the annual Fourth of July horse races between the red men and soldiers at the post. It is a world full of color and vigorous life in the open that is here spread before us.

Our Offer Send us one new subscription (not your own) for The Youth's Companion and we will send you the book postpaid; or the book will be sold for \$1.35 net.

NOTE. Our Premiums are given only to present subscribers (not to agents) to pay them for introducing the paper into homes where it has not been taken the past year.

RAISING THE FLAG

EVERYWHERE throughout the country the spring days are marked by flag raisings, as summer nights are starred by fireflies: flag raisings by schools, by colleges, by clubs, by business men's associations, by streets and little neighborhood gatherings, even by churches. Many of those who are called upon to manage such affairs are without experience in the matter and not in the way of getting the information they need in time to be of service. To meet that need The Companion herewith presents a programme that, if carried out with intelligence and spirit, will give even a modest flag raising the dignity that it deserves.

THE FLAG AND THE STAFF

First get your flag, and get one that is right—that is, standard in proportions, in the way the space is distributed, and in material. The fly, which is the length of the flag, should be one and nine tenths times as long as the hoist, which is the width of the flag. There must be thirteen stripes, seven red and six white, each of them one thirteenth of the hoist in width. They should begin and end with a red stripe. The field, or blue portion of the union, is seventy-six one hundredths of the hoist in length, and extends downward to the bottom edge of the fourth red stripe from the top. On it are forty-eight five-pointed white stars arranged in six horizontal rows of eight stars each. The material should be bunting, and neither stars nor stripes should be stamped or printed but each star and each stripe should be a separate piece, firmly stitched in place.

It is also important to choose a flag of a size suitable to the place in which it is to be displayed. One that is too large is as unpleasing as one that is too small. Since dealers offer all sizes, the proper choice is a question of good judgment only.

The staff should have a truck at the top into which has been set a pulley with either a metal or a lignum-vitæ sheave. Through the sheave should run halyards of thin, strong rope, not too large to slide smoothly even when swollen by dampness. Near the base of the staff should be a cleat to which the halyards can be made fast when the flag is at peak.

If the flag is not to be displayed from a staff, but is to fly as a banner, dependent from a rope stretched across a street, or from one building to another, the union, which is the blue portion with its stars, should fly to the north in streets that run east and west, and to the east in streets that run north and south. The flag should never be tacked to the side of a building, platform or stage, or in any way made fast so that it cannot be taken in at sunset. The only United States flag that should ever remain flying during the night is the great garrison flag of a fort, in time of actual war, and then only when the fort is besieged or under attack. The fact that just those conditions existed at Fort McHenry when Francis Scott Key wrote The Star-Spangled Banner is what gives point and poignancy to the opening lines.

Before you begin to formulate your programme, decide what you wish to be the climax of it: whether the flag shall be raised to peak first, and the exercises shall follow, and culminate in the important speech of the occasion, or in a poem, a hymn or a prayer; or whether you will have the exercises first and let the actual breaking out of the flag be the climax. It is the second plan that is adopted here.

In order to prevent the flag from breaking out before it reaches the peak, it must be sent up in stops. To put it in stops, lay it flat, with the union from you; fold it once lengthwise, from you, and then a second time, in the same way. You will then have four thicknesses, each a quarter the width of the flag, with the union underneath. Beginning at the end farthest from the union, roll the flag into a cylinder. Bend the upper, or field, halyard to the loop, or grommet, at the field corner of the flag, and the lower, or bottom, halyard to the other loop, or grommet. Bring the lower halyard down to the centre of the roll, give it one turn round the flag to the left, pass a bight, or loop, up through the turn, then down over the turn until it lies across the hanging portion of the halyard. Draw a bight of the hanging portion through the first bight, and your hitch is complete. Although it sounds complicated, it is only the "stitch" that children use to make a rope chain that unravels at a single pull.

The illustration shows the flag in stops, with the turn of the bottom halyard round it, and the bight brought under the turn, ready to be brought down over the hanging portion, to complete the hitch. In raising the flag, all the pull is, of course, put on the field, or top, halyard until the flag reaches the peak, when a slight tug on the lower halyard breaks out the flag in an instant.

Besides having the dramatic effect of climax, sending the flag up in stops has another advantage: it makes it possible to inclose in the end of the flag farthest from the field, when you roll it up, a quantity—anywhere from a dozen to a hundred or two—of little flags. When the big flag comes out of the stops and burgeons forth in full-blown majesty, the little ones come fluttering down like petals that the breeze has set free. That plan, however, is adapted only to a programme in which raising the flag precedes

THE INVOCATION

Almighty God, our refuge and our strength, be with us in this hour of high resolve. Guide our will to the accomplishment of thy purpose, and direct our fervor to paths that shall lead us to righteousness and to the lasting service of mankind. Put away from us all narrowness, all cruel and vindictive passion, all hatred toward our fellow men; but fill our hearts with wisdom to see the right and with courage to do it; and keep us ever mindful that it is to Thee, and Thee alone, that we must look for strength and guidance and comfort. Amen.

THE ADDRESS

We have gathered here to-day to reaffirm our faith in the great assertion of human liberty on which this nation was established. We are to express that faith by raising a standard that from the beginning has been emblematic of it, and, please God! always shall be, so long as men aspire to freedom and have the courage to defend it.

The ceremony in which we are now engaged is both commemorative and dedicatory. By it we acknowledge with gratitude and affection the sacrifices of all those of every land who have given their lives that the boundaries of human liberty might be enlarged. By it especially we commemorate those of our own land whose courage and steadfastness made possible the priceless heritage that we now enjoy. The flag is dyed with their blood, lighted by the flame of their patriotism and sanctified by their single-hearted devotion.

But this ceremony is also an act of dedication. As we raise this flag, for which our fathers fought, let us not content ourselves merely with recalling the deeds of those who have so nobly served the nation in the past, but let us solemnly pledge ourselves that we in like manner, and in such measure as our ability permits, will serve it in the future; that in peace as well as in war we will cherish the principles for which it stands, and will do nothing to stain its honor or to lessen its influence. To that vow we pledge ourselves in person and in property. To the flag and the nation we offer all that we have, all that we are, and all that we hope to be.

THE PLEDGE TO THE FLAG

I pledge Allegiance to my Flag and to the Republic for which it stands: One Nation, indivisible, with Liberty and Justice for all.

the exercises; otherwise those who are at salute during the playing of the national anthem would have to lower their salute to prevent the small flags from touching the ground.

The directions for rolling the flag that have been given describe the plan generally used on shipboard, which has the excellent quality of being simple and easy to carry out. There is, however, another way, common in the army when the flag is to be sent to peak before it is broken out. It is first folded as in the naval fashion, that is, twice lengthwise. Then, beginning at the end of the strip farthest from the field, a triangular fold is made that lays the end on—and even with—an equal portion of the side; in other words, the corner is folded down at an angle of forty-five degrees. The next fold is straight across the strip, at right angles, the next diagonal again, and so on, until the field end is reached, when the whole flag will be in the shape of a cocked hat. The stops are then put on, as in the naval plan. When well done, the cocked-hat method produces a very pleasing effect, especially if little flags have been inclosed; for, as fold after fold of the big flag opens out, first on one side then on the other, the little flags shoot out as if sown by some invisible hand.

THE MILITARY SALUTE

RAISING THE FLAG IN STOPS

THE CIVILIAN SALUTE

The flag should be folded and rolled in private, so that nothing will remain to be done at the staff except to bend it to the halyards and put it in stops; and that anyone who has practiced it a few times can do in half a minute or less.

If your programme includes a parade, those who are to take part in the exercises should meet at some place agreed upon and form under the direction of a marshal or master of ceremonies. The order will depend upon whether there is a band or not, and whether any military organization is to take part. Since it is easier to add to a simple programme than to cut down one that is more complicated, the formation here given is for occasions

where no uniformed groups are present except a color guard of four—Boy Scouts if no others are available—to give the touch of military interest that the occasion needs.

THE ORDER OF MARCH

MARSHAL.

BUGLER.

COLOR GUARD (in one rank, the rolled flag carried breast-high by the second guardsman from the right flank).

THE SPEAKER, THE POET, THE MINISTER.

LOCAL ORGANIZATIONS.

THE PUBLIC.

When the head of the line reaches the staff the marshal halts the procession. The color guard at once advance, bend the flag to the halyards, put it in stops, and make fast the field, or top, halyard to the cleat on the mast. They then return to their position and stand at attention. The bugler takes his place at their right, and the exercises begin.

If you do not march formally to the staff, gather there at an hour appointed, and bend the flag, in stops, to the halyards; then place your color guard and your bugler, if you have them, at attention, and proceed with the exercises from this point.

THE PROGRAMME

INVOCATION.

ADDRESS.

POEM.

{ TO THE COLOR, sounded by the Bugler.

{ RAISING THE FLAG.

THE STAR-SPANGLED BANNER.

THE PLEDGE TO THE FLAG, by the Children.

The moment the reading of the poem comes to an end the color guard step to the staff, where the man on the right flank and the man on the left flank again stand at attention, while the other two men seize the halyards, one taking the field halyard, by which the flag is to be raised, the other the lower halyard, by which it is to be broken out, and which he now merely pays through his hands, without putting any tension on it as the flag goes up. At the instant when the flag begins to rise the bugler begins to play the call To the Color. The call takes about twenty seconds, and the color guard should so govern their work of raising the flag that it will reach the peak and break out as the last note is reached.

Upon finishing the call To the Color, the bugler immediately begins to play The Star-Spangled Banner, and the whole gathering takes up the song and goes through the first stanza of it—and the others, if you choose—under his leadership; but his instrument, of course, must be a cornet rather than a bugle, and he a cornetist, for you can no more play the national anthem on a bugle than you can play America on a drum. He is called a bugler merely because that is his official military title.

If you cannot get a bugler, you will have to set your ingenuity to the task of providing a substitute. A piano, moved out of doors or to a near-by open window and played with spirit and vigor, would serve creditably.

At the first note of The Star-Spangled Banner the color guard assume the position of the military salute and hold it to the end. The civilians uncover, hold the hat in front of the left shoulder and against it, and maintain that position to the end.

At the close of the national anthem, the children, on signal, give in unison the salute. They raise the right hand smartly to the forehead, with the forearm inclined about forty-five degrees, the hand and wrist straight, the forefinger touching the forehead just above the right eye, the thumb and fingers extended and joined, and the palm to the left. In that position they repeat together the pledge. At the words "to my Flag," the right hand is extended gracefully, palm upward, toward the flag, and remains in that position until the end of the affirmation, then immediately drops to the side.

The pledge was originated by The Youth's Companion in 1892, and since then has been in daily use in thousands of schools.

Both the prayer and the address should be brief; the prayer not more than two or three minutes long, at most, and the address not more than four or five. The address here given is intended, of course, more as a suggestion and guide than as anything to be committed to memory. Spontaneity is worth every other quality, for out of the abundance of the heart the mouth speaketh. But with the poem the case is different. The number of those who can write even respectable verse is limited, and it is far better to quote a good poem than to read or recite a poor one written for the occasion. There are plenty of good ones to choose from. Among them are Frank L. Stanton's The Old Flag Forever; Joseph Rodman Drake's The American Flag; George Washington Cutter's E. Pluribus Unum; Oliver Wendell Holmes's The Flower of Liberty; James Whitcomb Riley's The Name of Old Glory; Lucy Larcom's The Flag; Minna Irving's Betsy's Battle Flag; Hubbard Parker's Old Flag, and Henry Holcomb Bennett's The Flag Goes By.

Leak? No. Mar Floors? No. to Last? Yes. Neolin Soles

"Son, get your slippers on!"

Oh, the mothers, the countless mothers that have said it to their little urchins who reach the home-roof at night with scratchy leather soles.

"Son, get your slippers on!"

It was the only way for little Indians *not* to scratch a floor before Neolin Soles were made.

So get them Neolin Soles, that don't scratch floors—that don't bruise furniture.

Get them Neolin Soles. They don't even carry mud in the way that leather does.

And Neolin Soles *do* wear. They *do* mean noticeable saving where there are little feet to shoe.

Pliant, springy, weight-light soles! Winter-proof, waterproof, grip-sure soles. And as for slipper-comfortable—! They need no breaking in.

Neolin Soles for grown-ups and children. In black—white—tan. The same on any price of shoe. All shoe dealers can get them. Mark that mark—stamp it on your memory: Neolin—

Better than Leather

THE YOUTH'S COMPANION is an illustrated weekly paper for all the family. Its subscription price is \$2.00 a year, in advance, including postage prepaid to any address in the United States, \$2.25 to Canada, and \$3.00 to foreign countries. Entered at the Post Office, Boston, Mass., as second-class matter.

New Subscriptions may begin at any time during the year.

Money for Renewals should be sent by subscribers directly to this office. We do not request Agents to collect money for renewals. Payment to strangers is made at the risk of the subscriber.

Payment for The Companion, when sent by mail, should be by Post Office Money Order or Express Money Order. When neither of these can be procured, send the money in a Registered Letter.

Silver sent through the mail is at the sender's risk. It is liable to be stolen or to wear a hole through the envelope.

Renewals. Three weeks after the receipt of money by us, the date after the address on your paper, which shows when the subscription expires, will be changed.

Always give the name of the Post Office to which your paper is sent. Your name cannot be found on our books unless this is done.

Letters should be addressed and orders made payable to

PERRY MASON COMPANY,

Commonwealth Ave. and St. Paul St., Boston, Mass.

HEADACHE

WHEN a sufferer asks the question, "What is good for a headache?" the only sensible answer is, "What kind of a headache?" Pain in the head is not a disease but a symptom, and it may result from a great many causes. For that reason self-treatment—and, above all, taking any of the so-called "headache cures"—is a dangerous mistake, for it ignores the underlying cause, forms a deplorable and harmful habit, and gives only momentary relief.

The first thing to do for a recurring headache is to hunt the cause. So much has been said of late about eyestrain that most persons now go to an oculist if the headache is persistent. If the eyes are not at fault, or if glasses do not stop the headache, the ears, nose, throat and teeth should also be examined.

In many cases the trouble is with the stomach—the patient is bilious. Poor circulation is sometimes the cause, especially if it is produced by tight collars and stocks. There are many healthy persons who have a headache if the ventilation is bad, and who always pay that price for attending any entertainment that takes place in vitiated air. Then there is the so-called sick headache or migraine, a nervous affection that often runs in families, and that sticks to its victims during long years in spite of all efforts to cure it.

It is not natural for children to suffer from headache at all, and when a hitherto healthy child complains of one parents should watch it carefully. In many cases the pain marks the onset of one of the more serious disorders of childhood.

When a disease of the brain causes the headache there are other marked symptoms associated with it that help the physician in his diagnosis. An anæmic person is very likely to suffer, because the brain needs more blood; in that case treatment for the anæmia will cure the headache.

The occasional headache often yields to a warm footbath and rest in a quiet, darkened room.

A PRESENT FROM NORLEY

AS a package, rather dingy and battered at the corners and several times read-dressed, was put into her hands, Aunt Clarissa laughed delightedly.

"It's my birthday present from Fidelia Bonney. She always sends one,—she hasn't missed since we were schoolgirls,—and I was just as uneasy as could be when it didn't come. I was afraid that she must be sick, or that Uncle Si had one of his 'dying spells' again."

"Why don't you open it, auntie?" demanded her namesake—who preferred to be called Clarice.

"Here are my scissors."

Aunt Clarissa shook her head in good-natured disapproval at her niece.

"You're a hustling daughter of the great metropolis, Clarice," she said good-naturedly, "but I'm Norley born and bred, and I can taste my pleasures without bolting them whole. Just look at that address, please—right in the first place; then crossed out and put wrong, and crossed out twice more, readdressed, and then back to the right one again. Fidelia knew where I'd be,—I'd told her, special,—but Joe Lake at the post office thought 'Boston' was a slip for 'Bolton,' and changed it, to be obliging. I'm generally in Bolton with Cousin Anna at this time, as Joe knows very well."

"But surely a post-office official wouldn't—"

"Joe Lake would! He's Joe Lake first, which means everybody's friend in general and Sister Sally's old beau in particular, and he's an official afterwards. He wouldn't meddle with a stranger's address, but I'm 'Clarice' to him still, just as I was when he used to bribe me with peppermints to go and play in the far end of the garden while he called on Sally. That's the Norley way. So the box went to Bolton; and Cousin Anna wasn't sure where I was, so she tried Cousin Ruth, and Cousin Ruth tried Cousin Mary, and Cousin Mary sent it back to Fidelia, and Fidelia sent it on to me. Now, I'll open it—"

"O Aunt Clarissa! Candied mint and rose leaves! Why, that doesn't seem a bit like a—well, a village offering. I never saw them anywhere except in the Christmas parlor of the Woman's Exchange and at the very finest grocers' and confectioners'. They couldn't possibly keep company with striped peppermint sticks, and chewing gum, and gluey candy lumps on sticks—the kind of things you find in a country store."

"No," assented Aunt Clarissa, delicately nibbling a rose leaf, "they couldn't and they didn't. But they're a 'village offering' all the same. There's been mint along Fidelia's brook since before the Indians deeded over the farm, and cinnamon roses up against the house wall since it was built, and the big pink hundred-head growing by the gate. Confectioners and exchanges are well enough, but when I get a present from Norley, child, it's the kind that's never sold and never bought, and never can be. Not at any price."

But that was verging very near sentiment for Miss Clarissa. She changed her tone briskly:

"Try a mint leaf, Clarice. Mint's always such a good, clean taste to finish with."

Keds New Play Shoes for Girls and Boys

KEDS are new shoes made for the comfort and good of growing feet. The tops are made of the firmest and finest of canvas; the soles are of durable, flexible rubber. Every line conforms to healthfulness and freedom; and at their cost Keds will outwear any footwear made. Ask, or have Mother or Dad ask, at your shoe store for Keds by these names:

The names carry back of them the quality and service guarantee of the largest rubber manufacturer in the world. There are pretty kinds for Mother and dandies for Dad in the big Keds family, too. All around, they are the finest shoes you ever wore to keep your feet well-dressed and happy.

Put Your Wheel In Racing Trim

You can do it with but little work if you use 3-in-One Oil. Simply take a Handy Oil Can of 3-in-One, and squirt a goodly quantity of the oil in all bearings; wheels, gears, coaster, pedals, everywhere.

Then ride your wheel quite slowly for about a mile. The 3-in-One will work out all dirt. It will cut the grease that has collected and first thing you know you'll find your wheel running just about twice as easily as before. Try it. Send for

FREE sample of 3-in-One and full instructions how to use it. A Handy Oil Can full of 3-in-One costs 25c. You can buy 3-in-One in bottles at 10c, 25c and 50c.

Three-in-One Oil Co., 165 A.W. Broadway, New York

The automobile has come into your life permanently—or it soon will—to serve your convenience and pleasure, day in, day out, on down through the years.

Its appeal is irresistible.

It is a fundamental factor in modern every-day life.

It rides the road to happiness.

If you purchase a car this season, there are new facts for your consideration which should simplify the task of selection.

This year Willys-Overland Motor Cars comprise the most comprehensive and varied line ever built by any one producer.

The economies of our greater production are shared alike by every car in the line.

In thus broadly applying the established Willys-Overland policy of greater production—greater economy, higher quality, lower price—we extend the benefits of our economical advantages to include virtually every class of purchaser.

The Willys-Overland dealer is in a peculiarly pleasant position to frankly and honestly discuss with you your needs and requirements in a motor car.

For whatever your need he has the car to fill it and he is prepared to demonstrate to you that he is offering you the dominant value among cars of its kind.

See him today—talk it over—let him show and demonstrate the car you ought to own to ride the road to happiness.

Jiffy-Jell

For Salads and Relishes

Tart, Zestful Flavors
In Sealed Vials

Lime and Mint

For Summer Garnishes
Instant Relishes—Salad Jells

Made Direct
From
Mint Leaves

Jiffy-Jell is more than a dessert. Two of the flavors—Lime and Mint—are distinctly relishes.

Garnish your cold meats or salads with these zestful Jiffy-Jells. Or mix your salads into them before the jelly cools.

Both are green. Both have a tang or savor which fits with these cold dishes. Both are instantly prepared.

Ideal Summer Food

High-grade gelatine is ideal summer food. It isn't heating, and it easily digests.

It has unique value as a tissue-saver. That is, it prevents the vital tissues from wearing down unduly. For that reason in particular, food authorities highly recommend it. Each ounce of gelatine saves from destruction about one-half ounce of tissue.

It holds high place in scientific diet.

In hospitals, gelatine is a staple. Serve it at least once daily in some way.

Rare-Grade Gelatine

The basis of Jiffy-Jell is Waukesha gelatine. This is an extra grade which costs twice as much as the common. The supply is limited, and we control the output. We use no other grade.

Lime as Garnish

Jiffy-Jell will bring you a new conception of gelatine as a dainty. All the flavor and aroma come from the bottled essence. And that is made from fresh fruit juice, except the mint-leaf flavor.

Don't confine this dainty to desserts. Use the salad flavors as well as the fruit flavors. Keep an assortment on hand for the various forms of cold dishes.

Home of Jiffy-Jell

Flavors in Vials

Tart, Green
Lime Fruit

Jiffy-Jell

The Supreme Dessert

Fruit-Juice Flavors
Each in a Vial

Pineapple

A Summer Favorite
For Quick, Ice-Cold Desserts

A popular flavor for summer desserts is Pineapple. It is made from the fruit itself, and sealed in a vial. So it keeps its freshness until used.

So with all Jiffy-Jell fruit flavors. Each is made from the fruit itself—made by concentration. Each is sealed in a vial.

So Jiffy-Jell desserts taste like fresh, crushed fruit. You don't scald them in the making. Add the flavor when the jell has partly cooled.

One Dinner Free If You Are Not Delighted

Let one test show you how Jiffy-Jell methods improve a gelatine dessert. Serve one package of any flavor. If you are not delighted, take back the empty package and your grocer will return your money.

You will never again serve lower-grade gelatine, or flavors that are not like these.

Pineapple Dessert

For Hot Days

Serve Jiffy-Jell desserts on hot days. They are made in an instant. They are served ice-cool. They are light and nutritious, and easy to digest.

Serve with the flavor only. Or add fresh fruit, nuts, chocolate or whipped cream. Serve as side dishes as well as desserts. A Jiffy-Jell dainty, with fruit or whipped cream, is a perfect summer supper.

In summer, keep a variety on hand. Each package makes six to eight dishes.

But be sure it is Jiffy-Jell. No other kind contains Waukesha gelatine, or the true fruit flavors in vials.

"THAT'S MY SECRET, WILLIAM TORREY," REPLIED THE SICK MAN FIRMLY. "I CAN'T TELL YOU THAT"

ABE GINTER'S RESIGNATION

By Homer Greene

WHEN the doctor came out of Abe Ginter's bedroom he had a puzzled look on his face. Mrs. Ginter, with her hands folded in her apron, stood in the living room awaiting him. "Well?" she said.

"Abe's not so very sick," replied the doctor, "although he ought to have had that old wound opened up sooner; but he has something on his mind that's worrying him. Do you know what it is?"

"I wish to goodness I did; but he won't tell me. Just worries and worries and won't tell. Men are so cantankerous!"

She lifted a corner of her apron to her eyes; for, although Mrs. Ginter was sharp of tongue, she was tender of heart.

"I think it's something about his war record," she continued, "though what it is goodness only knows. I've been married to him nigh forty years and I never heard anything against him as a soldier, or any other way, for that matter."

"Well," said the doctor, "if we can relieve his mind, he'll come along all right. If we can't, I don't know what will happen. It's the worry that's wearing him out. Let's see; you have some children out West somewhere, haven't you?"

"Only John; he never came East. Mary died, you know, and it's her Hannah that's with us."

"I see. Suppose you write to John and tell him he'd better come on. I—I think maybe the old man might like to see him."

"Doctor, you don't think —"

She hesitated and looked at him sharply.

"Oh, there's no immediate danger. Get that thing off his mind, if you can, whatever it is, and keep on with the same medicine. I'll call again to-morrow morning."

The doctor strode down the path to the gate, where his horse was tied, and jumped into his buggy. Mrs. Ginter, with her hands folded in her apron again, watched him drive out of sight. She was thinking what she should say in her letter to John.

"Sary."

It was Abe's voice from the bedroom. Letting her apron fall, she pushed open the door of the sickroom and entered. It was a small room and plainly furnished; conspicuous on the wall hung a Grand Army uniform, and over the old-fashioned bureau an American flag was neatly draped.

On the wide, high bed lay Abram Ginter. His

sallow, wrinkled face showed signs not so much of physical suffering as of mental distress.

"Sary, has the doctor gone?"

"Yes, Abe."

"He might as well. He can't do anything for me. It wouldn't be worth while if he could. A man that's done what I've done is better out of the world than in it."

Mrs. Ginter squared her elbows and put her hands on her hips.

"Abe Ginter," she said, "you just stop that nonsense. What's the use of your fretting and fidgeting your life away, and no one knows what it's all about, and you won't tell. I'm going to put my foot down now. Something's got to be done."

She pushed a chair back from the side of the bed and sat down in it resolutely. The old man turned his head on the pillow and faced her.

"You're right, Sary," he said. "Something's got to be done and I've decided to do it. Get me a pencil and paper."

She hastened into the living room on her errand. That the secret that preyed on her husband's mind had to do with his conduct as a soldier in the Civil War she felt sure, but what it was that he had done she could not imagine.

As a young man, indeed when he was scarcely more than a boy, he had gone West to seek his fortune. Then came the war. At the end of it, an honorably discharged veteran, with a wound received at Five Forks that was bound to last him a lifetime, he drifted back into Indiana, married and settled down. But he never prospered. He was too easy-going—too conscientious, some said; he lacked the true Western energy and push. And the old wound troubled him so that for months at a time he was unable to work.

When Abe's father died, back in the Pennsylvania town where he was born, and left him the old homestead, he and his wife, both now past middle age, got together their few belongings, and with their little granddaughter, Hannah, came East and settled down in Abe's boyhood home. It was a small truck farm on the outskirts of the village, but it served to supply a decent living for Abe Ginter and his little family.

When the old soldiers of his native village

learned that he was a veteran of the Civil War and had an honorable discharge, and especially when they learned—not from him, for he never told of it, but from some one else who knew—how valiantly he had fought, what desperate bravery he had shown at Five Forks, they besought him to join their Grand Army post. At first he would not listen to them, but they kept urging him and at last he yielded. No man in the post was more loyal and devoted; but he would accept no office and no honor. He had fought in the war as a private soldier, he said, and he always wanted to remain one.

When his wife returned with paper and pencil, she brought also a large geography of her schoolgirl days on which he could lay the sheet of paper. Then she got his spectacles and helped him to sit up.

He found it a great effort to write. At best, he was unused to writing, and now the pencil seemed obstinately reluctant to set down the thought in his mind. But he started in bravely: "James Madison ag—" He looked at his wife over the top of his spectacles. "How do you spell adjutant?"

"Why," she replied uncertainly, "it's a-d-g—Wait! I'll get the dictionary."

"No, I can't wait. There isn't time. I won't write to the adjutant, anyway. I'll write to the post commander."

So he took a fresh sheet of paper and started again.

Wm. Torrey comander sir. I resine my membership in Robert Durland Post.

"What!" exclaimed his wife, who was looking over his shoulder. "What's that, Abe?"

"I'm resigning my membership in the Grand Army," he replied quietly.

"You—resigning? What for? Just when you need friends most? Abe Ginter, you're crazy!"

"I've thought it all out, Sary. I know what I'm doing." Then, paying no further attention to her, he wrote on:

I turn in my button with this letter. I never had any right to join the post. I—

The last sentence was more than Mrs. Ginter could bear. "Abe Ginter, that's not so!" she cried. "Why hadn't you a right to join the post, I'd like to know! Weren't you a soldier?"

Didn't you get wounded? Haven't you got an honorable discharge? Why aren't you as good as any of them?"

"That's my secret, Sary. I've kept it for forty years. There are only three men that know it, and if they're living they're living in Indiana; but I can't associate any longer with volunteer heroes like Adjutant James Madison and Chaplain David Graham. I'm not fit."

"Fit, fiddlesticks!"

Sarah Ginter had completely lost her temper, but her husband was still calmly resolute. With increased effort he went on with his letter:

If the post had known what I know, they wouldn't have taken me in in the first place. It's better that I get out while I'm alive, and not wait till I'm dead. This is for the sake of my conscience and to be fair with the post. Your Obedt. Servant
Abram Ginter.

When he had signed his name, the old man read the letter over to himself.

"It's not just as I wanted it," he said. "That last is badly mixed. But I haven't time—or strength—to write it over. Where's Hannah? She must take this to William Torrey right away."

But Mrs. Ginter had not yet recovered from her astonishment and indignation.

"Hannah's not going to take that crazy letter to town till she's had her dinner. I'll settle that. Why, it's a mile to William Torrey's house, and here it's almost twelve o'clock!"

While she was scolding, she laid the letter on the bureau, and took away the pencil, paper and geography. Then, noticing the ashen look on the old man's tired face, her voice took on a more kindly tone.

"There," she said, "you lie back. You're tired now. Let me get this pillow out. I'll have your broth ready in a minute, and when you eat some you'll feel better."

She eased the old man's head down on the one pillow and smoothed back his thin gray hair.

"The letter must get to him, so it can be presented at the meeting to-night," he said. "There's no time to lose."

"I'll send Hannah with it just as soon as she's finished her dinner."

As she bustled about her work, Mrs. Ginter felt that after all it had perhaps done her husband good to write the letter, for apparently it had relieved his mind.

When Hannah returned in the middle of the afternoon and told him that she had delivered the letter into William Torrey's own hands,

Alice had always thought Grace rather stupid. She was sure of it now. No girl who was not stupid would have contrived a quarrel on the eve of a house party. And Mary was easy to get along with, the most pleasant-tempered of all the Hall cousins. Only an imp or a stupid could have quarreled with Mary.

"What am I to do, Alice?" asked Aunt Janet. "I can't give a house party with two of my guests not on speaking terms. I've talked to them both and they're adamant. As far as I can see, we shall have to give up the house party."

"O Aunt Janet, not that! Couldn't you ask some one else in their places?"

"Can't find 'em, my dear," her aunt replied lightly. "I've canvassed the possibilities thoroughly. There aren't two other girls who are congenial and who are able to go. The Ditsons have an uncle coming, the Graylings leave next week for California. There's some perfectly good reason in every case."

"Maude Jaffrey?"

"Cousins on the way to visit her."

"Tid Bates?"

"Mother needs her. They have a houseful of company for the summer."

Alice frowned in perplexity. Then her brow cleared. "Make it a six-party, Aunt Janet. Six is almost as much fun as eight."

"Think how six would rattle round in two cars! And what about the tennis courts? When you all want to play at once—"

"Two could play singles, Aunt Janet, and with two courts—"

But Aunt Janet shook her head. "Of course I could manage to get along with seven, making eight myself, but never six, Alice. I positively refuse to have a house party of six."

That settled it, Alice knew. Aunt Janet was as whimsical as she was lovable.

The two fell into a dejected silence, which Aunt Janet finally broke. "I made rather a mess of talking to them, I'm afraid. You don't suppose you could do anything to patch up peace, Alice?"

Alice had been dandling the thought upon her mental knees for a full minute. "I don't know, Aunt Janet. Grace is just a bit obstinate, you know, and Mary, if anything, is more so. They're neither of them exactly tractable. And if they wouldn't listen to you."

"That's no reason why they might not listen to you," rejoined her aunt quickly.

Alice let a minute go by. Already she saw in her mind's eye Grace and Mary strolling arm in arm up to Aunt Janet's gate, but it would not be polite to let Aunt Janet perceive her thought.

"They were pretty new to it when you talked to them, I suppose, and pretty hot."

"Torrid, my dear."

"I'll try, Aunt Janet, if you want me to."

"I wish you would. Meanwhile, we will hold the matter of the house party open. I hope you succeed, Alice."

Privately, Alice had no doubt of her ability to do so. Give up the house party? Preposterous! Neither Grace nor Mary was pig-headed enough to ruin Aunt Janet's delectable house party for the sake of a stupid little quarrel about a hat.

As she walked along the street Alice outlined her plan. She could "jolly" Mary into peace; it was always easy to "jolly" Mary. Grace would be harder to deal with.

What was it that Cousin Wilfred had been talking about last night? "The approach is the whole thing," he had said, hammering on the table for emphasis. "Give me a clue to the approach and I can talk convincingly to any man."

Cousin Wilfred ought to know. He was a lawyer, and a successful lawyer. Alice had listened to him and believed that she knew almost as much as Cousin Wilfred knew about the theory of "approach." You found out what a person would be interested to listen to, and then you began to talk about it.

Thoughtfully Alice applied the theory to Grace. She would be interested in the house party, and she was conscientious. She was always saying, "If that's what the other girls want, I'll go in for it." Grace was going to be easy, too. Alice straightened up and stepped more briskly. She wondered whether Aunt Janet had known how to "approach" Grace.

She crossed the street half a block sooner than she otherwise would have crossed it, in order to avoid passing a tall, slender girl in a

"LET'S HEAR YOUR REPORT. ALICE DIDN'T HAVE ANY LUCK, EITHER"

blue linen dress. Not yet could Alice "cut" Stella Dame with a happy heart.

Miss Grace was upstairs, the new maid said, and Alice, on going up, found Grace studying her reflection under the redoubtable hat.

"Is that it?" Alice asked, to set the ball rolling.

Grace tilted her chin at a new angle. "What do you think of it?"

"Not worth the row," said Alice critically.

"You're right there," Grace admitted. "Somehow it looked prettier in the store. It was rather a love—on its perch."

"Let's see," Alice held out her hand and Grace capped it with the hat. "Pretty, but not your style."

"Look out! That's what Mary said."

Alice laughed. "What do you think yourself?"

Grace shrugged her shoulders. "Oh, soso! But you needn't tell her."

"Tell her yourself."

Alice studied a photograph intently.

"You bet I won't. Nor you, either. Going to the Parkers' to-night?"

"I suppose so. Everything looks tame to me now beside Aunt Jan's house party."

"That's the way I felt yesterday. Now I'm not going."

"Not going?"

"Can't go when I'm not on speaking terms with part of the party." Grace's mouth set stubbornly. "I don't wish to be talked to about it."

Alice came away presently. On the steps she met Olive Gray.

"Alice," gasped Olive, "have you heard—Mary isn't going to Aunt Jan's house party!"

"Mary isn't going! Why, Grace just told me that she isn't, either!"

In the next hour Alice felt that she had acquired the swing of a pendulum up and down the street.

"But, Mary," she argued at one end, "it's perfect nonsense for you not to go. If Grace refuses, what is the point in your staying away, too?"

"What Grace James does or doesn't do has

no influence over what I do," Mary retorted. She was clearly not to be moved by argument.

Alice tried the "jolly" method. "So, Pollywog, we've got to have you," she finished. "We simply can't get along at Aunt Jan's without you. You're coming with the rest of us—you know you are."

Mary's small mouth was set. "I am not going to Aunt Janet's house party."

Alice put her arm round Mary's neck. "Make it up, dear. You know you will never be happy until you do."

"There is nothing to make up," said Mary.

"That hat is fearfully unbecoming to her," Alice ventured.

"She has a perfect right to wear an unbecoming hat if she wants to."

"Then I don't see —"

"Nor I."

Alice put both arms round Mary and shook her playfully. "You funny Mollikins! You aren't pretty a bit when you look cross. Come along now and kiss and make up. I'm not going to leave you until you do."

Mary turned on her. "You're a nice one to talk, Alice Lake! What about you and Stella Dame? Everyone knows you haven't spoken to each other for a whole month."

"That's different."

"Maybe it is and maybe it isn't. Anyway, I don't want to hear you mention Grace James's name to me again."

Alice took herself away, aggrieved. Mild little Mary's attack was as preposterous as it was sudden. She could not understand Mary. Very carefully she set her words in order on the way down the street.

"I want to talk to you, Grace, about the house party," she began, coming to the point at once. "You say you have made up your mind not to go, but I am sure that you don't want the rest of us to miss it."

"Why, of course not! My staying away won't affect you."

"Yes, it will. There isn't to be any house party if you and Mary don't go."

"How's that?" Grace asked in astonishment.

Alice told her what Aunt Janet had said.

"I'm sorry," Grace said. "But the house party is Aunt Janet's affair, isn't it?"

Alice stared. "You don't mean that you're willing to break it up—you can't mean that!"

"I'm simply not going. That's flat."

"But —"

"What comes of it is none of my business, Alice."

"All for a hat that you don't really like?"

"Who says I don't like it? I'm going to wear that hat every day this summer."

Alice hesitated. "Grace, you know how crazy I am over the house party. The other girls feel the same way. Knowing that, won't you—make up with Mary?"

Grace flushed. "Alice, I'll do anything for you girls—anything except that. I can't be friends with her the way I was before. She's not the girl I thought she was. You know yourself how it is. You and Stella used to be —"

"We didn't quarrel about a hat," Alice interposed. "That was different, quite different—something important—more important, I mean."

Forty-eight hours later Alice sank wearily down on a seat in Aunt Janet's garden. "I can't do anything with them, Aunt Jan!" she said. "I've talked till I'm blue in the face. I've suggested that maybe Mary didn't mean that Grace's hats were *never* becoming, and that maybe Grace didn't mean, when she said she'd rather wear an unbecoming hat than a frumpy one, that Mary's hats were frumps. They agree to everything I say, but they won't make up. It was just a silly little quarrel, but they're stubborn over it. They got fearfully cross at each other, you know. Their feelings seem to have frozen that way. It doesn't matter that there wasn't anything at all really to have been cross about—they're bound to stay so."

"It's frequently so with quarrels, I think," Aunt Janet agreed. "The feeling remains after the cause is forgotten or explained."

"But that's unreasonable. Anyway, I'm tired to death of the whole business. A quarrel like that is so stupid, Aunt Jan!"

"Think so, dear?"

A girl rounded a syringa bush hastily. "O Aunt Jan, I didn't have any luck at all—I beg your pardon! I thought you were alone."

"Don't go, Stella. Let's hear your report. Alice didn't have any luck, either."

Stella flushed. "I didn't know anyone else was trying. They're perfectly unreasonable, both of them; and I think they see it, but they won't give in."

Aunt Janet put out a hand and pulled the tall, slender girl to a seat beside her. "Your reports agree perfectly; so you must both be right. I'm afraid I'll have to give up that house party, Alice. If there were only one other girl I could ask." Aunt Janet wrinkled her brow in thought.

Alice's heart beat fast under her white smock.

"Perhaps Stella could go." Her voice did not sound quite natural.

"That's so. Perhaps she could. Say yes, and save our house party, Stella."

The tall girl's gray eyes were fixed eagerly upon Alice's face. "Do you—really mean it?"

Alice jumped up and threw her arms round the other girl's neck. "Come along, you old—*peach!*" she cried, with a choke and a laugh.

"I'd love to."

"That will make seven, Aunt Jan," Alice announced. "Eight, counting you."

"Ten, I presume," said Aunt Janet. "We can manage with a little squeezing."

But Alice had wheeled again on Stella. "Did they tell you that you hadn't any business to try to get them to make up, when you had a fight of your own going on?"

Stella nodded. "I told them ours was different."

"So did I."

"By the way, just what was the trouble between you two?" asked Aunt Janet.

The girls looked at each other and had the grace to blush.

"Nothing, Aunt Jan," said Alice. "Just some silly little nonsense. I'm not sure I remember. Come on, Stella, we'll tackle them together; they can't resist the two of us."

he seemed greatly pleased. That night he looked brighter and more cheerful than he had looked before in many weeks. He ate his gruel with a relish, and fell early into a restful sleep that lasted until at daylight the little brass cannon ushered in Memorial Day with its accustomed salute from the brink of the ledge north of the village.

But if Abram Ginter slept peacefully that night, there was consternation at the post. What did Abe Ginter's letter of resignation mean? Did not everyone know that no man in Pennsylvania was better qualified to belong to a Grand Army post than Abram Ginter? Had not a comrade from the West who had fought side by side with him told them all one night before Abe joined the post about

that dreadful day at Five Forks when Ginter got the wound that had lasted him through life? Of all the desperate and daring deeds of the Civil War, what deed on either side had been more desperate and daring than his? And all for the rescue of a tattered and blood-soaked flag that he could not bear to see fall into the enemy's hands!

Since he had been with them in the post had he not been a faithful member? Then what did his letter mean anyway? But of only one thing were they sure: they must not let Comrade Ginter withdraw from the post in this summary fashion.

So they appointed the commander, the chaplain and the adjutant as a committee to interview the old man the next morning and to

report to the post at half past nine o'clock, when they were to form for the Memorial Day parade.

At half past eight the next morning William Torrey's two-seated surrey stopped in front of Abram Ginter's house, and the members of the committee got out. Hannah was the first to discover them, and she darted into the house and broke the news to her grandmother.

"For the land sakes!" exclaimed Mrs. Ginter. "Hold them outside a minute, Hannah, while I tidy up your grandpa's room."

With the artlessness of youth, Hannah entertained the visitors on the porch for five full minutes before Sarah Ginter appeared at the front door and invited them to come in.

"It was a curious letter," she said, when
